## ORDER OF REFERENCE

HOUSE OF COMMONS,

FRIDAY, February 13, 1934.

### *Resolution:*

That a Select Special Committee of eleven members of the House be appointed to inquire into and investigate the causes of the large spread between the prices received for commodities by the producer thereof, and the price paid by the consumers therefor; and the system of distribution in Canada of farm and other natural products, as well as manufactured products, and, without restricting the generality of the foregoing, more particularly to inquire into and investigate:—

- (a) the effect of mass buying by department and chain store organizations upon the regular retail trade of the country, as well as upon the business of manufacturers and producers;
- (b) the labour conditions prevailing in industries supplying the requirements of such department and chain store organizations, and the extent, if any, to which existing conditions have been brought about by the purchasing practices of such organizations, and the effect thereof upon the standard of living amongst those employed in such industries and organizations;
- (c) the relation between the flour milling industry and the bakeries of the country, and the effect of such relations upon the baking industry of Canada;
- (d) the methods and system prevailing in the marketing of live stock and animal products for domestic consumption and export, and the extent to which the present system affords or restricts opportunity for fair returns to producers.

That the Committee shall have power to send for persons, papers, and records, and the further power to request the appointment of a Commission or Commissioners under the Inquiries Act, to secure evidence to be presented to the Committee by such Commission or Commissioners.

That the Committee shall report to the House from time to time its findings, together with recommendations of such measures as in the opinion of the Committee may be considered necessary to secure as far as possible, fair and just practices in the distribution and marketing systems of Canada, with fair and just returns to producers, employees, and employers, not inconsistent with the rights of consumers.

*Ordered*,—That Messrs. Stevens, Baribeau, Bell (St. John-Albert), Boulanger, Edwards, Factor, Ilsley, Kennedy (Peace River), Kennedy (Winnipeg South Centre), Senn, and Young, form the Committee appointed on Friday, the 2nd of February, 1934, to inquire into the causes of spread in prices of commodities, the system of distribution of farm, natural and manufactured products, etc.

Attest.

ARTHUR BEAUCHESNE,  
*Clerk of the House.*

---

THURSDAY, February 15, 1934.

*Ordered*,—That the said Committee be empowered to print 1,000 copies in English and 250 copies in French of the evidence and proceedings which may be taken, and of such representations and documents as the Committee may wish to print, and that Standing Order 64 be suspended in relation thereto.

*Ordered*,—That the said Committee be empowered to appoint and employ counsel and auditors to assist in investigating the matters referred to it by the House.

*Ordered*,—That the said Committee be empowered to sit while the House is in session.

Attest.

ARTHUR BEAUCHESNE,  
*Clerk of the House.*

## REPORTS TO THE HOUSE

### FIRST REPORT

HOUSE OF COMMONS,

THURSDAY, February 15, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying begs leave to present the following as its

### FIRST REPORT

Your Committee recommends:—

1. That it be empowered to print 1,000 copies in English and 250 copies in French of the evidence and proceedings which may be taken, and of such representations and documents as the Committee may wish to print, and that Standing Order 64 be suspended in relation thereto.

2. That it be empowered to appoint and employ counsel and auditors to assist in investigating the matters referred to it by the House.

3. That it be empowered to sit while the House is in session.

All of which is respectfully submitted.

H. H. STEVENS,  
*Chairman.*

## MINUTES OF PROCEEDINGS

ROOM 231, HOUSE OF COMMONS,

THURSDAY, February 15, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m. for organization.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.—11.

On motion of Mr. Kennedy (*Winnipeg South Centre*), seconded by Mr. Senn, Hon. Mr. Stevens was appointed Chairman.

Hon. Mr. Stevens took the Chair and thanked the Committee for the honour conferred upon him.

The Clerk read the Order of Reference.

After making a few observations on the wide scope and importance of the matters referred to the Committee, the Chairman expressed the opinion that counsel should be appointed to assist the Committee, and suggested the name of Norman Somerville, K.C., of Toronto. It was decided, however, to defer appointment of counsel.

On motion of Mr. Kennedy (*Peace River*),

*Resolved*, That the Committee request permission to appoint and employ counsel and auditors to assist in investigating the matters referred to it by the House.

On motion of Mr. Factor,

*Resolved*, That the Committee request permission to print 1,000 copies in English and 250 copies in French of the evidence and proceedings to be taken, and of such representations and documents as the Committee may wish to print, and that Standing Order 64 be suspended in relation thereto.

On motion of Mr. Factor,

*Resolved*, That the Committee request permission to sit while the House is in session.

On motion of Mr. Senn,

*Resolved*, That a sub-committee be appointed, consisting of the Chairman and two members of the Committee, together with counsel, when chosen, to consider the question of procedure and report to the Committee at an early date.

Messrs. Senn and Ilsley were designated by the Chairman to act on said sub-committee.

On motion of Mr. Edwards, the following resolution was adopted unanimously:—

Whereas the Order of Reference to the Committee in paragraph one contemplates an extensive inquiry into the economics of distribution in Canada, and inasmuch as several departments of government are in possession of numerous reports of previous investigations and other public documents and data containing valuable and useful evidence and information, and

Whereas it would be advisable to investigate and correlate such information, and to make it available to this Committee in a concise form;

Therefore be it Resolved: that to achieve this end, the following permanent officials of the Government: Mr. H. H. Coats, Dominion Statistician; Dr. H. M. Tory, President, National Research Council; Mr. F. A. McGregor, Registrar under the Combines Investigation Act, together with Mr. Harry Hereford, be requested to enter upon a study and investigation of the aforementioned documents and data, and to co-operate with each other to that end, and in particular to take into consideration the subject matter referred to in the Order of Reference, reading as follows:—

To inquire into and investigate the causes of the large spread between the prices received for commodities by the producer thereof, and the price paid by the consumers therefor; the system of distribution in Canada of farm and other natural products, as well as manufactured products.

The Chairman having asked the opinion of the Committee regarding the adoption of a short title to designate the Committee, the following was agreed to: "Special Committee on Price Spreads and Mass Buying."

Mr. Heaps, member for Winnipeg North, requested the privilege of taking part in the deliberations of the Committee on behalf of labour interests. He was advised by the Chairman that members of the House were generally accorded the privilege of attending the sittings of committees and of asking questions, and that Mr. Heaps would be welcome and could expect every possible courtesy.

The Committee then adjourned until Tuesday, February 20, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

ROOM 268, HOUSE OF COMMONS,  
TUESDAY, February 20, 1934.

The Special Committee on Price Spreads and Mass Buying met at 11 o'clock, the chairman, Hon. Mr. Stevens, presiding.

*Members present:*—Messrs. Stevens, Baribeau, Bell (*Saint John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young—11.

The minutes of the last meeting were read and approved.

On motion of Mr. Kennedy (*Peace River*),

Resolved,—That Mr. Norman Sommerville, K.C., of Toronto, be appointed counsel to assist the committee in pursuance of leave granted by the house.

The chairman submitted a report from the sub-committee on procedure, suggesting the following initial method of procedure:

1. Invite officials administering Minimum Wage Laws of Ontario and Quebec to appear before the committee and file their respective minimum wages scales.

Write the officials administering minimum wage laws in the other provinces, requesting that they file with the committee their minimum wage scales, and also that they comment, if they wish, on the administration and observance of the minimum wage law in their respective provinces.

2. Representatives of labour organizations to appear before the committee to inform the committee of what they know of labour conditions and possibly "sweat shop" practices.
3. Verification of (2) by commissioner or commissioners.
4. Questionnaire covering the buying practices of departmental stores to be sent to the departmental stores, completed by them, and returned to the committee.

During that time the committee is occupied with (2) and (3), No. 4 will be in process of completion.

5. After counsel is appointed and available for consultation, it is likely that the committee will decide that the work can be expedited by the appointment of commissioners to carry on detailed investigations when, as a result of representations made to the committee, such investigations are deemed desirable.

It was agreed that the questionnaire referred to in paragraph 4 of the above report would be submitted to the committee for approval before being sent out.

With respect to the method by which specific cases would be brought before the committee, the chairman stated that the matter of procedure would rest almost entirely in the hands of Mr. Sommerville, K.C., and that every opportunity would be given members of the committee to bring up matters of special concern.

On motion of Mr. Kennedy (*Winnipeg South Centre*), the report of the sub-committee submitted this day was adopted.

On motion of Mr. Senn,

Ordered,—That the clerk secure for the committee an official copy of the Minutes of Proceedings, Evidence and Report of the Standing Committee of the House of Commons on Agriculture and Colonization, session of 1933, respecting the enquiry on Milk and Milk Products, to be taken under consideration under the terms of paragraph (d) of the Order of Reference, viz:

"the methods and system prevailing in the marketing of live stock and animal products for domestic consumption and export, and the extent to which the present system affords or restricts opportunity for fair returns to producers."

On motion of Mr. Factor,

Resolved,—That the report on an alleged combine in the importation and distribution of British anthracite coal—1933—be laid before the committee.

The chairman indicated that arrangements would be made to have officials administering the Minimum Wage Laws of the provinces of Ontario and Quebec appear before the committee on Tuesday, February 27; also that Dr. R. H. Coats, Dominion Statistician, would be invited to appear on Thursday, February 22, to present an outline of the material and information at present available.

The committee adjourned until 11 o'clock a.m. on Thursday, February 22.

R. ARSENAULT,  
*Clerk of the Committee.*

ROOM 268, HOUSE OF COMMONS,

THURSDAY, February 22, 1934.

The Special Committee on Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (St. John-Albert), Boulanger, Edwards, Factor, Ilsley, Kennedy (Peace River), Kennedy (Winnipeg South Centre), Senn and Young.—11.

Counsel in attendance, Mr. Norman Sommerville, K.C.

The minutes of the last meeting were read and approved.

Pursuant to an order of the Committee dated February 20, the Clerk of the Committee produced and filed:—

Exhibit No. 1.—Copy of Proceedings, Evidence and Report of the Standing Committee of the House of Commons on Agriculture and Colonization, Session 1932-33, respecting Milk and Milk Products.

On motion of Mr. Baribeau,—

*Ordered*,—That authority be given to the Clerk to call any witnesses required by Counsel to the Committee.

Dr. R. H. Coats, Dominion Statistician, submitted a number of suggestions as to the method of organizing subject-matter for the conduct of the inquiry now proceeding, and gave a partial outline of the nature and scope of the materials available in government departments for the use of the Committee.

Dr. Coats filed,—

Exhibit No. 2.—Memorandum entitled: "Procedure of investigation under Government notice of motion dated January 29."

Exhibit No. 3.—Statements showing:—

- (a) Commodity price spreads.
- (b) Index Numbers of Wheat, Flour and Bread, 1926-1933.
- (c) Canadian prices for Wheat and Wheat products 1932-33.
- (d) Index Numbers of Hogs, Pork carcass, Bacon and Lard, 1926-1933.
- (e) Canadian prices of Hogs and Hogs products, 1932-33.
- (f) Index Numbers of Sugar at Vancouver, 1926-1933.
- (g) Vancouver prices of Sugar, 1932-33.

The Witness retired.

On motion of Mr. Factor,—

*Resolved*,—That any public departmental report under the Combines Investigation Act, regarding the investigation of the alleged Tobacco Combine, be filed with the Committee.

On motion of Mr. Boulanger,—

*Ordered*,—That the Clerk secure and file a copy of the Proceedings, Evidence and Report of the Standing Committee of the House of Commons on Banking and Commerce, 1932, respecting the Price of Gasolene.

It was agreed that the sub-committee appointed on February 15 be authorized to meet further, when necessary, and report from time to time.

The Committee adjourned until Tuesday, February 27, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

TUESDAY, February 27, 1934.

The Special Committee on Price Spreads and Mass Buying met at 11 o'clock a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

Counsel in attendance, Mr. Norman Sommerville, K.C.

The minutes of the last meeting were read and approved.

The Clerk produced and filed,—

Exhibit No. 4.—Minutes of Proceedings, Evidence, and Report of the Select Standing Committee on Banking and Commerce, 1932, respecting the inquiry on the Price of Gasoline.

Exhibit No. 5.—Memorandum by Dr. R. H. Coats, entitled: "Commodities on Which Data to be Assembled".

Exhibit No. 6.—Reply to questionnaire on Minimum Wage Law, Province of Nova Scotia.

Exhibit No. 7.—Reply to questionnaire on Minimum Wage Law, Province of Manitoba.

On motion of Mr. Edwards,

*Resolved*,—That the Committee request permission to appoint and employ secretarial, clerical, stenographical, and investigational assistance, until the final report of the Committee is submitted to the House.

Mr. Richard Stapells, Chairman of the Ontario, Minimum Wage Board, Toronto, was called, sworn and examined.

Witness retired and the Committee adjourned at 1.00 o'clock until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30.

Mr. Stapells recalled and further examined. He filed,—

Exhibit No. 8.—Orders of the Ontario Minimum Wage Board, Nos. 3, 6, 10 to 39 inclusive, 41 to 50 inclusive, and Amending Orders Nos. 3 and 29.

Exhibit No. 9.—Thirteenth Annual Report of the Ontario Wage Board.

Witness discharged.

Mr. A. W. Laver, Commissioner of Public Welfare, Toronto, was called, sworn and examined.

Witness discharged.

The Committee adjourned until to-morrow at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 271,

WEDNESDAY, February 28, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met in executive session at 10.30 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

Counsel in attendance, Mr. Norman Sommerville, K.C.

On motion of Mr. Kennedy (*Winnipeg South Centre*),—

*Resolved*,—That R. A. Barker be appointed as special investigator at Toronto and vicinity, to inquire into the 41 cases submitted to the Committee on February 27th by Mr. Laver, and to verify the facts alleged therein, and to further inquire into the scale of wages paid in chain and department stores and industries and commercial firms supplying the requirements of such organizations, in so far as it applies to the evidence given by Mr. Laver to the effect that workers in such institutions were paid rates of wages so low as to require additional relief from the city. And further, that this investigator be paid at a rate to be fixed by the Chairman.

At 11 a.m. the Committee adjourned to Room 368 where the regular meeting scheduled for this day commenced.

The minutes of the last meeting were adopted.

Mr. Gustave Francq, Chairman of the Women's Minimum Wage Commission for the Province of Quebec, was called, sworn and examined. Witness filed,—

Exhibit No. 10.—Annual Report of the Women's Minimum Wage Commission, Province of Quebec, for the year ending June 30, 1933.

Exhibit No. 11.—An Act to provide for fixing a Minimum Wage for Women, Chapter 100, Revised Statutes of Quebec, 1925.

Exhibit No. 12.—List of firms prosecuted under the Quebec Women's Minimum Wage Act, and penalty imposed.

Exhibit No. 13.—Form indicating "Rates per Hour."

Exhibit No. 14.—Question form for employers.

Exhibit No. 15.—Minimum Wage Board Orders Nos. 3, 7 (amended), and 9a.

Exhibit No. 16.—Statement entitled: "Various Ways of Evading the Minimum Wage Law."

Witness discharged.

The Committee adjourned at 1 until 3.30 this day.

## AFTERNOON SITTING

The Committee resumed at 3.30.

The Chairman read two telegrams received from J. F. Cosgrave, President, Cosgrave Export Brewery Co., Ltd., Toronto, and J. S. McLean of Canada Packers, Toronto.

Mr. H. M. Cassidy, Assistant Professor of Social Science, University of Toronto, was called, sworn, and examined.

Witness filed,—

Exhibit No. 17.—Report on Labour Conditions in the Men's Clothing Industry, by Messrs. F. R. Scott, and H. M. Cassidy.

Exhibit No. 18.—Specimen Pay Envelopes.

Witness discharged.

The Committee adjourned until to-morrow at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

## ORDERS OF REFERENCE

TUESDAY, February 27, 1934.

*Ordered*,—That the said Committee be empowered to appoint and employ secretarial, clerical, stenographical and investigational assistance until the final report of the Committee is submitted to the House.

Attest.

ARTHUR BEAUCHESNE,  
*Clerk of the House.*

---

HOUSE OF COMMONS, ROOM 368,

Witness discharged.

Mr. Sommerville, K.C., counsel to the committee, read a report from a committee of the Charlottetown Board of Trade, on mass buying merchandise practice and its effect upon individual retailers and community life and consumers in Prince Edward Island.

The above with accompanying report of a sub-committee of wholesale grocers, filed as Exhibit No. 54.

The committee adjourned at 1 o'clock until Wednesday, March 14, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

ROOM 368, HOUSE OF COMMONS,  
WEDNESDAY, March 14, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 o'clock a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Win-nipeg South Centre*), Senn and Young.

In attendance, Mr. Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Chairman drew the attention of the Committee to a letter received from Mr. Thomas Moore of Ottawa, who appeared before the Committee as a witness on the 1st of March, stating that he had not been reported accurately on that occasion and requesting that certain corrections be included in the printed records.

On motion of Mr. Kennedy (Peace River),—

*Ordered*,—That the evidence given by Mr. Thomas Moore before this Committee on March 1st, be amended in accordance with the corrections and changes indicated in Mr. Moore's letter dated March 9, addressed to the Chairman, and filed with the Clerk of the Committee, viz:—

*Page 142*, end of tenth line, take out words "and not from" and insert "for," making the sentence read:—

What statement I have to present to you is being directed more to suggestions and general comment as to where the existing laws or new legislation might be helpful for eliminating or curtailing some of the abuses which have been made so clear by the evidence you have already heard.

*Page 143*, answering question by Mr. Kennedy, the word "questionnaire" should be "question" and the word "trial" should be "compromise" which, with other slight changes, would make the sentence read:—

As was said here in regard to union agreements, in answer to a question, they are often only a compromise and therefore not entirely satisfactory either to the employer or worker.

Seven lines further, on the same page, answering a question by Mr. Factor, the word "boards" should be "Trades" making the reference read "Trades and Labour Councils", and in a subsequent sentence, four lines further, the word "the" should be "a", reading:—

Some general observations with respect to a number of these.

*Page 144*, answering question by Mr. Ilsley, second line of paragraph, change word "exert" to "insert", making the answer read:—

It does, but there is no compulsion to insert it.

*Page 145*, answering Mr. Sommerville's second question, near top of page, insert the word "not", the answer then reading:—

Not unless complaints are registered by worker.

In the next paragraph, answering Mr. Kennedy, the word "policy" should be "compulsion", the statement being:—

There is no compulsion and cases have arisen where tenders have been called for without the fair wage clause conditions being inserted.

*Page 146*, following the question by the Chairman, "And that parliament ought to take into consideration that fact?", the answer to read as follows:—

Yes. I do not want to be understood as criticizing any government. The present practice has been a common one over a number of years.

On the same page, answering Mr. Kennedy, the word "seven" should be "several", and the words "we have about five" entirely eliminated, the answer to read:—

Quite a number over the past several years.

*Page 147*, in answer to Mr. Factor, delete all the words of that paragraph, following "the Minister of Labour is empowered to fix a fair wage."

*Page 148*, in answer to Mr. Kennedy's second question, the word "plants" should be "complaints", the answer then reading:—

They have a limited number of inspectors who to-day confine themselves very largely to investigating complaints and not to initiating investigations.

*Page 149*, answering Mr. Sommerville's question: "Those conditions were unsanitary?", the word "sores" to be substituted for "soils".

*Page 150*, answering Mr. Ilsley, the reference to "the Lieutenant Governor" should be "Governor in Council".

*Page 151*: The first question put by the Chairman was: "I was going to ask you this, Mr. Moore, make a transition of yourself from representing labour as a producer to your knowledge as a consumer."

*Page 152*, answering question by Mr. Sommerville, ninth line, the word "shut" should read "out", the answer to read:—

Would close out our principle of collective bargaining.

In the last sentence, same paragraph, insert the words "to refuse" and omit the words "members of his association where now it is a deterrent", making this sentence read:—

That right should be given to the worker in order that he could apply equal force and still maintain the right to refuse to work with non-union men, because he can only follow out his part of the agreement by having control of the discipline of the industry.

Near the bottom of the same page, the second answer to Mr. Young to read as follows:—

An organization that has an agreement with an employer should be placed in a position to have the necessary discipline to carry out its terms by having all those belong to the organization which is a party to the agreement.

*Page 152*, four lines from bottom, delete question: "Another organization?" and answer thereto.

*Page 154*, third and fourth line, the words "under the amendment framed in 1930" to be deleted and the following substituted therefor: "in the commission established in 1920", the answer to read:—

As a matter of fact, in the commission established in 1920, between the Provinces and the Dominion for the uniformity of labour laws this matter was discussed.

*Page 164*, in answer to Mr. Kennedy, the word "absolute" should be "obsolete", the answer reading:—

It is nearly obsolete to-day.

Mr. Alexander C. MacKay, representing the Retail Merchants' Association of Alberta was called, sworn and examined.

Witness filed,—

Exhibit No. 55.—Two jars of Armand Cold Cream identified as follows: 1 opal jar marked on label 50 cents, and one glass jar marked on label 25 cents, with accompanying letter.

Exhibit No. 56.—Copy of bulletin *re* rubber footwear issued by the Dominion Rubber Association.

Exhibit No. 57.—Series of advertisements with attached data on cut prices.

Exhibit No. 58.—Data *re* cut prices on bread in Alberta as affecting country bakers.

Witness discharged.

The Committee adjourned at 1 o'clock until Thursday, March 15, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

HOUSE OF COMMONS, ROOM 368,  
THURSDAY, March 15, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 o'clock a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (St. John-Albert), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Mr. J. Cuthbertson Doyle, Secretary, Nova Scotia Provincial Board, Retail Merchants Association, was called, sworn and examined.

Witness filed,—

Exhibit No. 59.—Series of replies, numbering 64, received from merchants of the retail trade in Nova Scotia, to a questionnaire sent out by the Nova Scotia Branch of the Retail Merchants Association.

Exhibit No. 60.—Series of advertisements with invoices, comparisons between wholesale and retail prices and other data indicating the effect of such advertisements as Loss Leaders.

Witness discharged.

At this stage, Mr. Sommerville read a brief submitted by the Board of Trade, Summerside, P.E.I., dealing with the competition merchants have to meet from the Mail Order business.

The above brief filed as Exhibit No. 61.

Mr. George R. Matthews, Vancouver, representing the British Columbia Division of the Retail Merchants Association, was called, sworn and examined.

Witness retired, and the Committee adjourned at 1 o'clock until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

Counsel and Assistant Counsel in attendance.

Mr. G. R. Matthews recalled and further examined.

Witness filed,—

Exhibit No. 62.—Series of advertisements, letters, comparisons between wholesale and retail prices and other data, all identified in witness' evidence, by numbers, from 1 to 26 inclusive.

Exhibit No. 63.—Suggestions for the elimination of unethical business practices, as approved by grocers and meat dealers in Vancouver.

Witness discharged.

The Committee adjourned at 4.30 until Tuesday, March 20, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

ROOM 368, HOUSE OF COMMONS,

TUESDAY, March 20, 1934.

The Special Committee on Price Spreads and Mass Buying met at 11 o'clock a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved, as well as the minutes of the Executive sessions of the Committee held on March 1st and March 15th.

The Clerk filed,—

Exhibit No. 40 A.—Advertisement appearing in the *Toronto Evening Telegram* and *Toronto Evening Star*, November 30, 1933, re sale of Turkeys, as referred to in Mr. G. S. Hougham's evidence, page 333 of the printed record.

Witnesses discharged.

The Committee adjourned at 1 o'clock until to-morrow at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, March 28, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

Counsel in attendance, Mr. Norman Sommerville, K.C.

The minutes of the last meeting were approved.

On motion of Mr. Kennedy (*Winnipeg South Centre*),—

*Resolved*,—That Mr. A. C. Boyce, K.C., of Ottawa, be appointed special investigator to inquire into and investigate the matters that are the subject of the reference to this Parliamentary Committee on Price Spreads and Mass Buying, in so far as the same relate to the effect on labour of large quantity buying of parts by manufacturers, and other pertinent matters in the Border Cities, and to report to this Committee from time to time.

On motion of Mr. Kennedy (*Winnipeg South Centre*),—

*Resolved*,—That Miss Evelyn L. Maynard, Ottawa, be appointed clerk and stenographer to assist this Committee, in accordance with the authority granted the Committee in its second report to the House.

Messrs. T. J. Ryan and M. G. Donovan, respectively, President and member of the Montreal Livestock Exchange, were called together, sworn and examined.

Witnesses discharged.

The Committee adjourned at 1 o'clock, to meet again after the Easter recess, at the call of the Chair.

R. ARSENAULT,

*Clerk of the Committee.*

---

HOUSE OF COMMONS, ROOM 368,

TUESDAY, April 10, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying, met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present*: Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Kennedy (*Peace River*) and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, K.C., assistant Counsel.

The minutes of the last meeting were approved.

The Clerk laid before the Committee communications received from Canada Packers Limited, Toronto, with attached list of pay-rolls; from Stock Yards Companies at Toronto, Montreal, Calgary, Moose Jaw, St. Boniface, Saskatoon, and Prince Albert, in reply to the Clerk's letter of the 22nd March; and from Messrs. A. W. Neil, M.P., and C. R. McIntosh, M.P. These communications were referred to Counsel.

The Clerk also produced a statement prepared by Mr. J. M. McCallum, Chief of the Market Services, Live Stock Branch, showing the volume of livestock shipped to stockyards and to packers in 1933. The Clerk was instructed to have this statement printed as an appendix to to-day's proceedings.

On motion of Mr. Kennedy (*Peace River*),—

*Resolved*,—That Major C. H. Douglas be called before the Committee on Price Spreads and Mass Buying on or about Thursday, April 19, or when convenient.

On motion of Mr. Baribeau,—

*Resolved*,—That Miss W. Hutchison, of Toronto, be appointed as special investigator to inquire into and investigate all matters that are the subject of the reference to this parliamentary committee on Price Spreads and Mass Buying, in so far as the same relate to wages paid in certain industries in Toronto, and to report to this Committee from time to time, Miss Hutchison's appointment to date from April 1, 1934.

Mr. H. P. Kennedy, President of the Edmonton Stock Yards Limited, and the Union Stock Yards of Saskatoon, Toronto, was called, sworn and examined.

At 12.45 p.m., witness retired and the Committee adjourned until 3.30 this day.

### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Ilsley, Kennedy (*Peace River*) and Young.

Counsel and assistant Counsel in attendance.

Mr. Kennedy recalled and further examined.

The Chairman read a communication received from Swift Canadian Company Limited, Toronto, with attached copy of their letter to Mr. Geo. Day, Creemore, Ont., covering additional one-quarter cent per pound on steers purchased on December 20, 1933.

Witness filed,—

Exhibit No. 86.—H. P. Kennedy Commission Co. sales sheet for two carloads of cattle, cows and calves shipped by train, showing commission of \$34.

Exhibit No. 87.—H. P. Kennedy Commission Co. sales sheet for one carload of cattle, cows, calves and sheep, shipped by train, showing commission of \$17.

Exhibit No. 88.—H. P. Kennedy Commission Co. sales sheet for twenty-five calves shipped by truck, showing commission of \$6.25, and requiring 15 separate statements.

Exhibit No. 89.—H. P. Kennedy Commission Co. sales sheet for seventeen calves and two cattle shipped by truck, showing commission of \$6.25 and requiring 12 cheques and statements.

Exhibit No. 90.—Copy of Bill (S. 2133, January 10, 1934) before the United States Senate, to amend the Packers and Stock Yards Act, 1921.

Exhibit No. 91.—Copy of Bill (S. 2621, February 5, 1934) before the United States Senate, to amend the Packers and Stock Yards Act, 1921.

Exhibit No. 92.—Copy of Bill (S. 3064, March 15, 1934) before the United States Senate, to amend the Packers and Stock Yards Act, 1921.

Exhibit No. 93.—Newspaper clipping reporting evidence given before the United States Senate Committee on Agriculture by D. M. Hildebrand, on the marketing of hogs.

Exhibit No. 94.—Comparative statement of market prices for livestock, October, 1933.

Witness retired.

The Committee adjourned at 6 o'clock until to-morrow at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, April 11, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Ilsley, Kennedy (*Peace River*), Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Messrs. Ilsley and Factor having inquired as to the procedure to be followed with regard to the calling of further witnesses to give evidence on the question of livestock, the Chairman gave an outline of the work now being carried out by investigators and accountants, and stated that every opportunity would be given to packers and producers to present their views before the Committee.

With reference to the inquiry into other subject matters of the Reference, it was suggested and agreed that an executive session of the Committee be held to discuss the procedure to be followed. It was also stated that the sub-committee of officials appointed to gather data for the Committee was making considerable progress and would be able to submit a report in the near future.

Mr. H. P. Kennedy was recalled and further examined. He filed,—

Exhibit No. 95.—Statements showing receipts of Live Stock at Canadian markets for the years 1924 to 1933, inclusive, compiled by the Union Stock Yards of Toronto, Ltd.

Witness discharged.

Mr. Gordon Oswin, salesman for the United Farmers Live Stock Department, Toronto, was called, sworn and examined.

Witness discharged.

Mr. O. Freer, representing the United Stockmen Limited, Winnipeg, was called, sworn and examined.

Witness discharged.

The Committee adjourned at 1 o'clock until to-morrow, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

---

Room 368, House of Commons,

Thursday, April 12, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Boulanger, Bell (*St. John-Albert*), Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Chairman read a communication received from J. G. Robertson, Secretary of the Saskatchewan Live Stock Board, incorporating a Resolution passed by that Board.

The Chairman also submitted a letter from the Winnipeg Live Stock Exchange, together with a brief which was read into the record by Counsel.

Mr. A. B. Quinn, a member of the Toronto Live Stock Exchange, was called, sworn and examined.

At 1 o'clock, witness retired, and the Committee adjourned until 3.30 this day.

### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. Quinn recalled and further examined.

Witness discharged.

Mr. T. Ross Chapman, a member of the Toronto Live Stock Exchange was called, sworn and examined.

Witness filed,—

Exhibit No. 96.—Specimen copies of Dunn and Levack sales sheets.

Exhibit No. 97.—Specimen copies of Dunn and Levack sales sheets with weigher's tickets attached thereto.

Exhibit No. 98.—Dunn & Levack sales sheet with attached letter and trucker's statement of account.

Witness discharged.

Mr. Harry Talbot, a member of the Toronto Live Stock exchange was called, sworn and examined.

Witness filed,—

Exhibit No. 99.—Copies of report of the Toronto Live Stock Commission Brokers for the years 1932 and 1933.

Witness discharged.

The Committee adjourned at 5.35 to meet again in executive session at 3.30 p.m., on Monday, April 16.

R. ARSENAULT,

*Clerk of the Committee.*

---

HOUSE OF COMMONS, ROOM 368,

TUESDAY, April 17, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying, met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Clerk filed,—

Exhibit No. 100.—Two copies of the report of the Registrar under the Combines Investigation Act, on an alleged combine of tobacco manufacturers and other buyers of raw leaf tobacco in the Province of Ontario, 1933.

The Clerk also laid before the Committee communications received from the North Battleford Stock Yards Co., Ltd., and Mr. T. Reid, M.P. These were referred to Counsel.

Counsel read a communication received from the Hon. L. Macaulay, Minister of Highways for the Province of Ontario, with reference to evidence submitted by Mr. Ross Chapman on April 12. This was filed as,—

Exhibit No. 101.—Memorandum to the Hon. Mr. Macaulay from J. P. Bickell, Registrar of Motor Vehicles, with attached copy of letter addressed to various packing houses; copy of the Public Commercial Vehicle Act, R.S.O. 1927, Chapter 253 as amended by 1930, Chapter 49; and copy of Regulations respecting the licensing of public commercial vehicles.

The Honourable Donald Gordon McKenzie, Minister of Agriculture, for the Province of Manitoba, was called, sworn, and examined.

At 12.45 p.m., witness retired and the Committee adjourned until to-morrow, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

---

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, April 18, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Chairman informed the Committee that Major C. H. Douglas was being recalled before the Select Standing Committee on Banking and Commerce on Thursday, April 19. It was unanimously agreed that Mr. Douglas be therefore released from attending the Committee on Price Spreads and Mass Buying, and the Clerk was directed to advise Mr. Douglas accordingly.

The Honourable Walter C. Buckle, Minister of Agriculture for the Province of Saskatchewan, was called, sworn and examined.

The witness illustrated his evidence with five charts in blue print which were filed with the Clerk. These indicate: (a) Acreage of wheat, oats and barley in Saskatchewan, 1924-1933; (b) production of wheat, oats and barley in Saskatchewan, 1924-1933; (c) farm live stock in Manitoba, Saskatchewan, and Alberta, 1924-1933; (d) number of live stock in Saskatchewan, 1924-1933; (e) gross value production grain and farm animals, Saskatchewan, 1924-1933.

The witness also submitted a chart entitled, "Searle Farmers' Index of the price of wheat, of things farmers buy, of taxes, of wholesale commodities, and of hourly wages of industrial labour." After some discussion with respect to the information conveyed by this chart, the Clerk was instructed to submit it to Dr. Coats, Dominion Statistician, with the request that it be compared with official statistics, after which an official of the Statistical Branch would be called to explain it further to the members of the Committee.

Witness discharged.

The Honourable D. G. McKenzie was recalled and further examined.

Witness discharged and the Committee adjourned at 12.45 until to-morrow, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

ROOM 368, HOUSE OF COMMONS,

THURSDAY, April 19, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Council to the Committee.

The minutes of the last meeting were approved.

The Clerk filed communications from the Edmonton and Saskatoon Stock Yards, in reply to the information requested by the Committee on March 22.

Mr. Alexander MacKenzie, wholesale butcher, Toronto, was called, sworn and examined.

Witness discharged.

Mr. Robert A. Wright, President of the Western Canada Live Stock Union, was called, sworn and examined.

At 12.50 p.m., witness retired and the Committee adjourned until 4 o'clock this day.

#### AFTERNOON SITTING

The Committee resumed at 4 p.m., Mr. Senn in the chair.

*Members present:* Messrs. Bell, (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

Counsel in attendance.

Mr. Wright recalled and further examined. He filed, —

Exhibit No. 102.—Statement showing cost of handling and distributing milk.

Witness discharged.

The Hon. D. G. McKenzie, Minister of Agriculture for Manitoba, was recalled and further examined.

Witness discharged.

Mr. E. J. Smith, of the White Packing Company, Stratford, Ont., was called, sworn and examined.

Witness discharged.

Mr. W. A. Wilson, Animal Products Trade Commissioner, London, England, was called, sworn and examined.

Witness discharged.

The Committee adjourned at 6.20 until Tuesday, April 24, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

TUESDAY, April 24, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, E. C., Assistant Counsel.

The minutes of the last meeting were approved.

Referring to the printed evidence of April 18, Mr. Young drew the attention of the Committee to a chart submitted by the witness, the Hon. W. C. Buckle, which had not been incorporated in the evidence. The clerk was directed to have said chart entitled "Searle farmers' index" printed as an appendix to No. 21 of the evidence.

Counsel filed,—

Exhibit No. 103.—Copy of the report of the Tobacco Enquiry Commission by the provinces of Ontario and Quebec, 1928.

Exhibit No. 104.—Memorandum entitled: Developments in the tobacco producing industry in Canada, 1928-1934.

Exhibit No. 5.—Statement showing statistics relative to the Canadian Tobacco industry, compiled by the Tobacco Division, Department of Agriculture, Ottawa, dated February 12, 1934.

Before proceeding with the calling of witnesses to be examined on the tobacco industry, Counsel read extracts from the report of the Registrar under the Combines Investigation Act on an alleged combine of tobacco manufacturers and other buyers of raw leaf tobacco in the Province of Ontario, 1933.

Mr. Edmond C. Scythes, President of the Victoria Tobacco Plantations, Simcoe, Ont., was called, sworn and examined.

At 12.50, witness retired, and the Committee adjourned to meet at 4.00, this day.

## AFTERNOON SITTING

The Committee resumed at 4 p.m.

Mr. Scythes recalled and further examined. He filed,—

Exhibit No. 106.—Graph showing United States tobacco growers' receipts and manufacturers' profits. (Printed in this day's proceedings).

Witness discharged.

Mr. H. A. Freeman, tobacco grower, Simcoe, Ont., was called, sworn and examined.

Witness discharged.

Mr. J. F. McKay, President of the Ontario Tobacco Plantations, Limited, Toronto, was called, sworn and examined.

Witness discharged.

The Committee adjourned at 6 o'clock until to-morrow, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

HOUSE OF COMMONS, Room 368,  
WEDNESDAY, April 25, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Clerk filed a communication from Canada Packers Limited.

On motion of Mr. Senn,—

*Resolved*,—That Mr. Leonard W. Fraser, Barrister, 149 Hollis Street, Halifax, N.S., be appointed special investigator to enquire into and investigate the matters that are the subject of the reference to this parliamentary committee on Price Spreads and Mass Buying, in so far as the same relate to the Fishing Industry, and to report from time to time to this Committee.

Mr. W. F. Kingston, tobacco grower, St. Thomas, Ont., was called, sworn and examined.

Witness discharged.

Mr. Archibald Leitch, tobacco grower, Guelph, Ont., was called, sworn and examined.

At 12.50 witness retired and the Committee adjourned until 3.30 this day.

## AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. Leitch recalled and further examined.

Witness discharged.

The Committee adjourned at 4.50 until to-morrow at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

ROOM 368, HOUSE OF COMMONS,

THURSDAY, April 26, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Honourable George Hoadley, Minister of Agriculture, Province of Alberta, was called, sworn and examined.

At 12.55, witness retired and the Committee adjourned until 3.30 this day.

## AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Hon. Mr. Hoadley recalled and further examined.

Witness discharged.

Mr. Rosaire Roch, Manager, "Coopérative agricole de tabac", St. Jacques, Co. Montcalm, Que., was called, sworn and examined.

Witness discharged.

Mr. Philippe Blais, Manager, "La Société Coopérative agricole de la vallée d'Yamaska", St. Césaire, Que., was called, sworn and examined.

Witness discharged.

Mr. M. H. Swatman, tobacco grower, Leamington, Ont., was called, sworn and examined.

Witness discharged.

The Committee adjourned at 6 o'clock, until Tuesday, May 1st, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

TUESDAY, May 1st, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), and Young.

Counsel in attendance, Mr. W. W. Parry, K.C.

The minutes of the last meeting were approved.

On motion of Mr. Boulanger,—

*Ordered*,—That the Clerk of Petitions of the House of Commons appear and submit all petitions received by the House this session against the imposition of a tax on raw leaf tobacco; and that the Prime Minister and the Minister of Finance be respectfully requested to refer to this Committee all petitions or protests against the imposition of a tax on raw leaf tobacco which they may have received during the present session.

Mr. Boulanger expressed the desire to have Mr. Charles Frenette, St. Charles de Bellechasse, and another representative of the tobacco growers in the Province of Quebec called as witnesses before the Committee. This was agreed to and Mr. Boulanger was asked to confer with Counsel as to the date on which these witnesses could be requested to appear.

At the request of Mr. Philippe Blais, a witness who appeared before the Committee on April 26, the Clerk was authorized to make the following correction in his evidence, viz:—

Page 1308 of the printed proceedings, seventh line from the top of the page, the words "green leaf" to be substituted to the word "processed," Mr. Somerville's question to read: "So that the price from 1927 to 1932 dropped from 22 cents to 10 cents; that is the price your farmers got on their green leaf tobacco. . ." etc., and witness' answer: "Yess".

Counsel filed,—

Exhibit No. 107.—Three Charts described as follows:—

Chart "A"—Showing average yearly prices of one pound of wheat, flour used in one pound of bread, and one pound of bread (1913-1923).

Chart "B"—Showing spreads between average yearly prices of one pound of wheat (Fort William basis) flour used in one pound of bread, and one pound of bread (1913-1923).

Chart "C"—Showing relation of Canadian wheat, flour and bread prices, 1924-1933, as compared to the relation of their average for the year 1923.

Exhibit No. 108.—Copy of report by the Registrar under the Combines Investigation Act, relative to an investigation into an alleged combine in the Bread-Baking Industry in Canada, dated February 5, 1931.

Exhibit No. 109.—Copy of report on the Bread and other Baking Products in Canada, 1932, published by the Bureau of Statistics, Department of Trade and Commerce.

Mr. R. J. Pinchin, Vice-President of the Copeland Flour Mills, Limited, Midland, Ont., was called, sworn and examined.

Witness discharged.

At 1 o'clock, the Committee adjourned until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. J. R. Jetté, Manager of L. Caron, Limited, Montreal, was called, sworn and examined.

Witness discharged.

Messrs. W. H. Harrison and G. E. W. Harrison, Montreal, were called together, sworn and examined.

Witnesses filed,—

Exhibit No. 110.—Series of advertisements showing series of reductions in the price of bread by chain stores, including combination prices for one loaf of bread and one quart of milk.

Witnesses discharged.

Mr. Cecil Morrison, of Morrison-Lamothe, Ltd., Ottawa, was called, sworn and examined.

Witness filed,—

Exhibit No. 111.—Newspaper advertisement containing an extract of an editorial from "Advertising and Selling," on the price of bread.

Witness discharged.

Mr. E. A. Berges, of Berges and Shelley, Kitchener, Ont., was called, sworn and examined.

Witness filed,—

Exhibit No. 112.—Three newspaper advertisements illustrating the advertising of bread as a loss leader.

Witness discharged.

The Committee adjourned at 5.30 until to-morrow, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, May 2, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

Counsel in attendance, Mr. W. W. Parry, K.C.

The minutes of the last meeting were approved.

Counsel filed,—

Exhibit No. 113.—Copy of a suggested code of ethics submitted by The Master Bakers Association of Saint John, New Brunswick, together with a number of newspaper advertisements with affidavits attached thereto.

Mr. James Dempster, Toronto, was called, sworn and examined.

Witness filed,—

Exhibit No. 114.—Newspaper clippings identified as (a) Advertisement by A. & P. store offering bread at 5c. a loaf; (b) Extract of a news item in the *Toronto Telegram*, Feb. 8, 1934, entitled "Say city bread supplier pays drivers \$8 a week."

Witness discharged.

Mr. H. W. Ward, Vice-President of Canadian Bakeries, Limited, Calgary, was called, sworn and examined.

Witness filed,—

Exhibit No. 115.—Five photographs submitted as illustrating the unfair exploitation of the baking industry, each photograph identified by numbers 1 to 5 on the reverse side.

Exhibit No. 116.—Series of newspaper advertisements illustrating the use of loss leaders.

Exhibit No. 117.—Copy of a suggested code of ethics submitted by the Master Baker Association of Vancouver.

Witness discharged.

The committee adjourned at 12.45 until 4 o'clock this day.

#### AFTERNOON SITTING

The committee resumed at 4 p.m.

Mr. Mark Bredin, Toronto, was called, sworn and examined.

Witness filed,—

Exhibit No. 118.—Series of advertisements, photographs, invoices, etc., submitted as an illustration of unfair trade practices in the Baking Industry.

Exhibit No. 119.—Statement entitled: Toronto Retail Cake Bakers' criticism on Canadian Bakers' Association code.

Witness discharged.

The committee adjourned until to-morrow, Thursday, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

THURSDAY, May 3, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Mr. J. P. DOYLE, Clerk of Petitions, House of Commons, appeared before the Committee and filed,

Exhibit No. 120.—All petitions and resolutions of protest received by the House of Commons during the present session against the imposition of an excise tax on raw leaf tobacco.

Counsel filed:

Exhibit No. 121.—Statement by the Bureau of Statistics showing the price index numbers and actual price of tobacco from 1926 to 1933, and the prices of tobacco and cigarettes, 1932-1933.

The Clerk filed a letter received from Dr. R. H. Coats, Dominion Statistician, which was partly read into the record.

The Chairman referred to communications received from some of the tobacco manufacturers with reference to conferences held between manufacturers and producers. Mr. A. Leitch, tobacco grower of Guelph, Ont., who was in attendance, was requested to prepare a written statement on behalf of the tobacco growers, this statement with those of the manufacturers to be discussed by the Committee in executive session.

Mr. G. Miller, President of the Imperial Tobacco Co. of Canada, Ltd., Montreal, was called, sworn and examined.

At 1 o'clock, witness retired and the Committee adjourned until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. Miller recalled and further examined.

Witness retired.

The Committee adjourned at 6 o'clock until to-morrow, Friday, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

FRIDAY, May 4, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Mr. Gray Miller, President of the Imperial Tobacco Company of Canada, Limited, Montreal, was recalled and further examined.

Witness stood aside.

Mr. Archibald Leitch, Guelph, Ont., called, sworn and examined.

Witness discharged.

Mr. Miller recalled and further examined.

Witness retired.

At 1 o'clock the Committee adjourned until Tuesday, May 8, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

TUESDAY, May 8, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

On motion of Mr. Edwards,—

*Resolved*,—That the expense accounts incurred in connection with investigations conducted for this Committee by Messrs. S. Cuddy and W. J. Boulton, officials of the Department of Trade and Commerce, be paid.

The Chairman read a communication addressed to him by the National Associated Women's Wear Bureau, Montreal, drawing attention to the fact that some unauthorized person had been seeking information from members of that industry claiming to have been engaged to do so on behalf of this Committee. (Letter printed in to-day's record.)

Mr. Gray Miller, President of the Imperial Tobacco Company of Canada, Limited, Montreal, was recalled and further examined.

In the course of Mr. Miller's examination, Counsel read a communication addressed to him by the witness with a list of statements and other documents filed this day with the Committee, or to be filed at a future date. (Complete list of said statements, etc., printed in to-day's evidence.)

Mr. Henry P. Buell, one of the executive officers of the Imperial Tobacco Company of Canada, Limited, Montreal, was called, sworn and examined concurrently with Mr. Miller.

At 1 o'clock witnesses retired and the Committee adjourned until 4 o'clock this day.

### AFTERNOON SITTING

The Committee resumed at 4 p.m.

Mr. Miller recalled and further examined. He filed,—

Exhibit No. 122.—Statement showing the interest of the Imperial Tobacco Company of Canada, Limited, in B. Houde Company, Limited.

Exhibit No. 123.—Statement showing the undivided profits of Imperial Tobacco Company of Canada, Limited, and its subsidiary companies as at 31st December, 1933.

Exhibit No. 124.—Recapitulation of daily contracts for purchases, by the Imperial Tobacco Company of Canada, Limited, of flue-cured tobacco, 1931 crop, *Delhi*.

Exhibit No. 125.—Recapitulation of daily contracts for purchases, by the Imperial Tobacco Company of Canada, Limited, of flue-cured tobacco, 1931 crop, *Leamington*.

Exhibit No. 126.—Statement showing Delhi green leaf purchases by Imperial Leaf Tobacco Company of Canada, Limited, for the years 1930, 1931, 1932, and 1933.

Exhibit No. 127.—United Cigar Stores Limited: Statement of net income and wages for three years ended December 31, 1931-1933 (for Toronto stores as listed).

Exhibit No. 128.—Imperial Tobacco Company of Canada, Limited, total factory pay-roll for the years 1931, 1932, and 1933.

Exhibit No. 129.—List of salaries and bonuses to chief executives of the Imperial Tobacco Company of Canada, Limited, and subsidiary companies.

Exhibit No. 130.—Copy of indenture dated 7th July, 1921, between *British-American Tobacco Company, Limited*, and *Imperial Tobacco Company of Canada, Limited*.

Exhibit No. 131.—Copy of memorandum of agreement dated 23rd September, 1921, between *Imperial Tobacco Company of Canada, Limited* and *George Garland Allen and Edgar Simeon Bowling*.

Witness retired.

The Committee adjourned until to-morrow at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, June 13, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Ilsley, Kennedy (*Winnipeg South Centre*), Kennedy (*Peace River*), Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee.

The minutes of the last meeting were approved.

Representatives of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, Accountants and Auditors in attendance, Mr. A. E. Nash being recalled and further examined together with Mr. G. G. Richardson who was called and sworn.

Witnesses retired.

The Committee adjourned until 3.30 this day.

## AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Messrs. Nash and Richardson were recalled and further examined.

Mr. Nash filed,—

Exhibit No. 8 (part of).—Summary of Orders passed by the Ontario Minimum Wage Board.

Witnesses retired.

The Committee adjourned at 6 o'clock until to-morrow, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

THURSDAY, June 14, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee.

The minutes of the last meeting were approved.

Representatives of Clarkson, Gordon, Dilworth, Guilfoyle & Nash in attendance, Messrs. A. E. Nash, G. G. Richardson, and W. L. Gordon being recalled and further examined.

Witnesses retired.

The Committee adjourned at 1 o'clock until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Messrs. Nash, Richardson and Gordon were recalled and further examined.

The Committee adjourned at 5.55 until to-morrow, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

---

HOUSE OF COMMONS, ROOM 368,  
FRIDAY, June 15, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens presiding.

*Members present:* Messrs. Stevens, Bell (*St. John-Albert*), Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee.

The minutes of the last meeting were approved.

Representatives of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, Auditors and Accountants, again in attendance.

Mr. W. L. Gordon was recalled and further examined. He filed,—

Exhibit No. 221 (part of).—Schedules on wages, mail order business, price spreads etc., *re* The T. Eaton Co. Ltd.

Witness retired.

The Committee adjourned at 12.50 until Tuesday, June 19, at 11 a.m.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

TUESDAY, June 19, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

The Clerk filed,—

Exhibit No. 8 (part of).—Copy of the Ontario Minimum Wage Act, R.S.O. 1927, as amended in 1929, 1932, 1933, and 1934, together with Regulations.

On motion of Mr. Kennedy (*Winnipeg South Centre*),—

*Ordered*,—That Mr. Sylvester Robbins, of New Toronto, who attended as a witness for three days, from May 8 to May 10, inclusive, and who was paid for only two days, be paid \$10 additional to what he has already received.

On motion of Mr. Kennedy (*Winnipeg South Centre*),—

*Ordered*,—That expenses incurred by T. C. V. Champion, with respect to investigational work for this Committee, be ratified, and that the accounts submitted by the National Research Council for expenses so incurred be paid.

Messrs. A. E. Nash and W. L. Gordon, of Clarkson, Gordon, Dilworth Guilfoyle & Nash, Chartered Accountants, Toronto, were recalled together and further examined.

Mr. Gordon retired.

Mr. Thomas Weir, of the above firm of Accountants, was called, sworn and examined with Mr. Nash. He filed,—

Exhibit No. 223.—Memoranda *re* The Hudson's Bay Company, on (a) organization, financial structure and merchandising policies; (b) on salaries and wages; (c) on purchases in selected departments and price spreads; together with schedules referred to therein.

Exhibit No. 224.—Map of the Dominion of Canada, showing the establishments and transport routes of The Hudson's Bay Co.

Witnesses retired.

The Committee adjourned until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Messrs. Nash and Weir were recalled and further examined.

Witnesses retired.

The Committee adjourned at 6 o'clock until to-morrow, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, June 20, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Representatives of Clarkson, Gordon, Dilworth, Guilfoyle & Nash in attendance, Mr. A. E. Nash being recalled and further examined with Mr. S. H. Dobell, who was called, sworn and examined.

Mr. Nash filed,—

Exhibit No. 225.—Original report of Creak, Cushing & Hodgson, Chartered Accountants, Montreal, *re* Henry Morgan & Co., Ltd., as submitted by Mr. Glassco.

Witnesses retired.

The Committee adjourned at 12.55 until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. J. G. Glassco, of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, and Mr. A. E. Nash were recalled and further examined.

Witnesses stood aside.

Mr. T. V. Hurson, Investigator for the Committee, was called, sworn and examined.

Witness retired.

Mr. Glassco was recalled and further examined.

Witness retired.

The Committee adjourned at 5.50 until to-morrow, at 11 a.m.

R. ARSENAULT,

*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 368,

THURSDAY, June 21, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 11 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, K.C., Assistant Counsel.

The minutes of the last meeting were approved.

Mr. J. G. Glassco, of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, Chartered Accountants, Toronto, was recalled and further examined.

Witness retired.

The Committee adjourned until 3.30 this day.

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

Mr. Glassco was recalled and further examined.

Witness retired.

The Committee adjourned until to-morrow, at 10.30 a.m.

R. ARSENAULT,  
*Clerk of the Committee*

---

HOUSE OF COMMONS, ROOM 368,

FRIDAY, June 22, 1934.

The Special Committee appointed to inquire into Price Spreads and Mass Buying met at 10.30 a.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn, and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee, and Mr. W. W. Parry, Assistant Counsel.

The minutes of the last meeting were approved.

On motion of Mr. Edwards,—

*Resolved*,—That the appointment of Mr. F. R. Gregory, Leamington, Ont., as special investigator in connection with the tobacco inquiry conducted by this Committee be ratified, and that the expenses incurred by Mr. Gregory, amounting to \$25.70, be paid.

Mr. J. G. Glassco, of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, Chartered Accountants, Toronto, was recalled and further examined. He filed,—

Exhibit No. 226.—Auditors' report on shoe companies (Referred to in Nos. 56 and 57 of printed record).

Exhibit No. 227.—Auditors' report on manufacturers of men's clothing (Referred to in No. 57 of printed record).

Exhibit No. 228.—Auditors' report on Company manufacturing overalls and work-shirts (Referred to in No. 57 of printed record).

Exhibit No. 229.—Report and exhibits on investigation by Auditors of Winnipeg clothing manufacturers.

Witness retired.

Mr. T. V. Hurson, Investigator for the Committee, was recalled and further examined.

Witness discharged.

Mr. R. P. Sparks, Ottawa, who gave evidence on June 4 and was then discharged, was recalled, sworn and further examined.

Witness discharged.

The Committee adjourned at 12.50 until 4 o'clock this day.

#### AFTERNOON SITTING

The Committee resumed at 4 p.m.

Mr. A. E. Nash, of Clarkson, Gordon, Dilworth, Guilfoyle & Nash, Chartered Accountants, Toronto, was recalled and further examined. He filed a number of statements which were ordered printed into this day's record.

Witness retired.

Mr. L. W. Fraser, Investigator for the Committee, Halifax, N.S., was called, sworn and examined. He filed,—

Exhibit No. 231.—Record of views expressed by fishermen and others through interviews with Mr. Fraser.

Witness retired.

Mr. C. V. Fessendon, Investigator for the Committee, Kitchener, Ont., was called, sworn and examined. He filed,—

Exhibit No. 230.—A summary of particular purchases of furniture by Department stores, showing cost and profit to manufacturer.

Witness retired.

The Committee adjourned at 6 o'clock, to meet in executive session on Monday, June 25, 1934.

R. ARSENAULT,  
*Clerk of the Committee.*

HOUSE OF COMMONS, ROOM 496.

THURSDAY, June 28, 1934.

The Special Committee appointed to enquire into Price Spreads and Mass Buying met *in camera* at 5 p.m., the Chairman, Hon. Mr. Stevens, presiding.

*Members present:* Messrs. Stevens, Baribeau, Bell (*St. John-Albert*), Boulanger, Edwards, Factor, Ilsley, Kennedy (*Peace River*), Kennedy (*Winnipeg South Centre*), Senn and Young.

In attendance, Mr. Norman Sommerville, K.C., Counsel to the Committee and Mr. W. W. Parry, K.C., Assistant Counsel.

On motion of Mr. Edwards,—

*Ordered*,—That the evidence given before this Committee on June 14, by Mr. W. L. Gordon, be amended in accordance with Mr. Gordon's letter of the 26th June, addressed to the Clerk of the Committee, viz:—

In the tenth line of page 3446, in answer to a question by Mr. Sommerville, the figure \$750 to be substituted to that of \$750,000, with respect to the advertising allowances received by the Winnipeg Furniture Department of the T. Eaton Co. Ltd., in 1933, making the sentence read as follows:—

Contributions to the advertising of this Department were received from five manufacturers and they totalled \$750 in 1933.

The Chairman presented a draft report for approval.

On motion of Mr. Senn,—

*Resolved*,—That the draft report as submitted by the Chairman be adopted, and that it be presented to the House as the Committee's Third Report.

The Committee adjourned *sine die*.

R. ARSENAULT,  
*Clerk of the Committee.*

## MINUTES OF EVIDENCE

HOUSE OF COMMONS, ROOM 268,

February 22, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Gentlemen, there is a small item of business which I would like to bring to your attention before we proceed in the regular order. Counsel would like to be authorized to arrange to call witnesses in the usual way. That, I think, requires a motion. The motion suggested is that authority be given to the clerk to call any witnesses required by counsel for the committee. Then, if any member of the committee wishes to have a witness called he can make arrangements with counsel for so doing. I think that should work with entire satisfaction. Of course, if there is not entire satisfaction the matter can be brought before the committee if it is so desired.

Mr. FACTOR: That is, if a case arises where counsel thinks that the witness should not be called and the member of the committee thinks that he should, then the member will come to the committee for permission.

The CHAIRMAN: Exactly; if you cannot come to an understanding. I do not anticipate there will be any difficulty.

The CHAIRMAN: Gentlemen, to-day we have asked Dr. Coats, Dominion Statistician, to be here. He has had only a very short time with Dr. Tory, Mr. McGregor and Mr. Hereford to scan over the first part of our order of reference; but Dr. Coats will give to the committee an outline of their preliminary survey. It must, of course, be understood that in the short time which has elapsed this cannot be a very detailed or elaborate outline, but I am quite confident that Dr. Coats will be able to give to you some very useful and interesting advice, and an analysis of the situation. Might I ask that before Dr. Coats starts he should probably take up his position in the room so that members of the press will be able to hear. The press have indicated that they will be unable to hear if Dr. Coats has his back to them.

Mr. FACTOR: Is this room to be our permanent quarters?

The CHAIRMAN: It seems to be the best we can do. I am not very well satisfied with it. I have been after the clerk of the house for better quarters. The banking committee will be sitting on very important business themselves and it is probable that they will take the railway committee room. There is another room upstairs.

Mr. SENN: There is room 429; that is a good room.

The CHAIRMAN: Where is that?

Mr. SENN: It is in the back corridor.

The CHAIRMAN: That is the one I am speaking of. We will have a go at it. I will now call on Dr. Coats.

Dr. R. H. COATS, Dominion Statistician, called.

The WITNESS: Mr. Stevens and honourable gentlemen: it occurred to me in coming before the committee that there were three things I could do in this preliminary hearing; first, I might as a professional statistician and more or less perennial investigator into economic subjects sketch an organization of the subject matter that might fall within the scope of an inquiry of this kind, with a view to the orderly covering of the field; secondly, I might, more particularly give you a broad idea of the kind of materials that are already available in the various government departments, particularly on the specific point of the spread in prices; and thirdly, I might refer very briefly to the Census of Distribution, i.e., of wholesaling and retailing which was taken for the first time in Canada in 1931. The latter is very full of most interesting results, placing wholesaling and retailing activities in their general setting in the social and economic life of the country.

On the first point, namely, the procedure and method of organizing the subject matter falling under the committee, I have prepared a memorandum (Exhibit No. 2, printed at the end of this day's evidence), which perhaps I could leave with the committee for reference—if you consider it of value—in the meantime commenting on some of the points it brings out. I would suggest—again I say as a professional statistician and economic research worker—that the method should be adopted from the outset of proceeding from the particular to the general, if you are not to avoid a considerable dissipation of effort and waste of time. The field is an immense one, and it can only be covered, to my way of thinking, by seeing the forest as well as the trees in it, and by knowing very specifically just where you are at any stage of the inquiry. The terms of the motion itself are both specific and general. The preamble states the general problem, but the four subsections, especially C and D discuss particular trades. It is suggested that the committee begin with the very specific items of C and D which refer respectively to the situation concerning the marketing of live stock and live stock products and to the situation as regards flour milling and baking. The committee might then proceed, perhaps concurrently, but keeping the two phases distinct, to A and B which have to do with a practice rather than a particular trading field, namely, mass buying, and the repercussions of mass buying on conditions of labour and the retail trade generally.

I would like here to suggest that in addition to animal products, and with a view of making the specific inquiries more complete from the standpoint of the terms laid down in the preamble or general objective, that you should add the item of fruits and vegetables in which there is a good deal to be learned as regards marketing processes—from the stage in which the vegetable is grown on until it reaches the consumer in the raw or prepared state.

Fish is, of course, an "animal product". I understand from the discussion in the House on the motion that fish is to be separately investigated. The conditions surrounding fish marketing are so distinct and different from those in livestock products that they merit, perhaps, special mention.

Now, if you proceed in that way by taking up specific marketing fields, I think as the inquiry proceeds various practises, desirable or undesirable as the case may be, will come into view,—such things as "lost leaders", secret rebates, misleading advertising, the opportunities for more standardization, various aspects of cutthroat competition, and so on. In this way we can gradually accumulate a mass of information on these and other practises looking to any remedial action that may be thought necessary. The inquiry would be facilitated if, at as early a date as possible, Mr. Chairman, there was a resumé made of the various materials that have been collected under previous inquiries of one kind or another; and these materials are very considerable and I think very instructive to the committee in certain cases.

If a certain number of specific marketing fields were explored in this way and the conditions concerned were thrown into relief, I think you might then proceed, perhaps concurrently, from the theoretical standpoint with the consideration of broad questions—subjects of a general kind—that you will want to know about before the inquiry is over. I have listed eight or ten of these, and I might read what it seems to me will be thrown to the top from time to time, and on which you might proceed to collect the materials that are available.

First, *sweatshop abuses*, which will lead to a consideration of minimum wage legislation in the several provinces, and perhaps to some phases of factory legislation;

Secondly, *farmers' markets*. The farmers' market is an old device for bringing producer and consumer together, and it is a device that has great utility in preventing price spreads.

The CHAIRMAN: You are referring to the market places in the towns?

The WITNESS: Yes—retailing market places in the towns. That is a device which is worthy of study. The farmers' market in Canada of some years ago had rather fallen out of pace with development elsewhere, largely through lack of appreciation of the importance of transportation facilities and of having markets follow population into the different sections of our large cities, and of having terminal and other facilities provided. In cities like Paris, Budapest, and even Boston the technique of the farmers' markets has been greatly developed, with valuable results.

Then there is the question of the regulation of commission houses in the marketing process. Various states in the United States have promulgated or suggested legislation on this point. Under our own Combines Investigation Act, in connection with the distribution of fruits in western Canada, if I remember rightly, there were in 1925-6 revealed certain abuses in connection with the operations of commission houses.

There is further the general problem of Co-operation. We have developed producers' co-operation to a certain extent in Canada, and we have developed co-operative credit in the province of Quebec to quite a considerable extent; but we have very little representation of consumers' co-operation. Perhaps the intense individualism of the people on this north American continent accounts for this in the main; but there is a lack of facilitating legislation, and even if legislation exists it is necessary to have a Sir Horace Plunkett to draw attention to it.

The fifth subject that will probably come before the committee before the inquiry is ended is standardization and the extent to which improvement in legislation or regulation on this subject is called for.

Further, there is the question of the *Companies Acts*. This is a provincial as well as a dominion matter, but investigation might be made of the degree of latitude that is allowed with regard to, say, capitalization and other phases, in their effect, first, upon the investor in company securities, and, secondly, upon the consumer of company products. The question of more detailed annual reports under our various companies acts will, I feel confident, come up.

Then there is the whole problem of our anti-combine legislation and machinery and its operation—can anything be learned from experience elsewhere under that heading?

Under No. 8 I have noted the question of industrial and trade associations and their operations in Canada. The very interesting part which the American industrial and trade associations are now playing in the organization of trading operations in their respective fields might be reviewed. American "Better business Bureaus," of which we have some examples in Canada, might be worthy of investigation. We might review the United States' licensing system in rela-

tion to traders' and manufacturers' associations, which is by way of a disciplinary control. Then there is the question, and it is a very large question, to what extent we are prepared to make such associations compulsory. The pendulum has swung away from the idea, which was rife some years ago, that any association of manufacturers was a combine and could not exist for beneficent purposes. American opinion, at least, has accepted associations of manufacturers as beneficent.

There is the further big question of the creation of a federal trade commission, i.e., the advisability of some central organization for the continuous observation and regulation of trading practices. We have the Board of Railway Commissioners reviewing railway tariffs, and practices. Of course, trading is a much larger and more amorphous subject.

It is only a few years since we definitely decided to set up a Board of Commerce in Canada, and that board did operate for a number of years. The constitutional aspect of that question would have to be considered.

And finally, in those notes that I have jotted down, I have mentioned the possibility of an advisory economic council. That is a very large subject, and its implications, of course, relate to more than the trading field. As a matter of fact, there is another motion on the order paper for discussion in the House of Commons just now.

These are some of the broader considerations that arise within the field of trading activities. Of course, you could go very far afield in this inquiry if you include all subjects, that have some incidence on trading operations. But keeping within the limits of considerations that apply mainly in the area of distribution, I think it would be well worthwhile to have the available data from a theoretical and practical standpoint collected on those points and made available for the committee. The final recommendations of the committee could then represent a process of evolution, from a series of facts in the prospective fields, and proceeding from these facts to such generalizations and broad remedial recommendations as might suggest themselves.

In the factual investigations I think that the utmost care should be taken throughout to ensure consideration of every important point of view and every important interest which may be involved. Finally, as I said at the outset, it seems very important that the committee should "see the forest as well as the trees" in this programme upon which they are entering, so that at all times they know exactly where they are, and thus produce constructive results. I will leave this memorandum, if it is of any value to you, with the clerk, for reference.

The second phase that I might speak to you about is the general problem of the materials that are already available for the committee's consideration in the various departments, and more particularly materials relating to the spread in prices.

There are some nine groups of commodities under which these data may be listed: first, wheat, flour and bread; second, livestock and animal products; third, dairy products; fourth, fish; fifth, fruits and vegetables; sixth, tobacco; seventh, coal; eight, gasoline; ninth, various manufacturers. I mention tobacco and gasoline because there is quite a lot of material already available on those commodities.

I can tell you in a rough outline, under each of those headings what materials are available from various departments and from various investigations that have been made from time to time. Although I have not got any final data to lay before you on the question of price spreads, I can show you some *interim* materials that are, I think, interesting, and that will indicate to you the sort of materials that are available. For example, under wheat, flour and bread, we have, of course, in the Dominion Bureau of Statistics, a great mass of data on agricultural production and the marketing of agricultural products, and the prices at various stages in the process. There was, in the domain of the marketing of

wheat, a royal commission headed by Sir Josiah Stamp, some two years ago. In the domain of flour and bread, there have been two investigations under the Combines Investigation act, the materials of which are very detailed and voluminous.

On the point of agricultural price spreads, I have here a few tables that I think would be interesting to lay before the committee. They are preliminary only, but they will give you an idea of the sort of thing that is available in this single aspect of prices; and it may point to lines of further inquiry. In proceeding to speak on agricultural prices and the spread as between the producer and consumer of agricultural products and manufactured products derived therefrom, there are two lines of approach. From the *relative* point of view, you can take the prices, say, of wheat, flour and bread over a period of years, and accepting the spread at the beginning of that time as normal, you can show whether the spread has widened or lessened in the meantime. I have taken wheat, flour and bread in 1926 and made the price equal to 100 in that year, and the table shows what has happened since 1926. For example, if we take No. 2 northern Manitoba wheat at Fort William a cash basis in 1926 and place it at 100, in 1933 it was 40.8—

Mr. ILSLEY: I thought you said 100.

The WITNESS: 100 in 1926. We have taken the index number for 1926 as 100. Then, the average price in 1933—

Mr. FACTOR: Are you going to file this table? (Exhibit No. 3).

Mr. SENN: I suggest the table be printed in the report.

The WITNESS: I would not decide that for the moment. We may have a better table. At any rate, you can see what it shows. Wholesale flour, first patents at Montreal, have declined from 100 in 1926 to 57.7 in 1933.

Mr. YOUNG: That was the figure for 1933?

The WITNESS: Yes. The retail price of flour at Toronto has declined from 100 to 52.9. The wholesale prices of bread at Toronto has declined from 100 to 90.1. The retail price of bread in Toronto has declined from 100 to 91.8. I can give you the same figures for Winnipeg. The retail price of flour at Winnipeg has declined from 100 to 53.7, and the wholesale price of bread from 100 to 83.3. The retail price of bread at Winnipeg has declined from 100 to 85.7. That shows what always happens in times of depression or in times of boom. In such times, raw materials gyrate upwards or downwards much more rapidly and violently than manufactured products. Wheat fluctuates much more violently than does a final product like bread. If you observe the fluctuations of wheat you will find that within a single week it may move very violently; in fact, within a single hour. On the other hand, the price of flour will sometimes go for considerable intervals on an even keel, and then again, the price of bread may go weeks and months and even years without change.

Mr. HEAPS: Has your department any figures to show what it costs to produce a pound of bread?

The WITNESS: I would suggest on that subject that you consult the report on the bread baking industry in Canada, which was brought out in 1931 under the Combines Investigation Act. That investigation discussed bread prices very exhaustively, also bread costs, the content of different loaves that were analysed at different points—because a loaf of bread is not always the same—and various questions of that kind. It was quite an exhaustive investigation, I believe Mr. Heaps.

Mr. FACTOR: What year?

The WITNESS: 1931.

The CHAIRMAN: It will be borne in mind that Dr. Coats is submitting this as an illustration of a process of study and not as a part of a finished study on any given subject.

Mr. BOULANGER: May I ask what the reasons were for selecting the year 1926 as the basis of your calculations?

The WITNESS: Well, it is just a few years ago. We can adopt for the committee any year they desire; it does not really matter.

Mr. BOULANGER: I thought you had a special reason.

The WITNESS: The special reason was the lazy reason. All our index numbers are on the 1926 basis, and so we did not have to make an additional calculation.

The CHAIRMAN: It is very widely used. It is the Fisher index in the United States, and the London Economist, I think, takes 1926. A great many bodies that make these indices use 1926 as the base year. There is no special reason for it.

The WITNESS: It is a very good year, as a matter of fact. If you will remember there was depression in 1923-24, and there was a considerable recovery by 1926. It preceded the boom of 1927-28, and of course it preceded the present depression, so that most statisticians still look on the year 1926 as a fairly normal yardstick. I think it is as good as you can get, but if for any reason the committee would be better served by another basis, it is only a matter of clerical labour to do so.

Now, I follow that table of index prices on the 1926 basis, with a table showing the spreads in the actual prices of those same commodities from month to month for the past two years. I have listed the average price per month of No. 2 Manitoba Northern at Fort William, the wholesale price of Manitoba first patent flours at Montreal, the average retail price of flour at Toronto, and so on. It is the same list as that in which I have given the index numbers, so that you can see the actual prices, and the spreads. For example, in 1932, the average price of No. 2 Manitoba Northern wheat f.o.b. was 87—these prices have been reduced to a per pounds basis.

Mr. SOMMERVILLE: .87.

The WITNESS: Yes, .87. The average price per pound of wheat was .87 in 1932; in 1933 the average price per pound was .98. The average price per pound of Manitoba first patent flour in 1932 was 2.46; in 1933 the average price per pound was 2.60. The retail price of flour at Toronto was 2.8 and 2.7 respectively for those years. The average retail price of bread at Toronto was 6.7 and 6.7. These prices are on a per pound basis throughout.

Then, you have the same figures for Winnipeg. The spread, as you will see, is from .98 cents per pound for wheat, to 2.6 cents per pound for Manitoba first patent flours, 2.7 being the retail price for flour at Toronto, and 6.7 for bread at Toronto. These two tables I submit will be interesting to investigate in a preliminary way. They can be amplified materially, if you wish, later.

I have another table here, a table which shifts the scene to hogs and hog products, and is regarded as representative of raw and manufactured commodities in this field. Hog prices first—I refer to the index number: the prices of live bacon hogs at Toronto has gone down between 1926 and 1933, from 100 to 42.5. The wholesale price of pork carcass, shop hogs, at Toronto has gone down from 100 to 43.6. The retail price of fresh pork has gone down from 100 to 50.6. The wholesale price of standard, smoked, light bacon at Toronto has gone down from 100 to 47.9. The retail price of bacon at Toronto has gone down from 100 to 57.0. The retail price of lard at Toronto has gone down from 100 to 50.0. Bacon hogs at Winnipeg, wholesale—it is the same story for Winnipeg in this second table.

*By Mr. Edwards:*

Q. These are fiscal years, are they; 1926 and 1933 are fiscal years?—A. No.

The CHAIRMAN: Calendar years.

The WITNESS: Calendar years.

*By Mr. Senn:*

Q. Is that the average over the year?—A. That is the average over the year. This second table gives for 1932 and 1933 the actual prices from month to month. In 1933 the average wholesale price of bacon hogs per pound at Toronto was 5·66. The wholesale price of pork carcass, shop hogs, per pound at Toronto was 9·0. The average retail price of fresh pork at Toronto per pound was 15·9. The wholesale price of bacon, standard, smoked, light, per pound at Toronto was 15·8. The average retail price of bacon per pound at Toronto was 20·3. The wholesale price of lard, in tierces, per pound was 10·1, and the average retail price of lard at Toronto per pound was 11·8; and similar figures for Winnipeg are quoted.

*By Mr. Young:*

Q. You gave us figures to show that when the price of a raw commodity drops, the price of the manufactured goods lags behind. Can you give us any corresponding figure to show what the lag is when the market is going up?—A. Yes. I have some tables and charts here which I will show you in a moment and which tells the general story of that very feature back to 1913. Before proceeding to that, perhaps I might just finish this aspect.

Q. I would like to have those tables set aside, if possible?—A. I was suggesting that I might give you some sugar figures, and I will then be finished with this phase of the subject?

Q. All right.—A. Take the situation of sugar at Vancouver—

*By Mr. Boulanger:*

Q. You mean cane sugar, do you?—A. Yes, cane sugar.

Q. Beet sugar and maple sugar have nothing to do with it?—A. No.

The CHAIRMAN: It is cane sugar.

The WITNESS: Yes, it is cane sugar. The index numbers comprising 1926 and 1933 in the sugar field, are as follows: raw sugar has declined from 100 in 1926 to 64·2 in 1933. The wholesale price of granulated sugar at Vancouver has declined from 100 to 96·8, and the wholesale price of yellow sugar from 100 to 96·6. The retail price of granulated sugar at Vancouver has declined from 100 to 90·7, and the retail price of yellow sugar at Vancouver has declined from 100 to 95·7. There follows again the specific prices for sugar for the past two years, which shows a spread in 1933 between raw sugar and refined, granulated sugar from 2·54 to 5·73; and between the latter and retail prices again, to 6·8.

The CHAIRMAN: Gentlemen, in regard to these very interesting tables, do you wish them printed? I might point out for the consideration of the committee, that all of this is a summary by way of illustration at the moment. A specific study, must of course, be made on each subject later on. I would like the view of the committee whether these should be printed, or simply filed for the moment as exhibits just at this point.

Mr. FACTOR: I think they should be put on the record.

Mr. EDWARDS: Just multigraphed copies.

Mr. SOMMERVILLE: They are just specimens of the class of study.

Mr. SENN: That is all.

The CHAIRMAN: I want the committee to realize this: they are not analyzed or extended, and must not be accepted as the final word on the subject with which they treat. Is it the opinion of the committee that they should be printed or merely mimeographed?

Mr. EDWARDS: Just mimeographed, I would suggest.

The CHAIRMAN: They are to be mimeographed for study by the members of the committee.

Mr. YOUNG: When Dr. Coats is preparing these for us, would it be possible for him to outline in the same document what the unyielding factors are when prices may have lagged?

The CHAIRMAN: Unquestionably all of that will have to be gone into with care. For instance, one can see a good many questions you would want to ask Dr. Coats on the phenomena that he has here set forth.

Mr. YOUNG: Yes.

The CHAIRMAN: I think it would be wise to leave it until we follow the study systematically. A full opportunity will be given on all that.

The WITNESS: Mr. Young was speaking of the historical view, were you not?

Mr. YOUNG: I want to know what the lag is when the prices go up. You have given us the lag when prices go down.

The WITNESS: Well, I have three charts here which have been made on that point. They are very interesting to look at, because they go back to 1913, for a large class of commodities. I think they might be passed around, perhaps; I am sorry I had not time to have them reproduced.

The CHAIRMAN: We will reproduce them and attach them.

The WITNESS: I will reproduce these and submit them.

For example, here is a chart that shows trends in farm products at wholesale, and on the farm; producers' goods, that is, various goods that are used by manufacturers and other producers as raw materials as well as capital goods; consumers' goods, by which we mean foods and clothing and the sort of thing that we individually buy in their final form for personal consumption; and finally retail price in general. There four groups are charted in this diagram from the year 1913 to the year 1933, showing just the way in which they have behaved from year to year.

From 1929 down, they have all fallen. The chief fall has been in farm products, just as the chief rise in the last year has been in farm products. Farm products have fallen fastest and turned around quickest. They fell from a point in 1929 that was higher than the others. Consumers' retail prices have dropped the least; consumers' goods the next least and producers' goods the next. That is the story for the last five years. You can see just how these different classes have been hit in varying degrees. The great calamity that is represented by changes in the price level is in the dislocation that always happens, dislocation of the purchasing power as between different economic groups. If prices would only either stay still, or all go up or all fall simultaneously they would be like people in an elevator; relatively to each other they would not change. The trouble is in the dislocation that happens. Raw materials and farm products commonly attain greater heights in time of boom but greater depths in time of depression; as to retail prices, the further you get from raw materials the more equilibrium you usually find in the price level. As I was saying a few moments ago, while wheat may go all over the lot within a week it is very seldom that there is a change in the price of bread—it goes on for months, even for years without a change.

The CHAIRMAN: We will file these charts with the others, and have them mimeographed.

The WITNESS: I can put these in shape, so that they can be passed around.

I might, as an illustration of the kind of materials that the committee can draw upon, refer to a docket I have here on fish products. In the first place, there is an annual report on the fisheries which sets out in great detail what our fisheries production is. Fishing, of course, is one of our great historic industries; our present fishing grounds—both salt and fresh water—are perhaps the most extensive in the world. I do not think they yield precedence to any except possibly those of the North Sea. Lobstering and salmon canning in Canada are two of the greatest industries of their kind anywhere. Yet it is a fact that the trade in products derived from this great natural resource has been always beset with considerable difficulties.

For the study of the fishing situation, there is an annual report of the catch in great detail, a report of the pack of the canneries in great detail, and a report on the import and export trade in great detail. On the subject of prices we have a good deal of information. For example, take fresh haddock: the prices I am going to mention are very hastily put together and I would not vouch that they are strictly accurate, but I think they are within measurable distance of accuracy. For fresh haddock the fisherman in Nova Scotia receives, let us say, one and a half cents a pound. He sells the fresh product largely to companies—fish companies operating on the coast. They sell the haddock fresh at, say three and a quarter cents a pound. Sometimes they sell to the wholesaler at inland points like Montreal; sometimes they sell direct to large retailers in the interior cities. The wholesale price at Montreal is naturally higher, and finally the retailer in Ottawa gets from twelve to fourteen cents, say, for fresh haddock, or perhaps as high as twenty cents for haddock fillets, or some choice bit of the fish. That is a large spread, of course, perhaps eight or ten times between the producer and the consumer. But that spread has been officially investigated in all sorts of detail on at least three occasions within the last few years. There was a parliamentary committee in 1916 which collected voluminous evidence and published it in a report of the same session. In 1926-27, and this is coming within measurable distance, there was a royal commission of which Mr. Justice Maclean was Chairman, which investigated the fisheries of the maritime provinces and issued a report of which I have a copy here, dealing very extensively with the marketing process, going into the question of prices I am speaking of, and allocating the costs of handling, icing, refrigeration and so forth in great detail,—delivery charges, distributors' profits, all that sort of thing. This was laid bare in a report which is only six or seven years old. More recently, in 1932—which is only two years ago—there was a report on the marketing of Canadian fish and fish products made for Hon. Mr. Rhodes, then minister of fisheries, by Cockfield, Brown and Company. Their investigation, I believe, was prolonged and very thorough, and very voluminous in final results. The complete report has not been published but a digest of it has been issued and it runs to some eighty or ninety pages. It sets forth in the final chapters 160 conclusions as to facts, and 12 or 15 conclusions and recommendations based on the interpretation of those facts. Those conclusions and interpretations cover very thoroughly the problem that is involved in the marketing of fish products, both fresh and cured. Needless to say, the Department of Fisheries has been very closely in touch with all these operations and investigations, and I am not the person that should be speaking to you about them. The Deputy Minister of Fisheries, Mr. Found, has the whole matter at his finger ends and could place it before the committee very satisfactorily, I am sure.

A few years ago in the fishing trade, I understand that the great difficulty was at the retailing end of the process, methods of handling fish products, and methods of proper display; methods of refrigeration and of keeping the fish fresh, and so on. The Department of Fisheries, years ago, began an educational campaign on that point, and it has been very successful. It has without doubt,

in the last few years alone, tremendously improved the retailing end, in having the fish reach the consumer in better shape. The fish trade has a distinct technique, and it suffered in the old days from the fact that it was not considered as requiring a special technique. Consumption, in consequence has improved; one evidence is that small "fish and chips shops" are growing up in Canadian cities, a thing we never had until the last few years, as far as I know. The main difficulty in this field appears to lie, at the present moment, in the wholesaling end, with the methods of fish buyers on the coast, amongst whom competition is extremely keen, leading at times to cutthroat methods. These methods are visited back, so it is said, on the fishermen on the one hand, and they also exercise, sometimes, a demoralizing influence on the wholesale market. The regulation of a feature like that, of course, is a provincial concern. One of the difficulties is that the fresh fish trade is only a limited part of the total fish trade, and it is accordingly harder to regulate. What I was just saying applies to the Atlantic coast, but I understand there is something of the same situation in the export dry fish trade on the Pacific coast, where competition and price cutting amongst the shippers sometimes reaches a point where there is nothing in the way of a profit either for the fisherman who catches the fish or the wholesaler who processes them and markets them. As I said a moment ago, on all such points as that, the committee, I am sure, would find a wealth of information in the Department of Fisheries and I am merely mentioning the subject as instancing the kind of materials that are available already for the committee.

I do not know, Mr. Stevens, that there is anything more I have to say. I could exemplify what is available in a number of other fields, but I do not know that that is necessary; I could do that as well by letter or by memo to the secretary of the committee.

Mr. FACTOR: What about the census taken by your division in 1931; will you file it?

The WITNESS: That is perhaps the concluding thing I have to say. This census was a very exhaustive one. It was the first investigation of the kind that was ever carried out in Canada. We had a quasi census of the kind in 1923, but we had to stop before completing it, and its results were so partial that we have never said very much about it. But the census of merchandising and service establishments which we took in 1931 is an exhaustive one, and has many most illuminating figures as to the economic importance of distribution amongst the other broad economic interests of the country.

I have a brief memo here which will illustrate some of the phases on which it throws light. The compilation is now in the final stage in the bureau of statistics and in a very few weeks' time we will have practically all details at our disposal. I suggest that in two or three weeks' time it might interest the committee if the chief immediately in charge of that census could come before you. In a census of this kind there are numerous points of view of great importance and interest that the committee should have before them. For example, it is interesting to note that the sum total of the retail turnover in 1931 reached \$2,805,000,000. Now, the sales of sectional or national chain stores made up \$530,753,000 of that total; that is 18.9 per cent. Turning to departmental stores, which are not included in chain stores, and including those that do a business of a million dollars a year and over each, their turnover was \$284,102,000, or 10 per cent of the total merchandising done in Canada. The business of all large central organizations formed 29 per cent of the total retail business of Canada.

The importance of large scale buying again is revealed more clearly in certain other figures. For example, the proportion of chain store business among grocery stores, grocery and meat stores, shoe stores and ready-to-wear stores in

Canada is as follows: In groceries, 21·67 per cent; in grocery and meat stores, (that is combined stores) 34·24 per cent; in shoe stores, 18·29 per cent; and in women's ready-to-wear, 13·56 per cent.

Mr. SOMMERVILLE: That is, 34 per cent and 21 per cent together represents chains handling either groceries or groceries and meats; over 55 per cent of the entire purchasing of groceries and meats was through chains, either single or combination stores.

Mr. YOUNG: No, that would not follow at all, would it?

The CHAIRMAN: What is that? Will you explain just what these percentages are?

The WITNESS: These percentages are the percentages in each branch of the total that is done by the chain stores in each branch.

Mr. YOUNG: You mean, in a particular branch.

The WITNESS: For instance, in grocery stores alone (not combination stores, just grocery stores alone) chain stores do 21 per cent of the total business; in the combination grocery and meat stores they do 34 per cent.

The CHAIRMAN: Is that percentage the percentage of the total business done in Canada, or the 18 per cent of the business done by chain stores.

The WITNESS: Of the total business done in Canada. Of the total turnover of grocery stores in Canada 21 per cent represents the turnover in chain stores.

Mr. KENNEDY (Winnipeg): Is it grocery stores, or is it grocery and meat stores? The percentage I am trying to get at is whether one of these figures includes the other, or whether each is mutually inclusive.

The WITNESS: I don't know that I follow you.

Mr. KENNEDY (Winnipeg): The 34 per cent includes the 21 per cent, as I understand it.

The WITNESS: No. These are to be taken singly.

Mr. KENNEDY (Winnipeg): Well then, have you a figure which expresses the total?

The WITNESS: No, but I would suppose it would be somewhere between 21 per cent and 34 per cent. I can get you that, I simply have not stipulated it here.

Mr. SENN: Would one gather from that, Dr. Coats, that these chain stores have a larger proportion of the trade than other stores have?

The WITNESS: No, I don't think you could draw that direct inference. The figure is simply that if you take all the stores in this country that are handling groceries alone and take their turnover, 21 per cent of that turnover is done by chain stores handling groceries alone. If you take grocery stores that also handle meats, then the total turnover of the country is so and so, and of that total turnover 34 per cent is handled by the chain stores.

Mr. FACTOR: But that is combining groceries and meat?

The WITNESS: If you would like me to combine these figures I can do so, but I can't do it now.

Mr. SOMMERVILLE: As I understand the matter this is simply an illustration, let us say, and this will be developed to the full as occasion arises.

The WITNESS: Yes, on any feature that you may care to instance.

It is very interesting to follow some of the results of our census by provinces, because quite different situations exist in the different provinces. In the province of Ontario the concentration of trade has reached the stage where chain stores and large departmental stores did 28 per cent of the entire business of the province in 1930. For the province as a whole the chain stores alone did 17·56

per cent; while in cities of from 10,000 to 30,000 population the business handled by chain stores amounted to 22·78 per cent of the total sales. If you wish the position of chain stores in the retail field might be illustrated in detail. Chain stores in Ontario in the grocery field did 36·78 per cent; in the combined grocery and meat field 39·59 per cent; and variety stores (five cent, ten cent, up to a dollar), 95·8 per cent.

Mr. FACTOR: What did you say the variety store consists of?

The WITNESS: The five cent, ten cent and up to one dollar stores.

Mr. FACTOR: And there are some chain stores that deal almost exclusively in shoes?

The WITNESS: Yes. Information is available from our census to show the sales of all commodities for the leading kinds of stores. Take the sale of furniture, the proportion of business in Ontario for 1930 between department stores and furniture stores was as follows; the departmental stores did \$9,701,000 worth of business, whilst the furniture stores did \$8,621,000. The sales of chain furniture stores were approximately \$1,900,000.

I could illustrate this by similar figures for the operation of any line of business. The sales of shoes as between department stores and shoe stores were: department stores over \$10,000,000; shoe stores, nearly \$16,000,000.

In Quebec, the figures are different in their incidence; sales of furniture were \$3,406,000 by department stores, and \$6,797,000 by furniture stores. I think that an all-round picture of the salient results of this census would be very suggestive to the committee, either presented as a whole or otherwise; in any event it may be valuable for the committee to know that there is a fund of information of that kind that they can draw upon as their inquiry proceeds. It may be important for you to know at a certain stage just what is the general situation regarding this, that, or the other feature under particular investigation. The purpose of the trading census is to throw such situations into relief so that you will know, the relative status of any particular phenomenon that you are investigating.

Mr. BOULANGER: You mentioned various subjects about which there is information available in the departments, coal, and among others, you mentioned tobacco and gasoline; could you give us an idea about the information which is available on these subjects.

The WITNESS: I mentioned tobacco and gasoline because there had been special investigations in connection with these subjects.

Mr. BOULANGER: What information is there available, for instance, with respect to tobacco?

The WITNESS: Well, there is a tobacco division in the Department of Agriculture here, and the provincial governments of Ontario, Quebec, and I think British Columbia, give a great deal of detailed attention to tobacco. It is a small special crop that has been under direct encouragement for a number of years past.

Mr. FACTOR: On flue-cured tobacco, do you mean?

The WITNESS: All kinds of native grown tobacco. Consideration is given by these departments to the production of tobaccos, and the conditions surrounding production in Canada. I am sure you will find the tobacco division of the Department of Agriculture full of information.

Mr. BOULANGER: You have any index prices?

The WITNESS: Oh yes, I can give you the tobacco situation in much the same way as I have given you material regarding wheat, flour, and hogs and bacon.

Mr. FACTOR: Was there not an investigation into an alleged tobacco combine, followed by a report?

The WITNESS: I was just going to say there was an investigation recently under the Combines Act. I remember a great many years ago, 25 or 30 years ago at least, there was an investigation into certain practices of tobacco manufacturers held under the late Judge MacTavish. Speaking from memory, certain abuses (whether real or not I do not remember) were charged. Manufacturers having established in the minds of the public by advertising or otherwise a brand of, say, cigarettes that everybody was asking for, would then refuse (I must not be quoted as endorsing this statement, I am saying what was alleged) to sell the retailer this particular brand of cigarettes unless he also stocked up with their other brands.

Mr. FACTOR: That still goes on, Dr. Coats.

The WITNESS: I am not an authority on that. Well, that is a possible abuse—using a brand as a lever for other brands which perhaps the retailer does not particularly want to handle. Then there was an investigation under the Combines Investigation Act just a few years ago, not long ago.

Mr. FACTOR: Just a year or so ago.

The WITNESS: Yes. Doctor Archibald of the experimental farm also conducted an investigation recently into the tobacco industry.

Mr. FACTOR: In 1927.

The WITNESS: Was it? I did not think it was as long ago as that. The officer at present in charge of the tobacco division of the Department of Agriculture would, I am sure, have all these facts at his fingers' ends, and would be a valuable witness for the committee. I am not sure but that the export trade in tobacco has been investigated by the Commercial Intelligence Service.

The CHAIRMAN: Yes, they have some considerable information on that.

Mr. FACTOR: Might I be permitted just to take a moment to suggest that you have filed with the committee the report made on the alleged tobacco combine by, I think it was, the Registrar of Combines, and a special investigator appointed by the Minister of Labour. I think it would be useful to the committee to study that report.

The CHAIRMAN: Of course, any such report which is a public document, can be asked for.

Mr. FACTOR: I will move to that effect.

The CHAIRMAN: Mr. Factor has moved that any departmental report regarding the investigation of the alleged tobacco combine under the Combines Investigation Act, be filed with the committee; at least we will send a request to the minister that it be filed with the committee.

Mr. BOULANGER: We might do the same thing about gasoline.

The CHAIRMAN: Let us dispose of this first. All in favour of the motion? Carried.

Now, what is your motion, Mr. Boulanger?

Mr. BOULANGER: We might ask for the filing of any available reports with respect to gasoline.

The CHAIRMAN: Yes, we have the report of a parliamentary committee on that.

Mr. BOULANGER: We should have copies of the report of the parliamentary committee, and also of the report under the Combines Investigation Act.

The CHAIRMAN: Yes.

The WITNESS: It was an investigation by a parliamentary committee.

Mr. EDWARDS: The parliamentary committee sat about two years ago.

The CHAIRMAN: Of course, we cannot get anything that is under way; but we can get copies of the report of the parliamentary committee and make it available to members.

The WITNESS: On all such subjects as production, imports, exports and prices we would give you information.

The CHAIRMAN: Now, gentlemen, we have kept Dr. Coats on his feet for nearly an hour and twenty minutes, and I think you will agree with me that he has been most helpful, and that he has given us a resumé of all available information, as I felt certain he could do, and an indication of how we can proceed with some of the subjects in a manner that will minimize loss of time by the committee itself and secure for you a maximum of information. Is there anything that the members of the committee wish to say?

(Discussion followed).

Mr. BOULANGER: May I ask Dr. Coats if he has any information about the paper industry and the paper retail trade?

The CHAIRMAN: Do you mean the pulp and paper industry?

Mr. BOULANGER: Yes.

The WITNESS: Yes, we have.

Mr. BOULANGER: As to the retail trade—newsprint and coarse paper.

The CHAIRMAN: There is no retail trade in newsprint.

Mr. BOULANGER: No.

The CHAIRMAN: You mean paper—stationery.

Mr. BOULANGER: Yes.

The WITNESS: When you get into retail stationery you involve a great variety of products.

Mr. BOULANGER: No investigation has been made especially in connection with the coarse paper trade?

The CHAIRMAN: You mean wrapping paper and newsprint?

Mr. BOULANGER: Yes.

The WITNESS: Yes, there is a lot of information on that.

The CHAIRMAN: Mr. Boulanger, there is a lot of information on that.

Gentlemen, at the next meeting on Tuesday, we will follow the course set down the other day. Certain witnesses have been summoned; and we shall commence with the representatives of the minimum wage boards of the provinces of Ontario and Quebec. This will be followed by evidence from other parties whom the counsel for the committee have called. We shall possibly have to sit in the afternoon to get through with the witnesses, but we are going to sit as long as necessary to hear the witnesses and push the matter along as rapidly as possible. May I suggest that the sub-committee which was appointed the other day be authorized to continue as a counselling committee on procedure. If that is done I can call the members together on short notice, and we will report from time to time.

Mr. HEAPS: Mr. Chairman, have you the names of the witnesses whom you have summoned to appear here on Tuesday next?

The CHAIRMAN: We shall have Mr. Stapells, chairman of the Minimum Wage Board of the province of Ontario and Mr. Frank of the Minimum Wage Board of Quebec. Then, we shall have Professor Cassidy, and Mr. Tom Moore has been kind enough to offer to give us some evidence. Professor Cassidy has made an elaborate report on labour conditions in certain industries, and he will be called as a witness. There may be one or two others, if time permits.

Mr. YOUNG: Something was said about the appointing of commissioners to go into specific industries and investigate them. Have you the names of the commissioners available?

The CHAIRMAN: No. We are feeling our way in that regard. We shall have a consultation with Mr. Sommerville and the sub-committee to talk it over, and what we will do will be to meet in camera and discuss procedure in that regard.

Mr. FACTOR: If I understand correctly, the minimum wage is applicable only to females.

The CHAIRMAN: Whatever the law says. As I understand it in those two provinces the law is limited to female labour, but in the province of British Columbia the law, which we will file before the committee, applies to male labour as well in certain lines. Is there any other business?

Mr. KENNEDY (Winnipeg): Did I understand from Dr. Coats that you are going to file the memorandum in regard to the various investigations and reports on those various subjects that have taken place?

The WITNESS: Yes. I have already filed the memorandum appertaining to the broad subject matter upon which the committee will touch; and I have a further memorandum that I can file if you wish to have it for consideration, showing the materials available under a number of headings. As price spreads have been so prominently mentioned, and as the committee has these aspects presently in mind for study, it would facilitate matters if we could know sometime in advance the course that the committee is going to follow. For instance, if you are going to take up first the conditions in the live stock and animal products end of the inquiry, I would set to work at once with that end in view. Perhaps it would not be necessary for me to come before the committee, I could send on the information available. If that could be done it would be a great convenience. It requires a good deal of painstaking work to make sure that you get the materials on price spreads in a form that will not be misleading.

Mr. KENNEDY (Winnipeg): I had in mind the idea that you might prepare a memorandum involving or indicating what material is already available as a result of investigations that have been held, or reports that have been made.

The WITNESS: Yes. I can do that at once. For example, I mentioned to you what was available in regard to fish; there are three different reports available covering pretty nearly everything of interest within the four corners of the fish trade.

The CHAIRMAN: Dr. Coats will see to that.

The committee adjourned, to meet Tuesday, February 27, at 11 o'clock.

## EXHIBIT No. 2

## MEMORANDUM SUBMITTED BY DR. COATS

*Procedure of Investigation under Government Notice of Motion dated  
January 29*

1. The undersigned begs to offer the following suggestions as to the *method* of organizing subject-matter for the conduct of this inquiry:—

2. It is suggested that, in its opening stages particularly, the investigation, if it is to arrive at constructive conclusions and avoid dissipation of effort, *should proceed from the specific to the general*. In other words, it is submitted that the best results will be obtained by studying in the first instance the trade in a series of specific commodities and ascertaining from competent sources what are the conditions that normally surround the passage of each from the producer to the consumer.

3. The terms of the motion itself, it will be noted, are both specific and general. The preamble states the general problem, but the four subsections, especially (c) and (d), instance particular trades. It is suggested that the Committee might take up the two latter items, namely (c) and (d) first (they cover respectively the marketing of live stock and animal products, and the situation as regards flour-milling and baking), and either concurrently or later proceed to items (a) and (b), namely, mass buying by departmental and chain stores, with the repercussions of such practice upon other retailers, manufacturers, and the condition of labour. Items (a) and (b) are different in kind from items (c) and (d), in that they refer to a practice rather than to a commodity, and are therefore more general in application.

N.B.—In addition to animal products and bread stuffs, it would seem that fruit and vegetable products (raw and prepared), might also be investigated, together with typical manufactured products such as furniture, textiles, and leather goods. Fish is of course included in “animal products,” but some of the conditions surrounding the trade represent such different and distinct interests that it might merit special mention.

4. The process just suggested ought to reveal to the Committee from time to time as the enquiry proceeds any unfair and undesirable practices or conditions that exist (“lost leaders,” secret rebates, misleading advertising, various methods of cut-throat competition, etc., etc.), thus pointing the direction which remedial measures might take. (A feature like the “spread” in prices must first be studied in a series of particular instances; a “spread” of considerable proportions might be justifiable in one field and wholly unjustifiable in another.) The process of enquiry in specific fields would be assisted, its direction indicated and the work of the Committee in general facilitated if at as early a date as possible a resumé were made of the conditions that previous inquiries have shown to exist, such as inquiries under the Combines Investigation Act, various statistical enquiries, etc.

5. When a sufficient series of specific enquiries has been launched, the Committee might proceed to investigate certain broader subjects which have been thrown into relief, and from the study of which, from a purely theoretical standpoint, practical suggestions may be obtained. The list of related subjects might of course be indefinitely extended, but it would appear advisable on the present occasion to limit it to those that lie predominantly within the field of trading operations. Examples of subjects of this general kind on which expert evidence might be invited are:—

- (a) *Sweat-shop abuses*.—(Minimum wage legislation—factory and mines inspection—special legislation for the protection of women and children.)

- (b) *Farmers' markets.*—This is an old time device for bringing producer and consumer together and thus preventing price spreads; the possibilities might be re-explored for Canada.
- (c) *The Regulation of Commission Houses.*—United States state legislation on this point is suggestive. The investigations under the Canadian Combines Act in 1925-6 into the distribution of fruits and vegetables in Canada showed abuses that may arise.
- (d) *Co-operation.*—Co-operation among producers is well exemplified in Canada, and co-operative credit has been extensively organized in Quebec, but consumers' co-operation, which has attained such colossal proportions in Great Britain, plays a very minor part. Our intense individualism doubtless accounts for this, but there appears to be a lack of facilitating legislation.
- (e) *Standardization.*—The extent to which improvement in legislation or regulation on this subject is called for is worthy of investigation.
- (f) *Companies Acts.*—This is a provincial as well as a Dominion matter, but investigation might be made of the degree of latitude allowed with regard to capitalization and other phases in their effect upon (a) the investor in company securities, and (b) the consumer of company products. The question of more detailed annual reports of company operations to the chartering government might also be considered.
- (g) *Anti-combine Legislation and Machinery.*—An examination of the operation of existing legislation.
- (h) *Industrial and Trade Association.*—The increasing part which American industrial and trade associations are now playing in the organization of trading operation in their respective fields might be reviewed. American "Better Business Bureaus" might also be cited (there are a few similar organizations in Canada). However, in the formulation of any code of business ethics it would appear desirable that all interested parties—producers, traders, consumers, labour—should be represented. The United States "licensing" proposal might be studied in this connection, as a disciplinary factor involved—also the "compulsory" feature as applied to such associations.
- (i) *The Creation of a Federal Trade Commission.*—The advisability of some permanent central organization for the continuous observation and regulation of trading practices might be explored. It will be recalled that some years ago the institution of a permanent "Board of Commerce" for Canada was approved, its functions to be the regulation of trading in somewhat the same way as the Board of Railway Commissioners regulates railway tariffs. The constitutional aspect of this suggestion would have to be carefully considered.
- (j) *An Advisory Economic Council.*—It might be advisable to discuss a general project of this kind, though its implications embrace far more than internal trading activities. It is already involved in another notice of motion before the House (Mr. Speakman's).

6. On the above basis the adoption of final recommendations by the Committee would represent a process of evolution on the scientifically sound method of (a) eliciting the facts through examining a series of specific conditions, and (b) proceeding from the facts to generalizations and broad remedial suggestions. In the factual investigations just mentioned, care should be taken throughout to ensure consideration of every important point of view, and types of interest involved.

7. Finally, it is suggested that early consideration be given by the Committee to the expert staff required. The enquiry is a very large one—one that should be most carefully envisaged from the outset, and kept under “control” at each succeeding stage. This can only be done by “seeing the forest as well as the trees” at all times and adopting a rather strict line of procedure.

R. H. COATS,

*Dominion Statistician.*

HOUSE OF COMMONS, Room 368,

February 27, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Hon. H. H. Stevens, presiding.

The CHAIRMAN: Order, gentlemen. We will have the minutes of the last meeting.

The minutes of the sitting of February 22, 1934, read and accepted.

The CHAIRMAN: There is one formal resolution that ought to be passed, that the committee requests permission to appoint and employ secretarial, clerical, stenographic, and investigational assistance, until the final report of the committee is submitted to the house. Will someone move that, please.

Mr. FACTOR: I think it would be better to leave the word "investigational" out of that resolution, until we see where we are at first.

The CHAIRMAN: This is only a request to give us the authority to appoint, it does not mean any action. I want a private meeting of the committee to discuss that whole matter. This is merely seeking authority to do it, without naming anyone.

Mr. FACTOR: I quite appreciate that, but I thought at the last meeting you suggested that so far as investigators were concerned, that we would go along for awhile and see how we get along without them.

The CHAIRMAN: That is true, but we have got to get at it very soon now; counsel is getting the matter in hand, and I want to have a meeting of the committee especially to discuss that thing. I did not want to take the time when we had witnesses here.

Mr. FACTOR: I have no objection, as long as it is understood that the scope and the personnel of the investigators will be submitted to the committee before any appointments are made.

The CHAIRMAN: It will be.

On motion by Mr. Edwards the resolution was adopted.

The CHAIRMAN: Well now, gentlemen, we have certain witnesses here this morning and I think it is desirable that we proceed as promptly as possible with the examination of the witnesses. As this is the commencement of the examination of witnesses by the committee, may I make a suggestion which I think will be helpful to the proceedings of the committee generally, and certainly will lend clarity to the record as it is produced, it is this; that as each witness is called counsel for the committee shall be allowed to examine the witness without interruption as far as that is possible, so that there may be a continuity to the evidence which is to be produced, and then after counsel is through, any member of the committee who so desires may ask any questions of the witness.

Mr. YOUNG: That does not mean, Mr. Chairman, if we think the point is not being brought out properly that we will be forbidden to interfere?

The CHAIRMAN: Not at all, except that I would ask the committee, so far as possible, evidence be taken down without interruption.

Mr. ILSLEY: In other words, Mr. Chairman, you suggest that members of the committee exercise a little restraint.

The CHAIRMAN: The first witness we have is Mr. R. A. Stapells, Chairman of the Ontario Minimum Wage Board.

I wish to express my appreciation of the action of the government of Ontario, and also of the government of Quebec, in allowing, in the case of Ontario, Mr. Stapells to come here and assist us by giving his evidence, and in the case of Quebec, Mr. Gus. Francq, Chairman of the Minimum Wage Board of that Province, who will be called later, to come here and give evidence. If Mr. Stapells would please come forward now.

Mr. RICHARD A. STAPELLS called and sworn.

*By Mr. Norman Sommerville:*

Q. Be seated, Mr. Stapells.—A. Mr. Chairman, and Gentlemen: I welcome the opportunity to tell your committee something about the operations of the Ontario Minimum Wage Board. We do not claim that the law is being lived up to one hundred per cent, I do not think any law is being lived up to one hundred per cent; but we do say to you that we are enforcing the law, as vigorously and as sincerely as we can. I would also like to add that for honesty and integrity, for efficiency and ability, the employers and employees of the province of Ontario are comparable with any similar group you may find anywhere else in Canada.

The act, gentlemen, was brought into force by the Drury government in 1920. The board was appointed. The act called for a board of five, two men, two women and a chairman. Two were supposed to represent the employers, and two were supposed to represent the employees. The government appointed Miss Margaret Stephens, at that time the secretary of Local 202 of the Garment Workers of America, a little Scotch woman, who had worked in an overall factory all her life. It appointed Henry George Fester.

Q. Is Miss Stephens still with you?—A. Miss Stephens is still with the Board; I will come to that as we go along.

Mr. Fester, at that time, was secretary of the Trades and Labour Council of Hamilton, he was president of the Cigar Makers Union of Hamilton, and he was president of the Independent Labour Party of Hamilton, a labour man all his life. The government also appointed Mrs. Horace Parsons, who was recording secretary of the National Council of Women, and very well known and highly regarded in welfare organizations in the Province of Ontario; and R. A. Stapells, president of Stapells, Fletcher, Ltd., this firm manufactures ladies dresses; and Dr. J. W. Macmillan, professor of Sociology of Victoria College, also the first Chairman of the Manitoba Minimum Wage Board, and generally recognized throughout Canada as a minimum wage expert; Dr. Macmillan was appointed as Chairman.

The Act covered all female employees in the Province of Ontario, with the exception of farm labourers and domestic servants. The first duty of the board was to determine the basis on which minimum rates would be fixed, the profitability or unprofitability of business was not considered, the efficiency or inefficiency of management, good times or bad times were all disregarded and officially the board decided on the basis of the cost of living, the generally accepted basis for all minimum wage rates. The board, first of all, therefore, studied the cost of living in all parts of the province. Toronto, made a very intensive survey into the cost of living in Toronto; then we selected the next

four cities in point of population—Ottawa, Hamilton, London, and Windsor. Then we investigated the cost of living in populations between ten thousand and thirty thousand, and then in towns from five thousand to ten thousand, and then in towns under five thousand. That necessitated the board visiting—and I am reading from the first annual report of the board.

Q. That is in 1922, is it?—A. No, in 1921. Fort William, Port Arthur, Sault Ste Marie and North Bay; London, Hamilton, Ottawa, Windsor, Chatham, Stratford, St. Mary's, and Kitchener. A special investigator spent several weeks inquiring into the cost of living in small towns, and finally we realized that there were a lot of villages and very small towns where large industrial and manufacturing plants were located, and we had the cost of living studied in these places. Then we produced a budget of the cost of living, based upon this more extensive investigation. At the time labour thought that the budget was somewhat low and some of the employers thought the budget was somewhat high; but the budget has stood the test of time, and we submit the budget to-day as being in line with the cost of living in this day even as we submitted it in line with the cost of living in 1921, based upon the cost of living for a self-supporting working woman in the Province of Ontario.

*By Mr. Young:*

Q. Do you mean to say that it is the same to-day as it was then?—A. Yes, Sir, for a self supporting working woman in our province. Let me explain to you that this budget is divided into three parts; first of all, is the cost of clothing, and the estimate for clothing amounts to \$2.21 per week. Now, we have asked over and over and over again organizations and associations and corporations to study that budget for the clothing item and submit to us evidence that the estimate was either too high or too low. Then, for sundries—and I do not take it, gentlemen, that you want me to read this whole budget; it is here, and I would be glad to do it if you would like me to.

*By Mr. Sommerville:*

Q. These things could be filed, Mr. Stapells?—A. They may. A member of the committee asked me a question, and I was wondering whether he would like to have the information now or if it would be alright to give it later.

*By Mr. Factor:*

Q. It would be interesting to have these three divisions.—A. Quite so; then, the cost of clothing \$2.21; then, sundries, per week, \$3.29; and board and lodging \$7.00 in the city of Toronto.

*By Mr. Young:*

Q. Have you the relative costs of the different sized towns you mentioned?—A. Just the difference in board only; because the girls in small towns, in addition to the local merchants, have access to the mail order catalogues, and therefore could get garments at the same price in those towns as the girls could in the city of Toronto.

Q. You gave us a figure of \$12 and something for the city of Toronto per week.—A. \$12.50.

Q. What would they be for a town of 30,000?—A. In cities of 30,000 population or over, except Toronto, \$11.50. That is the experienced minimum rate.

Q. Cities of 10,000?—A. From five to thirty thousand, \$11.

Q. Below 5,000?—A. \$10.

Q. Small towns?—A. That is the story.

Q. You spoke of villages.—A. Yes, but that was not fixed for the factories' list.

*By Mr. Factor:*

Q. These figures have been the same since 1921?—A. Yes. The cost of board is the item that could be reasonably attacked, the others could not, in our opinion, at least. But at that time, 1921, the breadwinner in the house was usually of the male persuasion, and if his wife came to him and suggested that Mary Jones was coming in from the old home town of Acton and her mother was rather anxious that she should be comfortably situated, and she suggested to her husband that they take her in as a guest boarder, her husband did not bother about it very much, did not bother very much about what the cost of board would be. They had a room upstairs and the wife was willing to take care of it. The cost of food for three people perhaps was slightly more than the cost for two, and he did not investigate what the food cost him, or what the board cost him; and so if they arranged for the girl to come in at \$6 or \$6.50 or \$7, he was not very much concerned. So, the rate was fixed at that time at \$7, which was pretty close to the wind. Well now, with the advancing years and the breadwinner out of work and young girls of that type coming into the home to board the husband very carefully scrutinized the cost to him of the girl living in his house; and he found to his surprise that it cost just about as much for board as he was getting out of her. So, the fluctuations have not been great. All last year we surveyed the cost of living so far as board and lodgings were concerned in the city of Toronto, every month, and we found it just fluctuated between \$7, \$6.85 down to the lowest point, I think, of \$6.38. So, based upon the cost of living, the only basis that we recognize, last year we could have reduced the minimum wage rate by the difference between \$6.38 and \$7. But, gentlemen, no organization in its cooperate capacity, excepting one, approached the minimum wage board and asked for a reduction in the rates; and that one organization, when it appeared before the board and it was pointed out that the uptrend in the cost of living was likely to occur almost any moment, and if so, we would have to put it back again, admitted that in the interest of stability it would be advisable to leave it where it was.

In fact one manufacturer said, if there is only a difference of sixty-five or seventy-five or eighty cents, give the girls the benefit of the doubt. I think, perhaps, what he really had in mind was that he wanted to know what the minimum rates were without having \$12 one month, \$12.75 another month, and perhaps \$12.50 another month. So that there was no real serious request for a reduction in the rate. I want to say to you at this stage, that I am very glad the board was not forced to reduce its rates because the cost of living is on the uptrend at the present moment; and to-day we are receiving no serious complaints about the rates fixed by the minimum wage board. Have I answered your question sir?

Now, how did we proceed to get the co-operation of the employers of the province, and how did we start in to fix our rates? Well now gentlemen, the speaker happened to be the only business man on the board; and while he thought at that time that he knew something about the dress business and one or two other businesses that he was interested in, frankly, there were a great many businesses he did not know anything about. And no one on the board knew anything about the conditions obtaining in those other industries. So, we called a group of outstanding men of certain industries together. For instance, the first industry was the laundrymen's industry; and we quite frankly told them that we did not know anything about their industry, and would they tell us something about the problems and conditions obtaining whether there should be a learning period; what the initial wage should be; what they thought would be a fair minimum wage; to tell us frankly what the problems were with which they were concerned. And after we had conferred with the employers we then selected a group of employees from various plants; and we called them into.

conference. We usually had them at night, and we paid them a witness fee. We said to them, "Now ladies, you are here; this is a private and confidential conference. We want you to be frank with us, because you have very heavy responsibilities. You are going to help fix the rate of all your fellow employees in this particular industry; and the meeting is private and confidential." We had a very ready and very willing and very cheerful response. And then we told them what the employers had said, and asked them if they agreed; and if they did not agree, we listened to what they had to say, and if they did agree, well naturally, we were pleased. And then having reached agreements with the girls, we brought the employers and employees together. I am taking a little time, Mr. Chairman, to explain this because it is the very foundation of our work.

MR. SOMMERVILLE: Perhaps if you could abbreviate the history and get to the existing conditions, and what it covers, it would be better.

THE WITNESS: I am not going to take very long with it, but don't you think in order to lead up to that, we ought to get the ground work?

MR. YOUNG: I think it will be very interesting to know how those wage rates were arrived at.

THE WITNESS: It is not going to take me very long, Mr. Sommerville. Then, we called the employers and employees together. We did not face the employee with her employer. We got a group of employers and we got employees from other plants, perhaps from outside the city, and we discussed the problems together; and then when we reached agreements the employee would move and the employer would second and the rates and conditions would be decided on. Now gentlemen, it is a very significant fact we did not fix one single rate. We knew what the cost of living was. We led them, perhaps, towards that cost of living, but the employers and employees themselves fixed these rates and passed these conditions and agreed upon these things.

*By Mr. Factor:*

Q. Does not the act provide for those conferences?—A. Oh yes. Of course, the point I am making is these rates were fixed by the employers and employees themselves. It is obvious to you we could not call all the employers in the industry into conference and all the employees and announce a public hearing, as covered by the act, as Mr. Factor very kindly points out. We advertised public hearings and invited all and sundry to come and explain their views on what we proposed to do. And if at that public conference some new element was introduced that required us calling back together a conference of employer and employee, we called the conference together and submitted these views. If it did not need that, we did not call them together. And then, having reached an agreement so far as the public was concerned, we published the orders in the Ontario Gazette; and having published the orders in the Ontario Gazette, 60 days later the law came into force; because we needed that time to get the cards printed and sent out covering these orders. Now, these orders generally cover piece rate workers as well as rate workers. In 1931 Mrs. Parsons, one member of the board, died, and Dr. MacMillan died in 1932; and by act of parliament the board was reduced to three in May, 1932, and the speaker was appointed chairman. I am finished with the first part, Mr. Sommerville, of what I have to say in this regard. I think that is what you want. How do we enforce our orders? Well now, first of all we had a—

*By Mr. Sommerville:*

Q. Might I suggest just what are the orders, and who are covered by the orders.—A. May I do it in my own way, please.

Q. I thought perhaps before you came to the question of enforcement you would acquaint the committee on who are covered and what is covered.—A. I think I have already said that female employees in the province of Ontario are covered, excepting domestic servants, farm labourers, and we do not cover school teachers or nurses. We did not issue a board for school teachers or nurses because at that time we found they were so amply protected that there was no necessity for it. There are all the orders, Mr. Sommerville (producing orders).

*By Mr. Factor:*

Q. You mean, since the board was inaugurated?—A. Yes, these are the orders in force to-day.

Q. How many, roughly?—A. About fifty. Then, as I said gentlemen, we had a card printed, a card like that (exhibiting). Now, I would like to make it clear that the card was not printed for the purpose so much to inform the employers, as to inform the employees what they were entitled to under the law. And we sent these cards out to all the names on the list that we had prepared. Then we prepared a list, gentlemen, after consulting with the Workmen's Compensation board of Ontario, the Factory Inspection Branch of the Department of Labour, Ontario government; Might's Directories; Fraser's Business Directories; Bell Telephone Company directories; Ottawa federal statistical department; Dun's Commercial directory; Municipal licence departments; Liquor Control board of Ontario; and also the Retail Merchant's Association, Laundrymen's associations, Woollen and Knit Goods Manufacturers association, Chain store associations, Carton Manufacturers association, Hotelmen's association, Restaurant Owners association, Canadian Manufacturers association, Associated Clothiers of Toronto, Canadian Garment manufacturers association, and the Hairdressers' association.

Q. Did your board also fix the maximum hours, both minimum wage and maximum hours?—A. No, at that time there was no control over hours, and we had to govern ourselves, and we did in this way: at that time the manufacturers were deluged with inspectors from municipal boards, provincial governments and dominion governments. They had questionnaires to fill out by the score. To some we felt this must just seem to be an added burden to them, and so we did not add any more than we had to to the burden that they seemed to be carrying at that time.

*By Mr. Heaps:*

Q. Are there any maximum hours fixed at the present time?—A. Well, I have been away from Toronto for twenty-four hours, and I do not know what happened in the Ontario legislature yesterday; but we are leading in that direction, gentlemen, and before I am through I shall read to you my recommendation to the Department of Labour regarding that point. But at that time what we did was this: we had no control over hours; the Factory Act provided for 10 hours, and we have had to see that the numbers we agreed upon, the number of hours ordinarily in vogue in the plant should be the amount for which the experienced minimum was paid; that is, if one plant had been in the habit of working forty-eight hours, then the minimum wage was forty-eight hours; if another plant worked fifty hours, then the minimum wage was fifty hours. That was agreed upon between the employers and the employees, the number of hours in vogue. In other words, we did not go in and say, "You have been working fifty hours, you must only work forty-eight."

*By Mr. Factor:*

Q. I am not disputing your rule, but this seems to me to be very important, because if the maximum hours are not fixed, then perhaps the whole operation of minimum wage is destroyed by reason of that.—A. The maximum is sixty; they cannot work more than sixty under the Factory Act.

Q. I understand under the Minimum Wage Act, as contained in the revised statutes under Section 11, the board can fix minimum wages, the maximum number of hours per week for which such minimum wages can be paid?—A. Quite right. That was an amendment about two years ago.

Q. You have not taken advantage of that?—A. In some instances, yes.

Q. That is what I wanted to get; you fix maximum hours?—A. We do. As a matter of fact, we do in restaurants, hotels, and do in some retail stores; where we found that the industry ran to abnormally long hours, then we dealt with it; and where we found that the industry did not run on abnormally long hours, then we did not fix the rate. As I said before, a little later on I am going to indicate to you that we are taking steps in that direction.

At this point I would like to point out that I have been chairman of this Minimum Wage Board only since May, 1932. I really did not get into my stride for some few weeks, and have only produced one annual report for the Ontario government, and it is the report which was laid on the table in the Ontario legislature yesterday. My first report covered only five months of my regime, or six months. The report that I presented yesterday covered the full twelve months.

Having secured this list, these cards were sent to the names we had on this list. Now, gentlemen, we have the assistance, first of all of eighteen inspectors of the factory inspection department. These inspectors are under the direction of the Factory, Shops and Office Building Act, and the factory inspection department of the Department of Labour, and this act says on page 168, section 6, "It shall be the duty of every inspector appointed under this act to report any violations of section 20 of the Minimum Wage Act to the Minimum Wage Board."

*By Mr. Factor:*

Q. That is the Factory Act?—A. Yes. Section 20 has to do with the posting of these cards in a conspicuous place where the employees may readily read them. But thirteen years ago, when we started our work, we had a meeting every two weeks and have had right down through the years, with the head of this factory inspection department, Mr. Burke, and now his successor in office, Mr. Prain. We sit in with Mr. Prain, as I say, or Mr. Burke, every fortnight and discuss the problems of the enforcement of the act. The eighteen inspectors from time to time have collected arrears of wages for us, they have inspected pay-rolls, they have taken off wage sheets and they have advised us about the cards, whether they are posted or not. During 1933, as an indication as to how they are working with us, we had 1,192 reports for the year 1933 from these inspectors.

Q. You mean breaches of the act, or just ordinarily?—A. Well, breaches of the act, if the cards are not posted. If they are not posted because they did not know about the minimum wage law, it was not a breach of the act. We have had these reports covering wage sheet adjustments, wage adjustments, whether or not the card is posted or whether they have sent in their wage sheet or not.

Then we have four specially trained negotiators. You can understand that if an inspector of the board goes in to a firm where it is necessary to adjust his pay-roll, and perhaps collect \$500 in arrears of wages, it has to be not only someone with experience, but someone with rare tact and judgment, in order to bring about a delicate adjustment of this kind, and so we have four very expert special negotiators. They are, first of all, Miss Stephen, who was originally appointed to the board as a member of the board in 1920. Miss Stephen, as I said before, has been an overall operator all her life. She belonged to her union, was secretary of her union, and a very able, very conscientious and excellent inspector for us. After the change in chairmanship, one of the first things I did was to get Miss Stephen to resign from her position as an overall operator and come in as a full time inspector for the minimum wage board; so we have Miss Stephen. We have had for years Mr. Fester, the vice-chairman, who is with me

here to-day. I have given you Mr. Fester's background. He is naturally sympathetic towards labour; then he is a born negotiator, because he has been mixed up in negotiations all his life. I may say to you at the present time he is official arbitrator of the Amalgamated Clothing Union of the United States and Canada.

Mr. FESTER: No, for the city of Toronto.

The WITNESS: For the city of Toronto; selected by the union and by the employers, and he is very highly regarded as a negotiator. Then we have Mr. Kelly, situated at Port Arthur, and he is our special investigator in that part of the country. Then we have appointed Mr. E. A. O'Dell of Hamilton, a man who has been mixed up in labour all his life, was organizer for the boot and shoe union—I am not using the exact title of the association, because I do not know it; but Mr. O'Dell is one of the outstanding labour men in Canada; so I have the assistance, gentlemen, of these four special negotiators.

*By Mr. Factor:*

Q. Four special investigators?—A. Yes, negotiators. We have called them more particularly negotiators, Mr. Factor, for the reason that so far as inspections are concerned, we can have that done through our usual methods, but when it comes to negotiating with firms who are flouting the board or with firms who do not report their wage sheets, then we use these four special negotiators.

Q. Is Mr. Fester a negotiator and a member of the board?—A. Yes, and so is Miss Stephen.

Q. They are both?—A. Yes, both members of the board. There are just three members of the board, Miss Stephen who was appointed in 1920. Mr. Fester and myself. Then we have the assistance of the crown attorneys throughout the province; if we find that a firm up in, we will say, Renfrew, which refuses to send its wage sheet, refuses to answer our primary order, refuses to adjust wages, we write to the crown attorney and ask his co-operation in the matter of getting that firm amicably to do what we have asked. Perhaps it is just a very simple request and they just get negligent, or they may be belligerent. I don't know; at any rate, we use the crown attorneys throughout the province and have their co-operation. Sometimes we use the provincial police and sometimes we use the chief of police, and we have used both in the enforcement of the act.

Now, I would like to make this point clear: we have the sympathetic and cheerful co-operation of most of the employers of the province. We have not experienced a great deal of difficulty in securing a return to our questionnaire. This questionnaire is sent out once a year. It calls for the total number of female employees, young girls under eighteen, the number on piece work, the number on time work, the number of office workers, the number of hours worked per day, the number of hours worked per week, the name of the employee, the date of hiring of those paid less than experienced workers' minimum wage, weekly rate of wages, actual number of hours worked for a period, last year, of twelve weeks and the actual amount of wages paid in this, covering piece workers; the idea there, of course, being that if the girls were working on short time on piece work, and we had the actual amount of wages paid, we would know whether our rates of \$12.50 in the city of Toronto were being violated or not. In other words, a firm could not come along and say, "Well, we worked only a few hours in the day, and that the girl was properly paid for that time." We divided the number of hours normally in vogue in that man's plant into \$12.50, and that is really the rate, and he has to give us the number of hours worked; and we, of course, work out with our clerical staff, the amount of wages that a girl is supposed to receive.

*By Mr. Edwards:*

Q. Is that minimum based on the minimum wage of sixty hours?—A. No, sir, the number of hours in vogue in the plant.

Q. I understand that.—A. The number of hours in vogue in the plant.

Q. That is per week, if sixty hours is the basis—A. But it is not, most decidedly. I have explained that twice. The number of hours in vogue in the plant. If it works forty-four hours in the city of Toronto, \$12.50 is for forty-four hours.

Q. If the time is sixty hours?—A. It is also the same, \$12.50.

Q. That is where the weak spot is?—A. It may be, and perhaps a little later on in my address, if you don't mind, I will indicate to you just how we propose to correct it.

*By Mr. Sommerville:*

Q. May I just deal with the question of the period of the twelve weeks; who selects the twelve-week period for which the report must be made?—A. We do.

Q. From a certain date to a certain date?—A. Yes, we do.

Q. You fix that?—A. Yes.

Q. You fix that twelve-week period out of the year?—A. Yes.

Q. And the twelve-week period gives you a basis upon which you decide whether or not there has been compliance with the order?—A. Correct.

Q. With the operation of the act?—A. Yes; and, Mr. Sommerville, I at once get your point. Some may say there is a weakness there.

Q. I am not discussing any question of weakness. —A. I know. Nevertheless I get the point.

Q. I want to know whether the employer fixes the twelve-week period?—A. No, we fix it. We have been asked, "Why don't you collect wage sheets covering the whole fifty-two weeks in the year?" Well, I will answer that in this way: what an onerous obligation it would be for a firm employing 1,800 girls to write down 1,800 names for fifty-two weeks in the year. I do not think it would be very long before there would be protests that that would be too great a strain on the clerical help, especially during these economic conditions.

*By Mr. Edwards:*

Q. Could that not be got simply by duplicating their pay-roll?—A. Yes, but if there were only a copy of the pay-roll—

Q. What is to prevent putting a carbon in the typewritten pay-roll, would not that give you the exact number of hours?—A. There are thousands of firms that do not typewrite their pay-roll, or even write their pay-roll in ink.

*By Mr. Sommerville:*

Q. May I just, following up that twelve-week period, make it clear to the committee that it is not a period of twelve weeks, one week in each month in the twelve?—A. No.

Q. So that it is not like a sample week out of each month?—A. No.

Q. It is a period?—A. A definite period.

Q. And in some industries that period may strike an active season and in some industries it may strike an inactive season?—A. Yes, it may conceivably do that.

Q. In the clothing industry you get the spring season and the fall season?—A. Yes.

Q. And if you take the twelve-week period, it might fall outside of the range?—A. Yes.

Q. That depends upon the date when you fix it?—A. Yes.

Q. I was only asking for information.—A. Yes. And on the other hand, if we took a week out of each month, we might strike a week where they were closed down and they might have three employees or might have no employees at all, and not give us their information.

*By Mr. Heaps:*

Q. Don't you think it is very important that we should have some idea of what the average annual wages of the girls are?—A. I can tell you; in my own time I will be glad to. I have it here. Your female employees must be listed separately. I might say until the change in chairmanship that employers were allowed to summarize, all those who employed girls with over seventy-five employees; but that change was made the moment the change of chairmanship came into force, and now they must list separately every female, if they have 10,000 females, list their names separately. The questionnaire must be signed by a member of the firm and certified correct by a member of the employing firms. These questionnaires are sent out once a year, and when they come back a staff of checkers who have been with us for years, take last year's pay-roll and take this year's pay-roll, and take the year previous, and they check them up, to see how the wage rates are running, and to see if by any chance a girl appearing on last year's pay-roll is not getting the wage, if she has been reduced; because, gentlemen, there have been reductions in pay-rolls during the past few years, as of course you are all aware. These are very carefully checked up once a year with the previous year's wage return.

Now, I would like to just here say this: we believe from our experience, and from the number of times that we have checked up the pay-rolls with the wage returns, that the majority of employers are honest. We believe they give us an honest return, and quite frankly I want to say to you that I am prepared to follow the philosophy, if you will, that employers are honest until I find them crooked; and not that employers are crooked until I find them honest. I have had thirty-two years business experience in the province, and my experience over those thirty-two years prompts me to say that the vast majority of men with whom I have come into contact have been honest men, and not dishonest men.

As an illustration as to the degree to which the field has been covered in some of the particular classes, I would like to submit some figures; and just at this point I would like to say that we have collected returns covering 77,500 female workers in the province of Ontario.

*By Mr. Factor:*

Q. That is the total of female workers?—A. No, it is the total we have.

*By Mr. Sommerville:*

Q. The total that are registered under the Minimum Wage Board?—A. Yes.

Q. As being in the industries which have reported and are within the jurisdiction of your board?—A. Quite right. Take the textile and needle trades first—

Q. Perhaps while that figure is fresh in the minds of the committee, could you indicate the number of places of business or factories in which the 77,500 female workers are employed?—A. Have we a week in which to do it?

Q. Oh, approximately; are there 3,000, 4,000 or 5,000 factories; if you can give us just the even hundred, the total number of factories and total number of business houses, just to give the committee a picture of the widespread coverings of your board?—A. Yes; about 4,000 firms.

MR. SOMMERVILLE: Factories, for instance ?

MR. FACTOR: All industries?

MR. SOMMERVILLE: Yes, all industries; factories as opposed to stores.

*By Mr. Edwards:*

Q. What would you call a factory, what number of wage earners ?

MR. SOMMERVILLE: I don't think it is a question of that.

Mr. FACTOR: More than four.

Mr. SOMMERVILLE: As against business houses.

The CHAIRMAN: Perhaps Mr. Stapells will get that information and have it a little later.

The WITNESS: I had it this morning.

*By Mr. Factor:*

Q. Mr. Stapells, does the 77,500 consist of experienced employees?—A. No.

Q. That includes the three categories?—A. Yes.

Q. Experienced, inexperienced and under eighteen?—A. Girls under eighteen can be experienced if they have had the requisite time in the industry. It really covers experienced and inexperienced workers in the province of Ontario in the field that we have covered, and that is just what I am coming to. In the textile and needle trades, according to the Dominion Bureau of Statistics, 1931, there were 22,504 employed. Our figures for 1932 were 23,354.

*By the Chairman:*

Q. Female or altogether?—A. Female.

Q. Both cases?—A. 22,504 for the textile and needle trades together. The reason we put the needle and textile trades together was because the Dominion Bureau of Statistics placed them in that way.

*By Mr. Sommerville:*

Q. To make a comparable statement?—A. Yes; and we have 23,354 covered.

Q. In 1932.—A. The drug trade, the Dominion Bureau of Statistics for 1931 show 1,517. For 1932 we have 1,251. Now, the question you asked—

*By Mr. Edwards:*

Q. What do you mean by the drug trade, manufacturing drugs?—A. Manufacturing drugs and not drug stores, the wholesale houses and so on. To go back to the textile and needle trade, there were 801 firms. To answer your question, this governs the wages in the following trades: drug, chemicals, pharmaceutical or toilet preparations, dyes, inks, shoe blacking or polish, mucilage, medicines, non-corrosive acids and non-hazardous chemicals or medicinal preparations.

*By Mr. Factor:*

Q. That is the orders?—A. That is an arbitrary list that we arranged ourselves just for convenience.

*By Mr. Edwards:*

Q. I just wanted to know whether it was manufacturing, or producing?—A. Both. Then we come down to the leather trade. The Dominion Bureau of Statistics for 1931 have 1,705 listed. We have 1,953 listed; firms covered, 91. Electrical goods, the Dominion Bureau of Statistics record 1,335. We have on our list, 2,005, with 60 firms covered; and when I say we have on our list, we have the wage rates of these girls on these wage returns.

Then we come to the food trades, and I hesitate to give you this figure and the Dominion Bureau of Statistics, because they must have some other classification somewhere, that we have not found. They only show 1,534 whereas we show 4,237. It is perfectly obvious to me that we have included in our classification some that they have not included. For instance, we have included seasonal cannery in ours and they possibly have not included seasonal cannery

in theirs. Then we have tobacco trades, and the same thing applies here. They have figures 224, we have 1,025; but there again I think they have this seasonal tobacco industry with a number of additional employees which they have reported in their figures.

Then the rubber goods trade; the Dominion Bureau of Statistics have 21 firms and 1,045 employees, where we have 1,630. Then in the jewelry trade, 166 is the Dominion Bureau of Statistics figure for 1931; our record for 1932 covers 267.

Q. That is, Mr. Stapells, you are giving the 1931 figures of the Bureau of Statistics?—A. Yes.

Q. And you are giving us the 1932 figures for the minimum wage board.—A. Yes.

*By Mr. Factor:*

Q. Why compare them in that way?—A. They are quoted as there 1931. I am just reminded that these are the census figures for 1931 by the federal government; and that is the explanation, Mr. Factor.

*By Mr. Sommerville:*

Q. What is the purpose of the figures, that is what Mr. Factor wants to know.—A. The purpose?

*By Mr. Ilsley:*

Q. Why don't you just give us your figures; are you giving the Bureau of Statistics figures to show that theirs are incorrect?—A. No, I was indicating, rather, the difference which exists between them, and pointing out that we covered more than they did.

*By the Chairman:*

Q. Yes, Mr. Stapells, you did not cover all the numbers you have given there because you have already given more numbers of organizations than you show as your total number.—A. No, I have not, Mr. Stevens, excuse me. These are the number of firms from which we have got a wage sheet, and the names of every single one of these employees are on these wage sheets; to make it absolutely clear, these figures are taken from the names sent in and certified to by the head of the firm.

Q. Run them over rapidly.—A. Then there is the paper and printing trades. 4,535, in 1932, we show 4,535, while the Dominion Bureau of Statistics show 3,257. Miscellaneous trades, we show 3,880 for 351 firms, while they show 214. Laundries, we show 2,846 employees for 226 firms while they show 2,833. For retail stores, we show 9,923 for 1932.

*By Mr. Sommerville:*

Q. You say 9,923 employees.—A. Yes.

Q. What does the Bureau of Statistics show?—A. They show 19,399. Now, the explanation there is this, that they have gone into every village and town throughout the province. We have not got hot-dog stands where a girl may be employed; we have not got corner groceries, like at Brown's Corners; we have not got a lot of the small stores in these smaller towns, for the simple reason, it is very difficult to get, and besides in these small towns and in these small villages it is not likely that bad wage conditions or working conditions obtain.

Q. Have you got the totals; just look up your total number of institutions and I think you will see that there is a difference of about 10,000 in retail stores.—A. Yes.

Q. The Bureau of Statistics cover approximately 10,000 more employees in retail stores.—A. Right, and purposely so.

Q. What do you mean by that?—A. We did not go into the small towns throughout the province, looking up these corner groceries and retail stores, and so on.

Q. You did not go into those?—A. No; and we did not go into the hotels and the restaurants, we did not go into the small villages looking up small hotels. Under the heading "hotels", "restaurants", etc., we show 4,491 employees for 624 establishments, while the Dominion Bureau of Statistics show 5,513. Then we have "hairdressers and beauty parlors" (only towns of 30,000 and over) we show employees 240, with 135 firms, where the Dominion Bureau of Statistics show 2,340; then for custom millinery, our returns show 440 employees for 135 firms while the Dominion Bureau of Statistics report 1,104; then for office workers (clerical) we have no figures for 1932, but for 1933 our returns showed 13,305 for 1,095 firms, while the Dominion Bureau of Statistics' report shows 54,118. And then for chain stores we have a total of 888 reporting, which covers 4,489 employees.

Q. I suppose, Mr. Stapells, when you are referring to the Bureau of Statistics, that these statistics were taken by inspectors who made their inspection on a certain date when they made their census.—A. I presume so. Yes.

Q. And your board would have the changes that took place over the year, and the ultimate result of the year's operation; your figures would reflect that?—A. As far as we are concerned, yes. I do not know just how they filed their figures, or how they got them.

Mr. FACTOR: Well, Mr. Sommerville, you are not expressing the fact that that would cover towns of 10,000.

Mr. SOMMERVILLE: No, that is a different factor.

The WITNESS: These statistics which were taken for the Dominion Bureau of Statistics were taken for one day when the census taker called.

Just at this point, I would like to say, Mr. Chairman, if you do not mind, that the board, as a board, attended 182 regular meetings in 20 months, and that the chairman has delivered addresses at Hamilton, Ingersoll, Preston, Kitchener, New Toronto, Mt. Dennis, the Canadian Manufacturers' Association and Board of Trade meetings, and at several service clubs and at churches in and around Toronto; and we have interviewed, perhaps hundreds of individuals in our offices.

*By Mr. Sommerville:*

Q. We will agree that the church activity is very commendable.—A. And members of the board read every letter that comes in to the board; the Chairman personally reads every letter that comes in to the board, and he signs every letter that goes out from the board.

The CHAIRMAN: Mr. Stapells, may I make a suggestion to you; I do not want you to feel that the committee are critical in any way of the way in which you do your business, I think we will gladly take it for granted that it is very efficiently done; but we are most anxious to get at certain facts. I think that the question of how the board has operated is accepted. If you have any statistics that you wish to file, I think it would be better to file them and let us try to get on. I notice we have been over an hour now and I would like to get on with the more essential matters, if we could.

The WITNESS: Well, Mr. Chairman, I have been thirteen years on this work and it takes a long time to cover the ground.

The CHAIRMAN: We are quite satisfied, Mr. Stapells, to say that for thirteen years you have been doing well.

The WITNESS: Some of our friends may not think so, Mr. Chairman, and that is just the point I want to bring out.

The CHAIRMAN: We are not here in any critical sense at all.

The WITNESS: I am very glad to hear that.

*By Mr. Sommerville:*

Q. The committee are desirous of getting information.—A. We have no mean task, gentlemen, I have signed 10,800 letters in 20 months.

The CHAIRMAN: Frankly, we do not care if you have signed 40,000.

The WITNESS: The point is that we have no mean task, and we endeavour to fulfil it to the best of our ability.

*By Mr. Factor:*

Q. We are rather interested in seeing how the act is enforced.—A. I have tried to explain to some extent, now we will go on a little further. Towards the latter part of 1930 we found that wage rates were undergoing a change. Frankly, we began to find some indication that the maximum wage was becoming the minimum wage; something that labour feared over 8 or 10 years ago. For instance, we found it over the last few years, and the result has been that our task has been very difficult, and delicate, particularly during the last few weeks.

*By Mr. Sommerville:*

Q. I think, Mr. Stapells, what you mean to say is that the minimum wage has become the maximum. Your reference was that the maximum had become the minimum.—A. Yes, you are right, the minimum wage becoming the maximum. We decided for the first time, during last year, to collect returns from office workers; we had not done so up to that point, and to collect returns from the seasonal canners, and also to collect returns from seasonal tobacco operators, and we have got several thousands as a result of that determination.

*By Mr. Factor:*

Q. Would your 25 or 26 cover these workers?—A. It does. We did not collect returns formerly because we did not think it necessary, the former chairman did not think it necessary, but when the change in chairmanship came, we decided to collect these, and we have collected them for the last year. Here are some of the difficulties, Mr. Chairman; pieceworkers, suppose there were a lack of orders in a plant, and the result was that we are to curtail on piece work, if she were filled up with orders during the day, she could make the minimum wage according to piece rates that obtained in the plant, if she had sufficient work to enable her to earn her minimum on piece rates, she could do it, but if the plant were short of work and could not give her sufficient work to enable her to make the minimum rate, then, of course, she fell below the rates fixed by the board. That was not the girl's fault. We adopted the attitude that that was the fault of the employer, and if he kept that girl on the premises for the full working day, whether she was at work or not, he had to pay her the minimum wage, according to our regulation.

*By Mr. Young:*

Q. Or discharge her, is that the idea?—A. Well, it is his right to discharge if he wants to; there is no law under God's heaven to make him employ the girl if he doesn't want to, and there is no law to make the girl work if she doesn't want to. Early in April, 1932, I sent out this letter, and it is touching on this piece rate work, Mr. Stevens. To indicate to you that we realize the difficulties that we are likely to create: A recent inspection of payrolls in the needle trades industry discloses the fact that some firms are not keeping time records for their pieceworkers. This practice renders it almost impossible for the Minimum Wage Board to determine the hourly and weekly earnings of the employees concerned and constitutes a distinct violation of the Minimum Wage Act. The law is clear on the point and reads as follows: "Every employer shall keep

records setting forth the names, rates of wages, hours of labour, actual earnings and actual time spent in work of all employees, and the ages of those employees under eighteen years, and these records shall be open at all times during business hours of inspection and examination by any member or representative of the Board, and copies therefrom shall be furnished when requested by the Board." Penalties of from \$10 to \$20 may be imposed for failure to comply with the above requirements. The Board has decided that the failure to keep records for pieceworkers must come to an end and takes this means of warning the trade that prosecutions are inevitable if the practice continues. And, furthermore, in the event of demands for arrears being received from employees who claim to have been underpaid, the statement of the employee as to time worked and wages received will be accepted by the Board if the employer is unable to furnish complete and proper records.

*By Mr. Factor:*

Q. Do you think \$10 or \$20 is an adequate penalty for the prevention of violations such as these; you will notice that is the penalty provided in the act? —A. It does seem small, but may I point this out, Mr. Factor: There are a class of immigrants who started business in this country after a few years, for instance; they have not received a very good education in their own country, and they come out to this country, and because of their thrift and ability, and their determination, working for some one else, they saved this money to start in business, and when he starts in business he doesn't know much about keeping books, and he does not know much perhaps about reading clearly legal documents like these. I must confess as a business man, and perhaps the Chairman will agree with me, that it is mighty difficult sometimes for us after we have instructed a legal firm to draw up a legal document, to understand what we are getting at when the document is presented to us. And how much more difficult it must be for one who does not know the language. And if he unwittingly, I would call that unwittingly, fails to—does not keep records; if we sat down too hard or too fast on him, would it be fair to charge him \$50 or \$100?

*By Mr. Edwards:*

Q. Would not that be legal, to charge that? That is in the Act; that is only one of the penalties, and these penalties range from \$10 to \$200.

*By Mr. Factor:*

Q. But that is the penalty for that?—A. Yes. Not keeping records, \$10 to \$20.

Q. You think that is accurate?—A. That is what it is, and we will give our opinion on that.

Q. I just wanted to get something on that?—A. Quite so.

*By Mr. Sommerville:*

Q. Records are the basis of the whole minimum wage law operations, are they not?—A. Yes, they are.

Q. And failure to keep these records therefore prevents the Board from getting information required for the operation of the Act?—A. Yes.

MR. SOMMERVILLE: I think that is what is in your mind, Mr. Factor; it would give the Board their right to take action.

MR. FACTOR: Yes.

THE WITNESS: These events were taking place before the change in the Chairmanship.

*By the Chairman:*

Q. Just before you leave this; suppose the employer sends the employee away from the premises part of the day, there is a corresponding cut in the amount of the wages the employee would receive.—A. Yes, and it is in the same category as a girl who works three days and is not paid for six. There is nothing to compel that.

Q. Or, she may work certain hours of the day, and not other hours, and is only paid a part of the minimum wage for the day at the rate of the minimum wage hourly rate.

*By Mr. Sommerville:*

Q. But she may work part of every one of the six days of the week and be paid on a partial basis.—A. Quite.

Q. So that the requirement that any person who keeps an employee upon the premises shall pay that person whether they are working or not may have the effect possibly of having the employer send that employee home after a certain number of hours during the day.—A. Quite right.

*By the Chairman:*

Q. Well, Mr. Stapells, does not that negative, as it were, all the trouble you have gone to in arriving at what the minimum wage for a person to live on, under your budget system will be?—A. It would seem to, Mr. Chairman; but, of course, now we are getting into the question of unemployment insurance.

Q. No, we are dealing with it only in so far as it comes under this law.—A. I repeat, there is no law under God's heaven which will make an employer pay a girl for the time she does not work, if she only worked for part of a day, that is all he has to pay her for.

*By Mr. Sommerville:*

Q. Then, under this system, the employee is only paid for full time when that employee is on the premises.—A. Right.

Q. If, as a result of inspectors, or supervisors, speeding up the employee, that employee, this year, does 20 per cent or 30 per cent more work during the year than formerly, that employee may be sent home before the end of the day.—A. That is the basis of the piece work system.

Q. So that the employer may, if he desires, speed up the pieceworker to produce the same number of articles in a shorter period of time and then have the pieceworker sent home.—A. Right.

Q. And then he would only pay the proportionate amount of the \$12.50—A. Right.

Q. And the employer received the full quota of articles that he had formerly received from the pieceworker.—A. I do not know that I can enter into that particularly.

Q. Is not that the fact?—A. It all depends on just how much speeding up is done; if you have a lazy girl who would make five garments in an hour normally, and she could be called upon to make seven, because her fellow-workers make seven, it is a quite proper thing to speed that girl up, I would suggest.

Q. But, Mr. Stapells, do you find many lazy employees under the present piecework rate, and under the present minimum wage provision; is not the tendency to speed up general all along the line.—A. I do not know, I cannot tell you that, I am not in these plants.

Q. Has your board not received a number of complaints as to the general speeding up that has taken place during the past two or three years.—A. No, we have not had many complaints with regard to what would be "driving the help" in other words.

Q. Driving the help?—A. No, we have not had any complaints in that connection.

Q. I asked you that, Mr. Stapells, because a number of complaints have come in from employees over this speeding up process that has been going on for these last several years, as one of the means of reducing the costs for manufactured articles.—A. We have not received these complaints.

*By Mr. Ilsley:*

Q. How is this speeding up done?—A. You will have to ask Mr. Somerville.

*By the Chairman:*

Q. That, I think, will come up later. There is another question which I would like you to go on, Mr. Stapells.—A. Yes, Mr. Chairman.

Q. Assuming that the process of speeding up were adopted, and consequently, assuming that you went into a large store where the girls were brought to work only in the rush hours and were paid only for the hours they worked at the minimum wage hourly rate, that would inevitably defeat the object of the minimum wage law if that was the only work which the girl had. —A. Oh, no. Once again, Mr. Chairman, you are bordering on the unemployment insurance thought. If your girl works for three hours in the day, and there are girls that are working that—take for instance, the case of a restaurant, where they have a rush at dinner time or lunch time and the girl comes in and works three hours, and assume that she does not again work the rest of the day anywhere else, you cannot make that employer pay her for a whole day's work.

*By Mr. Heaps:*

Q. Has not that girl got to live during this interval?—A. I would say so, yes, sir.

*By the Chairman:*

Q. You have not answered my point, that is a normal condition in the restaurant business, well recognized, but we will take a store in which a girl is working during the rush hours, there are rush hours from 11 to 4, for instance, and then there are two or three hours at the commencement of the day, and along towards the end when there is a slacker period. Now, the girl might have no other occupation, and her job in that store is subject to the minimum wage law, which is intended to provide her with a minimum wage that she can live on. If the employer takes a certain percentage, say, half of his employees, and brings them in say at eleven in the morning instead of nine, thus saving two hours there, and lets them off at four instead of five, or five instead of six, saving another hour or so at the other end, he would have half of his staff working only part of the day, for a little over half time, for which he would pay them, and he would be getting virtually full time service from them.

Mr. FACTOR: How is that girl paid?

The CHAIRMAN: She is paid by the hour, at the minimum wage rate, for the rush hours. Does that not defeat the object of the minimum wage law?—A. I would not say that it does, Mr. Chairman. We are concerned with rates, and there is no minimum wage law to take care of a situation of that kind.

Q. Then, why do you fix your budget on a weekly basis?—A. Because it is assumed that the girl is going to do a week's work, and if she works, gives of her time, strength, and ability for a week, whether it be of 44 hours or 48 hours, then she should get these rates that we are charged with the responsibility of fixing, but we are not charged with the responsibility of fixing charges for girls when they are not working.

Q. You have no interest then in the administration, in evasions such as I have indicated?—A. Well, I would not call them evasions, Mr. Stevens.

Q. Well, circumlocution, we will call it?—A. Well, it may be, just as has been pointed out, if a firm only has three hours of work for a girl in a day you cannot force more work. There is no law to cover that point.

*By Mr. Factor:*

Q. Where a firm employs a girl only three hours a day, while your minimum wage is \$12.50 per week, she would not be paid for the whole week, unless she worked the whole week.—A. You mean, if she worked the whole week, he would have to pay her \$12.50, whether she worked twelve hours or fifty hours in the week.

Q. No, that is not what I mean?—A. If she worked for three days, and then goes home for three, you would have the firm paying her three days, but you would want her paid for the whole week; if that is what you mean, if that is not unemployment insurance what is it?

*By Mr. Sommerville:*

Q. Perhaps we are at cross purposes?—A. Yes, there are two or three questioning me at the same time, but I will do my best to answer one.

Q. Your board is interested in the administration of the minimum wage law?—A. Fixing the rates.

Q. This is not a fair wage law, it is a minimum wage law?—A. It is not a fair wage law.

Q. It is not what is fair; if an employee works for a week, then your administration fixes the minimum wage for the week, that is the idea. I think you set it out well in your report for 1932, where you say: it must be kept in mind that we are not administering a fair wage law, but a minimum wage law, that we do not fix the wages, but simply set the cost of living levels below which wages may not fall.—A. Below which wage rates may not fall.

Q. I have just got wages here.—A. Please do not overlook that "wage rate".

Q. These are in this report.—A. Quite so.

Q. At any rate the minimum wage law asks no more for working women than society demands for its criminals, imbeciles and paupers, namely, sufficient food, proper shelter and modest clothing. That is clearly understood. Surely there could be no argument as to its desirability. It is a question of minimum rather than fair wage, that is being administered. Now, Mr. Stapells, I ask you this; if the minimum wage is being administered on the basis of the cost of living and not on the basis of the ordinary requirements of the individual, and a firm, as the chairman says, decides that instead of its employees coming in at nine o'clock in the morning, they shall come in for the peak hours, eleven to two, and four to six; that is, they are there practically only two-thirds of the day and they receive accordingly two-thirds of the minimum wage set by the act.—A. Right.

Q. And when the employer reports to you, he reports that the employee has been there two-thirds of the forty-eight hour week and has received two-thirds of the \$12.50?—A. Right.

Q. Or the sum of \$8 to \$9 a week. That is about the situation with respect to that employee?—A. Right.

Q. Has it not come to your knowledge, Mr. Stapells, that during the past two or three years, by reason of the economic conditions, employers have been cutting down the hours of employees, particularly store employees, or staggering the hours so as to reduce the number of hours they would work and thus reduce the total amount paid to those employees.—A. No, not in stores. In stores we find them increasing the hours. It is in factories where they reduce the hours. We find them doing that in factories, yes.

Q. You find them doing that in factories?—A. Yes.

Q. That would have the effect of giving an employee very much less than the \$12.50?—A. Correct.

Q. Then, Mr. Stapells, the \$12.50 is fixed for the ordinary hours of work in a plant?—A. Yes.

Q. Does that mean that every employee over 18, every experienced employee over 18 in that factory must receive the \$12.50?—A. No.

Q. What does it mean?—A. It means for the normal number of hours in vogue in the plant in which she works, if she works those hours then she gets \$12.50 a week, if she is experienced.

Q. Suppose the plant is a 48 hour plant and the employee works the full time, does it mean that every experienced employee working the full time must get \$12.50?—A. If she is on a time work basis. If she is on piece work basis, there is a provision that calls for 80 per cent of those on piece rates, if they earn the minimum wage the other 20 must be slow or must be malingerers or something of that kind, and they must take what they earn.

Q. Even for years?—A. That is a provision that is used in every minimum wage law in all countries in which minimum wage laws obtain.

*By Mr. Factor:*

Q. Do you mean that 80 per cent do get it?—A. Yes.

*By Mr. Sommerville:*

Q. Then, Mr. Stapells, if a person is employed at a weekly wage rate, or a rate per hour and she works the full time of the factory, that employee gets \$12.50; is that right?—A. Yes, if she is experienced.

Q. If she is experienced, and she is working on piece work, and if 80 per cent of the piece workers receive \$12.50 or reach that minimum, that is said to be a compliance with the provisions of the act?—A. Right.

Q. So that every factory may, in reporting to you, show 20 per cent of its experienced female workers as earning less than the minimum wage law calls for?—A. Right.

Q. And that would be the latitude in which your minimum wage would operate?—A. Right.

Q. That being so, Mr. Stapells, if you found a case of employers whose employees were engaged on piece work, and they were speeding up the employees in order to get them.—A. We do not know anything about speeding up. They do not call us and tell us that they are going to speed up their employees; that the employees are going to speed up. We have nothing on that score at all. We know nothing about that, as a matter of fact.

Q. So that the complaints that have come to this committee have not come to you, at any rate?—A. No sir, they have not.

Q. Has this kind of complaint come you: when a firm finds that 60 per cent of its employees on piece work have earned only \$11 during a week, they advance the additional dollar or dollar and a half to 20 per cent in order to make it \$12.50?—A. We have occasionally come across that where an employer said we will make it up, yes.

Q. Then, have you found that in the following week or month when that particular employee to whom the advance has been made is in the 20 per cent class, and has earned say only \$7 that the \$1 or \$1.50 advanced, has been deducted from the \$7?—A. Never.

Q. You never found that?—A. Never.

Q. Then, those complaints that have come to this committee have not come to you?—A. No.

Q. They have not come to you?—A. No.

Q. You are not familiar with that practice?—A. No, sir.

Q. Then, may I ask you this: does the 80 per cent apply to all the industries that are under your board, or is there a different proportion for some other industry?—A. No, all piece workers are on the same basis in all industries where piece rates obtain.

Q. I just want to get the variation here. Take, for instance, this order no. 47 of the Minimum Wage Board for canners and packing of fruit?—A. Yes. I beg your pardon; you are right. Sixty per cent in the season, because there are a lot of people who come in and work an hour and never come near the place again. They may come in and work two hours and you never see them again.

*By Mr. Factor:*

Q. Seasonal canners?—A. Yes.

*By Mr. Sommerville:*

Q. Any female employee in factories in canning, packing and evaporating fruits and vegetables?—A. Yes.

Q. They operate seasonally. Where you have set a minimum wage, if there is 60 per cent of these piece workers who receive the minimum wage.—A. Yes.

Q. —from their piece work, then that is said to be a compliance with the act?—A. Yes, the reason being this, that in those plants they work possibly three or four months only in the year. The tomato season starts in and runs for about five weeks only. They call in tomato workers. These women will come in and they may take on 400 and every one of them experienced, the whole group. It was decided that as they were old people and some of them perhaps very young, perhaps some had never done any work before, had not a proper comprehension of what they had to do, did not understand it at all, that the 60 per cent ratio would obtain rather than the 80 per cent that obtains in the regular factory which is working 12 months in the year. That was the reason for that 60 per cent.

Q. You have then, generally speaking, found that the employers of canning factories are pretty efficient?—A. You see, there are different kinds of canning factories; there is a regular canning factory that runs 12 months in the year, and then there is the seasonal canners that only work three or four months in the year.

Q. With respect to the seasonal canners, is it not a fact in your experience in the board, that they are employing very largely and almost exclusively those persons who do a full day's work and therefore they are getting full experienced help whereas 60 per cent is all that is required?—A. Where would they get full experienced help? If the town of Leamington called for 700 workers to start in on the first of May, these girls would come from more or less all over within a radius of 50 miles, and you would have farmers' wives and daughters and school girls, the most of them inexperienced, coming in to make a little money. In fact, in some of these places, they provide accommodation for them; they build houses.

Q. I presume they have been peeling tomatoes in Leamington for many years?—A. I do not know why you presume. We find a great many of these people are inexperienced.

Q. I mean the plants in Leamington have been peeling tomatoes for a long time. If that is so, have you found that 60 per cent is a rather small portion?—A. We do not think so; most decidedly and emphatically we do not think so. And it was the experience of the canners themselves and the employees. Some of the employees in the canning factories fixed that 60 per cent, not the Ontario Minimum Wage Board.

Q. Have you, in the course of your board's inquiries, had occasion to hear complaints that women were engaged in those seasonal canning plants working

all day, the full ten hours a day, and getting 50 cents for their work peeling tomatoes and such things?—A. We have had some anonymous complaints to that effect.

Q. Have you made investigations as to what they were getting?—A. How could we investigate the anonymous complaint; if we did not know the name of the girl we could not find out whether she was getting it or not. We get many letters during the year alleging dreadful conditions up there, and every place that we investigate we find not a word of truth in them.

Q. Now, let me understand the operation of your board. You have Mr. Fester and Miss Stephen, who are members of your board?—A. Yes.

Q. Then you have two inspectors who are directly employed by your board?—A. Four—three.

Q. I think you have four—A. Mr. Odell, Mr. Fester, Miss Stephen and Mr. Kelly, who is partially serving another department.

Q. Outside of the members of the board you have those two inspectors?—A. Yes.

Q. And those two inspectors, Mr. Kelly is serving your board and also another department?—A. Yes.

Q. When did Mr. Kelly join you; when did you get the additional man?—A. A year ago.

Q. Then the policy of your board, as I understand it, is to rely upon the statements that come in from manufacturers as to their wage rates?—A. Yes.

Q. Covering the period of 12 weeks?—A. Yes.

Q. And an 80 per cent showing of that wage rate is taken as a compliance with the board's requirements?—A. So far as piece workers are concerned.

Q. It is not the policy of the board, as a policy, to initiate inspections of those plants as a regular routine to see if they are living up to the wage requirements?—A. No, for two reasons: first of all, on economic grounds. The Ontario government has been trying to balance its budget for the last two or three years, and they have deliberately asked us not to—asked the department not to increase expenditures. In the second place, we do not think it necessary. We would have to have a couple of hundred inspectors, perhaps a thousand inspectors to cover every establishment throughout the province.

Q. These 77,000 employees are scattered through a great number of plants and industries?—A. Quite right.

Q. Can you give me any idea of the number of plants in which they are engaged, Mr. Stapells?—A. 4,215.

Q. Factories, that would be?—A. Yes.

Mr. FACTOR: 77,000?

*By Mr. Sommerville:*

Q. How many stores or mercantile plants would there be?—A. About another 2,000.

Q. So that altogether there would be some 2,400 or 2,500 plants and stores and mercantile establishments?—A. I would think so.

Q. In which these 77,000 workers are, and of course, it would be a very large task for you to gather data from these employees as to what they are paid?—A. Yes.

Q. During the past 18 months what evasions have there been? You told us that you have had a number of complaints and you found a number of evasions. From how many firms did you find it necessary to secure adjustments of arrears of wages during the past 18 months?—A. 320.

Q. 320 firms?—A. And 340 altogether.

Q. There were 340 altogether?—A. Yes.

Q. 320 of those were not prosecutions; is that right?—A. Correct.

Q. And 20 of them were prosecutions?—A. Correct.

Q. Resulting in convictions?—A. Right.

Q. Of the 320 what was the total amount of the adjustments that you secured for the employees?—A. Well, first of all I would like to say that we had a thousand adjustment of wage sheets.

Q. There are 1,000—A. 1,000 adjustments of wage sheets covering 2,500 girls. Now, these adjustments might be of this nature—

Q. What?—A. Not a violation of the law, just a misunderstanding on the part of the employer or a misunderstanding on our part; but that had to be adjusted. We had 1,000 of those covering 2,500 girls.

*By Mr. Factor:*

Q. Would you mind asking him how many actual cases of arrears of wages were recovered?

*By Mr. Sommerville:*

Q. You had 340 cases of adjustments—at least in the case of adjustment of the 340 firms, how many employees received back wages? Can you tell me that?—A. Of course I can.

Q. About how many—A. Adjustments without prosecution, there were 320 firms covering 589 girls.

Q. And the total amount adjusted was?—A. \$20,240.

*By Mr. Factor:*

Q. How far back do you go, usually?—A. My term—

Q. How far back do you go?—A. Under the Summary Convictions act we are only allowed to go back six months.

Q. In other words, you cannot recover arrears committed in breach of the Minimum Wage Act beyond six months?—A. We have collected for a longer period than that. We have collected for a year and a year and a half, but we have no right. What we have said is, you owe those girls, and we want you to pay it over. The act only goes back six months, unless they change it to-day in the House in Toronto.

*By Mr. Sommerville:*

Q. You said also in addition to this, there were minimum wage adjustments, —1,000.—A. 1,000.

Q. What does that cover?—A. 2,500 girls.

Q. What was the amount of this adjustment?—A. It was not an adjustment. I said before they were very simple misunderstandings between the board and the employer. I might say this—

Q. Corrections.—A. Corrections; that is a better term.

Q. I thought perhaps you had figures with you.—A. I have, on any wages; any question that arises on wages or prosecutions.

*By Mr. Factor:*

Q. I should like to ask your opinion on the six months' period, Mr. Stapells. Do you, from your experience, think that it is a sufficient length of time to go back?—A. Mr. Factor, I do not. I have asked the Ontario government to pass an amendment in the present legislature making it a year.

*By Mr. Sommerville:*

Q. Then, Mr. Stapells, in addition to this you have had some firms that you prosecuted?—A. Yes.

Q. And I understand that the policy of the board is to prosecute only in the event of there being open defiance of the board or some flagrant case of deception in the records?—A. I think that is a fair way of putting it, yes.

Q. And in these twenty prosecutions, how much money have you recovered for employees and for how many employees?—A. We recovered for 171 employees; 20 firms, 20 prosecutions, \$4,693. Our total altogether, \$24,931.51.

Q. That is the total amount of adjustments you have been able to make?—A. The arrears we have collected.

Q. In the last eighteen months. Then, Mr. Stapells, what has been the nature of the evasions for which prosecutions have taken place?

*By Mr. Factor:*

Q. May I interrupt for a moment; I would like to know what fines were levied against the offenders in these prosecutions, those twenty convictions; have you a record of that?—A. Do you want the names?

*By Mr. Sommerville:*

Q. The twenty convictions?—A. Parkway Tea Rooms, Toronto—

Q. I would not give the names, if you can give the total fines.—A. The total fines were six hundred odd dollars. It is my memory which is serving me now.

Q. Possibly \$30 apiece?—A. Yes, I can read them here: \$20, \$20, \$20,—and costs, of course, in each case; \$70 and costs; \$20 and costs; \$20 and costs; \$80 and costs; \$50 and costs; \$20 and costs; \$20 and costs; \$20 and costs; \$20 and costs; \$20 and costs; \$20 and costs; \$20 and costs; \$200 and costs.

*By Mr. Factor:*

Q. \$200 is the maximum; in one case it is the maximum?—A. Yes. There were some separate charges here; in no case was the maximum given. I may say this, that the disposition of the magistrates is not to apply the maximum.

*By Mr. Sommerville:*

Q. Then, Mr. Stapells, as to the nature of the evasion, have you found that in the course of your investigations, that some companies have kept two sets of records, one for the Minimum Wage Board and one for themselves?—A. In one single case.

Q. Have you found they have kept false records?—A. Yes, we have found some where they kept false records.

Q. What are the false records?—A. For instance, putting down a girl as getting \$18 a week when perhaps she was only getting \$10 or \$14 a week.

Q. Have you not found cases in which they had two sets of cards, one for the factory and one for the office, the office copy being submitted to the board?—A. No.

Q. No false record of that kind?—A. No.

Q. What has been the nature of the evasion where you went so far as to prosecute?—A. Under-paying the girls, supplying wrong information to the Minimum Wage Board, not keeping correct records, and deliberately trying to fool the board.

Q. Has the situation in the textile trade been rather serious as far as the minimum wage problems are concerned?—A. No; particularly in the needle trades.

Q. In the needle trades?—A. Yes.

Q. You have referred to the needle trades and textile trades?—A. Yes.

Q. The needle trades have been rather seriously affected?—A. Yes.

Q. And you have a good many complaints from them?—A. Yes.

Q. And in that trade, that particular branch of the business, is where you have had most of your adjustments?—A. No, I would not say that. I would not say that we have had most of our adjustments there.

Q. Well, most of your prosecutions, shall I say?—A. No, I would not like to say that.

Q. Why do you say most of the trouble is in the needle trade?—A. For the reason that they are on short time, they are on short orders, they are working part time. The needle trade certainly has been up against it, perhaps more than any other industry during the past few months; and these fellows struggling against fate, struggling against depleted surpluses, struggling against the imposition of dictation perhaps by the provinces, they have paid their girls—have tended to reduce below our levels, not deliberately, but the poor manufacturer was not perhaps in any other position than to just do it that way. In some cases we prosecuted where, the next day, they assigned because they were completely up against it. When a man is desperate, he will take a chance, and I think some of these people have taken chances.

Q. Have you found that some of these plants have not reported to you the full number of employees that they have had?—A. Yes, we had two cases of that.

Q. Have you found in some cases that there were actually two persons drawing the one pay envelope; that is to say, one person appearing as drawing \$15, whereas that was divided between that person and another?—A. Well, we had two or three instances; in the first one there were two pays in one envelope but both girls were getting  $33\frac{1}{2}$  per cent more than the minimum wage calls for.

Q. That is for part time?—A. For full time. Each of them should have been getting \$12.50 per week and one was getting \$17 a week and the other drawing \$16.

Q. Have you had cases where there have been infractions of the minimum wage by that process?—A. Yes, but not as many; we have heard allegations of that, but they have not been brought to our attention; and then we have had this—and it has been the practice in the needle trade for years—where an operator will bring in an assistant, a helper and the firm will not know anything about it. The operator may be teaching her.

*By Mr. Factor:*

Q. You mean an apprentice?—A. Well, that is what the operator calls her, an apprentice; and while we hold the employer responsible, after all is said and done, if he does not know anything about her being in there, or he does not know he is violating the law, he is not so reprehensible a being after all. We have had cases of that kind.

*By the Chairman:*

Q. Do you think there would be many cases where the employer would not know an extra worker was on his staff?—A. Well, there are employers—plants, where they may have 100 or 150 girls and the employer not go upstairs to the factory once in—

Q. But the foreman?—A. The foreman may know, yes; but it has been the practice in the needle trades for the girls to bring in helpers; and in the men's section of it I believe it is very prevalent, not to bring in girls but to bring in other men, to teach them.

*By Mr. Sommerville:*

Q. Mr. Stapells, has it not come to your board as it has come to us, that instead of them being inexperienced helpers that are brought in, experienced operators come in with the registered worker, with the worker who punches the

clock, and the two together work on the piece work to produce the minimum wage?—A. That is the same thing, two pays for one envelope, or the name of one on it.

*By Mr. Factor:*

Q. How many cases of that are this?—A. Very few. When it has been brought to our attention, we follow it up very vigorously.

*By Mr. Sommerville:*

Q. Of course you would. That is the policy of the board, as a matter of fact, is it not; you mostly wait until there is a complaint, naturally?—A. Oh no.

Q. And then follow it up?—A. No. What about those 1,000 adjustments I have spoken about?—A. No, we will initiate an investigation.

Q. That is, you will initiate the investigation after they become apparent on your examination of the wage sheets?—A. Yes.

Q. But if they do not become apparent on the wage sheet, you wait for complaints from the employees?—A. What else could we do?

Q. I am just asking if that is the system; that is the policy, of course, that you have adopted?—A. There is no other way unless someone complains. What else are we to do?

Q. Have you found, as a matter of fact, diffidence on the part of the operators for fear they would lose their jobs? Is not that the experience of your board?—A. I wish you could see the number of girls that come up to the office every day asking for information and making complaints. No, they are not afraid of losing their jobs. There are some of course, because the average little girl in business is modest; and I want to say this at this point, that we do not institute prosecutions, for that particular reason, as much as we adjust wages. A girl will come in and say to me, "Oh, Mr. Stappells, please don't take us into court, we don't want to go into court to collect our arrears." After we got as we did in this case, \$100 for this girl, and her wages were shown to be at \$12.50—it was possible to have effected a large adjustment in her case—she does not want us to prosecute and take that firm into court; and so we have got these adjustments on that basis.

Q. When you find that employees are entitled to moneys from their employers for breaches of the act, have you found in some instances the employees, would refuse to take the arrears?—A. Yes; last week we prosecuted one firm and the girls came themselves, our witnesses, and they got up in the witness box and asked the magistrate not to mulct this employer of theirs because he was hard up and because they did not want the arrears and they would not take the arrears if they were given to them.

Q. Is that because they were afraid of losing their jobs?—A. I cannot tell you what their object was. They were not afraid of losing their jobs when they allowed us to prosecute.

Q. I appreciate that.—A. I cannot tell you what was in their minds. I asked Mr. Fester afterwards, and I think the feeling was that these girls were really a little sorry for this employer. He employed seven girls, and they were really a little sorry for him.

*By Mr. Factor:*

Q. You do not think that there was any other motive?—A. Not in this case; there may have been; we have no way of judging motives.

*By Mr. Sommerville:*

Q. Do you know of any other cases, Mr. Stappells, where the employer settled with the employees at ten cents on the dollar; have you found many cases of that kind?—A. I would not say how much they settled for, they have settled, they have gone to the employees and had a conference, perhaps they

were on very good terms, you see, Mr. Sommerville, and possibly we did not know anything about it. I have had girls come to my office and say now we don't want to be dragged into court to settle this, because to do so might throw us out of a job. I remind them that they are entitled to their \$12.50 per week, and they say that they have reached a settlement with their employer, whom they say has made an adjustment in their wages, and they are going to look after their future.

Q. That is just what I infer, judging by the broad lines we have been taking. There are instances where to disclose the identity of the board might be prejudicial, I thought perhaps your experience would have been somewhat that they are in danger of losing their jobs.—A. Yes, I would think so.

Q. Does the board permit the settlement of claims for so much on the dollar? —A. How do we know when a girl goes privately to the employer and makes a settlement?

Q. Does not the girl make the settlement through your office?—A. We might not know anything about it, they make settlements that we know nothing about.

Q. I mean when you get co-operation and the girls are being paid, you do not make settlement through your office.—A. Yes, we do, if the case comes to our notice at all.

*By Mr. Factor:*

Q. Do you make any settlements through your office on this percentage basis?—A. No. There may be times, for instance, where you have a company which goes into liquidation or makes an assignment and we have to collect so much on the dollar on the assignment. If we find that a firm has not a dollar and the owners are absolutely up against it, and the girls are satisfied to take a portion and be glad to get a portion we will make settlement; just common sense would prompt us to do it.

The CHAIRMAN: Now gentlemen, it is one o'clock. I think Mr. Sommerville is through with the witness.

Mr. FACTOR: I would like to have asked Mr. Stapells to discuss the problem of apprentices and how that works.

The CHAIRMAN: Well, the committee would like to hear Mr. Stapells again this afternoon. We will adjourn the committee until three thirty o'clock this afternoon in this room.

Committee adjourned at one o'clock to meet again at three thirty, p.m.

---

#### AFTERNOON SESSION

The committee met at 3.30 P.M. and continued with the evidence of Mr. Stapells.

Mr. SOMMERVILLE: Mr. Heaps is leaving in a few minutes, Mr. Stapells, and he may desire to ask you a few questions.

*By Mr. Heaps:*

Q. You gave the sum of \$12.50 being the minimum rate of pay for the girls under your jurisdiction?—A. In the city of Toronto.

Q. And outside of the city of Toronto it is a dollar per week less?—A. Not necessarily. In some towns it is \$12, some \$11.50. There is one industry in Hamilton and other points which asked purposely that they make it more. They wanted to make it \$11.50. They asked us to make it \$12.

Q. Could you give to the committee the amount received by those other than skilled employees?—A. What particular industry?

Q. In a general way.

Mr. FACTOR: You mean not experienced.

Mr. HEAPS: Inexperienced.

The WITNESS: Yes. Take the textile industry—a factory—if a woman is over eighteen years of age, in the first six months of her employment she should receive \$10 a week; then in her second six months, \$11; and at the end of twelve months, \$12.50, the experienced minimum.

*By Mr. Heaps:*

Q. After twelve months she is looked upon as experienced?—A. An adult over eighteen. If she should be a young girl under eighteen, say starting out at sixteen years of age, the minimum wage for the first six months, \$8, the second six months, \$9, the third six months—the eighteen months learning period—\$10. After the eighteen months \$12.50.

Q. What do you include in the textile industry?—A. Spinning, knitting and weaving.

Q. How about the garment industries, the clothing industries?—A. They are under the needle trades.

Q. Could you give to the committee an idea of the approximate time one of these girls would work during the whole year?—A. No. I have not got that information, frankly. It is to some extent seasonal. There are certain times in the year—and when I say we haven't got it, please bear in mind that I was for thirty years in the dress manufacturing business myself. There were certain periods in the year when we were slack and not much work going on. During the depressed conditions we have been going through, these slack periods have been a little more accentuated.

Q. Do you think a girl would work eight months in the year on an average?—A. In my plant they always worked eight months, nine months and ten months; in some places under eight months, depending on how successful the firm is.

Q. Would eight months be a fair approximation of the time a girl would work during the year?

Mr. SOMMERVILLE: At the present time?

The WITNESS: I would think so.

*By Mr. Heaps:*

Q. If you have your minimum rates split by two-thirds that would be about the average wage a girl would earn in the province of Ontario?—A. Yes.

Q. In other words, a girl to-day would be earning \$8 or \$8.25?—A. According to that way of figuring; according to ours it would be about a minimum rate.

Q. She would be making \$8.50?—A. Yes.

Q. If \$12.50 is, as you say, the minimum rate on which a girl could live in anything approaching decency, you would not expect she could live on \$8.50 a week?—A. I have no answer to that question.

Q. The committee want to know something about industrial conditions in the province of Ontario?—A. You are asking me for my opinion.

Mr. FACTOR: That is not the fault of the minimum wage act; we are discussing fair wages.

Mr. HEAPS: I think the committee is investigating industrial conditions. In investigating industrial conditions we have a gentleman before us who occupies the position of chairman of the Minimum Wage board who tries to state what is an approximate living wage, \$12.50, for those engaged in industry. He could tell the committee whether \$8.50 is anything approaching a decent living wage.

The WITNESS: I would not say it was approaching a decent living wage, no; but I have an act to enforce, and that is my job—not to provide for girls who are not working during slack periods. That is something entirely foreign to the minimum wage board administration. I have no authority whatever.

Mr. HEAPS: Speaking strictly within the confines of the act you may be correct. I do not think the committee wishes for a moment to say that this investigation shall be confined strictly to the interpretation of the act.

The WITNESS: I would say there are others more qualified.

The CHAIRMAN: Excuse me, gentlemen; might I suggest that we confine ourselves to asking for facts rather than for opinions from Mr. Stapells, because that is hardly fair to him or to the committee.

*By Mr. Heaps:*

Q. May I ask if Mr. Stapells has in his possession figures to show exactly what the average wage of the girls is that come under the jurisdiction of the Minimum Wage board?—A. Yes. What industry would you like?

Q. Have you them all?—A. I have them all.

Q. Textiles?—A. I have them all covering 77,000 girls.

Mr. FACTOR: I would suggest that this table be filed with the committee.

The CHAIRMAN: Mr. Stapells, could you file this table with us?

The WITNESS: Yes, sir.

The CHAIRMAN: Would that be all right, Mr. Heaps?

Mr. HEAPS: Yes; as long as it goes into the record.

The WITNESS: As a matter of fact, it is my annual report, and, having been released to the House I can present it.

*By Mr. Sommerville:*

Q. If you present your annual report, does that contain the information for which Mr. Heaps is asking?—A. Yes.

Mr. FACTOR: You mean the average wage earned by the girls annually?

Mr. HEAPS: The annual wage.

The WITNESS: Oh, no; we are only dealing with rates.

*By the Chairman:*

Q. You have no record, Mr. Stapells, of what any girl—A. gets during the whole year.

Q. —of the 77,000 throughout the whole year?—A. No, sir.

*By Mr. Sommerville:*

Q. You have no record showing the length of time in a year in which a girl works?—A. No, sir.

Q. And the record is for merely a four weeks' period or a twelve weeks' period; in return she was receiving a certain wage?—A. Yes, sir.

Q. Whether she was engaged for six months, nine months, of that there is no record?—A. No records. We do not collect them.

*By Mr. Heaps:*

Q. This morning you spoke about the dictation of the banks?—A. No, I do not think I said the dictation of the banks.

The CHAIRMAN: I think you did.

The WITNESS: Did I say the "dictation" of the banks?

Mr. FACTOR: Under extenuating circumstances.

The WITNESS: It may be that. Did I say "dictation"? What I said was this: if a firm owed a bank a large amount of money and the firm was not successful and the bank was asking the firm to reduce its overdraft and this firm in order to try to reduce the overdraft was hard put in order to get sufficient to reduce the overdraft then they might adopt desperate means to reduce the overdraft by various methods, reducing wages for one.

The CHAIRMAN: That is only supposition on your part?

The WITNESS: That is all, Mr. Stevens.

Mr. HEAPS: You have no direct knowledge of that?

The WITNESS: I have not, sir.

*By Mr. Factor:*

Q. Is there anywhere we can get a record of what the average weekly pay of these girls is? You haven't got it?—A. No.

Q. Could you assist us in getting it?—A. The only way you could get it would be to ask the individual firms to give you a copy of their yearly payroll.

*By Mr. Sommerville:*

Q. Perhaps you could assist the committee by giving them the average weekly earnings of these girls for the twelve week period for which you have the records? That will not give the year but it will give the average for the twelve weeks?—A. In 1933 we had 456 firms reporting 7,154 female employees. The average weekly rate of wages was \$13.80, the average number of hours worked 44.6. There were out of these 7,154, 27 who received under \$7 a week, 3,054 who received between \$7 and \$8; 143 who received between \$8 and \$9; 163 who received between \$9 and \$10; 64 who received between \$10 and \$11; 431 who received between \$11 and \$12; 1,391 who received between \$12 and \$13; and then we reach the minimum level. Now, from that point on I have no authority whatever. This board has no authority over wages beyond its minimum.

Q. What industry is that?—A. The needle trades. Between \$13 and \$14, 1,372. These are quite beyond our authority, \$14 and \$15, 937; between \$15 and \$16, 743; between \$16 and \$18, 530; between \$18 and \$20, 330; between \$20 and \$22, 189; \$22 and upwards, 255.

*By Mr. Kennedy (Peace River):*

Q. How do you select the twelve weeks? Do you try and pick twelve weeks that represent in your mind the average for the year of that particular industry?—A. When they are busy.

Q. When they are busy?—A. Yes.

Q. It would not be a picture really of the whole year?—A. It is difficult, because one needle trade might be busy in the months of September, October and November, others might be busy in July, August and September, others would be busy in the three previous months. In the needle trades they make coats, dresses, caps, pants, vests—in these various needle trades, altogether something like 23,000, I think.

*By Mr. Sommerville:*

Q. Your method of selecting the twelve week period, as I understand, was by dividing your industry into so many component parts?—A. Yes.

Q. And in order that you might not be glutted with the reports from all of them in the same three months' period you broke up the year and will have one section of your industry reporting for the first three months?—A. Yes.

Q. And the next section for the next three months, and another section for the third three months?—A. Yes.

Q. And the last section for the final three months?—A. Yes.

Q. That is the method, I understand, that is followed by you in getting your reports?—A. Distribute them over the year.

Q. And you take that report—one industry may be making a report to you for January, February and March while another industry in another branch or another group may be reporting for October, November and December?

*By Mr. Factor:*

Q. It does not give us the factor of what the average weekly wage is?—

A. No, it does not.

The CHAIRMAN: It does not. He has not got the information.

*By Mr. Ilsley:*

Q. Does any industry know in advance what three months they will have to report for?—A. No; although after collecting them for ten or twelve years they know approximately it is going to October, November and December or perhaps, September, October and November. We have not said rigidly that it must be for those three months.

*By Mr. Sommerville:*

Q. Does not the same group report for practically the same period?—

A. Round about the same period, yes.

*By the Chairman:*

Q. They could put their house in order nicely in anticipation of that, could they not? Do you think that has been done at all?—A. No, Mr. Chairman, I do not think so.

Q. Are you quite satisfied?—A. Yes. Frankly—there might be some shyster firm, shyster manufacturers, advertising men and lawyers and so on, but taking them—

Mr. SOMMERVILLE: Speak for yourself.

The WITNESS: I did; I said advertising men; but taking them by and large, I do not think so, Mr. Chairman.

*By Mr. Factor:*

Q. They have seasons; they cannot make the season when the season is not there?—A. No, and they are busy, and they are hard put to get their operators at that particular time.

*By Mr. Sommerville:*

Q. Your report may not be for the particular season in that particular industry?—A. No, it may not be.

*By Mr. Ilsley:*

Q. You spoke of employees under eighteen years of age; are there any child labour laws in the province of Ontario?—A. Oh, yes, the Adolescence Act takes care of girls up to sixteen. I do not know that we have a single girl in our reports under sixteen. We do not recognize them, and if we come across them we report them. The only way she can work under sixteen is with a permit from the Adolescent administration.

Q. Do your records show that portion of those under eighteen in the employ of each industry?—A. Yes, we are dealing with one now. For instance, in the total number of employees in this particular industry there were 7,154—of the 7,154 there were 7,027 over eighteen years of age.

Q. What industry is that?—A. Needle trades. 127 under eighteen.

Q. Is there any trade in which those under eighteen predominate?—A. Yes, a little more, but by and large if you will please name them I will be glad to read any industry.

*By Mr. Sommerville:*

Q. This report contains that pretty fully?—A. Yes; but the proportion of young girls working is very small especially during depression conditions. It runs more to the older women and married women.

*By Mr. Ilsley:*

Q. Do the records show the number of married women in these industries?—A. We kept them for a matter of five years and then decided that they meant nothing to us so far as rates were concerned, so we did not clutter up the questionnaire with matters of that kind, we put in more important ones.

*By Mr. Sommerville:*

Q. This morning I was asking you about false records kept by any firm. Was that a factor in the firm that was fined \$200?—A. Yes.

Q. And had that firm been reported previously as getting a clear sheet, and then did you subsequently send in and make a careful inspection and find the falseness?—A. The only way we could find that the books were not correctly kept—I will not say I know they were deliberately falsified.

Q. They were false records—entries?—A. No. I am not so sure of that, Mr. Sommerville. We had to send in an auditor and the auditor was able to dig up the figures. Now, there was a question, a difference of opinion as to whether the firm worked fifty-four or forty-four hours. If they were working fifty-four hours a week there was not a question of its falsification; if they were working forty-four hours only, then there was. That point was never settled because he pleaded guilty and paid the fine.

Q. In other words, this \$12.50 being based upon the usual hours of work in the firm, if the firm changed the hours from forty-eight to sixty hours, we will say, then they could change the basis of the hourly rate for the women?—A. Yes. In other words, if they declared the factory's work period sixty hours and only worked forty-eight and paid forty-eight-sixtieths they were deliberately violating the minimum wage law.

Q. They did plead guilty and paid some \$1,700?—A. Yes.

Mr. FACTOR: Arrears of pay?

*By Mr. Sommerville:*

Q. Arrears of pay?—A. For the month of October. Arrears? Oh, no.

Q. How many months did that cover?—A. There were fifty-two employees and it covered eight months.

Q. That firm was convicted? This is a matter of record—A. Pled guilty.

Q. What firm was that?—A. The Ontario Boy's Wear Limited.

Q. They operate at Toronto?—A. They do.

Q. I presume that the checking up of such a discrepancy being a book-keeping matter, an auditing matter, would require expert help—A. It did.

Q. —to detect it?—A. Yes. We sent an expert auditor in. By the way, Mr. Chairman and Mr. Sommerville, I would like to correct one misunderstanding—

ing this morning. When Mr. Sommerville asked me if we had initiated any investigation I thought he meant if we initiated them or carried them on year in and year out.

Q. That is what I did mean. I have no doubt that some of the members of your board would visit plants from time to time?—A. Mr. Fester has visited every plant in Toronto, Hamilton, London, Ottawa, Windsor, Chatham, Kitchener, Guelph, Galt, Niagara Falls, Belleville, Brockville, Sault St. Marie, Fort William, Port Arthur, Kenora, St. Thomas, Trenton, Dundas, Cornwall, Orillia, Midland, Oshawa, Woodstock, Ingersoll, Grimsby, Burlington.

Q. He spent a busy twelve years?—A. He has indeed, and I carried on while he was away—not only inspected their payrolls but interrogated employers as well as the employed; and in the city of Toronto he goes around to most of the plants every year.

Q. What I had in mind was that I thought the committee desired to know if you made it a practice to have the inspectors go in every year into every plant or at off times in the year, at unascertained periods?—A. No. When he goes in he blows in. He does not give any notice.

Q. Are you going to suggest some recommendations?

*By Mr. Factor:*

Q. I understand apprentices are exempted from the Minimum Wage Act?—A. No.

Q. What is the position of the apprentice?—A. We have two. In the printing trades if a girl is an apprentice in a proper fashion—that is indentured—the firm signs the agreement, the girl signs the agreement and the Minimum Wage board signs the agreement—if she comes under a special dispensation. The other probationary period is in the millinery trade—the custom millinery trade, not the factory millinery trade; it is a better, artistic, creative occupation.

Q. You mean there is a lower schedule?—A. A little lower. In order to prevent the possibility of girls being kept out from learning the millinery trade it was pointed out unless we did this there would be no girls taken in as beginners in the millinery trade.

*By Mr. Sommerville:*

Q. Are there some dispensations granted by your board under which less than the minimum wage is allowed to be paid to certain girls?—A. Yes.

Q. Under what circumstances are these dispensations allowed—on how many dispensations, briefly?—A. We are allowed to give special permits to those who are physically and mentally handicapped and to women over sixty years of age. It is perfectly obvious with a woman over sixty that she is slowing up at that time, or some are at any rate. We guard them very carefully, very carefully. Last year we issued ninety permits only covering 116 employees. Now then the employee is fully interviewed by Mr. Fester, Miss Stephen and Mr. Odell.

Q. Is it a permit to an employee and not to a firm?—A. All three have to sign it.

Q. When you say 190, that covers 190 employees, not 190 firms?—A. No, only 90 firms; and unless the girl is perfectly satisfied she is not pressed nor do we listen to the importunities of the employer.

Q. Are there any permits granted under which the period of hours of labour is extended over sixty hours for the week?—A. Oh, no.

Q. That is definite?—A. Oh, no, not by our board. Of course, under another act, the Factory Act, they have that privilege but we have no control over them.

*By Mr. Factor:*

Q. You also grant permits to suspend the regulations in exceptional circumstances, I notice in the memorandum here?—A. The exceptional circumstances are physical and mental handicap or women over sixty years of age. On any other grounds we have not granted a permit—not more than three permits in the last three months.

*By Mr. Sommerville:*

Q. What are your recommendations?—A. I do not think, Mr. Chairman, that it will take me more than five minutes more if you will let me read what I have incorporated in my annual report to the government of Ontario. It will reflect the whole situation although there may be a little repetition:—

The work of the Minimum Wage board involves, always a consideration of many problems that arise from time to time in connection with the operation of the law. The past year, in particular, has produced many problems of an intricate nature, which the Board has not had to face during previous years.

It has not been an easy year. Perhaps, during 1933, we have felt the accumulated effect of the last few years of depressed industrial conditions. In many cases, it has marked the final disappearance of surpluses accumulated by industrial concerns over the period of prosperous years. The resultant necessity of lowering wage levels as a partial means of reducing overhead and overdrafts, and the cutting of wages by some firms to rates beneath our modest levels, in a last desperate effort to keep out of bankruptcy, were two of the major causes that made the task of the Board a difficult one, taxing to the limit the time, judgment and ability of its members. With the advent of better times, following a definite turn towards industrial recovery in this country, the board anticipates that these problems will become less acute in the coming year, and that organized industry throughout the province will recognize the importance of protecting their employees, and especially women employees, by making the payment of adequate wages the first step in the process of rehabilitation.

It is idle to deny that during the past few years the spectre of unemployment has stalked abroad throughout the world. In this country as in other nations, and in this province, the effect of the depression upon employment conditions has been seriously felt, and, although the future shines with a brighter promise for the worker, it will be some time yet before industry can absorb, in the process of recovery all the men who depend upon it for a livelihood.

With their men-folk out of work, it frequently happened that the women of the household were the only breadwinners in the family. Naturally the wages these women received were more closely scrutinized than they would have been under normal industrial conditions. Consequently, the assistance of the board has been sought more than ever before.

More than that, the Minimum Wage law and the measure of protection that it affords to women workers, has now become generally known, with the natural result that cases of alleged under-payment are being brought to the attention of the board in increasing numbers, not only by those who consider themselves underpaid, but also by some who think others are being underpaid.

It might be well to emphasize this point. The chief duty of the Minimum Wage board is to protect the wage rates of the women and girls of the province. They are the special clients of the board and when any complaint comes, anonymous or otherwise, that alleges under-

payment of a woman or a girl in Ontario, it is the bounden duty of the board to respond very promptly and to institute all the necessary enquiries to see that justice is done according to law. This duty we have endeavoured to carry out.

The board does not feel that it is bound to prosecute employers who, unwittingly, offend against its orders, and so long as such firms, on request from the board, bring their wage rolls into complete conformity with the law, and pay such arrears to their employees as may be found due, the board feels that it should be satisfied.

But, on the other hand, the board promptly and vigorously prosecutes (and will continue to do so) all employers who, after warning, are guilty of dereliction and who are not inclined to obey the regulations laid down by the board. In this connection, the board is gratified to know that the government of the province is solidly behind the board in its determination to enforce the law without fear or favour.

"The board decided for the first time during the past year to collect wage returns from seasonal canneries, seasonal tobacco plants, co-operative fruit and vegetable associations and office workers, outside the city of Toronto. These payrolls, upon examination have disclosed many interesting facts which will enable the board during the coming year to enforce its regulations more effectively in these occupations. It is the conviction of the board that it is only fair that employers who pay good wages of their own free will, and not because they are compelled to should be protected from the illegitimate competition of those who are not governed by similar ideals. In the pursuance of its duty in administering the Minimum Wage law, the board hopes to achieve this purpose.

"The experience of the board during 1933 has made it apparent that some amendments to the Act are desirable, and it is the intention of the board to ask the government to bring such amendments before the 1934 session of the legislature. These amendments, primarily, will have to do with the number of hours for which the rates fixed under the orders of the board are to be paid, and the length of time for which arrears may be collected. The board also desire to suggest to the government that the women workers of the province should be still further protected in their jobs by the inclusion of men and boys in any of the orders issued by the board."

Q. By that you mean that women who are now subject to a minimum wage law and men not being subject to that law there is a danger that women may be discharged and men put on at cheaper rates?—A. Yes.

*By Mr. Factor:*

Q. You are not recommending a minimum wage law for men?—A. I am not, sir—just covering the class of work our women are employed in:—

"For some years past the board has had in mind the convening of an Inter-provincial conference of Minimum Wage boards from all parts of Canada. All the eight provinces having Minimum Wage laws have expressed their willingness to attend. The chief difficulty militating against the bringing of such a gathering together has been, of course, financial, but the board intends again to press for such a conference this coming year, with the hope that possibly the Federal government may be interested enough in securing uniformity of Minimum Wage laws throughout Canada that they may be willing to defray the expense of such a meeting—to be held, if possible, in Ottawa in 1934."

*By Mr. Ilsley:*

Q. In framing your regulations under your Act, did you have regard to regulations made under the acts of other provinces to the end of their having any competitive advantage in the interest of one province and at the expense of another?—A. No, sir.

Q. What do you want an inter-provincial conference for?—A. If we have an inter-provincial conference it will be a matter of experience, discussion and agreement.

Q. You say you feel that uniformity is desirable, and I gather you did not make any effort to get uniformity. You say you did frame your regulations?—A. We cannot. It is based upon the cost of living. Whether it would be possible to fix a rate in Toronto that would stretch across Canada will depend as a result of our conference to find out whether the cost of living in the Maritimes is the same as in British Columbia. It is based on the cost of living only.

Q. If you had a situation like this, where the minimum rates in the province of Quebec, for example, were allowed advantages in that way, would not that put the manufacturers of Ontario at a comparative disadvantage as compared with those nearby?—A. Yes, it might. We have no control over Quebec, nor would we have any influence.

Q. Have you worked together?—A. We have had at least a dozen conferences with the district chairman of the Quebec Minimum Wage board and I have endeavoured to help him and he has endeavoured to help me. I think I may say he has helped me in many instances.

Q. Does the fact that this Minimum Wage law is under provincial jurisdiction rather than under dominion jurisdiction give you any trouble?—A. If it were a Federal matter they could deal with the whole country right straight across. My authority is confined to the province of Ontario alone.

*By Mr. Factor:*

Q. Do you know, as a matter of fact, whether the minimum wage in the province of Quebec is lower than that in the province of Ontario?—A. Yes, I know that.

Q. It is lower?—A. Oh, no, I would not say that. You asked me if I knew. Yes. I know.

Q. Do you know if it is lower?—A. No, you asked me if I knew. I did not say I knew it was lower.

Mr. ILSLEY: He knows whether it is or not.

*By Mr. Factor:*

Q. Is it lower in the province of Quebec?—A. In some industries and some sections it is not—it is exactly the same.

Q. In some industries it is lower?—A. Yes, and maybe higher.

The CHAIRMAN: Supposing we leave that until we come to Quebec? Just get the facts.

Now, Gentlemen, we have had Mr. Stapells for a pretty long time and if there are no other questions, I would like to get on with the next witness.

Thank you, Mr. Stapells, very much for your giving us this information.

The WITNESS: Thank you, Mr. Chairman, and if there is anything more that we can do to co-operate with you, we will be only too glad to do it.

The CHAIRMAN: Thank you very much.

Mr. A. W. LAVER called and sworn.

*By Mr. Sommerville:*

Q. Mr. Laver, what is your position in the city of Toronto?—A. Commissioner of Public Welfare, Mr. Sommerville.

Q. Commissioner of Public Welfare?—A. For the city of Toronto.

Q. Is that a department of the municipal government of Toronto?—A. It is, Mr. Sommerville.

Q. And you have occupied that position since its establishment two years ago, was it?—A. In 1931, Sir.

Q. Prior to that, I understand you were the officer in charge of taxes for the city of Toronto?—A. Right, Sir.

Q. And now you are in charge of the largest spending department in the city of Toronto?—A. Either fortunately or unfortunately.

Q. At any rate, it is a fact that the Welfare Department is the largest spending department you have?—A. That is correct, Sir, yes.

Q. Now, Mr. Laver, perhaps you can tell us just what bearing this question of non-payment of adequate wages has upon the relief situation. In your city you have how many families upon relief?—A. Oh, in round figures 115,000 people, Sir.

Q. About 115,000 persons?—A. Yes.

Q. And last year, your relief budget covered what expenditure, what total?—A. The gross expenditure last year for unemployment relief only by the city of Toronto was \$6,686,933.65.

Q. And of that amount, what proportion was contributed by the province of Ontario?—A. Generally speaking, two thirds. With the exception of some non-admittable items.

Q. Generally speaking, and that two-thirds of the contribution that you get from the provinces includes the one third which is paid by the Dominion.—A. Naturally, Sir, yes.

Q. In other words, of your six and a half million expenditure upwards of four millions comes from the province and the Dominion.—A. \$4,286,142.50.

Q. And split between the two it would represent an expenditure by the Dominion of Canada and the province of Ontario of about \$2,100,000 each in the city of Toronto.—A. Yes.

Q. For unemployment relief alone.—A. Naturally.

Q. Yes. Now, Mr. Laver, what have you found in your relief organization of your welfare department with respect to the wages paid to full time workers in the city of Toronto, and whether or not they are adequate; or whether or not, they are sufficient to avoid their drawing on relief.—A. I could answer that in this way, Mr. Chairman, that the Welfare Department in the city of Toronto not only comprises the unemployment relief activities but the welfare activities of the corporation.

Q. Yes, will you elaborate that?—A. That includes hospitalization, old age pensions, and other kindred activities. The effect we have found of the small payment of wages is not only in the unemployed relief responsibilities or obligations, but has also affected materially our assistance for hospitalization services which last year cost the city of Toronto \$1,355,000.

Q. That is for hospitalization services alone?—A. It cost the city one hundred cents on the dollar.

Q. Yes?—A. And a very large part of that \$1,355,000 is attributable to the fact that a great many of the citizens who heretofore could pay at least in part their hospital care cannot do that to-day by reason of the small, or low rate of wage, they are receiving.

*By Mr. Young:*

Q. Do you mean some of the wages paid are small, or are they only employed part time?—A. In some cases, it is due to the small rates of pay for full time employment.

Q. We are quite clear that that covers a very large number of cases of full-time employment.—A. Quite, Sir.

*By Mr. Sommerville:*

Q. Then, what other welfare work is affected by the same condition?—A. Another branch of the department's activities affected materially the last two and a half years is the increased demand from the corporation for old age pensions.

Q. Yes, how would that arises?—A. We have found this, that when a member of a family who had a fairly good income through sense of pride and otherwise desires to maintain an aged parent, they are now absolutely unable to do it, and the parent is compelled to ask assistance of the corporation by way of pension.

*By Mr. Factor:*

Q. But the old age pension is a matter of right for anybody who wants it.—A. Not entirely, Mr. Factor, the financial conditions of the family and the duty under the Adults' Maintenance Act have a very large bearing on the decision of the board.

*By Mr. Sommerville:*

Q. And you say that that occurs in connection with full time employed sons and daughters who find that their whole time pay is not sufficient to maintain themselves and their parents.—A. Frequently, yes.

Q. And, therefore, the number of applications has increased by reason of that factor.—A. In Toronto at the present time there are approximately 500 recipients of old-age pensions. As you are probably aware, the cost of that pension is divided in three ways; ten per cent by the municipality, fifteen per cent by the province of Ontario, and the balance of seventy-five per cent by the federal government.

Q. Yes, now let me see, the total amount in the city of Toronto last year paid for old-age pensions was how much?—A. In round figures, \$200,000, that is the city's share.

Q. That is ten per cent of the total?—A. Ten per cent.

Q. And fifteen per cent by the province would amount to something like \$300,000; and seventy-five per cent by the Dominion would amount to some \$1,000,000.—A. Correct, Sir.

Q. Paid by the Dominion government; so that, if there is an increase in the number of applications for old-age pensions by reason of the inadequate pay of full-time workers, the Dominion pays 75 per cent of that increase and the province pays 15 per cent.—A. Correct, Sir.

Q. Is there any other factor that is affected by this low-wage situation, Mr. Laver.

MR. FACTOR: I have not heard yet from Mr. Laver, the foundation as to why there is a low wage.

*By Mr. Sommerville:*

Q. We will just see all the conditions affected by the low wage and then we will reach the question of low wages?—A. There is, Mr. Chairman, a very serious and insistent demand under the Children's Protection Act that the municipality assume the burden of wardship over an increasingly large number of children

The City of Toronto last year spent in round figures \$236,000 for the maintenance of children who were made the wards of the Children's Aid Society.

Q. Yes?—A. And they thereby become a legal and monetary charge upon the municipality.

Q. What is the rate which is paid for each child who becomes a ward of the Children's Aid Society?—A. The rate varies slightly, it is adjusted yearly by conference; but approximately 94½ cents per day.

Q. 94½ cents per child per day paid for each child who becomes a ward of the Children's Aid Society.—A. Until they become 16 years of age.

Q. Up to 16 years of age?—A. Yes.

*By Mr. Young:*

Q. Children whose parents are both living?—A. In many cases, yes.

*By Mr. Sommerville:*

Q. In those cases where there is inadequate pay received by parents.—A. And thereby creating home conditions which the Children's Aid Society deem are not suitable to retaining the child.

*By Mr. Young:*

Q. That is to say, if there are immoral conditions in the home?—A. That is a factor, but not necessarily the only factor.

Q. Are there other factors?—A. The inspectors find cases where the children are not properly fed or clothed and otherwise.

*By Mr. Factor:*

Q. Who applies for the order to make the child a ward of the city.—A. It can be applied for by the welfare organization, or by the family, the parents.

*By Mr. Young:*

Q. You furnish relief, why is there not sufficient food and other things to enable the parents to take care of the children?—A. We find we have to take the children away because there are other factors in the home besides food and clothing.

Q. What are they?—A. Immorality, which you have just mentioned; and incompatibility of the parents who are not living together satisfactorily, and the children thereby suffer, and that is frequently the result of low wages.

Q. Do you lay all that to the low scale of wages paid to-day?—A. No, not as a whole, but it is partially the cause of it.

Q. Do you think that does not occur among the rich as well as among the poor?—A. Very frequently we find insufficient funds is the first cause of strife in the household.

*By Mr. Sommerville:*

Q. At any rate you find that there has been a decided increase in this factor during the past two years, during which there has been this lowered wage situation?—A. The demand, Mr. Sommerville, has been so heavy that it requires three full-time workers of my department to resist in the courts these children being made wards.

Q. And perhaps you could give the members of the committee some idea of just what you regard as the expense involved in making a child a ward of the city; what, in your experience, has been the expense?—A. By actual experience we find that the average maintenance of a child from the time the wardship is made, it may be a matter of months, or it may be a matter of years,

I think we have found that the average cost of a wardship is \$5,000 per child during the period of wardship.

*By Mr. Young:*

Q. What is the average period of wardship?—A. I cannot tell you off-hand; as I pointed out just now, some are made wards at infancy, and some at eight or ten, or four, or five or six years of age.

Q. And you say it costs \$5,000 to put a child through; we would be interested in knowing what the average period is.—A. I have not the figures here.

Q. Can you get that for us, and have it filed with the committee?—A. We can get it, yes.

*By Mr. Sommerville:*

Q. Now then, Mr. Laver, in the course of your duties at the Department you have to deal with a great many thousands of persons who are employed and who are on relief, and have you an investigating staff that looks into the question of investigating the wages received by persons as to their unemployment condition, or their means?—A. We have, Mr. Sommerville. We have investigated every family to the best of our man power ability, and the man power ability is limited by the number of our investigators.

Q. You have about how many?—A. We have approximately 30 of an investigating staff; and we have a small branch of what we call our special investigating branch, who carry on prosecutions, and work of that kind.

Q. Then, in the course of your investigations, Mr. Laver, will you tell me what effect you found, if any, the minimum wage law has on the employment of girls and men?—A. We have found many cases, Mr. Sommerville, where the wages being paid men and women made it necessary that the municipality come to the aid of the family, in some cases to the extent of partial relief, and in other cases, where they had a large family, to the extent of full relief.

Q. All these persons were working full time?—A. Quite right.

Q. And a full week?—A. Generally speaking, or frequently; yes.

*By Mr. Young:*

Q. Did you find any cases where a family, say of five, receiving X dollars per week, could not finance on it, and another family of the same number could finance on the same income?—A. I think that is possible, I cannot recall such an instance, though.

Q. In cases where they have financed on it, you were not called on to investigate?—A. No, that is correct.

*By Mr. Sommerville:*

Q. Now, Mr. Laver, what did you find as to whether or not girls who are required to be paid a minimum wage of \$12.50 had been discharged and men employed at smaller wages?—A. You are asking me if we found such instances?

Q. Yes.—A. I say we have, yes.

Q. And, can you give the committee the kind of case which you are referring to?—A. I can cite you, Mr. Sommerville, a case in point, if that is sufficient, where an employing concern in Toronto, where girls who were employed, and a complaint was registered by one girl, that she was being paid a minimum wage and she and other girls were discharged and men taken on in their places. These men received such a low rate of pay that the city of Toronto has absolutely had to come to their rescue in the way of supplies.

*By Mr. Young:*

Q. Are there many of these cases?—A. I am prepared to cite you one specific case.

*By Mr. Sommerville:*

Q. You have one factory there; how many employees are there in that factory?—A. There were approximately 20 girls employed there at this particular time.

Q. As a result of this condition being brought to your attention, did you investigate the condition and examine the wage list of this firm?—A. We did, Mr. Sommerville, yes.

Q. And you found the girls have been discharged and men taken on in their places?

*By Mr. Factor:*

Q. All of them?—A. The girls were practically all discharged, except the retaining of a small office staff of about three girls.

*By Mr. Young:*

Q. But 17 were discharged?—A. Practically all of the operating girls on the manufacturing branch were discharged, and the office girls only were retained.

*By the Chairman:*

Q. How many?—A. Approximately 17.

*By Mr. Sommerville:*

Q. What was the nature of the product this company was making?—A. This particular firm manufactured picture frames.

*By Mr. Factor:*

Q. Is that the firm that had the strike?—A. I believe they had some labour troubles, yes.

*By Mr. Sommerville:*

Q. What is the name of that firm, could you give us that?—A. The National Picture Frame and Art Company, 822 Richmond Street West.

Q. And after they dismissed a lot of these girls, what did you find when you examined the wage role, what did you find were the wages being paid for full-time employment to the men who took their places?—A. Could I recite one or two incidents of this particular firm, I think it probably would answer your question better than I could in my own words, this particular employee, Frank "Unpronounceable" 66 Lawton Avenue, wife and five children, has received relief for one year and has worked for the company two years; he is receiving \$9.00 a week for a fifty hour week.

*By Mr. Young:*

Q. What did his predecessor get?—A. His predecessor was a woman.

Q. What did she get?

Mr. EDWARDS: She could not get less than \$12.50.

*By Mr. Sommerville:*

Q. Her minimum wage would be \$12.50.

A. I have no record of that, but the reason she was discharged was the complaint that she was not receiving the minimum wage of \$12.50 per week.

Mr. FACTOR: It is not likely that she was getting \$12.50 per week.

*By Mr. Sommerville:*

Q. Can you give us any other cases?—A. Do you think I should mention names? The next instance, Mr. Sommerville, is a widower with four children

who has been receiving city relief for the past nine months. He has worked for the company two years, receiving fifteen cents an hour for a nine hour day.

Q. Fifteen cents an hour?—A. Right, for a nine hour day.

*By Mr. Factor:*

Q. Was that before or after the strike?—A. Before the strike.

Q. Some of these men were on strike?—A. Some of these men, Mr. Factor, yes. The next instance is this, "Wife and four children, has received city relief for nine months"; he has worked for the company nine years and is receiving \$10 per week.

*By Mr. Young:*

Q. This man could not have been taken on in place of the girls.—A. He was not.

Mr. ILSLEY: How long is a week.

Mr. SOMMERVILLE: A fifty-hour week.

The WITNESS: There is a list here of 13 names of boys. The following names of men or boys employed by the company are not on relief on our records, at least, under these names. They are receiving 10 cents an hour, 12 cents an hour, 12 cents an hour, 10 cents an hour, 12 cents an hour, 12 cents an hour, 12 cents an hour, 10 cents an hour, 12 cents an hour, 12 cents and 14 cents respectively.

Q. For a fifty hour week?—A. Yes.

*By Mr. Factor:*

Q. How old are these boys?—A. The ages are not given.

*By Mr. Edwards:*

Q. Does this firm do retail or sell directly—A. As far as I am aware, wholesale only.

Q. They contracted with certain firms for their product?—A. I understand their output is retailed through other channels.

*By Mr. Factor:*

Q. This is a picture frame concern?—A. Yes.

*By Mr. Somerville:*

Q. They retail through chains and departmental stores?—A. Retail trade, some way or other.

*By Mr. Young:*

Q. Not through retail, all through wholesale?—A. I do not know the channel of output, but I do not think it is retailed by themselves.

Q. Do you think that it is always through chain stores or departmental stores?—A. I am not suggesting that, sir; I do not know where it goes through.

*By Mr. Factor:*

Q. I was under the impression that this firm has men who are not employed, but who are paid a certain sum on condition they bring in the business of picture framing, and they frame the picture for them?

Mr. EDWARDS: They bring in work the same as any other agent brings in work, presume; they solicit business.

Mr. FACTOR: Exactly.

*By Mr. Factor:*

Q. Does it go through a wholesale jobbing firm, or a departmental store, or does it go through the ordinary retail channels? I mean, directly through retail channels?—A. I cannot answer that question.

Q. It would be well to find that out?

Mr. KENNEDY (Peace River): It would not make any difference from the standpoint of wages.

Mr. SOMMERVILLE: That will be the subject of inquiry.

*By Mr. Sommerville:*

Q. You have given us a list of nine; have you the hours and the names of the men who were employed in the plant. These are the known nine that were employed to take the place of girls.—A. These names I read to you last, Mr. Sommerville, were men and boys who were not in receipt of relief.

Q. They say they are on full time pay?—A. Taken off their payroll.

Q. These that are on relief, the city of Toronto, the province of Ontario and the Dominion of Canada, are contributing to the cost of maintenance of their families?—A. They are receiving at least partial relief and in some instances full relief, depending on the size and circumstances of the family.

Q. In other words, you are subsidizing that firm with respect to the wages that are so inadequate for these men?—A. To a more or less degree, yes.

Q. As against legitimates concerns in the city that are paying an adequate wage to their employees.

Mr. YOUNG: Are there many firms in that position?

*By Mr. Sommerville:*

Q. I have asked you to give me some samples of the kind of thing that you have to deal with of a similar character. Have you some there, Mr. Laver?—A. I have something here, Mr. Sommerville, that I think will probably answer your question.

Q. How many examples have you there?—A. I have a list of 41 firms,—I do not think there are 41, 38 or 39 different firms, the list includes 41.

Q. 41 different persons who are on relief?—A. No, 41 different persons who are on relief and employed by 38 different firms.

Q. Are these 41 persons that are on relief on full time pay?—A. In every instance but one.

Q. So that you have 40 of the 41 on full time pay?—A. Yes.

Q. And the full time pay is not adequate for the maintenance of the family?—A. As I pointed out before, Mr. Chairman, the amount of assistance the municipality renders to a family must be considered. You must take into consideration the circumstances of the particular family. Where \$9 might maintain a family of two or three people, it might not in many cases maintain a family of five or six or seven children; so that in these cases the rate of wages, or the wages earned, vary from \$5 per week to a maximum, I think, of \$12 per week.

Mr. FACTOR: For male employees?

Mr. SOMMERVILLE: Male employees.

The WITNESS: All male employees. Excuse me one moment until I see if I am right.

*By Mr. Sommerville:*

Q. I see one or two girls in the list.—A. Yes, there are one or two girls, Mr. Factor, yes.

Q. With the exception of one or two girls, or women, this list includes men who are working full time in those various firms?—A. There are only 7 in this list not men.

Q. There are 7 on the list who are not men, which leaves 34 men.

*By Mr. Young:*

Q. When you say "not men," do you mean women or boys?—A. No, I mean men, heads of families.

Q. But you spoke of some getting \$5. That would be boys, would it not?—A. No, heads of families.

Mr. SOMMERVILLE: These are all heads of families, with the exception of 7.

Mr. FACTOR: And all working full time except one.

*By Mr. Sommerville:*

Q. Now, in regard to the rate of wages, perhaps you could give me some samples of the kind of industries in which you found this inadequacy of pay, Mr. Laver.—A. The first one, Mr. Chairman, I found, is a restaurant, and the rate of wages for 12 hours daily is \$9 per week.

Q. Six days a week, 72 hours?—A. The next incident I have is a chain grocery store, grocery and meat, probably. That is a special report I have on it. The rate of pay on that was \$12.50 and \$10.

Q. Why do you say 12.50 for one?—A. For a week.

*By Mr. Factor:*

Q. How many hours?

*By Mr. Sommerville:*

Q. You have a special report; what is that?—A. "I was paid at the rate of \$10 per week for three weeks, and after asking for a raise, finally was given one dollar, making my salary \$11 per week."

Q. Full time pay?—A. For full time pay.

Q. For how many hours?—A. Full time the store was open. No stated hours. These particular stores are open in the evening quite frequently. "At the time of entering their services I was on city relief, and when asking for my raise explained to the chief supervisor that I was on city relief and that I liked to be getting enough wages to enable me to give up my relief supplies; but he told me that until business picked up, he could only give me \$1 raise. At the time the city of Toronto put the voucher system into effect, my supervisor insisted on us working at night to get prepared; but I had already prepared relief packages, and when I protested against working at night, especially owing to the fact that my wife was ill, he said the other men would be willing to do my work for less than I was receiving, and when I remarked they would not get the work I had done from the other men at the rate I was receiving, I was told by the supervisor that I had no kick coming, as I was getting city relief besides my wages, which was as good as \$15 or \$16 per week."

*By Mr. Young:*

Q. He was the only man that was getting a small wage; is that so?—A. He is making that statement regarding himself. This is a signed declaration, Mr. Chairman.

Q. I understood you to say that the other man in the store did not do the work he was doing for that price?—A. No; he told his supervisor that he could not get men to do the work he was doing at the price he was getting paid.

*By Mr. Factor:*

Q. Did you investigate the rate of wages of the other employees from that particular concern?—A. I have not, Mr. Factor.

Q. You have just given us this one isolated case?—A. Just a declaration as to his own income; but he also makes a statement here in regard to his co-workers, who he said did clerking and was receiving \$10 per week salary.

*By Mr. Sommerville:*

Q. By the way, these 41 cases are illustrations that you have prepared by request?—A. Just.

Q. They are just samples?—A. Samples of many. Forty-one is not, by any means, the number we have had.

*By Mr. Young:*

Q. You said one was a restaurant, one a chain store, what are the others? Give us the occupation of them all.

The CHAIRMAN: We are going right through the list.

*By Mr. Factor:*

Q. Before you leave the chain stores, is there any objection to knowing what chain store that is?

Mr. SOMMERVILLE: I do not see any.

Mr. FACTOR: Let us have it.

The WITNESS: That particular chain store is the Stop and Shop concern. The next concern is a woollen goods manufacturer, the Smith Manufacturing Company. I think they make or manufacture woollen goods, Shoddy Textiles. It is a mill, Mr. Factor. Probably you are familiar with it. It is on Front street east.

Mr. EDWARDS: You would not dignify that by the name of woollen goods.

The WITNESS: Incidentally, the Smith Manufacturing Company pay this particular man \$8.80 per week.

*By Mr. Sommerville:*

Q. How many hours?—A. Full time, whatever it may be—40 hours per week. The next concern is a rag and metal company.

*By Mr. Factor:*

Q. Mr. Laver, did you investigate the wages of any other employees of that concern?—A. No, sir. The public welfare department in Toronto is not concerned with that feature of it at all.

Q. You are merely taking these cases and producing these facts in connection with those particular cases.—A. My interests, Mr. Factor, is the protection of the city of Toronto in the matter of expenditure of relief. So far as I am personally concerned, or the city is concerned, the minimum wage is another thing entirely.

Mr. SENN: Would you say that that was a skilled labour?

*By Mr. Sommerville:*

Q. You have a declaration of the facts in each case. Perhaps if that was referred to when you are quoting these cases you could tell who it was, and what his position was?—A. I am going to answer that question right now. "I am employed by the Smith Manufacturing Company, Front street, who are manufacturers of shoddy textiles, and further state that I work 40 hours per week operating a machine." That is his declaration.

*By the Chairman:*

Q. He receives relief from the city of Toronto?—A. Yes.

*By Mr. Factor:*

Q. \$8.80 per week.—A. He also makes the statement, "There are roughly 75 employees who are receiving the same rate of pay, and most of whom are on relief". That is a general statement.

*By Mr. Young:*

Q. Can you tell us what the duty is on that product, Mr. Laver?—A. He operates a machine, that is all I can tell you, Mr. Young. I misunderstood you; I thought you said, what his duties were.

Mr. FACTOR: Mr. Young is very much interested in the other kind.

Mr. SOMMERVILLE: Yes.

The WITNESS: The next case—

*By Mr. Sommerville:*

Q. Just before passing to that case; in a case of that kind, Mr. Laver, do you adopt the policy of going to the firm and asking them to tell all of the complaints and of the applications for relief?—A. Not necessarily; in some instances we do.

Q. But in the majority of cases what would happen if you did go to the firm?—A. Well, my reaction to that would be this: the provincial government have ruled that a person entitled to unemployment relief is one who has no suitable employment; and the legal opinion of our corporation counsel is that suitable employment means sufficient earnings to maintain his family somewhat in keeping with the usual mode of living.

*By Mr. Young:*

Q. If a man has been used to living well, what then?—A. "Somewhat in keeping" I said. We have some discretionary powers; but my reaction is this: if that man is earning \$5 or \$6 or \$8 per week, it only requires the municipality and the two governments to assist that family partially. If we complained to the firm and he might be discharged, probably he would, then the municipality and the governments are required to assist that family entirely.

*By Mr. Factor:*

Q. Did you ever go to any of those employers and point out the inadequacy of the wages paid in a tactful manner and try to convince them of the inadequacy of them?—A. I would answer you, Mr. Factor, this way; it is not our business and another factor is that we have not a staff to do such work.

Q. Did any of those employers give you any reason for paying those low wages? Take the illustration you have given us, the last one, did they assign to you any reason for paying a very low wage?—A. No. I cannot answer your question, Mr. Factor, except to say this: that we have verified from the firms the statements these employees make.

*By Mr. Sommerville:*

Q. As to what they are getting?—A. Yes.

*By Mr. Factor:*

Q. Did you verify any of those circumstances?—A. They are all verified.

Q. Was there any reason given by the employer?—A. None.

Q. No reason at all?—A. No, sir. I will give you one case further down that might answer your question.

*By Mr. Sommerville:*

Q. Give us the next one.—A. The next one is a rag and metal company.

*By Mr. Young:*

Q. You mean someone gathers those things up?—A. Yes, for resale. Working full time, fifty hours per week, \$5.50 per week. The next one is a shoe manufacturing concern—not shoes, slippers or something of that kind. Full time, \$9.44 per week.

*By Mr. Ilsley:*

Q. What is full time?

*By Mr. Sommerville:*

Q. What firms are they to which you refer, that \$5.55 a week?—A. \$5.50 per week, Western Rag and Metal Company.

Q. And the next firm?—A. Colonial Manufacturing Company. They are on Adelaide St. west, a firm that makes slippers.

*By Mr. Factor:*

Q. The Colonial Manufacturing Company have assigned; you are aware of that?—A. Yes. This man is employed by the Colonial Manufacturing Company. "I have been employed for the past five years and have been working steady for this firm from 8 a.m. to 6 p.m."

Q. Five years?—A. Yes.

Q. And he gets what?—A. \$9.44, sir.

Q. Does he operate a machine there?—A. "I have been employed by the Colonial Manufacturing Company, Adelaide street west, Toronto, manufacturers of boots, shoes, etc." He does not say what his particular occupation is.

*By Mr. Boulanger:*

Q. Has he got the same wages all during those five years?—A. For a period of 17 consecutive weeks, at least. Omit one for one a minute. The next one is a service station.

*By Mr. Factor:*

Q. Gasolene?—A. Gasolene service station, working full time, sixty-four hours a week, \$10 per week.

Q. 64 hours?—A. 64 hours.

Q. What is the name of the company?—A. Gerber Red Indian Service Station.

Q. What gasolene do they sell, do you know?—A. I could not answer your question; Red Indian, I presume though. It is a product of McColl-Frontenac, is it not? The next item, Mr. Chairman, is National Grocers, Toronto.

*By Mr. Young:*

Q. That service station, is that run by the McColl-Frontenac or a private individual?—A. I would say by a private individual.

*By Mr. Sommerville:*

Q. Yes?—A. This man worked 50 hours per week.

*By Mr. Factor:*

Q. The National Grocers, do you mean?—A. Yes, the National Grocers, Limited.

Q. They are wholesale grocers?—A. 50 hours per week, \$9.10. The next one is—

*By Mr. Young:*

Q. How many employees for the company have you in your list, only one?—A. We don't know them as such. It is the individual we deal with.

Q. You know what company he is working for when he applies for relief, don't you?—A. We don't tabulate them as such; we have 30,000 families to tabulate, and we have them tabulated both as to street and name.

*By Mr. Sommerville:*

Q. There might be 20 or 50 from one firm? These are just samples.

MR. YOUNG: If you are going to investigate malpractices of these firms, we should know whether there is one man or more than one.

THE WITNESS: I could say this, if any of these firms submit to the department a list of their employees, we could tell in a few minutes how many were on relief or not.

*By Mr. Factor:*

Q. Do you know what the particular duties of that man were, at the National Grocers, who was receiving \$9.10?—A. Yes. "I have been in the employ of this firm for approximately eight weeks, that I worked from 7 a.m. until 5 p.m. as grocery clerk, occasionally later than 5 p.m., five days weekly, and Saturdays from 7 a.m. to 1.00 p.m., occasionally later than 1.00 p.m.; that I am paid weekly at a rate of pay that figures out at about \$35 per month. For the week ending June 3, 1933, I received \$9.10. For the week ending May 27, I received \$8.70."

Q. In all these cases, the employers practically confirm the wages paid?—A. In many cases they are investigated and confirmed by the employer. The declaration is sworn to, in every instance.

*By Mr. Young:*

Q. Is this National Grocers company a chain store or a wholesale house?—A. A wholesale house.

*By Mr. Sommerville:*

Q. What is the next item?—A. The next item on the list is an employee of the National Picture Frame Company.

Q. That is the firm we have already dealt with?—A. It is covered by that large list I submitted in the early part. The next one is the Queen City Paper Company, full time employee, 45 hours per week, \$5 per week.

Q. 45 hours?—A. 45 hours.

Q. For \$5?—A. \$5 per week.

*By Mr. Factor:*

Q. What are his duties?—A. He is a labourer.

*By Mr. Young:*

Q. What does the company do, are they manufacturers?—A. The Queen City Paper Company?

MR. FACTOR: I think they sell paper and twine.

MR. YOUNG: They are dealers, not manufacturers.

MR. SOMMERVILLE: They may rule and may do some other things in connection with paper.

Q. What is the next?—A. The next one is the Toronto Electric Supply Company. That is a firm, I presume, handling electric fixtures, wiring material and so forth. 48 hours per week, full time, \$7 per week.

Q. \$7 per week?—A. Yes.

*By Mr. Young:*

Q. Are they retailers?—A. I would say so. There are very few electrical manufacturers outside of two or three large concerns.

*By Mr. Sommerville:*

Q. This is a manufacturing company, is it not?—A. Electrical supply company.

Q. Next?—A. Queen City Cooperage Company, full time, 55 hours per week, \$5 per week.

*By Mr. Young:*

Q. What are they doing, manufacturing?—A. The cooperage company?

Q. Yes?—A. They make barrels, I presume.

*By Mr. Sommerville:*

Q. What is the next?—A. Rapid Grip & Batten Company; they are stereotypers.

Q. Electrotyping?—A. Yes.

Q. Electro platers, engravers?—A. Yes, work of that kind. A full time employee, 50 hours per week, \$7.20 per week.

Q. Since reduced, is it not?—A. Reduced from \$7.20 to \$5 per week just recently.

Q. \$5 a week now?—A. Yes.

Q. What is the next?—A. The next item is another employee of the National Picture Frame Company?

Q. The National Picture Frame Company again?—A. Yes.

*By Mr. Factor:*

Q. In this case of the Rapid Grip & Batten Company, did you interview the company about this particular case?—A. Not necessarily; the declaration is here.

Q. Yes. I know that; but was there an interview of the company and was there some explanation sought for this rather ridiculously low wage?

*By Mr. Sommerville:*

Q. How long has he been there; the declaration would show?—A. "I have been employed by the Rapid Grip & Batten Company, Limited, 181 Richmond street west, for the past 2½ years and I am still employed by that firm, that I am married and have a wife and child dependent upon me, that my wages as messenger with the aforesaid firm for a full week of about 50 hours amounts to \$7.20,"—being employed as messenger.

*By Mr. Young:*

Q. He was employed as a messenger?—A. Yes.

*By Mr. Factor:*

Q. There was no explanation made by the employer to you?—A. None that I know of.

*By Mr. Sommerville:*

Q. The next item?—A. The next item is Cosgrave Brewery.

Mr. FACTOR: Now we are coming to a very interesting subject.

*By Mr. Sommerville:*

Q. What are the particulars?—A. Full time, \$8.82 per week.

*By Mr. Factor:*

Q. How many hours?—A. It does not disclose the number of hours; just a full time employee, whatever that may be.

Mr. SOMMERVILLE: The declaration will show.

The WITNESS: This man has five dependents.

*By Mr. Factor:*

Q. What does he do?—A. It does not disclose that, just an employee.

Q. He does not taste the beer, does he?—A. That is a supplementary food. The next one is J. N. Day Company. I am not aware what their business is.

Mr. FACTOR: They make signs.

The WITNESS: I don't think that is the firm at all.

Mr. FACTOR: Display signs.

The WITNESS: No, I do not think that is the sign firm. It does not disclose the nature of their business.

Mr. SOMMERVILLE: No, not the sign business.

The WITNESS: I don't think so; no, it is not the sign firm.

*By Mr. Sommerville:*

Q. What about that company?—A. \$6 to \$9 per week.

*By Mr. Young:*

Q. You don't know what they do?—A. It does not disclose that.

*By Mr. Sommerville:*

Q. What is the next?—A. Bolter Cap Company?

Q. What do they make?—A. Caps.

*By Mr. Young:*

Q. Caps for men or bottles?—A. Full time—

Q. I want to know, Mr. Laver, what they make?—A. The Bolter Cap Company—no, not bottles—men's caps.

Q. And they are how much?—A. \$6 to \$8 a week, this particular man.

Q. Full time?—A. Full time, yes.

*By Mr. Senn:*

Q. Would that be piece work, Mr. Laver?

*By Mr. Sommerville:*

Q. How long has he been with them?—A. Yes, that is piece work, and he has been employed for four years; four years with that firm.

*By Mr. Factor:*

Q. What do you mean by piece work and full time?—A. I presume the full number of hours per day.

Q. Well, if it is piece work, he gets paid as much as he produces; I mean, I cannot understand the statement about full time and piece work.

The CHAIRMAN: Surely he might be working full time, and only earning what he says.

The WITNESS: As I understand the situation, the factory is open from eight to five; those are their operating hours.

Mr. EDWARDS: They will not allow a machine to stand idle.

Mr. SENN: Have to work that many hours to earn that much money.

The WITNESS: The next one is a restaurant, the Savarin restaurant. I think that is a small restaurant in the west end of the city.

Mr. FACTOR: No, it is a large restaurant on Bay street.

The CHAIRMAN: Don't get the name wrong.

Q. What is the name?—A. The Savarin restaurant. It is the one on Bay street.

*By Mr. Factor:*

Q. That large restaurant on Bay street?—A. Yes.

Q. That is where I have my lunch.—A. A full time employee, he discloses his entire earnings, and that must include his tips if his declaration is correct, as \$10 per week.

Q. They only have female employees as waitresses; that must be a dishwasher.—A. Kitchen help, probably.

Q. Kitchen help?—A. Yes. He states his earnings are \$40.

Q. Is that kitchen help or dishwasher or what is he?—A. Kitchen help, yes.

Q. How much a week?—A. \$10 per week.

Q. The next one is Douglas Baker; this man is only employed four days per week, but he works 48 hours in the four days and he earns \$8.

*By Mr. Sommerville:*

Q. What is the next?—A. Toronto Feather & Down Company, pillow manufacturers, et cetera, \$10.50 per week.

Q. They are manufacturers of quilts and pillows?—A. Quilts and pillows; \$10.50 per week.

Q. For how long has that man been there?—A. Nine years with the company and his entire earnings \$10.50 per week.

*By Mr. Factor:*

Q. That does not mean that he made \$10.50 per week during the nine years, does it?—A. The 30 days preceding January 30 of this year, he declares that as his entire earnings. The next item is the Toronto Co-Operative Bakery Company, a full time employee earning \$9 per week. Next, the Midland White-wear Company, a full time employee at \$6 a week.

*By the Chairman:*

Q. Is that a manufacturing concern?—A. Yes, they are a manufacturing concern.

Q. Where do you suppose they would market their goods; have you any idea?—A. I have no idea, Mr. Chairman.

*By Mr. Young:*

Q. Is that woollen or cotton they manufacture?—A. Whitewear? Cotton.

Q. That would be garments, would it?—A. Whitewear, manufacturing made-up garments.

Mr. FACTOR: I think it would be well to know in each instance what the duty of each particular man is.

*By Mr. Sommerville:*

Q. Perhaps Mr. Laver can give us as near as their declaration will permit, what their duties are.—A. We are not entirely concerned with that, Mr. Chairman.

Q. But you may have it, if we have to have it?—A. Yes, as a department.

Q. This girl was an operator?—A. This is a girl, in this case. The next one was a grocery employee, Draper's grocery, full time, \$6 per week.

*By Mr. Young:*

Q. A man?—A. Yes, a man.

*By Mr. Sommerville:*

Q. What is the next?—A. The next one is the Warsaw Bakery, full time, \$6 per week. The next is a girl, a female, at a hairdressing establishment. She is a hairdresser. C. Allen is the employer; a full time employee, \$7 per week.

*By Mr. Factor:*

Q. A female?—A. A female.

*By Mr. Sommerville:*

Q. What is the next?—A. Canada Packers, full time employee, \$10.50 per week.

Q. That was a man?—A. That is a man.

*By the Chairman:*

Q. What would his duties be?—A. Shipper. Seven years employed there, and he is employed now as a shipper.

*By Mr. Factor:*

Q. Canada Packing Company?—A. Canada Packers, Limited.

*By Mr. Sommerville:*

Q. And the next?—A. The next one is a female employee of the T. Eaton Company, full time, \$10 per week.

Q. Does it say what her duties are?—A. Operator.

*By Mr. Young:*

Q. What kind of operator?—A. I presume in the factory, manufacturing in some line of goods; an operator on some machine, I imagine.

*By Mr. Sommerville:*

Q. Do you know what line of goods?—A. No, it just states operator.

*By Mr. Kennedy (Winnipeg):*

Q. A case of that kind, where it would come under the minimum wage law, would you report that case to the Minimum Wage Board?—A. We have not made that a practice, no, for the reason I expressed before, that we have no desire to have these people lose their employment and come to the city for full relief.

Q. You do not make a practice of reporting infractions of the minimum wage law?—A. No.

*By Mr. Sommerville:*

Q. Is it real fear these women have that they will lose their position, if reported?—A. I cannot speak about that personally, but I would think that is logical. I am not in close contact with these people.

*By Mr. Kennedy (Winnipeg):*

Q. In the case of that girl getting \$10 a week with the T. Eaton Company, if you are saving Toronto money, by reporting that case, would it not also likely be remedied?—A. I do not think that is for me to answer.

Q. In any event you do not report them?—A. We do not. We do not make it a practice.

*By Mr. Young:*

Q. Here is a company that employs thousands of women, and if you find one of them that gets that amount, you might find others; that may be quite prevalent in their factories; have you many other similar instances at Eaton's?—

A. I can only answer that question as I answered before, that we are not concerned with the people on relief from the employers' end. They come as individual citizens and they are granted relief on their merit as citizens; if they have sufficient earnings to maintain them partially, we give them partial relief.

Mr. FACTOR: Of course, this is only one side of the picture; this is an illustration of individual cases, from a certain angle, and if this information is going to be of any value to us, we have got to follow it to its logical conclusion, a thorough investigation.

*By Mr. Young:*

Q. Can you tell me if this female is living alone or has anyone dependent upon her?—A. She is a married woman. The man is unemployed, and they have a boy twelve years of age. The husband and the boy are dependent upon her.

*By Mr. Sommerville:*

Q. At the present time?—A. Yes.

Q. What is the next item?—A. The next item is the Right Way Hand Laundry, full time, \$6 per week. That is a female. The next item is a male, at the Beach theatre, a night employee, \$9.50 per week.

*By Mr. Factor:*

Q. What does he do? Is he an usher?—A. An usher, yes.

Q. \$9.50 a week and works a few hours a night?—A. I suppose he goes on at five o'clock.

*By Mr. Sommerville:*

Q. What is the next?—A. The next two items are females. The first one is the Toronto Feather & Down Company.

Q. The same company you had before?—A. Yes. Piece work, \$5 per week, for full time.

Q. What is the next?—A. The next one is George H. Hees Company, who are manufacturers of window shades; \$10 per week, full time.

*By the Chairman:*

Q. Piece work?—A. No.

*By Mr. Factor:*

Q. What does she do?—A. She is employed in the sample room, displaying goods; she would not be on piece work.

Q. A female?—A. Yes.

*By the Chairman:*

Q. Have these got dependents?—A. Five dependents. The next item is Canada Packers, full time employee, \$9 per week.

*By Mr. Factor:*

Q. Male?—A. Female.

*By Mr. Kennedy (Winnipeg):*

Q. What does she do, Mr. Laver?—A. "The bearer is an employee of our West Toronto plant, since the opening of the year—this is February 13, 1934—since the opening of the year she has lost considerable time in sickness and thus it is her average wage for the period mentioned would be about \$9 per week." That is signed by the Canada Packers.

Mr. FACTOR: It does not say what her capacity is?

*By Mr. Sommerville:*

Q. No; it does not mention the capacity?—A. No, it does not. The Woolworth company—she was a packer at the Canadian Packers.

The next case is a female employed by the Woolworth company for three years. Full-time employment, \$8.50 per week, saleswoman.

The CHAIRMAN: Were there any dependents?

The WITNESS: Two dependents, a daughter twenty-four years of age.

Colgate-Palmolive company, female, full-time, \$11 to \$11.50 a week.

*By Mr. Young:*

Q. What does this company sell?—A. Soaps and perfumes—manufacturing concern.

Charles Cottrell company—I do not know what line of business it is—full-time employees, sixty hours per week, \$9 per week.

Q. What do they do?—A. 31 Stiner street. I do not know their line of business. He has been employed by the firm for twenty-five years.

Q. In what capacity?—A. I don't know. It does not say. That is a male.

De Veer Equipment company. I am not certain of their line of trade, but I believe it is equipment for garages—full-time employees, \$9 per week.

Q. Do they manufacture or distribute?—A. I do not think they are manufacturers. I have not the detailed information on that.

Dominion Stores, a branch on Yonge street, full-time employee, \$10 per week.

Mr. FACTOR: Male?

The WITNESS: Yes.

*By Mr. Edwards:*

Q. Married?—A. Married man, wife and one child.

Ontario Fuels limited—male employee, forty-eight hours, \$8 a week.

Mr. FACTOR: Is that a coal company?

The WITNESS: Yes, a coal company.

Mr. FACTOR: What does he do?

The WITNESS: "I have been employed with this firm for about eight months and since October 1 have received \$35." This is dated December 12. "Previous to October 1 was receiving \$25 monthly." Man works from 8 a.m. to 5 p.m. at Cherry street yard, \$6 per week. The employer states he is an excellent worker but owing to present unfair competition in coal states he is unable to increase man's earnings at present time but expects at the end of January or the middle of February he will be in position to increase man's earnings so that he will not require any assistance.

*By Mr. Young:*

Q. You should tell us when pay day is. There may have been one or two pay days?—A. How do you mean?

Q. He said, "I got \$35"?—A. For a month.

Q. From a certain date he got so much money?—A. "Has been employed with this firm about eight months and since October 1st has received \$35 month. Previous to October 1st received \$25 a month."

*By Mr. Factor:*

Q. What is he a driver or a shoveller?—A. He is a clerk.

Q. Clerk in the office?—A. Yes.

Q. Clerk in the office?—A. Yes, Muirhead Limited—full-time employee, \$6 per week.

Q. What firm is that? Is that the restaurant?—A. I am not sure of what this man's duties are, but he is employed by the Muirhead company.

Q. Are they the restaurant people?—A. 217 King street east. I do not know whether they have a warehouse or not. They have no restaurant there.

*By the Chairman:*

Q. What does this man get?—A. Six dollars per week.

Q. Is he married?—A. Married and one child.

*By Mr. Factor:*

Q. I do not think that is the restaurant?—A. That is the last. I did not repeat one or two that we had duplicates of.

*By the Chairman:*

Q. Now, how many do you know there are on your relief that are in similar circumstances to these that you have given—that is, the inadequacy of their wages make it necessary for them to go on relief?—A. During the week, and in February 17th there were 1,455 families supplied with partial relief—1,455 families of our total list.

*By Mr. Sommerville:*

Q. That would mean they would have some income from some other source?—A. Some income, but in the larger part, 25,669 families, there are still some of that list that have smaller earnings and require full relief, but there are at least 1,455 by reason of small relief who are getting personal assistance.

Q. And with regard to the balance, even if they are receiving full pay for a full week, if that is not more than enough to pay their rent you still put them on full relief, or you give them the relief other than rent, do you not?—A. You mean where in our opinion the earnings are not sufficient to maintain the family that they get either partial or full relief?

Q. Yes?—A. That is correct.

Q. Take some of the cases you referred to—the type of cases you referred to—some of those may be on full relief, and all of them will, in any event, be on partial relief?—A. Yes, that could conceivably happen, where the earnings might be four, five, six or seven dollars per week and the numbers of dependents five, six, seven or eight.

*By Mr. Factor:*

Q. How does the relief situation this year compare with that of last year—say January of this year as compared with January of last year.—A. In January 1933 there were 24,244 families on relief in Toronto; in January 1934 28,695.

*By Mr. Sommerville:*

Q. An increase of some 4,000 families?—A. 4,450.

*By Mr. Young:*

Q. Now, you spoke of interviewing one employer who had a man of a very excellent kind, but could not pay him any more, because business was bad; is that general?

Mr. SOMMERVILLE: That was because competition was so bad.

Mr. YOUNG: You mean because competition was so keen?

Mr. EDWARDS: No, the type of competition was so bad.

The WITNESS: Shall I read that statement again?

*By Mr. Sommerville:*

Q. About the coal man?—A. A man employed by the Toronto Fuels Limited, Ontario Fuels Limited; has been employed by this firm about eight months, and since October 1st has received \$35 per month, and prior to October 1st, was receiving \$25 per month; the man worked from 8 a.m. to 5 p.m. at the Cherry Street yard six days per week, and the employer states he is an excellent worker, but owing to present unfair competition in the coal business, states he is unable to increase the man's earnings at the present time, but expects by the end of January or middle of February he will be able to increase the man's earnings, so that he will not require any assistance.

*By Mr. Young:*

Q. What does he mean by unfair competition? He must have something definite in mind.—A. This is the statement, I am not in charge of it, myself.

*By Mr. Sommerville:*

Q. Now, Mr. Laver, you are referring now to a case that was on direct relief from the city; are there a large number of cases on relief from social or welfare organizations apart from the city relief?—A. No social organizations in Toronto distribute to citizens fundamental relief in the way of food or fuel, the City of Toronto, where unemployment exists, takes over the entire burden.

Q. But they do relief work, which does not come under your department.—A. They supplement the city's relief in other ways.

Q. Yes, and that would not be reflected in your figures?—A. The cost would not be reflected.

Q. No.—A. Some of the families may be here, but that cost would not be reflected.

Q. Then there is the question of the larger number of families this January than you had a year ago; how do you account for that, Mr. Laver, what are the factors that cause that.—A. I could only give you my opinion on that, Mr. Sommerville.

Q. By your experience?—A. When you consider that December, 1932, the employment index for Toronto was 91.2 and that December, 1933, it was 92, that is eight-tenths of one per cent better; the situation was that much better so far as employment was concerned.

Q. Notwithstanding that, you had four thousand more families on relief.—A. I account for that by two reasons; one is that a great number of families have come to the end of their resources, and have been required to come to the municipality for assistance, and a good portion, in my opinion, are now coming to the city by reason of their low rate of earnings. Those are two factors which enter into it.

Q. Yes, what do you find generally speaking as to the condition of earnings in the needle trades in the city?—A. I think a general statement would cover

that. Quite a percentage of the number of families we are required to assist in part or in whole are attached to the needlework trade. I think so. It is a pretty general statement, perhaps, to make without analyzing 30,000 records, but I think I am fairly sound in saying that of the cases that come to our particular attention a percentage, at least, of them, are involved in the needlework trade somehow or other.

Q. What conditions did you find prevailing in the chain store organizations of Toronto, and, generally, as to the rate of pay.—A. I am only able to tell you the conditions of the case that I referred to specifically.

*By Mr. Young:*

Q. One was Stop and Shop, and what was the other one?—A. Dominion Stores.

*By Mr. Edwards:*

Q. Does that mean, Mr. Laver, that these are the only two cases that came to your notice?—A. These happened to be singled out for the tabulated statement.

Q. There might be others?—A. Quite possibly.

Q. You refer to the percentage of employment, 91 per cent and 92 per cent; what was your base year?—A. It was 100 in 1927; the index in Toronto was 127 and 131.

Q. But when you say it is 90 in 1932 and 91 in another year—as compared with what year?—A. I am comparing these two years, but I say in 1927 the employment in Toronto was over par by 30 to 35 per cent.

Q. I know, but what are you comparing these two years with; with what year; what is your base year, you must take a base year?—A. They are taken from the Dominion Bureau of Statistics.

Q. Then probably it is 1926?—A. 1926 or 1927—I am saying it was 127 or 131 around about that.

Q. But you considered it from whatever your base year was?—A. It fell continuously from 1927, and since 1928 it has not risen; I have not got the figures here.

*By Mr. Ilsley:*

Q. The peak was reached in 1929?—A. No, the peak was not in 1929, it was in 1927.

*By Mr. Factor:*

Q. Just one question, Mr. Laver; you singled out the needle trades and the chain stores in the problem, you are implying that these two form the major portion of that problem, are you?—A. I have no statistics, but make such a statement.

Q. No; well, have you anything particular to show what percentage, we will say, of the chain stores are on relief and of the amount of those on partial relief?—A. No, sir, I have not.

Q. Or of the needle trade industries?—A. I have not, sir, no.

Q. Then why emphasize these two as against the others?—A. I am speaking, to a certain extent, in a general way, when I make that statement, because of conditions which come to my notice; and our superintendent, Mr. Heron here, would lead me to believe that a considerable percentage of the people who are employed by these trades or these lines—I cannot speak absolutely, or on tabulated facts—come to us for relief.

Q. You mean some of the percentage are in these two spheres?—A. They rather stand out.

Q. They do stand out?—A. It was drawn to our attention anyway.

*By Mr. Young:*

Q. Now, Mr. Laver, I want to go back to my other question, that you frequently find complaints from employers that they cannot increase wages because of unfair competition?—A. I do not recall any such frequency at all.

Q. You can recall only the one instance?—A. That is so.

*By Mr. Sommerville:*

Q. I suppose you do not ask employers why they do not increase wages?—

A. That is not one of our inspector's duties at all.

*By Mr. Factor:*

Q. And, in this coal case, or any of these cases cited to us, was any attempt made to have the employer explain the reason for the low wages?—  
A. No, there was not, that I recall.

The CHAIRMAN: Is there anything else? Thank you, Mr. Laver.

Mr. YOUNG: What about the questionnaire we were to discuss?

The CHAIRMAN: That is not quite ready yet. Is there anything else, gentlemen? We will stand adjourned, then, until to-morrow morning at eleven o'clock.

The committee adjourned at 5.20 p.m. to meet again to-morrow, Wednesday, February 28, 1934, at 11 a.m., in Room 368.

HOUSE OF COMMONS, ROOM 368,

February 28, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 a.m., the Honourable H. H. Stevens presiding.

GUSTAVE FRANCO, called and sworn.

The CHAIRMAN: Mr. Franco is chairman of the Minimum Wage Board of the province of Quebec, and I want to thank him for coming forward to assist the committee in its efforts.

The WITNESS: It was a pleasure and a duty, Mr. Chairman. In reply to a request that was made in the letter I received, Mr. Chairman, I am going to file with the committee some documents.

*By Mr. Sommerville:*

Q. You are going to file some documents with the committee?—A. I will, Mr. Sommerville. Here are some copies of the last report up to the first of July, 1933. If you have not got enough I will be delighted to send you more copies, copies for every member of the committee. Here are a few copies of the act, and enclosed in the same booklet are 14 orders so far enacted. In case you have not got enough copies, here is another one. I will file also the list of cases that have been taken.

Q. Prosecutions?—A. Yes; up to the first of January.

Q. For the year 1933?—A. Yes,—well, we have to the end of 1932 in that list. Thirty-seven cases were taken in the district of Montreal, and seven cases were taken outside of the district of Montreal.

Q. Forty-four cases?—A. Yes.

Q. They were convictions in each case?—A. Well, with the exception of two cases where a settlement has been arrived at before the judge. The employer having paid back pay to the employees. Some pay costs. I have added to the list ten cases actually pending in court. Some of those cases are taking a long time. For the information of the committee I am going to file with you a copy of the questionnaire that firms and employers are requested to fill out, either that or the inspector fills it himself.

*By the Chairman:*

Q. This is a questionnaire from the employer to the board?—A. Yes.

Q. Giving a report upon the wages, hours, and rate of pay.—A. Here is a copy of the questionnaire that was filed yesterday. I have taken the name of the firm to show how it is done. It is taken by the inspector, signed by him if o.k. If not o.k. it goes to the other department. Here are three samples of the orders that must be posted in the shops. I have taken three cases of each. The first one is one where there is no working period attached to it.

*By Mr. Sommerville:*

Q. Working period attached?—A. It simply means the minimum wage must be paid, as in Ontario, according to the working order of the establishment. There is order number three, governing my own industry, the printing industry.

Number seven governs the boot and shoe industry and leather industry as amended in June, 1933. Quite a lot of improvement. Here is one; we have added to the order an extract from the orders in council, ordering employers to do certain things, and at the same time, advising girls what to do if they are underpaid. Here I have added ten various ways of evading the minimum wage law.

Q. Just ten?—A. Only ten, yes.

*By Mr. Factor:*

Q. They were not suggested by you, Mr. Francq?—A. No, but they came.

*By Mr. Sommerville:*

Q. Unfortunately experienced by you?—A. Yes. Here, Mr. Sommerville, I will file a few copies of the way we are checking the payroll.

Q. These are scales of wages. Now, will you be seated.—A. Let me tell the committee that the minimum wage law in Quebec, though based on the same principle is almost entirely different from all other provinces.

Q. This minimum wage law of Quebec is on an entirely different basis?—A. Although we recognize the same principle of fixing not exactly a living wage.

Q. What is the basis in the province of Quebec, Mr. Francq?—A. The basis is that the minimum wages are fixed and set by a joint conference.

Q. By a joint conference?—A. Composed of representatives of employers, employees, and the general public.

Q. When this has been fixed between them, it is accepted by the board?—A. The board has the authority as a board to adopt, to amend, to reject, or to order a new conference.

*By Mr. Young:*

Q. Do you fix it on the cost of living as they do in Ontario?—A. More or less.

Q. More or less?—A. Yes.

Q. Which?—A. Well, I am going to explain it to you, what the board does. The board has prepared some orders giving say in 1927, a budget on the cost of living, not so much the board itself, it is the social workers' budget, the secretary of the Y.M.C.A.

Q. In 1927?—A. In 1927. And we arrived at the conclusion, through these reports, that a living wage in Montreal for a girl will be \$12 a week. In Quebec, Sherbrooke, Three Rivers, and municipalities over 20,000 population, it came down to \$10, \$2 less. The dollar is explained by the necessity of buying car tickets.

Q. Buying what?—A. Car tickets. It seems extraordinary but most of the girls in Montreal are compelled to use street cars, while in all these other cities they do not. In between these cities and the rural districts, we have set the minimum wage at between \$8.50 and \$9. Let me add, for the information of the committee, that outside of Montreal, and to a certain extent in Quebec, most of the girls working in factories are living with their parents, are living at home; and, of course, it costs them less to live there than if they had to pay board somewhere else. And even if they have to pay board they can obtain board in a rural district for less money than they could in Montreal. That is the explanation why we have accepted a lower budget for the rural districts than we have in Montreal.

*By Mr. Sommerville:*

Q. What is the minimum wage paid to a woman in the rural districts?—

A. You mean the minimum wage in the rural district?

Mr. HEAPS: Are you referring to the minimum or the maximum? Would it not be as well to have the maximum?

Mr. SOMMERVILLE: I just want to get from Mr. Francq this one wage.

Mr. HEAPS: There is inexperienced help there.

Mr. SOMMERVILLE: We will bring that out.

*By Mr. Sommerville:*

Q. What is the minimum wage paid for experienced helpers in the rural districts?—A. It varies from \$9 to \$10.

Q. What is the minimum wage to an experienced helper in the city of Montreal?—A. It varies from \$11 to \$12.50.

Q. Is it fixed upon a weekly wage basis or an hourly wage basis?—A. Fixed on a weekly wage, but we check it on the hourly basis.

Q. That is to say if a girl is entitled to \$10 a week, and she is working 50 hours, you check it at 20 cents an hour; that is the principle?—A. Exactly.

Q. If she works for 30 hours of the week, she gets what?—A. She gets paid, according to the board, for whatever time she has put in.

Q. What is the minimum wage for an inexperienced girl in the rural districts first?—A. In the rural districts?

Q. Outside of Montreal.—A. Outside of Montreal. In orders number one and two, if you will permit me, Mr. Sommerville, it will be quicker this way, without checking one order after the other, if you do not mind.

Q. I want to get it as briefly as you can, Mr. Francq.—A. We have, for instance, in the laundries, dye works and dry cleaning establishments, a minimum wage for an experienced girl outside of Montreal, of \$9. In Montreal it is \$12. That applies to numbers 1, 2, 3, 4, 5 and 6. That applies, as I said before, to the recognized working pay of the establishment, meaning that if any one works 55 hours the minimum wage applies to 55 for that week. Fifty-five is the legal limit of working hours for girls in Quebec.

*By Mr. Factor:*

Q. You do not fix the maximum hours.

*By Mr. Sommerville:*

Q. What are the maximum number of hours fixed for the girl helper in the province of Quebec?—A. 55. You cannot go over 55. If you go over 55 you come before the court and explain why, unless you have a special permit.

Q. Then, 55 hours a week for girls is your maximum; on what basis are special permits given extending that?—A. The permits are given only by the chief factory inspector in the district; and the employer has got to explain why he requires that permit. If he has got a contract that he cannot perform in the date specified for delivery of the goods—

Q. Are there many of these permits issued?—A. Not many; many requests, many, many requests.

Q. Yes.—A. If you will permit me, here is one that I have. This is one of the trends of the industry.

*By the Chairman:*

Q. One of the trends?—A. During a few months' period they may work day and night.

*By Mr. Sommerville:*

Q. During a few months' period each year?—A. Yes. I have found cases where girls have been employed up to 75 hours per week without a permit.

Q. Yes?—A. In other cases they are keeping the girls up to 65 in cities, 60 to 65. As soon as the inspector discovers that, he reports it to the chief factory inspector. Then, after that, everybody goes.

Q. What do you mean by that?—A. I mean by that, after that period of industry is passed, well, there is nothing else to do, and they close down, more or less.

*By Mr. Young:*

Q. Is that during a particular season of the year when there is a demand for the goods?—A. Well, it is due, to my knowledge of the case, from what manufacturers and contractors are reporting to me that whenever they have got a request that they are able to make a sale to a big concern the date of delivery is fixed and if they do not deliver during that period, they will be fined; they have to pay so much per day for delay, and so on. So that the contractor or the manufacturer if he has not got enough machinery to perform the contract, in the said date, well, he has got to apply for a permit. They have got to pay so much per day, and so on. If a contractor or manufacturer has not got enough time to perform a contract in the set day, he has got to apply for a permit.

*By Mr. Edwards:*

Q. Just on that point, is not a lot of this due to the fact that dealers throughout the country are not placing specifications like they used to place them? For instance, a man would buy goods for fall, and he places specifications in March or April for delivery in August, say. Now it is a case of buying from hand to mouth, and then insisting upon delivery in a month or two weeks or something like that, instead of placing orders ahead and giving time to have an even run in the plant.—A. That is one of the facts of the actual situation, that whenever a manufacturer or contractor obtains an order, he has got to do it in a rush, and if he does not do it, he loses the contract.

Q. In other words this buying from hand to mouth plan has been followed by a great many troubles, and one thing and another; if it were a process of buying, anticipating your requirements, buying a full order, placing your order in due time and then allowing delivery to be made in the regular way, it would give a more even run in the factories?—A. Undoubtedly.

*By Mr. Sommerville:*

Q. When you refer to the orders from large firms, to what do you refer, what kind of firms?—A. Those dealing in large quantities.

Q. Large quantities?—A. Yes.

Q. Is that general in the industries?—A. From the information that we are obtaining, whenever permits are required, that is the explanation given: "We have got to deliver the goods in so many days or a few weeks, and we can't do it; if you don't give us a permit we will lose the contract. The chief factory inspector will be able to give you more information that I, because all we do is whenever the inspector goes to the factory or workshop and he finds in the time tickets or time sheets that they are working over 55 hours, he inquires right away. The employer, as a rule to-day has closer relations with the Minimum Wage Board than he has with the factory inspectors. He is in closer contact than he is with the factory inspectors; and they telephone to my office and I have got to refer them, through an understanding between the factory inspection department and my own department. No permits are granted to any firm who is not paying the minimum wage.

Q. No permit is granted to a firm not paying the minimum wage?—A. That is the first inquiry made by the factory inspector: "Is that firm O.K. with you?" If I said no, they have got to go to him first.

*By Mr. Young:*

Q. These are reasons assigned by firms seeking permits?—A. Yes.

Q. You never check up to see whether they are correct or not, or you could not give us specific cases?—A. No, I could not.

*By Mr. Senn:*

Q. In case a firm wishes to employ a girl more than 55 hours a week, if they give her extra remuneration for that time, is that contrary to the law?—A. Unless the factory inspector gave her the permit, she cannot work over 55 hours.

Q. Even for extra pay?—A. Even for extra pay. Of course that goes without saying, if she works over 55 hours she must be paid accordingly, from the minimum wage order; even for some orders they have got to pay time and a half after the regular working day. I will come to that in minute. After 44 hours they have got to pay time and a half.

Mr. SOMMERVILLE: In some industries.

Q. Now, perhaps you could tell us how many establishments are at present covered by the minimum wage law in the province of Quebec?—A. Yes, I will; we have got 24 orders enacted.

Q. You have 24 orders enacted?—A. Yes, covering 11 different trades; 1,068 workshops, covering 30,362 working girls. That is the census of 1932-33.

Q. Have you in contemplation other orders covering other industries?—A. On the eighth of March, orders will be issued for five other trades, namely the rubber trades, jewellery trades, drugs and chemicals, the paper trade in all its branches, the electrical and metal trades; and right after that we are practically completing the census of the commercial establishments, department stores, chain stores and so on. That order will be issued in the month of May.

Q. Up to the present time commercial establishments are not under the requirements of the Minimum Wage Act?—A. They are under the jurisdiction of the act and the board, but we have not seen fit to issue orders. When you go over these orders you will notice that there is a six months or year interval between each order, because the board in Quebec, acting differently from other boards, is doing its own checking. We have not been satisfied with the reports of the manufacturers.

Q. What is your experience in that connection, if you leave it to the manufacturer to make his report? What do you say as to accuracy?—A. Well, some will make a straightforward report; some others through ignorance, voluntary or not, will falsify their reports. When a manufacturer does not keep any record of the working time of his girls, how can he make a report? Impossible, absolutely impossible.

*By Mr. Factor:*

Q. Does not the act provide for them to keep a record?—A. Yes. But permit me to say that the Minimum Wage Act of Quebec, although it was put on the statute book in 1919 or 1920, the board was appointed in 1925, and we took two years time before issuing orders. The situation was so difficult, and wages in many cases were so low, that we did not know how to increase those things; and the same act, the same law, has been amended at every session since.

Q. Since 1927?—A. Yes, since we have issued the first order, according to the experience. At the beginning of the existence of the board, it had jurisdiction only over commercial establishments and only over wages, not working hours. Now, we discovered right away when we enacted order No. 1 covering laundries, No. 3 and 4 covering printing, lithographing and allied trades, No. 5 and No. 6 covering the textile industry in all its branches, knitting and so on, that right away some employers saw fit to use that regular recognized working pay within the establishment, to increase their working hours right away.

*By Mr. Sommerville:*

Q. They did what?—A. They increased the working day.

Q. The working hours?—A. Yes, if an employer had to pay, for instance, \$12 a week for 55 hours, and the other employer having a regular working day of 45 hours—well, it was absolutely unfair to the employer having 45 hours as the schedule of working hours to be compelled to pay his girls \$12 a week while the other fellow was paying for 60 hours, some of them. In my own particular case, we had a 44 hours pay in the printing industry. The fellow across the street was working 55 hours. He was within the law, but I had to pay the minimum wage of \$12.50 on 44 hours while the other fellow was paying the minimum wage of \$12.50 on 55 hours. So right away we stopped issuing orders and we asked legislation to extend the powers of the board so as to permit us to get a definite working day to apply for the wages, and we have done so, from No. 7 to the last one.

Q. That is continued in the orders from No. 7 to—A. No. 14.

Q. No. 7 to No. 14 fix the working hours as well as the wages?—A. Absolutely.

Q. In the industries covered by those seven orders?—A. Yes.

Q. And you think that is a decided improvement on the operation of it?—A. There is no other way. You cannot enforce a minimum wage unless you have that.

*By Mr. Factor:*

Q. Not exceeding 55 hours?—A. No. The hours are set, the same thing as the minimum wage again,—I am going to repeat—by the joint council. Whenever the board thinks that wages are too low, or we have a request, we make an investigation. We are issuing question forms; they are filled out; we make a census, and we present the result of our work to the joint conference. The employers themselves are invited. In one particular trade, they all receive an invitation to attend the meeting, to appoint representatives. We do likewise. They have their own employers' association, labour union. We ask the employers' association and the labour unions to select their representatives. When there are no such bodies, we ask the employers to be kind enough to attend the meeting, to select their own, which they do, as a rule. It is, of course, harder to get employees; you may get together 50 employers, but it is impossible to get together 1,000 employees, so we have to do the best we can to get the employees represented—the ones they select themselves in the shops.

Q. At any rate, the parties to the industry really have a say in the fixing of the hour?—A. They do. You realize that it would be absolutely unfair, unless there was something absolutely unjust to the employees or employers, not to accept the decision of a joint conference. After all is said and done, we must have co-operation of the employer and employee to enforce that law. If you are only able to enforce the law through taking people to court, you are not going to get very far with it.

Q. Is there any pressure brought to bear on the employers or employees?—A. Yes. That is why we have a safety valve. Supposing a conference is composed of three employees and three employers; they both select three representing the general public that are neither employers nor employees, and they hold the balance between the two.

Q. Then you have seven inspectors under your Minimum Wage Board?—A. All through we have got the co-operation of the factory inspectors but I do not think the factory inspectors have the time or opportunity of checking the pay-roll or time of the manufacturer.

Q. So that you do not really assign the factory inspector to do any checking of any pay-roll; you have your own inspector?—A. Our own staff; and we have increased the number of orders issued according to the personnel that was placed at our disposal.

Q. When firms evade the law in the province of Quebec, is there any provision in the act by which the employee gets back pay?—A. Yes.

Q. In the act itself, when a person is brought before the court?—A. Clause 11 of the law reads: "Whenever an employer pays an employee wages lower than those fixed by the commission, such employee may recover the difference by a suit before any court of competent jurisdiction, either during the course of her employment or after the same has ended."

Q. That is to say, that in your province, to get back money owing them through being paid less than a minimum wage, the employees must sue for it in the ordinary civil courts?—A. Yes.

*By Mr. Boulanger:*

Q. There is an amendment before the house in Quebec about that, is there not?—A. No.

Q. This session?—A. No, not regarding that.

*By Mr. Sommerville:*

Q. Did you ever hear of a case of a girl suing an employer, and going to all the expense and delay occasioned, to recover back wages by a civil suit?—A. Have girls taken advantage of that particular clause?

Q. Yes.—A. Certainly.

Q. Have there been many?—A. No.

Q. The expense and delay is a difficulty?—A. I am going to explain to this committee the reason why we have not got so many. The board has adopted the policy of helping the girls obtain the difference in wages. Here is the way we do: supposing an inspector discovers that a girl is underpaid, or girls come to the office and say, "I was working for such and such a firm and was not paid the minimum wage." As a rule they always wait until they are discharged or lose their jobs or have quit, before they come to the board. Then we send an inspector over to the firm. He checks up in the books, in the pay-roll and in the time sheets, how much the employer owes to the employee.

Q. Yes?—A. Going back as far as—not three months since the date of the enactment of the order, or since the date the girl was in the employ of that particular firm—we have got a case where we went two years back. We say to the employer, we notify him to come over to the board that we have a little business to discuss with him. We take the case up with him and say you are paying too low wages, and if we follow the law we could take your case before the criminal courts, and if we do that you are going to be fined \$50 and not less than that; of course we would take it that you are going to have some nice publicity out of that. Then they will say don't take us before the court. We will say this is your first infraction of the law and we are going to be considerate with you, if you are willing to pay what you owe to the girl, and will send us a certified cheque for the amount the board will remit that cheque to the employee, and we will give you our word of honour that we are not going to take you to the criminal courts in that particular case; but from now on you will have to observe the law, and if we have any more complaints about you, why the next time we will take you to court. I know of a firm that has paid over \$3,000 in back pay rather than go into court.

*By Mr. Factor:*

Q. How far back do you go?—A. It is the same thing as though it was a regular debt case, we can go back five years; of course we have not done that with the exception of one or two, we are not going five years back, and girls who have been working for five years for one firm are not many, believe me.

*By Mr. Sommerville:*

Q. How much have you collected during the past year by way of settlement in this manner?—A. During the last year we did not collect as much as before, but I see from the figures before me that we collected \$2,315.34.

*By the Chairman:*

Q. That was in 1933?—A. Yes, divided up between 47 girls and involving 38 employers.

*By Mr. Sommerville:*

Q. That would be 38 firms?—A. The lowest amount claimed was 64 cents and the highest was \$225, which was actually paid.

Q. During the past year?—A. During the past year. We have no report of the back pay paid, we could have it, but I did not make it up.

Q. What is the penalty that is imposed if a firm is found guilty of a breach of the minimum wage law?—A. The law reads, Section 12:

Every employer who infringes an order in council adopted under this Act, or any portion whatsoever of an order of the commission, shall be liable, in addition to the costs, to a fine not exceeding fifty dollars for each infraction, and, in default of payment of such fine and costs, to an imprisonment of not less than one month and not more than two months.

*By Mr. Boulanger:*

Q. That is going to be changed, there is an amendment now before the Quebec House.—A. At the present time, I have a copy of the Bill and I suppose it is carried.

*By Mr. Factor:*

Q. In the 37 convictions that you had in 1933?—A. If you will permit me, Mr. Factor, I will answer Mr. Boulanger. The amendment that we have is to the effect that the first infraction will be fined not less than \$50 and not over \$200, and in default of the payment of the fine imprisonment of not less than one month, and not more than two months. For all other infractions there is a fine of not less than \$100 and not exceeding \$300, and a liability to imprisonment of from two to three months. Now I might add something right away on that before I forget it. Supposing a firm has 56 girls and 52 of them are underpaid, we have a case like that, I am recommending if the amendment is passed that out of the 56 the 52 of whom are underpaid I am going to take 52 cases against the employer; now the judge will have no discretion, or we will say the power, to fine him \$10, but he will be compelled, according to law, to fine him \$50.

*By Mr. Boulanger:*

Q. In each case?—A. In each case; now that is where the teeth of the law comes in.

*By Mr. Sommerville:*

Q. Why did you find it necessary to increase the penalty in 1933 and again in 1934; I understand there was an amendment in 1933.—A. In 1932 the fine was \$100, up to \$100, but there were no teeth in it. That was the reason for the change; you see there was no jail involved. In one case the judge asked

me what is the alternative, and I said there is none whatever; he said you should have one inserted, I would be delighted to send some of these employers to jail; but when we submitted our proposed amendment to the Quebec legal department they saw fit to reduce it from \$100 to \$50 because they were adding alternative jail terms. Again, at the request of the employers themselves—it is not only the request of the board itself, but the request of employers, and employers associations.

The CHAIRMAN: The decent employers.

The WITNESS: I gave you copies of at least half a dozen letters coming from associations of employers. Now the opinion of judges in rendering judgment regretted that the fine was too low, that it was permitting employers to make money out of violations of the law.

Q. And these decent employers to whom reference is made thought that other firms were getting away with serious infraction?—A. Quite so. Some of the letters that I am referring to were suggesting a fine as high as \$200 for a first offence, and we will do what I just explained to you, we will take a case for every infraction, if five girls are underpaid, instead of taking one case, we will take five cases.

Q. That is what you will do in future?—A. Yes. Now, in answer to Mr. Factor, out of the 39 cases that were brought before the court, I can tell you exactly how much they were fined. 39 cases came in Montreal, you will get the list there, they were fined \$100 and costs; that was before the amendment of \$50. 28 were fined \$50 and costs or two months; three were fined \$35 or two months, seven were fined \$25, and one was fined \$10. That is in the district of Montreal. The one fined \$10 had only had six girls and the infraction was not for not paying wages, the infraction was for not keeping an account of the hours worked by the girls, and if the employer does not keep a record, it is pretty hard to check the amount of money paid to the girl against the number of hours stipulated in the order. We are governed by the regulations stipulated in the order. If a girl is paid \$8 and there is no record of the working hours, we simply divide the eight by 48 if it is a 48 hour week, which is in force there.

Q. Although she may be working 50 hours or 60 hours?—A. We do not know, he has no record of the time, so we have to presume the time stipulated by order in council 743.

Q. And outside of Montreal, how many did you have?—A. 7 cases were taken, one was fined \$50—it was a second offence, the second time I took him to court; 5 were fined at \$10 each and one was fined \$1.

Q. Now then, Mr. Francq, before we leave these cases—

The CHAIRMAN: May I ask one or two questions?

Q. I notice that all of these fines in the Montreal district with the exception of two, I think, are in the needle trade.—A. Yes.

Q. How do you account for the preponderance of the infractions in that trade?—A. I will explain that to the best of my knowledge and ability, Mr. Chairman. We have taken more cases in the needle trades, because the trade in itself developed a lot of small shops, more than in other trades. It requires less capital to start in business in the needle trades than in anything else. In the needle trades again some of the manufacturers are only manufacturers in name, they do not manufacture anything.

*By Mr. Sommerville:*

Q. What do they do?—A. They simply buy the cloth and they get a designer and a cutter and then they send their goods over to a contractor, who makes the goods. Take pants especially they are all going out to the pants contractors, and through the manufacturers not paying enough for the making up of the goods the contractor can't pay wages, it is impossible; he can't pay the minimum

wage, he can barely make a living for himself. We have cases where big manufacturing firms, firms that are well known, have paid as low as \$3 for a dozen pairs of men's pants.

Q. \$3 for the making of a dozen pairs of men's pants?—A. Yes, and as low as 35 cents a dozen for boys' pants.

*By Mr. Factor:*

Q. To the contractor?—A. To the contractor; how can you expect that a contractor can pay wages; it is impossible.

*By Mr. Young:*

Q. How much labour is involved in the making of a pair of pants?—A. I am not in that particular line of business.

*By Mr. Sommerville:*

Q. Let me get this clear. You say that manufacturers, and these are big manufacturers, send them out to these contracting firms?—A. Yes, and may I add this, that the contractor in many instances does not manufacture himself. He sub-lets all these contracts to sub-contractors, and some of the sub-contractors are sub-letting them again to private families in the country, with the result that we have known of cases where as low as 50 cents or a dollar was paid for a dozen men's pants.

Q. 50 cents to a dollar paid for the making of one dozen pairs of men's pants?—A. And you cannot control it, because it is in the private families. It is the sweating system coming back; and how are you going to prevent it?

Q. That means that you are getting down to the payment of from four cents to ten cents for the making of a pair of men's pants, under that system.—A. Yes.

Q. And then these pants eventually find their way into the hands of the good manufacturers, and they are sold to the trade?—A. Of course, these are the cheaper kinds of pants, but still the work which is done is there.

Q. In reference to boys' pants, you refer to that 35 cents a dozen; that is, you have cases where the large manufacturer lets them out at 3 cents a pair for making, and are these again let out at a lower rate by the sub-contractor.—A. No.

Q. The sub-contractor himself makes them up?—A. Here is the way that I found it out, one of our inspectors went over to a rural district about 30 or 40 miles from Montreal, where we had complaints that the girls were underpaid and receiving only \$2 or \$3 a week.

*By the Chairman:*

Q. You say only \$2 or \$3 a week.—A. Yes; and, of course, he told the contractor, we are going to take you to court. Well, he says, if you do take me to court, I can't pay the fine, I will have to go to jail. They said, "you had better go down and see the chairman of the board." They came to my office and I asked, "what is the idea of paying your girls \$2 and \$3 a week?" He said, "I cannot pay any more; it is all I get—thirty-five cents for a dozen boy's pants." I said, "who are you working for?" He told me who he was working for.

The CHAIRMAN: You had better give us the name of the firm. Put it down on a slip of paper. We will not publish it for the moment.

Mr. HEAPS: Could we not get all the names of the same kind of contractors?

The WITNESS: What I could give to the committee would be a list of the contractors that are receiving such ridiculous pay for work they are performing.

*By Mr. Sommerville:*

Q. Will you make available to the committee for the purpose of its investigation the names of the contractors that are receiving—A. Certainly. It will be a service to the contractors and the girls underpaid. You realize what is the position of the chairman of the board in a case like that. Am I to go and send the poor man to jail for two months? He cannot pay the fine; it is impossible. He cannot pay the back pay to the girls; he has not got it. The same manufacturer goes scotfree. He wants the benefit of it.

*By the Chairman:*

Q. A moment ago you said in speaking just as you have just now spoken that these people were driven to it. We would like to follow back a little further. In the first place we have a girl working for as low as \$2 a week on work which pays thirty-five cents a dozen for boy's trousers and fifty cents to one dollar for men's pants, cheap pants, of course?—A. Yes.

Q. Then we have the contractor who is often just an individual in his private home who employs a few girls and carries on this work. He, in turn, gets an offer from a larger person who calls himself a manufacturer but frequently is just a cutter-up, I presume?—A. Yes.

Q. A designer, and so on. Where does he get his orders, and where does this pressure commence?—A. Well, that is only an opinion I may express on that because I have no definite proof of anything of that kind. It is none of the business of the board to investigate why the manufacturer is selling his products; but from the information I personally have received from manufacturers, some have told me, "we are willing to pay the girls, but we cannot do it through the unfair competition of others." I could again give you the names of very reliable firms. They are paying exactly the minimum wage. They are just keeping within the law, and they even know that the wages they are paying to the girls are not enough to keep them going, and they cannot increase the wages on account of other firms under-cutting them.

MR. SOMMERVILLE: It affects the whole wage scale?

THE WITNESS: Yes. That is only one case.

*By the Chairman:*

Q. Let us get this back to its source. May I put this question to you, Mr. Francq? In your experience which, obviously, is very wide, would it be correct to say that these manufacturing firms who distribute this work to sub-contractors and private individuals are forced to offer a very low rate of remuneration for it because of the prices fixed or dictated by the large buyers and distributors of these goods?—A. To a certain extent it is the reason. Some manufacturers came over to the office and I asked them, "why don't you pay better wages to your girls?" "We cannot do it." "Why not?" "Because the price we are able to sell our products at is too low." "Why is it too low? To whom are you selling? Who is it?" And they tell me, "we had a contract for five thousand khaki shirts and we are offered such a ridiculously low price that we do not make anything out of it." "Why did you accept it?" "Because our plant was idle."

*By Mr. Factor:*

Q. From whom did the order come? I do not mean any individual; what kind of establishment—chain or departmental?—A. The big buyers; everybody knows that.

Q. You are referring to the departmental stores?—A. Everybody knows.

*By Mr. Edwards:*

Q. In order to get this price down for those large buyers who dictate prices there are only two places where the price can be reduced, one is in the material and the other is in the wages; is that so?—A. Yes.

Q. And it comes out of the wages every time.

*By Mr. Ilsley:*

Q. What is the meaning of this word "dictate" prices? Is that the man's offer?—A. Not exactly. A man may come over to your factory and say, "we are willing to give you a contract at such a price"—knowing that the price often does not cover the cost price of the material.

Q. That is offering a price less than the cost?—A. Of course, he is not compelled to take it.

Q. That is it. This term "dictate" is being used. There may be some reason why it is dictation rather than a mere offer of a low price?—A. Of course, I am not a party to the passing of contracts. My duty is to see that the girls are paid the minimum wage set by the employers themselves.

*By Mr. Factor:*

Q. In the case of the five thousand shirts you know from your own experience that the buyer went to the manufacturer and dictated the price for the shirts. Is that what you are trying to tell us?—A. Yes; and the same thing applies in the shoe industry.

The CHAIRMAN: That is well known; it is no secret.

The WITNESS: No, sir.

The CHAIRMAN: Common practice.

*By Mr. Sommerville:*

Q. Is that not a fact?—A. Yes.

Q. Now, can you give us the figure on those khaki shirts?—A. No. I could get all these things if I was coming in again. Of course, the manufacturer will say, "why should I give you these things?" It may be a reason that he has to explain why he did not pay his girls. But when a positive fact is that the contract has been taken from one manufacturer and offered to another one at a much lower price knowing that the first manufacturer was losing money on that contract and then offering it at still a lower price to another—no wonder there is no works.

*By the Chairman:*

Q. There is another question I would like to ask before we leave that. Your interest, of course, is with the welfare of these female employees in these factories; that is what your duty is?—A. Well I might add to the chairman. They both consider that they have got to be fair to the employer at the same time.

Q. Quite so?—A. And doing away with the unfair competition is a service to the entire society. Now, let me tell you members of the committee that we were instrumental in closing more than one place. Not so many months ago—the last order that we issued in the food industry—there was one particular firm employing about 150 girls. Wages were ranged in the city of Montreal from \$1.50 to \$6 a week.

*By Mr. Factor:*

Q. What do you mean by the food industry?—A. Biscuits, chocolates, confectionery. That is what order 14 covers. The wages varied from \$1.50 up to \$6 a week paid to the girls. Now the firm came to the office and they told me,

"are you going to enforce any minimum wages?" I said, "the lowest one we can, \$7 to \$10." Wages were so ridiculously low in that particular industry that we could not even enforce the regular minimum wage. "Well", he said, "I will not be able to pay that much." "No?" "All I am going to do is I am going to buy some machinery in the place of the girls—buy machinery if you try to enforce minimum wage." You get the answer, "I can dispense with the girls; I do not need them. I am going to put machinery in. I could do with about fifty per cent of the girls I am employing. It is simply to start unemployment and we must consider the girls. The poor fathers and mothers are coming over crying to give work to their girls, and so we are employing them." Now, the particular firm I was referring to did not install any new machinery two week after the order came in force. The first week after we sent an inspector to check the payroll of every one of the firms covered by order number 14. On first inspection fifty per cent of the firms did not pay the minimum wage required by the order; the second week only twenty per cent; the third week that particular firm was out of business. They closed. And after the fourth inspection every firm covered by that particular order was paying the minimum wage. Now, what was the minimum wage? If you permit me, Mr. Chairman—before the enactment of that order, which was in June 1933, we had in the city of Montreal 13 girls working for 5 cents per hour, 45 at 6 cents, 60 at 7 cents, 24 at 8 cents, 77 at 9 cents, 100 at 10 cents and 132 at 11 cents, making a total of 451 girls working in that particular industry working at less than 12 cents per hour.

*By Mr. Sommerville:*

Q. And what was the average of those 450 and some odd girls working in that particular industry?—A. The average wound up pretty high. I will tell you why.

Q. The average per hour of that particular group you have given us?—A. I could not tell you that.

Q. We can figure that out?—A. Yes, you can figure that out. The general average wound up because—that was in the biscuit factories especially—because in the chocolate end of the industry very good wages were paid—what were considered very good wages, of course—in some firms. One firm in particular, the lowest wage paid to a beginner was 18 cents per hour, meaning that the maximum or highest pay in one plant was much lower than the minimum in the other one.

*By Mr. Young:*

Q. Do you know of any biscuit makers that paid better wages.—A. Yes.

Q. Some biscuit makers were paying better wages?—A. Yes. Some were paying—I am going to tell you right away—some were paying an average of between \$9 and \$10 a week, beginning between 16 and 18 cents per hour.

*By Mr. Sommerville:*

Q. For the same kind of employees you refer to in the long list here all of whom were getting under 10 cents?—A. Below twelve. Under the order we brought up these 451 girls to not less than—254 to 12 cents per hour, and then we increased most of the other lot to the rate of \$10 a week after one week's experience.

Q. You increased the second lot to 18 cents an hour?—A. Yes.

Q. And the first 250?—A. 451. 254 we brought up to \$12 and the balance we brought up to 18 cents per hour.

*By Mr. Young:*

Q. Can you tell us why it is possible for one factory to do well, paying good wages, and another factory in the same business to have to go out of business, when they are not required to pay any more than a very low wage. Can you give us any idea where the trouble lies?—A. Can I give you any idea where the trouble lies? One is paying low wages, and he goes out of business.

Q. Yes.—A. And the other one pays better wages and remains in business. As a rule, employees who are not paid are not very keen in doing good work for you. If you do not pay somebody to work for you, you cannot expect anything in return.

Q. You can blame the management?—A. Absolutely. You will find that in the 12 ways of evading the law.

Mr. EDWARDS: In other words, the workman is worthy of his hire.

The WITNESS: That is the idea. In that particular one, Mr. Sommerville, while I am on it, in that particular industry one very reliable firm was willing to pay its girls who are working for that firm, at not less than \$10 per week, and they could not do it on account of the competition of others.

*By Mr. Sommerville:*

Q. There was a difference in the class of the goods produced in these two plants. In the plant paying poor wages they were producing a poorer class of goods.—A. Yes.

Q. In that particular instance, did you not find that these goods were being sold through the large chain organization?—A. Well, I cannot tell you that; I did not push my investigation that far, but I know that some of them were complaining there.

Q. Perhaps you will be good enough to give us the name of the firm that was paying those low wages out of which you have given us a list of 451.—A. Well, I cannot give you that right now. I can give you the name of the firms that were paying wages.

Q. Paying inadequate wages to the 451.

Mr. FACTOR: I am at a loss here. Is not that the 5, 6, 7, 8, 9, 10, and 11 cents per hour rate fixed under the enactment?

Mr. SOMMERVILLE: No.

Mr. FACTOR: What is that on page 12?

The CHAIRMAN: Let us get the answer to the question in regard to the firm.

The WITNESS: I cannot give you a list of the firms that were paying those low wages; but I will take a note of it and I will send it to you.

Mr. FACTOR: Let Mr. Francq explain that to me.

The WITNESS: Now, Mr. Factor, on page 12 you will find a number of columns, 1932, 1933. In 1932, when we made a census of the industry through employers' reports and this questionnaire we discovered that 13 girls were paid 5 cents per hour, 450 were paid less than 12 cents per hour. In 1933 you do not see a single one there because the order calls for girls to be paid not less than the rate of twelve to seven.

*By Mr. Factor:*

Q. In 1933 there were still 254 getting only 12 cents an hour.—A. Yes; that was the \$7 rate. The minimum wage was set at \$7. This is not to destroy the industry. We went one step further. The board made an agreement with the biscuit manufacturers whereby, providing 50 per cent of the employees were paid not less than \$10 a week, we would extend to the other 50 per cent \$7 in spite of experience. The order ends in June, 1934, and we will do away with the 50 per cent clause and insist that every girl that has at least one year's experience shall be paid not less than \$10 a week.

*By Mr. Young:*

Q. I have one more question to ask in regard to that. I notice in 1932 there were 1,600 employees in this industry; in 1933 there were 1,321. How do you account for the reduction?—A. In one way they have replaced girls by boys.

Q. They have?—A. Yes.

*By Mr. Sommerville:*

Q. At cheaper wages?—A. Of course. In one or two factories since in that particular line, they have, first of all, replaced girls by boys and they saw it did not work and they came back and employed girls again. In certain industries you cannot replace woman labour by boy labour, or girls by boys. In other industries it acts very well. Take, for instance, the shoe industry. In the shoe industry, what we call bench girls, can be replaced by boys. They have replaced them in some shoe industries. Instead of paying girls \$7, \$8, and \$9, they have hired boys as bench girls, doing bench work at \$3 and \$4 a week. We can do nothing until the law is amended saying that no wage, that no man or boy can receive a wage less than the minimum wage fixed for women workers. This is a provincial matter.

Q. While you are dealing with the shoe industry, you say the conditions that you have described in the clothing industry are equally applicable to the other industries, especially the shoe industry?—A. Yes, but not due to the same reason.

Q. In the shoe industry there are very low rates?—A. In the shoe industry it is due to the fact that they have decentralized.

Q. Decentralized?—A. If you refer to order number 7, on page 22, you will see that order number 7 was revised in 1933. We revised it because the industry has changed entirely in two or three years' time. In 1929 we had 21 factories in the rural districts, small factories, employing a few girls. They had 300 girls employed, while in 1933 it jumped up to 33 factories employing 614 girls. In 1919 in Montreal, we had 59 factories employing 2,304 girls, while in 1933 we had 64 shoe factories employing only 1,813 girls. The shoe order is divided in three, Montreal, Quebec, and the rural districts. If you take the Montreal and Quebec districts together you will see that the shoe industry has moved away from the regular industrial centres of Montreal and Quebec and located in the district of La Beauce. Mr. Boulanger knows exactly what I mean. In one particular district you find to-day no less than three factories employing between 100 and 200 girls. They have taken the trade away from the big centres. They are paying, of course, low wages.

*By Mr. Factor:*

Q. Lower wages?—A. Yes. When it started, I wish to emphasize that fact, we had a special order made to meet that; but I am not the whole board; I am the chairman of the board. As I said a couple of times, the employee and the employer set the minimum wage, and we have the minimum wage from \$5 to \$8 in the rural districts, and that explains why they took advantage of the low wages from \$5 to \$8 for 55 hours, while they had to pay from \$7 to \$12.50 in Montreal. They transplant their factories from Montreal and Quebec or start new factories in the rural districts. I am not able to discuss the location of industries in the rural districts; it is outside my jurisdiction, but I am stating the facts.

*By Mr. Sommerville:*

Q. Notwithstanding, the fact remains that these industries located in the rural districts are paying very much lower wages than the industries in Montreal, and they are competing with similar industries in Montreal?—A. Yes.

Q. And they affect the wages paid in the larger industries in Montreal?—A. Absolutely.

Q. And the result is a general lowering of the wages, is it not, in the whole industry throughout the province of Quebec?—A. That is exactly the issue.

Q. In that connection I think you have some very poignant cases of shoe manufacturers paying very low wages?—A. Yes.

Q. One case has come to your attention of a shoe manufacturer whose girls work for 75 hours a week and were paid as low as 2 cents an hour, a \$1.50 per week of 75 hours?—A. Yes.

The CHAIRMAN: Get that right.

*By Mr. Sommerville:*

Q. That is to say this shoe manufacturer paid these girls as low as \$1.50 for a full time of 55 hours?—A. Well, more than a full time week.

Q. More than a full time week—75 hours?—A. Yes, either 72 or 75.

*By Mr. Factor:*

Q. You say you prosecuted them?—A. Yes.

Q. And they were fined what?—A. \$10 for the first offence.

Q. Ten dollars?—A. Yes. I think I have got to explain that. It needs new legislation. It reads all right in the cities. You cannot check these things outside. The mentality of the city men—my own personal experience in industrial matters shows that the mentality of the man who deals with city problems is entirely different from the man who has been living in the country. Judges are no exception to the rule. A judge in a rural district, whenever you get a case in the rural district, you have to make twice as much effort to obtain a fine that you have in Montreal. In Montreal a judge will simply say, "well, you signed that, didn't you; that is your report; you signed that? It is no use arguing, \$50". and that is the end of it. I had the very same thing happen to me. A firm was fined \$10. I was so mad I said, "You are not going to get away, I am going to do something myself." I went down the following week and I took another case and then I saw the judge and I explained to him through signature what the other judges in Montreal were doing. I said, "It is a shame you fined that fellow \$10; he should be fined \$500." He said, well, bring the case in again and I will fine him \$50.

Q. May I just ask one more question? Are these girls members of any union or labour organization?—A. No.

Q. No union?—A. No.

Q. Are there no unions in the province or in those places?—A. Not in the districts, no, Mr. Factor. Even in the city girls are, as a rule, very hard to organize.

Q. They do not belong to a union?—A. Some of them do, in the main trades.

Q. What about complaints. I suppose those girls are rather fearful of complaining?—A. Mr. Factor, we are receiving more complaints from employers than employees.

Q. More from employers?—A. Undoubtedly.

*By Mr. Sommerville:*

Q. Competing employers?—A. I am going to take you as a manufacturer, although you are a lawyer. Supposing you are tendering for a big contract. Say you are in the shoe business and you are contracting for 500 cases of shoes. You have lost that contract and you know you have lost it because of a very low figure, lower than the one you have quoted. You have to pay the same price for your raw material; there is no doubt about that. The other fellow manufac-

tured at a lower price, and the result is he does not pay his girls the wages. He cannot pay wages; and you write to the board and say, "Will you please investigate the conditions in that particular plant?" Now, as a printer, every time I lose a contract, and the difference is too high, I say, "Well, there must be something wrong, if we have got to pay the same prices for the raw material"; and manufacturers and firms of practically the same size have practically the same expenditures; therefore, they must get the difference in some way.

*By the Chairman:*

Q. That would mean that where there was keen competition for a large order, such as goods from the needle workers and from large factories and such organizations as that, coming from the big retail distributors, that it is taken out of the hide of the workers?—A. Undoubtedly.

Q. Away down on the bottom of the list?—A. Starting at the bottom, from the girl, from the workers, going up the next step to the contractor and then to the manufacturer.

Q. May I ask one other question while we are on this subject: in your experience, Mr. Francq, with these female workers, where they pay these scandalously low wages, do you find evidence of suffering?—A. Undoubtedly.

*By Mr. Sommerville:*

Q. Among the workers?—A. Yes.

*By the Chairman:*

Q. No doubt about that, you say?—A. Yes. If you only knew, Mr. Chairman, the girls to-day who, through lack of work and unsteady employment and low wages,—even receiving the minimum wage,—cannot exist in the cities. It is impossible.

*By Mr. Factor:*

Q. On the minimum wage?—A. Even on the minimum wage, because there is not work enough. I am going to cite to you several cases. Take the piece worker; go back to the needle trades, if you wish; let us take ladies' dresses for instance. The minimum wage states that they must be paid \$12.50 per week of 48 hours. As a rule, all these girls have got two years experience. They are working on piece work. It is only the most efficient girl who is able to make the minimum wage or a little over. What about the others?

*By the Chairman:*

Q. Let me get that clearly; it is only the most efficient, experienced worker who is able to produce, on piece work, up to the minimum wage?—A. Well, above the minimum wage.

Q. Above the minimum wage?—A. Yes. Now, what about the others? The piece work rate, as a rule, is based on the most efficient girl, and as soon as a certain number of girls are getting up to make a certain wage, bang goes the piece rate again.

*By Mr. Sommerville:*

Q. Down?—A. Down.

*By the Chairman:*

Q. That is your experience from observing it?—A. That is my experience. There are exceptions. I am not prepared to say that all the firms are alike; but it is the system. I am not condemning any firm; it is the system due to unfair competition.

Q. Therefore, if we receive, for instance, statements from girls workers—as we have—that as the piece work production rises, the pressure is increased and the rates are lowered until they get down to a point where the ordinary girl cannot make the minimum wage, would you say that was pretty general in the system in this piece work business?—A. Well, I am not prepared to say it is general, but many, many cases came to the attention of the board. Girls come down to the office making complaints, delegations of girls, sometimes 20 or 25 girls all at the same time from the same factory, telling us they are paid 15 cents for a dress.

Q. For making a dress?—A. For making a dress. They say that they used to get 50 cents, and it came down from 50 to 40, to 30, and so on and so on. We have got these cases in the file at the office. Of course I do not carry the office file with me.

Mr. SOMMERVILLE: You carried a lot of it.

*By Mr. Young:*

Q. When did this system of cutting wages commence? How long has it been in practice?—A. I could not say that.

Q. Is it a recent development?—A. No, it has been going on for a couple of years.

Q. A couple of years?—A. Yes. You could see by the report.

*By Mr. Sommerville:*

Q. Steadily getting worse?—A. Of course it is now; it is due to the multiplication of workshops.

*By Mr. Young:*

Q. Too many factories?—A. Too many factories.

*By Mr. Factor:*

Q. Too many manufacturers?—A. Too many manufacturers. The ladies' dress industry is an industry by itself, with a special problem. Anyone may start a ladies' dress factory. They get a small contract and they start, whether they pay for the raw material or not; that is one thing. There is not one industry where the turn-over of girls is so high. Girls work two or three months at one place, or even a month, or even a couple of weeks and they will change from one place to another all the time. They claim, "We are not paid enough; we are going to try somewhere else".

Q. You have cases, Mr. Francq, where the girl has a sister working with her, and they divide the pay?—A. We have cases where the girls are not even sisters, where even three girls, three workers, were working on the same ticket and had the same number with the time recording clerk. I could cite you cases, one after the other.

Q. That is worse.—A. That is worse. Of course, you realize how hard it is for the inspector to check it up. Supposing an inspector goes into a plant and he asks for the pay-roll or the time sheet and he finds, when they have a time recording clock, that there are so many girls there. Then he goes into the workshop. After he has taken the figures and he has prepared his report, he goes into the factory and he asks, "What is your name, young lady? Were you working here last week? Yes. How much did you receive? How many hours did you work?" He is checking right in the factory. Whenever an inspector sees, for instance, any report or the report comes to the office showing, we will, say that girls are getting 35, 40 or 45 cents per hour, we know right away that that is not right. We know right away that no girls are making that to-day.

Q. That is divided, then, is it?—A. Between two or three.

*By Mr. Sommerville:*

Q. Between two or three persons?—A. Yes.

Q. You have even got them down to 15 cents an hour and divided it?—A. Yes. It is all piece work. How can we do with piece work? You can manage and control the time of girls, but you can hardly control the piece workers, because a girl may be in a shop nine or ten hours in a day and only working three or four or five hours. If you tried to apply, as a board, the wage clause, you will be answered by the employer who says, "All right, these girls were having time off; they were smoking cigarettes, playing cards. I told them to go—and if you want me to tell them to go, I am going to compel them to leave the shop and they will come back two hours afterwards, and they will spend more on car tickets than they will earn." We are trying to introduce a system whereby they will have to record it on the clock, the even days. If an employer is not honest, no matter what you do, he is going to evade the law.

Q. The employer?—A. Yes.

*By Mr. Factor:*

Q. You cannot legislate against that?—A. It is impossible. You can do the best you can to control it. That is what I said before, we are trying to get the co-operation of the employer as well as the employee in trying to enforce the minimum wage law, because we are getting more by compromising than by taking a firm course.

*By Mr. Sommerville:*

Q. In addition to the complaints about girls not being able to earn their minimum, have you had complaints from large numbers of them as to the speeding up that is going on in the factories, to urge them to keep up to produce enough?—A. Speeding up the system is a natural consequence of the lowering of the piece rate. If you do not speed up, some will tell you that you can apply to the board and ask for a permit; and if you do not get a permit as a slow worker, out you go.

Q. Out you go; and so girls remain rather than make the complaint, and take what they can get?—A. Yes.

Q. Is that not general throughout the industries?—A. Well, generally. As you see by that, in some industries there is practically no piece work; in other industries it is practically all piece work, and girls are coming and going all the time. You find in some trades girls that have worked 15, 20 and 25 years for the same firm; in other trades you do not find one that has been working for a year for one firm.

Q. You have given us one instance of the reduction of piece work allowance for the making of womens' dresses, from 50 cents apiece to 15 cents apiece?—A. Yes.

Q. Have you on record in your office similar reductions in other branches of piece work activity?—A. Well, in the shoe industry also.

Q. In the shoe industry also?—A. Yes, but it is not so general, because in the shoe industry there is more men's labour attached to it than in the needle trades.

Q. Have you found similar conditions of comparative reductions in the furniture industry?—A. No, we are not touching it.

Q. You are not touching it?—A. What do you mean by furniture?

Q. There is no order issued covering the furniture industry in Quebec, chairs, tables and that sort of thing?—A. I don't know if we have any women workers in that or not.

Q. In the upholstering end of the business?—A. No, not much.

*By Mr. Factor:*

Q. What about the textile industry; are there many girls employed there?  
—A. In the textile industry, yes; the largest number of girls employed in any one industry are employed in the textile industry.

Q. Can you give us a picture of the textile industry?—A. In the textile industry in Montreal, we have at present 2,423 girls employed; that includes textiles, knitting and so on. Outside of Montreal we have got 6,280 girls employed. The average rate paid to the worker in 1933 was \$10.72.

*By Mr. Sommerville:*

Q. \$10.72?—A. Yes, compared with \$13.25 in 1932.

Q. In 1932 it was what?—A. \$13.25; and in 1933 it was \$10.72.

Q. In the textile industry the wages were reduced from \$13.25 in 1932 to \$10.72 in 1933?—A. Yes.

Mr. HEAPS: Increased.

The WITNESS: Decreased.

Mr. SOMMERVILLE: Decreased; it was less in 1933 than in 1932.

Mr. HEAPS: Could we have an idea of how that figure is computed?

Mr. FACTOR: Yes, that is what I was going to ask.

Q. How is that averaged?—A. Mr. Heaps, we are taking the report as you have seen in audits; we are adding the wages, the total pay-roll, and we are subdividing it for a number of workers in that particular industry, and that is how we get the average received.

*By Mr. Heaps:*

Q. The annual wage?—A. No, there is no question of annual wage. No board can give you that.

Q. If you will pardon me, according to our Bureau of Statistics—we may get it that way—I think I can quote the figures Mr. Stevens quoted in the house; at the end of 1932, the average wages then including salaries amounted to \$780 per year. How do you tally your figures with those from the Bureau of Statistics?—A. Mr. Heaps, let me tell you that the Bureau of Statistics do their work and we do our own. The only explanation I can give you as to the varying in 1932 is that the average was made out on the wages not actually received, but on the basis of the wages that should have been received.

*By the Chairman:*

Q. You are speaking of female workers only?—A. Female workers only. If you are going to have a fair comparison between 1933 and 1932 in that particular case, I would ask you kindly to refer to the lowest figure given in 1933. If the girls had worked 55 hours per week, which is the prevalent custom in the textile industry, the wages would have been \$12.90.

*By Mr. Heaps:*

Q. Can you say, Mr. Francq, what number of weeks per year the girls did work in the textile industry?—A. No.

Q. Is there any way we can find those figures to give us an approximate idea?—A. Yes, I could, if you are applying only to the textile industry, leaving out the knitting, because the knitting and the textiles are two different industries entirely; leaving out the cotton; if you are talking about the cotton textile industry and if you interject into it the new development—

Mr. EDWARDS: Rayon.

The WITNESS: —that we have in the province, or in Canada, with the silk, then it is a different story altogether. The wages paid in the silk industry are practically the lowest ones.

*By Mr. Sommerville:*

Q. Practically the lowest.—A. In that particular industry.

*By Mr. Kennedy (Winnipeg):*

Q. Just about textiles, I want to know something about that.—A. I am glad you ask that.

Q. I was glad to hear you make the differentiation you did with regard to textiles; there are, of course, a great many branches to textiles, as you know, there is rayon, true silk, cotton, and then there is woollen. Now, you have all these branches included with textiles?—A. They are included.

Q. Have you many wool producers in the Province of Quebec?—A. No, not many, we have practically no woollens in Quebec; they do not employ a large number of girls, as they are more in the nature of a local industry than of a large industry.

Q. From the standpoint of percentage, they are a small industry.—A. Yes.

*By the Chairman:*

Q. Supposing we ask Mr. Francq if he would be good enough to give us a statement showing the textile industry broken up into its subdivisions, showing, if you like, the number of employers that he has record of, and the number of hours worked during 1933, and the rate of pay in the different lines.—A. I could do that.

*By Mr. Heaps:*

Q. Might he not do the same thing with regard to the other industries that come under his jurisdiction; if that is not asking too much.—A. I would tell you, Mr. Heaps, there is a difference between a large industry and a small industry. In the large industry you can take everything because they have everything available, they keep reliable records. In the small plants the situation is different, they are not so well organized.

*By the Chairman:*

Q. In the small plants you have to be more careful?—A. In the small plants they can't even make out the reports, and that is why our inspectors are making out the reports to-day. We are not asking the small employer to make out his report, we send our inspector to his plant, and he takes the books and makes his report on the work of the employee. With these large firms employing over 100 people, the inspector will drop in and say Now here is a report for you to fill in and I will be back for it to-morrow, and the next day he comes in and checks it in the books. With all employers below 100 employees the inspector has to go into the plant and compile the report himself, so that we will know where we are at; unless you do that you may have to write half a dozen letters before you get an answer.

*By Mr. Factor:*

Q. Could you submit a statement with regard to the textile industry?—A. I will prepare a statement for the textile industry, subdividing the industry into the cotton industry, then the rayon industry, celanese, silk, raw silk, etc., if you like.

Q. Yes.—A. In the Province of Quebec there has been a large development in natural silk and there is the associated textiles at Lennoxville and you have two or three in Sherbrooke and one at Drummondville, and then there is one away down in the new district, Montmagny, where you have two or three plants starting up.

*By Mr. Kennedy (Peace River):*

Q. Could you give us the average earnings of employees per annum.—A. It is impossible.

Q. It is impossible, you think no one has that?—A. You could get it from the governments, or from a federal source, I am not filing any employers' reports, except for employees who are receiving a certain amount of money, as recorded in my report.

Q. You state with regard to the federal sources, the Dominion Bureau of Statistics, that would only be true provided the girls had worked; that is, they were taking an hourly wage and multiplying it by the number of working days.—A. You can't do that.

Q. It would not be a true picture?—A. No. You see, what we are doing, we are taking the regular pay, if it is one week, it is one week; or it may be two weeks, then we take two weeks, say as applied to the textile industry. Formerly we used to follow the example given to us by the Ontario Board, we have followed it very closely, and we adopted their policy at the beginning. We used to take it for twelve weeks, that is three months, but it used to vary in the different industries, and in the case of small firms in a period of three months' time, workers may have been replaced two or three times during the period. We have trouble enough getting weekly reports without trying to get reports covering a longer period.

*By Mr. Sommerville:*

Q. How many weeks' report do you get now from employers in your Province, you do not get a report every week?—A. To illustrate that point, in one case our inspectors went out for five consecutive weeks, one after the other, then we went to other lines and other firms and these were checked two or three times at least.

Q. But, generally speaking, what is the report required from the employer of one hundred or more employees?—A. He is giving us his regular pay sheet.

Q. Once a year?—A. Once a year, and whenever we have a complaint we check it up. I might just as well be open with the committee and tell you that we have on our files five firms which are more or less unfair firms.

Q. I suppose you have both fair firms and unfair firms?—A. There are some firms who are always the same in not paying wages, and they receive visits by our inspectors at least once a month, we check them very closely; but with a fair firm we do not need to check so much because they make the return of their payroll and we know they are fair.

*By Mr. Factor:*

Q. But the employer fixes the week for inspection?—A. Oh, no, they do not, the inspector who goes there picks whatever week he wants to go, and these manufacturers have nothing to do about it. He has the authority to tell the employer he wants to see the books and the payroll, and if the manufacturer says something to the effect that the inspector can mind his own business and he will attend to the return; well, if he doesn't do what the inspector asks we send the bailliff over and he will seize the books and invite the employer to come down to the office and submit his books and payroll to our inspector.

Q. The return that the employer makes is for one week?—A. The regular payroll.

Q. And that week you say is taken by the inspector?—A. We make the selection as a rule for the annual report, the report that is used for making the statistics, as as to cover the same period for all employers in the same industry.

*By Mr. Sommerville:*

Q. Your report is based upon one week's experience from each employer.—A. That is it.

Q. And it is practically the same week for all the employers in a given industry?—A. Yes, and these are used as a source of information for statistical purposes.

Q. It is for the purpose of checking up?—A. That is right.

Q. Do you select the week in the industry which is the busiest week, or what is your basis?—A. As a rule we prefer a middle course, not taking it in a peak time and not at the lowest depression period. We have copies of audits at the office for each industry. We would take a census say of the printing industry and when we have finished that, we would take another industry, and we follow that system throughout the year.

Q. I see.—A. And for checking purposes we go whenever we wish to, but that is not used for statistics.

Q. Let me make it clear, Mr. Francq, with regard to the serious difficulties which you find in the needle trades, that relates particularly to the manufacturing of the cheaper grades of clothing, does it not?—A. Well, you see, you have got to divide the needle trades into men's clothing and women's clothing, for one thing; and another thing, is the sub-letting of contracts to contractors and sub-contractors—the trouble with the ladies' dresses, always, you know (now I am speaking from my own experience) in dealing with these needle trades, the trouble with the ladies' dress industry is the number of small firms competing with each other; they are in business to-day, they are out of business to-morrow, they are a fly-by-night trade.

*By Mr. Factor:*

Q. They would be better off as working men than as manufacturers, is not that the situation?—A. From what I know of the district of Montreal, the ladies' dress industry is run mostly by young men, while the clothing trade is run by older men, and believe me the "ladies' dresses" are pretty clever, you have got to watch them before you accept their report.

*By Mr. Sommerville:*

Q. But even in the men's clothing department that you speak of, that has again to be divided into workmen's clothing and fine clothing?—A. I do not know that we should do that, Mr. Sommerville.

Q. Do you not find that these problems arise more with the cheaper grades of work clothing?—A. Whenever you see cheap products, you cannot expect to get as much out of your work actually done, although it is practically the same amount of work, but you cannot expect to get the same return.

Q. I notice, dealing with the evasions, that you find difficulty in getting employers to keep true records of working hours, that is, as you say in this memorandum:—

1. Employers are not keeping a true record of the working hours of the pieceworkers, sometimes an employee has spent 9 or 10 hours in the shop and is only recorded for 4 or 5 hours. Employers admit that the employees were there but unemployed, that if the board insists on enforcing the waiting time clause, they will compel the employees to quit the shop upon completion of their lot and return later; this, they claim, could be repeated three or four times a day.

Have you any means of checking that up?—A. No, none at all. You see the girls start in at eight in the morning and get work till ten o'clock, and at ten o'clock there is nothing ready—the work goes from one department to another, it is all specialized to-day—and the forelady will tell the girls there will be nothing for you before one o'clock, you had better go home and come back at one. The girl says, well why should I waste two car tickets going home and

coming back to the shop, and she stays in the shop. They are not taking any record of the time she has worked, because she is on piece work. That is why we have recently published our order in council by which we say we are not interested as to whether this girl has worked or not, but if the inspector finds out from the time sheet that she has been in, you will have to pay.

Q. Yes, but because of the representations of the employers that they would send the girls home, you do not insist upon that at the time?—A. We have got to use diplomacy in all these cases.

Q. Then the next point in your memorandum reads:—

2. If the amount of work done by pieceworkers is falling below the minimum wage, employees are told by the forelady or some one in authority, not to punch the time-recording-clock for a certain period, a half day or a full day; the same thing goes on when employees are compelled to work overtime, this also goes for time workers, their full time is not recorded.

That is the experience that you have?—A. That is our experience in many, many cases; we have found that.

Q. Have you found this instance; that if a girl succeeds in making within a dollar of the minimum wage required that the firm would pay her the additional amount to make up this week, but the next week if she makes over the minimum wage, they take it off?—A. I must confess, very humbly, Mr. Sommersville, that it has not come to the attention of the board, and I never thought of it myself.

The CHAIRMAN: That is a tip.

*By Mr. Young:*

Q. It is a complaint, Mr. Francq, is it not?—A. That is what it is. I think you will find that more in the commercial establishments, the stores, etc., than you would in factories; they are not taking that much trouble in the factories.

*By Mr. Sommersville:*

Q. Then item 3 reads:

3. In some instances, two or three employees are working together, but the amount of work done is credited to only one, making her wages appear to be in excess of the minimum rates, while they are much lower; another way of evading the law, employers compel their workers to bring work to their home to do at night, so the time worked in this way is never recorded.

A. That is a new development in the industry. Whenever it is possible, and to evade the minimum wage regulations, they compel employees to take work home with them at night and they bring it back in the morning; so much so that in some cases we have found that they are employing trucks to make deliveries.

Q. Using a truck to take the work home at night?—A. Yes.

*By Mr. Young:*

Q. Is that piecework?—A. Yes, piecework. They use the truck to distribute it. Supposing they are closed on Saturday afternoon, that truck delivers the merchandise to the homes of the girls and they come back and get it on Monday.

Q. They worked Saturday night and Sunday?—A. Yes, and they came in and out. There is no way of checking these things. That is why I put in the various ways of evading the minimum wage law.

Q. And then there may be five or six persons working on that particular work at night, and then that all goes to make up the minimum wage of one person; is that a fact?—A. Yes. If it was not I would not put it here.

Q. I want to get it clear. "The full working time is not recorded on pay envelopes, so that unless the employee keeps a record of her time herself, she has no means to check the time recorded, this seems to be a prevailing custom at the present time; some employers mark on the pay envelopes the amount of wages the employee should get, but simply remit to her whatever amount they feel like giving her?"—A. The first part of it, it is the general custom. The pay is made up in a small envelope coming from the bank where it says, "open a savings account and deposit every week some of your spare money." They have not got even enough to keep them alive. Sometimes the name of the employee is recorded; but I must say that I am sorry to have to state very openly that some employers do not even know the names of their employees; they are recorded under a certain number, and whenever they make their report you will find in the reports one name, Florrie, Blanche, Jeanette, and so on—no other name. Whenever the inspector asks him the name of that girl he says, "I don't know. You had better go over and ask her." Never is there a name on the pay envelope. All that is marked on it is \$10, \$6, \$7—whatever it may be—and that is the end of it. Now, unless the girl is keeping a true record of her time of working and she comes to the board to make a complaint, what can we do? Now, regarding the other part of it—the second part of it—sometimes to be within the law the time-sheets are correct, the envelopes are correct, because it is a well known fact to-day that we have advised all the girls to keep their pay envelopes and whenever they have a complaint, to bring their pay envelopes to the board, so that we know what is marked on the pay envelope and the minimum wage recorded on the time sheets and on the payroll; but we do not know what is going on.

*By the Chairman:*

Q. You do not know what is in that envelope?—A. Even if we know—we have cases when we have sent inspectors over to factories on pay-day before the girls got their pay. The inspector steps in and says, "look here young lady you open that envelope before me, I want to see what is in it." If we are going to enforce a law you have got to take the means to enforce it or else drop it. It is no use to have a law as a dead letter on the statute book.

Q. Did you ever find cases where there is not the proper amount in the envelope?—A. Yes, inspectors will tell you that.

*By Mr. Sommerville:*

Q. Is that a frequent occurrence?—A. No. As I said before, Mr. Sommerville, we have a list of unfair firms. They are always the same and the quicker we are able to drive them out of business the better for all concerned.

Q. No. 5:—"Experience at the trade is not properly recorded, in many instances employees count the time of experience only from the date such employees are in their employ?"—I must say to the justification of often fair firms it is a very difficult matter. We have not settled that problem yet. I do not know if any other provinces have been able to solve that problem, but we have not. A girl may ask for a job, and she may say, "well, I have two years' experience or three years' experience." She may have some experience in some other line, in some other work. If you take that time as experience he has got to pay her the experience work pay.

Q. We have had a number of complaints that really experienced operators are taken on at the inexperienced rate. That is what you are referring to here,

is it?—A. Yes. Now, the only way we could check that is in increasing the 50 per cent of apprentices and experienced girls, and we will do that eventually if business picks up again.

Q. By the way, Mr. Francq, perhaps you did not get this clear: what proportion of the payroll must come up to the minimum wage in the province of Quebec?—A. Regarding the time workers?

The CHAIRMAN: Piece worker.

The WITNESS: Regarding time workers, 100 per cent; regarding piece workers—every girl must be paid according to her experience if she is a time worker. So far as piece workers are concerned, 80 per cent, the same as in the province of Ontario. But I must admit that personally I am absolutely against that 80 per cent clause. We need it to protect the slower workers, but that slow worker has been extending so much to-day that we do not know who is a fast worker and who is a slow worker; and the board is contemplating submitting at the next conference of the employers to do away with any mention of piece work. We will simply say, "no girl shall be paid less than that; it is up to you to pay it; employ this worker, but she must be paid according to that." We will have to go after that.

The CHAIRMAN: Is that a maximum?

The WITNESS: A minimum, that is all.

*By Mr. Sommerville:*

Q. On what will the 20 per cent allowance for slow workers be based?—A. It can be overcome by simply giving permits to slow workers, handicapped workers.

*By Mr. Factor:*

Q. Are there many permits issued of that kind?—A. We have quite a lot at the present time. I have got at the present time 237 workshops having a permit, 830 permits in force at the present time, 156 on handicapped old-age workers, and 637 girls having more than the apprentice experience of the trade but performing a minor operation. I do not know if I am explaining that right to the committee. Girls have been kept from doing a minor operation for which you cannot logically ask the employer to pay the experience minimum wage. What will be the result? If you insist, the girl is fired and loses her job and she cannot get a job anywhere. She is suddenly thrown on the street. I am taking care of that in another place.

Q. There is another fact. We find in clause 6 of this report: "Manufacturers are subletting their work to contractors and sub-contractors at a very low price that does not permit them to pay their employees the minimum wage, some of them are subletting work to one of their employees in their own plant and on their own machinery?"—A. Yes.

Q. And that is a means—A. Yes, Mr. Sommerville, here is a case. Supposing a manufacturer knows that he has taken a contract at a very low figure, and to try to make good with it he will simply ask one of his workmen, "will you job that work; I am willing to pay you so much for it." And he takes girls working for that workman who becomes an employer. Now, to overcome that, I have submitted to my government an amendment to the law whereby the manufacturer will be responsible for the wages paid to the employees of his sub-contractors providing the sub-contractors employ those that work in the manufacturing workshop or on the machinery of the employer. Now, we will get that eventually.

Mr. SOMMERVILLE: I think that covers the matter very fully.

*By Mr. Boulanger:*

Q. I would like to ask you about the shoe trade. Do not the rural shoe shops pay a lot less taxes than the city shops?—A. Yes.

Q. And is not their overhead less than the overhead of city shops; is that also a fact?—A. No, the overhead expenses to a certain extent but not to any extent worth mentioning. The tax is all right, the location is all right; but so far as the administration expenditure is concerned—what we call in business general overhead expenses—I think they are high. I am not prepared to say they are lower than in the city.

Mr. SOMMERVILLE: You are speaking of the country.

The WITNESS: Undoubtedly. That is my estimation again. You cannot sell your products in the country. You have got to get an office in Montreal or Quebec or somewhere else. You have got to dispose of your finished product. The manufacturer located in Montreal does not need to have a special sale office—while the manufacturer—the country manufacturer has got to keep a staff in the city. Now, after all is said and done, Mr. Boulanger, his overhead expenses are just on the same level, if not higher; and we have taken that into consideration in framing up the orders for covering the rural districts, because we have said, "well he is handicapped in one way, he has got to pay the transportation of the raw material and the finished product." The rural manufacturer has got to train his own help. He has not a supply of labour in the open market, while in the city practically any manufacturer may find his own staff to-day and three days after it might be replaced by another. You cannot do that in the country. If you fire your girls you are out of luck; you have got to train some new girls. That is not so in the city of Montreal. That was all very well when everything was normal, but not to-day.

*By Mr. Boulanger:*

Q. Is the difference in taxes or power in favour of the rural manufacturer big enough to give him a chance to take orders at a lower figure than the city man?—A. If you join that with the lower minimum wage they are certainly at an advantage.

*By Mr. Somerville:*

Q. The minimum wage plus taxes—the lower minimum wage in the country plus the lower taxes in the country?—A. The minimum wage is based on fifty-five with the exception of the shoe factory, because it is a new order. Now, the shoe factory to-day—the difference is very little to-day.

Q. Is that so?—A. It is practically alike. Now, you have got No. 7 in Montreal. They are running from \$7 to \$11 on 48 hours. In Quebec another factory located in municipalities of over 3,000 is running from \$6 to \$10, and in rural districts they are running from \$6 to \$9 on 48 hours. It is always decided by the manufacturers themselves. There were 18 people at the joint conference, 6 employers, 6 employees and 6 representing the general public, and the vote was 17 against 1 in favour of that. So we can say very truly that this is the expression of opinion of the people interested in that trade. There was only \$1 at the bottom between Montreal and Quebec and the rural districts and \$1 at the top. In other words, we have increased considerably from the \$5 minimum—from \$4 to \$5 on 48 hours—for 55 hours—up to a minimum of \$6 to \$9 on 48 hours. That was quite a jump—absolutely necessary by the administration of the manufacturers themselves. It is not the board that is setting the minimum wage.

The CHAIRMAN: No. I understand that. Now, gentlemen, Mr. Francq has certainly been very generous with us and with his time. He desires to get back

to Montreal for an important engagement this afternoon, and I would like to thank him for giving us this very valuable information and assistance.

The WITNESS: I thank you very much, sir, for your kindness to me.

Mr. SOMMERVILLE: I presume that you will co-operate with the committee in regard to any information they may require?

The WITNESS: Whatever you need. We will try to comply with your requests.

Witness discharged.

The committee adjourned until 3.30 p.m.

---

### AFTERNOON SESSION

The CHAIRMAN: Before the next witness is called, there are two telegrams I shall read, and then I wish to make very brief observations in regard to them. The first is a telegram from J. S. McLean of Canada Packers, and is addressed to me. It reads:

February 28, 1934, Toronto, Ont.

Hon. H. H. Stevens, Minister of Trade and Commerce, Ottawa.

In his evidence before your committee yesterday Commissioner Laver of Toronto mentioned two employees of Canada Packers namely a male shipper and a female packer who had been paid allegedly unfair wages I telephoned Commissioner Laver this morning asking the names of these two employees Mr. Laver stated he was unable to give these names and I am therefore wiring you to ask for them. Without names I cannot specifically refute Mr. Laver's charges but I feel sure his statements are quite without foundation; the lowest wage which a regular male employee at Canada Packers Toronto can draw a full time week is sixteen dollars and eighty cents. Therefore a serious mistake must have been made in the case of the shipper cited by Mr. Laver. As to the female employee I do not understand Mr. Laver's statement as reported; but no female employee of Canada Packers receives less than the rate specified by the Ontario Minimum Wage Board and nearly sixty per cent of female employees receive more. I wish to give an immediate statement to the press as to the good name of Canada Packers is involved in this matter and therefore respectfully request you to telegraph me the names of the two employees mentioned by Mr. Laver. I also respectfully request the opportunity at the earliest possible date of putting the facts officially before the committee.

(Sgd.) J. S. McLEAN.

The second telegram is addressed to me, also dated at Toronto, and reads as follows:

Hon. H. H. Stevens, Minister of Trade and Commerce, Ottawa.

We brand as absolutely false Commissioner Laver's report re this company and criticize him for not investigating more fully stop Union labour only employed in this brewery minimum rate 45 cents per hour stop Example reported at yesterday's hearing was paid 49 cents an hour

for 18 hours or two day's work only, and evidently his services were not needed any further stop This company's time book open to inspection and we insist on a public retraction of Commissioner Laver's statement.

(Sgd.) COSGRAVE EXPORT BREWERY COMPANY,

Per JAMES F. COSGRAVE,  
*President.*

In regard to these two wires, may I suggest this to the committee: that an answer might be sent to each of them to this effect; that already the committee has appointed an investigator to check up each of the 41 cases mentioned yesterday by Mr. Laver and further to check the general subject matter which he presented, namely that there were more than 1,400 underpaid persons on part or full time who were receiving relief considered necessary by the relief board, and that this investigator be requested to communicate at once with these two firms who have communicated with us. Does that meet with the approval of the committee?

Suggestion agreed to.

Now, in regard to Mr. McLean's request to be heard. Of course, we shall be glad to hear Mr. McLean at any time it is convenient, and we shall try to make our arrangements convenient for him. It might be well to allow our investigator to see him before we fix the date.

The witness for this afternoon is Professor Cassidy of Toronto University. Professor Cassidy has made a study and an investigation of labour conditions and rates paid to labour chiefly, I think in what is know as the needle workers' industry.

PROFESSOR HARRY M. CASSIDY, called and sworn.

*By Mr. Sommerville:*

Q. Before we take your statement, I think we should have a statement on the record of your own investigation. You are the assistant professor of social science at the University of Toronto?—A. Yes.

Q. You, in common with Professor F. R. Scott, the associate professor of law, McGill University, made an inquiry into labour conditions in the men's clothing industry?—A. Yes, we did.

Q. The inquiry related to the men's clothing industry?—A. Yes.

Q. And this inquiry was made at the joint request of the Canadian Garment Manufacturers' Association and the Amalgamated Clothing Workers' Union?

The CHAIRMAN: Professor, would you mind speaking a little louder so that the reporters and others may hear your replies?

The WITNESS: Very good, sir.

*By Mr. Sommerville:*

Q. Your investigation covered men's and boys' fine clothing only?—A. Yes.

Q. It did not have anything to do with the cheaper grade of wearing apparel, overalls?—A. Not directly, no.

Q. And as independent investigators acting for both the Amalgamated Manufacturers' Association and the union, you had access to the records of the various firms who were members of the association?—A. Not of all, no. We had access to the records of certain firms, those that had agreements with the trade union concerned. There are, I believe, many firms that belong to the association which do not have agreements with their unions.

Q. That is to say you had access to the records of those firms that are called union shops?—A. Generally speaking, yes.

Q. And in that industry there are a good many shops that are non union shops?—A. A large number, yes.

Q. So your report does not deal directly with this large number of non union shops?—A. Oh sir, definitely. We got certain evidence from the non union shops as well as the union shops. However, in the case of the union shops, we had the full co-operation of the employer; in the case of the non union, we had not, naturally.

Q. You got that information in other ways?—A. Yes.

Q. Then, your report being related to the fine clothing, you have not a report upon workmen's clothing and overalls, or women's clothing or anything of that kind?—A. Not directly, no.

Q. When did this inquiry take place and when did you complete your report?—A. The inquiry was initiated about August of last year.

Q. August, 1933?—A. We completed our report in December.

Q. December, 1933?—A. Yes.

Q. And did that inquiry cover both the provinces of Ontario and Quebec?—A. Yes, it did.

Q. In respect of the class of industry you have just described?—A. Yes.

Q. And the class of shops you have described?—A. Yes.

Q. Will you kindly give to the committee the benefit of your observations on that inquiry?—A. Very good, sir.

Q. By the way, you have a report?—A. Yes.

Q. Will you be good enough to file that?—A. I will be very glad to do that, yes.

Q. That is a complete report?—A. Yes.

Q. Then you have made a synopsis of it?—A. Yes.

Q. From that synopsis you are going to give to the committee the benefit of some of your observations?—A. Yes.

The CHAIRMAN: May I suggest gentlemen, that Professor Cassidy be allowed to make his statement as far as possible, first, so that he may get it on the record in as consecutive a manner as possible. Then, we can reserve our questions until he has made his statement, always within reason, of course.

The WITNESS: There are a few carbon copies here which I shall distribute to the members. I should like then, Mr. Chairman and gentlemen of the committee to present this report upon which Mr. Sommerville has already interrogated me. In this memorandum which I have prepared I shall try to summarize briefly our findings, particularly upon these matters of wages and earnings, and observance of labour laws in which, I understand, the committee is particularly interested at the moment. And in conclusion I shall venture to make a few general observations upon conditions in other industries than the one which we studied in detail.

The men's clothing industry is concentrated very largely in Ontario and Quebec and, indeed, in the two cities of Toronto and Montreal. In 1931 there were 180 establishments, representing an investment of some \$21,500,000, whose output was valued at about \$34,000,000, according to the Dominion Bureau of Statistics' figures. Montreal's output made up 50·2 per cent of the total for 1931, Toronto's 30·5 per cent, while some of the smaller towns in Quebec such as Victoriaville, Joliette, Hull and Quebec city, along with Hamilton in Ontario, provided most of the remainder. Prior to the depression the average number of employees was some 11,500, but by 1932 this had declined to 9,285, according to the Dominion Bureau's figures. Small factories, gross seasonal irregularity and intense competition (including competitive undercutting of labour standards)

have for long been characteristic of the industry. Even before the depression the condition of the trade was far from healthy, and the effects of the depression upon almost all concerned in it, worker, reputable employer, sweatshop proprietor and investor, have been disastrous.

*Labour conditions.*

Prior to the depression the wage rates of the clothing workers were relatively good, so that when they worked steadily they were able to make fairly good annual earnings. But irregular employment, for seasonal reasons, was even then a chronic problem, so that on the average they could count upon only some 36 to 40 full weeks of work per year. In Toronto the more skilled men could earn from \$1,700 to \$2,000 per year, while skilled women could make \$1,000 to \$1,200, with the less skilled earning considerably less and with earnings in Montreal probably somewhat lower. All wage-earners in the industry earned, on the average \$1,068.30 in 1929, according to census of industry reports.

But the depression, with its accompanying unemployment and increased under-employment, brought wage reductions and has forced the workers far below their far-from-good pre-depression position, until the great majority of them in the industry are now close to or below the border line of abject poverty. It is probable that the wage-earners attached to the industry have worked no more than 50 per cent of full time since 1931, on the average. In other words, unemployment and underemployment, spread over the whole group, has been equivalent to the total idleness of half of them. Business improvement in 1933 has reduced unemployment somewhat, but it is still very heavy.

Serious wage reductions have also operated to cut earnings. In Toronto the union workers took three wage reductions of 10 per cent each from 1929 to 1933, but in September of this year they gained a 10 per cent increase, so that their present rates are about 20 per cent below 1929 levels. Non-union workers in Toronto and most of the Quebec workers have had wage reductions probably much more severe than this.

For these reasons average annual earnings have been drastically reduced, so that it is probable that they did not exceed \$600 or \$700 on the average in 1933, for men and women wage earners taken together.

In my report there are some detailed tables of annual earnings, if the committee would be interested in them at this point.

Mr. SOMMERVILLE: We will have that report.

The CHAIRMAN: Just cite the page.

*By Mr. Ilsley:*

Q. Do they show how you get that \$600 or \$700?—A. Yes, they do.

The CHAIRMAN: Just cite the page of the tables that you wish to refer to.

The WITNESS: Appendix beyond page 109.

*By Mr. Factor:*

Q. These three wage reductions, do they apply in every factory or is that the average?—A. That is applied to union workers in Toronto. Non-union shops never have records of the exact wage reductions, but that is pretty nearly the rate. Reductions in union shops in Montreal in general are probably more severe than in Toronto union shops.

*By Mr. Young:*

Q. There was an increase of 10 per cent in Toronto; was it the same in Montreal?—A. There was an increase in Montreal in September of last year when the strike took place, and when the amalgamated clothing workers succeeded in unionizing a great number of the Montreal shops.

Q. What was the increase?—A. The increase varied from shop to shop, 60 and 70 per cent in some cases.

Q. In the rate of wages?—A. Yes. Rates have been made very low in some cases.

*By Mr. Sommerville:*

Q. An indication of the extreme cuts that had been made in non-union shops?—A. Yes. Mr. Chairman, that is table No. 7.

Q. Even that increase of 60 or 70 per cent in the wages of these men did not bring them to a point where they were earning as much as in Toronto union shops after the strike?—A. I should think not, in the great majority of cases. I have only a very few figures of annual earning. It is exceedingly difficult to get any figures of that kind, except as one turns to a census of industry data. In table No. 7 of my report, there are some figures for 1932, covering all employees—that means salaried employees as well as wage earners. This is from the census of industry reports. It shows the average earnings for all employees in Montreal were, \$930 in 1932, and for contractors were \$521. I should point out that is men and women and salaried persons as well as wage earners, taken together, which naturally tends to hold up the total figure pretty well. For other cities and towns, apart from Montreal, Toronto, Quebec, Winnipeg and Hamilton,—which means very largely Quebec,—we figure the average earnings for 1932 for all employees, for general manufacturers \$766, and for contractors, \$487, approximately.

*By Mr. Factor:*

Q. That is for the province of Quebec?—A. Mainly Quebec, yes. The table is taken to show other cities and towns in Canada.

Q. What about in Toronto?—A. In Toronto the figures show general manufacturers \$940 in 1932.

*By the Chairman:*

Q. What table?—A. Table No. 7; and contractors \$652.

*By Mr. Heaps:*

Q. Mr. Cassidy, these are annual wages received during the year?—A. No, Mr. Heaps, these are figures of average earnings calculated from reports of the census of industry, Dominion Bureau of Statistics.

Q. What I mean to get at is does that sum you have just mentioned represent the annual salary or wages received by either the managerial staff or employees?—A. The annual average for the whole group taken together, managers' wages all lumped in together, men and women all together.

*By Mr. Sommerville:*

Q. Does it also include administration?—A. Yes. More specifically, there is a little more definite evidence in Table 12 of the report. Table 12 I constructed myself from the pay-roll records of two representative union shops in Toronto where I should say relatively good standards prevail. These tables cover 115 men and 39 women in these two shops, first taking the annual earnings of the women in 1932, that is all the women who were regularly on the pay-roll of these two shops throughout the full year.

*By Mr. Factor:*

Q. Working the full year?—A. Yes, not that they worked full time, but they were on the pay-roll during the full period.

*By Mr. Sommerville:*

Q. For the full time that the factory did work?—A. Yes. 16 of these women earned \$400 or less, 16 of the 39; 20 of these women earned from \$401 to \$600; 3 of these women earned from \$601 to \$800.

Q. These would be experienced operators?—A. In most cases they would be, in the great majority of cases.

*By Mr. Factor:*

Q. Have you a record of the time they actually worked?—A. I have not got it here. These figures reflect very largely short time, under-employment, of course.

Q. You have no record of the actual time that they worked in order to earn those moneys, that is to show the average was the minimum wage?—A. I can show that to you in a different way, with other tables; if I may turn to it again, the table shows that 6 of the 115 men earned \$400 or less; 21 earned from \$400 to \$600; 30 earned from \$600 to \$800; 31 earned from \$800 to \$1,000; 13 earned from \$1,000 to \$1,200; 9 earned from \$1,200 to \$1,400; 3 earned from \$1,400 to \$1,600; and only 2 earned more than \$1,600.

*By Mr. Sommerville:*

Q. And those were in two representative union shops?—A. Yes, two thoroughly good, standard, union shops.

Q. Employees in non-union shops would, of course, get a good deal less?—A. I am pretty sure of that.

*By Mr. Factor:*

Q. That is 1932?—A. Yes, 1932.

Q. With the men, you have no records at all of the actual time worked?—A. No, I have not got that here.

*By Mr. Heaps:*

Q. Mr. Cassidy, are those employees to whom you have just been referring mostly working on a piece work rate or an hourly rate?—A. In those two shops, piece work was most common; the great majority of both men and women were on piece work.

Q. Is that the general procedure in the needle industry?—A. It is quite general in the main needle industry, yes.

*By Mr. Sommerville:*

Q. This covers only the full time of working in the shop during the year of 1932, and these men being employed during the full working time of that factory during that year, indicates the amount of employment?—A. Yes.

Q. That experienced men would have?—A. Yes.

Q. In these two representative shops during the year?—A. Yes.

Q. To that extent your figures reflect their earnings?—A. Yes. You see, practically all of these men—all but about 25 of them—earned less than \$1,000 in 1932.

*By Mr. Young:*

Q. You have no idea how long they worked to earn it? We want to know how long they worked to earn it.—A. I have not got my basic records here to answer that question exactly, but I can give you the rough opinion that it would be perhaps from 50 to 60 per cent full time.

*By Mr. Senn:*

Q. Were these men being paid the union scale of wages?—A. Yes, they were being paid the union scale of wages.

*By Mr. Factor:*

Q. It just shows under employment?—A. Oh, precisely; that is the main factor.

Q. In this figure?—A. Yes. If I may continue with my report:

Following such general information, our report next goes on to present more detailed evidence of the conditions prevailing in the summer and autumn of 1933. This data was obtained from interviews with a large number of both union and non-union workers, from pay-roll records and from certain other sources. While we cannot vouch for the accuracy of every statement made to us or our assistants by workers, we believe that the substance of what our interviews revealed, checked wherever possible by our methods, is reasonably accurate. I shall take up separately our findings for Ontario and Quebec.

In Toronto the union has agreements with shops employing from 85 to 90 per cent of the 2,500 or 3,000 workers attached to the industry. All of the larger firms except the T. Eaton Company and Ontario Boys' Wear are union shops.

Q. When you say, "the industry," you refer to men's clothing only?—A. Yes.

*By Mr. Sommerville:*

Q. In this industry, Toronto and Montreal are the main centres?—A. Yes.

While hourly rates for Toronto union workers were still relatively good in the autumn of 1933 (in spite of the wage reductions mentioned above) under-employment was so prevalent that their actual weekly and monthly earnings were very poor. Thus in August last the average weekly earnings of 68 out of 105 union men surveyed were only from \$10 to \$20, while all but three of 38 union women earned less than \$12.50, with 13 of them earning \$7.50 or less.

In the Ontario non-union shops we found much lower hourly wage rates as well as the ever-present under-employment, so that actual earnings were even worse than in the union shops. Thus 13 non-union men reported full time weekly earnings in August and September from \$7 or \$8 to \$22, or from 18 cents to 46 cents per hour. Out of 47 men from another non-union shop, 29 reported weekly earnings for full time in October of less than \$12.50, while 4 of them said that they received from \$5 to \$7.50.

*By Mr. Sommerville:*

Q. Per week?—A. Yes, per week, in Ontario non-union shops.

Mr. FACTOR: There are only about 10 to 15 per cent non-union shops according to your report?

*By Mr. Senn:*

Q. Is that in Ontario or Toronto?—A. That is in Toronto, sir. In Hamilton the union also prevails.

Q. The same percentage?—A. Well, perhaps it is better. Whereas there are a few shops scattered in other towns—in Cornwall for example there is one—these are non-union shops usually.

Continuing: Women's wages were even lower. Thus 40 out of 44 women from this same shop reported full time earnings of less than \$12.50 in October—

*By the Chairman:*

Q. Per week?—A. Per week.

*By Mr. Heaps:*

Q. For a full week's work?—A. For a full week's work.

*By Mr. Factor:*

Q. That was contrary to the Minimum Wage Act?—A. Quite definitely; there were clear violations in these shops of the Minimum Wage Act.—while 5 said that they worked for less than \$7.50 weekly.

*By Mr. Young:*

Q. Full time?—A. Full time, yes.

One woman from another non-union shop, who had a child to support, reported a wage of \$6 for a 44-hour week, or 14 cents per hour. In still another shop 3 experienced finishers, working as a piece-work team reported average earnings of \$11 to \$12 for from 50 to 60 hours work during October, or about 20 cents per hour. Direct information from 8 women employees of a large factory at Cornwall indicated wage rates for a 49-hour week, varying from \$4.50 to \$16. The highest paid non-union woman interviewed in Toronto reported average weekly earnings in October of \$16.45 for 49 hours, or 35 cents per hour.

*By Mr. Sommerville:*

Q. That was higher?—A. That was higher.

Q. For an experienced operator?—A. Yes.

*By Mr. Heaps:*

Q. Are not all these figures for experienced help?—A. No, they are not necessarily; when you go and interview groups of workers you get them sort of in together, you take a sort of run of the mill sample, from some girls 15 to 18, inexperienced, and some older people who are inexperienced, and so on. Of course we can sort that out afterwards, but in my tables I have not done so. The preponderance of them were inexperienced workers, and adults however.

These are merely samples of wages and earnings, of course, but we think that they serve to illustrate the total situation fairly well. I might say it was very difficult to obtain information from non-union workers in most cases, because they were terrified that their employers would discover that they had talked to us about wages and would penalize them with discharge.

There is a much more detailed statement in my report about those conditions. I have merely summarized a few things in this memorandum.

While the normal work week in Toronto is usually considered to be 44 hours, actual working hours vary tremendously, short time alternating with much overtime. In the fall of 1933, some union firms worked their employees fifty or sixty hours weekly, or more in rush periods. Employees from non-union shops reported working 60 hours or more, in some weeks of the summer of 1933. Some reported working for 13 hours in a day, while others said it was common on busy days to work until ten or eleven p.m.

*By Mr. Factor:*

Q. Were they paid extra for overtime?—A. This is practically all piece-work where they got what they made.

This alteration of short time and long hours is a reflection of bad organization in many shops as well as in the industry itself.

I may say we were struck in our interviews with manufacturers with the statement constantly that when work came in they simply had to work as fast as possible, and as they were pressed, they therefore worked their employees to get the job out in a tremendous hurry—a reflection I think of the competitive struggle which is becoming very keen in the industry.

*By Mr. Sommerville:*

Q. You mean they would take it if they could.—A. Well, in explanation of that I would say there was shortage of work all around, and if a firm had an opportunity, with an order to deliver goods three days hence, that firm would consider that an opportunity for working its people very long hours.

*By Mr. Factor:*

Q. Many of these demands are seasonal, are they not?—A. Very definitely, and between seasons these orders would come along.

Shop conditions in the union shops were generally very good. This is true also of several non-union shops. However, there were serious complaints from workers about some of these, and one at least of those inspected was filthy, unsanitary, crowded, and quite lacking in the ordinary physical amenities.

I might say at this point that the Factory Act of Ontario provides that employers must provide towels, wash rooms, drinking cups, and pure water. These are small things, but a fair number of the shops in Toronto did not provide these ordinary amenities for their employees.

*By Mr. Factor:*

Q. Non-union shops?—A. Some union shops as well.

Q. Union shops as well?—A. Yes. And it was a common thing in a clothing factory to find workers with pop bottles at their machine which they used for drinking out of. It may seem to be a little thing but it is not a little thing to the worker on the job, necessarily.

Employees from non-union shops, as well as some of those from union shops complained of the intense speed at which they had to work to make any sort of earnings at all with piece rates so low.

*By Mr. Factor:*

Q. If you will pardon me, Mr. Cassidy; is the piece work fixed by the union in the union shops?—A. In the union shops by agreement between the two parties the employer and the union; yes.

Q. I mean these complaints were from the union shops or non-union shops.—A. Some came from union shops.

Q. They were not satisfied with the very agreement that the union made.—A. In some cases, no.

*By Mr. Ilsley:*

Q. Did you have some cases where the employer did not recognize the union?—A. As I have already intimated, Mr. Ilsley, about eighty-five per cent covers that. We have a certain number of shops, I am not giving an exact number, because I am not sure of it, ten or a dozen or more, which do not recognize the union.

*By Mr. Sommerville:*

Q. But there are some large shops that do not recognize the union in Toronto.—A. There are but two main ones, the T. Eaton Company and the Ontario Boys' Wear. The rest of the non-union shops are small shops.

Employees from non-union shops as well as some of those from union shops complained of the intense speed at which they had to work to make any sort of earnings at all with piece rates so low.

The WITNESS: All workers interviewed reported drastic declines in standards of living during the depression. Many reported debts, loss of insurance policies, loss of homes, and practically all, of course, reported loss of savings. A great majority said they lived in "rooms" or "flats". Thus, of three men from one shop, one with three dependents lived in two rooms, another with three dependents lived in three rooms, and a third, with a wife and child, lived in a two-roomed flat. These quarters were in a dilapidated section of Toronto, where slum conditions prevailed.

Mr. FACTOR: That pictures Toronto, there, Mr. Sommerville.

Mr. SOMMERVILLE: Well, this is one industry.

The WITNESS: Most of the women, as well as the men, had dependents or were contributing the support of families. Thus out of 30 women from one non-union shop, practically all of whom were earning less than \$12.50 per week, the amount decreed by the Minimum Wage Board as necessary for the maintenance of an independent working woman, 21 were married and were the sole providers for their families, or were helping to support them; eight were single, but were helping to support their families; while only one girl had no dependents and no family obligations.

*By Mr. Sommerville:*

Q. You say that the Minimum Wage Board requirement provides only for the living of one girl, but you found in these cases 21 out of 30 women were married and providing for their families as well out of the \$12.50 they were able to earn?—A. Yes. Six out of these 30 women belong to families who were drawing public relief. They, of course, could not be expected to support their families completely, and that compels families to seek relief. I think I might mention this point, Mr. Chairman, at this time; that it seems that women in this industry are normally expected to be wage earners as well as the men. The complaint of the factory man has been that a man could not earn enough to support his family, and the women are expected as a matter of course to be earners also.

*By the Chairman:*

Q. Among those employed in this industry, that is common, is it?—A. Yes.

*By Mr. Ilsley:*

Q. You found men who could not support their families unless their wives were working in the industry as well.—A. His wife would go out, if she could get a job; if not the wife, the 15, 16 or 17 year old daughter; or perhaps the sister would be living with the family, and also working. These families, then, are to a very large degree supported not just by one wage earner, but by two, or sometimes more wage earners. The earnings that can be obtained by the husband, the head of the family, ordinarily are not large enough to enable him to keep a family.

Q. Then these six out of the thirty women belonging to families that were drawing relief, would that be because there were no other wage earners bringing any money into these homes?—A. Those were cases, for example, where the husband was unemployed, and the woman was contributing what she could to the family's support, but it would not be sufficient to keep the family going on without the husband working. And, I think I may say this, if a woman can make her \$12.50 a week with all the scrimping and scraping which is being done these days, she might have sufficient to keep a family on. But the process is going on in spite of all the Minimum Wage Board says about that being requisite for a single woman. That may be requisite for a single woman to support herself on with any degree of decency, but it is quite possible that, if she had to, she could get along very well for herself if she were only getting \$7 or \$8 a week.

Some of the other employed workers, men and women, also belonged to families on relief. At this point I might note that the workers usually receive their pittance in pay envelopes provided by the banks, such as some that I have here, admonishing them to thrift, to the building up of savings accounts. One may question whether the admonitions are appreciated by workers who get six to ten dollars a week!

I happen to have some of the pay envelopes which I thought might be of interest to you, Mr. Chairman.

The CHAIRMAN: Here is one and it shows that they get \$7.90, another \$7.60, and one \$7.20, \$5, \$5, \$5, \$6, and \$8.

*By Mr. Heaps:*

Q. Is that for 1933, Mr. Chairman?—A. These are for 1933, Mr. Chairman.

The CHAIRMAN: And I see that these envelopes are printed and they say "your pay envelope and one of our savings account pass books make a strong team that can help you to financial independence".

Mr. YOUNG: When were these envelopes printed?

The CHAIRMAN: It says "The bank has been in business since 1832"; and it says, "Deposit a portion of your earnings in the bank, and it will help you to financial independence".

*By Mr. Factor:*

Q. That is rubbing it in with a vengeance.—A. I think it is, rather.

*By the Chairman:*

Q. Just by the way, Professor Cassidy, were these envelopes taken from any particular girl; or could you identify where they came from?—A. Yes, I can. These are the pay envelopes of one girl employed in a non-union shop in Toronto for some eighteen consecutive weeks up to the end of about October 1933.

*By Mr. Heaps:*

Q. She was employed full time.—A. Yes.

*By the Chairman:*

Q. Just let me read the amount shown on each of these envelopes. Each one is marked 32A, I suppose that is the identification.—A. That is the number of the employee.

Q. I want you to note these, gentlemen, and I want to put it on record; they show \$4, \$4.50, \$5, \$4.65, \$5, \$5, \$5.50, \$6, \$8, \$8, \$7.90, \$7.90, \$7.90, \$7.90, \$7.60, \$7.90, \$7.20, \$7, \$8, and \$6.

*By Mr. Young:*

Q. How do you account for the difference, Mr. Cassidy, between the \$4 and the \$8.—A. I am told that in this particular instance, these were the wages paid to the girl from the time she joined the enterprise and the increase is very simple to explain, she was a more or less inexperienced worker, and as she gained in experience, her wages were adjusted upwards.

Q. These envelopes are not arranged in the order in which payment was made.—A. No.

Q. There are some payments at \$4 and others at \$8.—A. I presume she was on a time basis.

Q. There is one thing here which I think should go on the record. This envelope here says "Your pay envelope and one of our savings account pass ports make a strong team that can help you to financial independence".

An Hon. MEMBER: Out of \$5 a week.

The WITNESS: I turn next to the Quebec situation.

Mr. EDWARDS: Are these stores or firms allowed to take deposits from their employees as savings deposits?

The CHAIRMAN: That is just an advertisement for the bank, which supply the envelopes free to the firm which uses them.

*By Mr. Sommerville:*

Q. Now, you have dealt with the Ontario situation.—A. Except that I am coming back to the discussion of the labour laws of Ontario in a moment.

In Quebec, in contrast with Ontario, most of the shops were not working under union agreements until the Amalgamated called a strike in Montreal in September last year, which led to wage increases and new agreements and substantial union control of the Montreal industry. A number of shops in out-side towns were also unionized at this time.

Wages and earnings in Quebec were found to be even lower than in Ontario. Unemployment and short time played their part in keeping earnings very low, but even those employed full time received very little. Thus in a small Montreal contract shop (eight men and three women) wage rates before the strike in September last ranged upwards from eight cents per hour, only three of the workers being paid 20 cents and over. In another shop one of the workers in this shop received \$5 or less weekly before the strike, while 52 out of 77 were paid \$7.50 or less. The full working week in this shop was 55 hours.

We found one family of six in a Joliette shop, two females and four males, whose wages were listed in the books as four at \$2 per week, one at \$5 and one at \$7 regardless of hours worked. One young girl of 19 in Ste. Rose received \$2 for 55 hours' work before the strike, or less than four cents per hour.

*By Mr. Heaps:*

Q. This is all men's clothing trade, is it?—A. Yes.

*By Mr. Sommerville:*

Q. This whole inquiry is limited to men's clothing, am I right?—A. Yes.

These are but a few examples of the very low rates we found to prevail in Quebec country establishments.

We were informed that there were some home work shops in Quebec, in which conditions were even worse than in the factories, but we did not get much reliable information about them.

*By Mr. Sommerville:*

Q. What kind of work were these people doing, they were general sewing machine operators?—A. Sewing and various operations on a garment.

Q. Sewing machine operators got 9 cents per hour?—A. I could not say as to that off-hand, sir.

Q. And what are the men doing who get ten cents an hour?—A. I can only say that they are all shown as sewing machine operators.

*By Mr. Factor:*

Q. But these men with five or ten years' experience must have received their experience doing something?—A. The term needle trades will best express that; apart from certain finishing operations, they are all sewing machine operators of one type or another.

Now, at this point, Mr. Chairman, I might give the members some of our original reports taken from pay-roll records which will probably answer the question in more detail, I think.

Then, in Quebec, as in Ontario, there was great diversity of working hours, rush periods and long hours alternating with slow periods and short hours. In one shop in Montreal in one week of August, we found that out of 31 workers, 11 were working 54 hours or less, seven were working from 55 to 64 hours, and 13 were working over 65 hours. We found an extreme case of a head presser

who worked day and night, running up to over 100 hours in one week. In other shops it appeared that when work was available, hours of almost any length would be worked.

In the country shops wage rates and earnings were even worse. Minimum wage board reports show that 120 females in seven firms outside of Montreal were earning \$10 or less for a 50 hour week. . . .

It should be 120 out of 250. That is a typographical error.

. . . (e.g. 20 cents and less per hour). Wage sheets of one country shop which we examined showed that before the September strike, 24 out of 44 women were working at 10 cents per hour or less, and 6 men out of 26 men at the same rate, and only two men and one woman out of 70 earn more than 25 cents per hour.

*By Mr. Sommerville:*

Q. Two men?—A. Yes.

Q. Two men and one woman?—A. Out of a total of 70 earn more than 25 cents per hour.

Q. Sixty-seven earned 25 cents or less.

*By Mr. Heaps:*

Q. Was that below the minimum wage regulations of the province of Quebec?—A. Men are not covered.

Q. I am speaking of the women?—A. The great majority, probably, yes.

*By Mr. Senn:*

Q. Were they engaged in piece work?—A. I would have to look up the shops in question. In the Quebec country shop we found that a good many were time workers rather than piece workers, whereas piece work was much more common in Ontario and it is quite general in Toronto.

*By Mr. Sommerville:*

Q. If that is so, your time payment would be 10 cents an hour for 24 out of 44 women?—A. Yes, 24 out of 44 were working at 10 cents per hour or less.

Q. That would be on a time basis?—A. Yes, certain weeks last summer, about August of last year.

*By Mr. Factor:*

Q. Before the strike?—A. Yes, before the strike.

Q. Has it improved since the strike?—A. Yes, in those shops that were unionized the wage rates were increased 50, 60, and 70 per cent. The rate is low in some cases.

Q. How far have they been unionized since the strike?—A. The majority of Montreal shops have been, and the minority of the shops outside of Montreal, I believe.

*By Mr. Sommerville:*

Q. In those shops which have not been unionized were these rates still prevailing, from your enquiry?—A. After the strike?

Q. Yes?—A. On that score I cannot speak with assurance. I presume they would have been. I should explain this, perhaps, gentlemen, that the independent investigator has a hard task going into a particular industry like this unless he gets the co-operation of the employer because he must accept the statements of individual workers. Individual workers are liable to be unre-

liable in what they say, and in the face of fear of unemployment they are liable to avoid an investigator, even if he is a harmless person from a university, as they would the plague, because they are afraid of talking and constantly afraid of being discharged. Now, our information I should explain, possibly, in Quebec was fairly full, because the strike took place in September. We went in after the strike to shops that were now unionist shops and were given cases having reference to the weeks preceding the strike. Therefore, we were able to get a picture of what non-union conditions had been preceding the strike. We were, of course, refused, by a number of employers, permission to examine their pay-rolls—employers who were not under pressure, if you like, to co-operate, and which the unions could provide.

*By Mr. Factor:*

Q. Which showed an improvement of 50 or 60 per cent?—A. In a number of instances, yes. To go back to the shop I was mentioning a moment ago:—

Nearly one-third of the workers in this shop received \$5 or less weekly before the strike, while 52 out of 77 were paid \$7.50 or less. The full working week in this shop was 55 hours.

Q. Does that refer to male and female help?—A. That applies to the whole group, men and women.

*By Mr. Sommerville:*

Q. That is average?—A. Yes. "We found one family of six in a Joliette shop, two females and four males, whose wages were listed in the books as four at \$2 per week, one at \$5 and one at \$7 regardless of hours' work."

Q. That is a total of four at \$2 making \$8, one at \$5 making \$13, and one \$7 making \$20?—A. Yes.

Q. That is \$20 for the total wages of two females and four males?—A. Yes.

Q. Six persons got \$20 for an entire week's work?—A. Yes.

*By Mr. Factor:*

Q. Do you mean regardless of the hours of work?—A. In this particular instance, Mr. Factor, the report indicated that irrespective of hours of work this was the amount weekly received by these people.

*By Mr. Young:*

Q. What was the idea? Have they to work a day to get it or six days?—A. I think the expectation was they would not work a day. These are the normal cases; there is no allowance for overtime.

*By Mr. Edwards:*

Q. They did not come into time and a half, overtime, or double time?—A. Evidently not. "One young girl of 19 in Ste. Rose received \$2 for 55 hour's work before the strike, or less than 4 cents per hour.

These are but a few examples of the very low rates we found to prevail in Quebec country establishments."

Now, if the members of the committee would care to see some of our detailed records taken from paysheets I can pass them around.

The CHAIRMAN: Perhaps it would be better to give us briefly from what they disclose, and then we could print one or two in your evidence that would be typical, and the rest could be filed.

The WITNESS: Very good, sir.

The CHAIRMAN: Try and make your selection typical if you will.

The WITNESS: May I read, perhaps, half a dozen or ten and file the others to save time?

*By Mr. Factor:*

Q. Are these pay-sheet records?—A. Yes, records copied from pay-sheets for certain weeks preceding the strike of September last. Professor Scott of McGill handled this end of the work and his assistants kept the sheets. They endeavoured to take fair samples, not to choose the worst week.

*By the Chairman:*

Q. They were not extreme cases?—A. No, sir.

Q. You are quite satisfied with that?—A. Yes. Here is a little detail from one shop in Joliette—the case of a female worker, three years' experience, who prepares coats, \$5 weekly rate or 9·1 cents per hour.

Another female, three years' experience, same occupation, preparing coats, \$3 weekly rate, 5·5 cents per hour.

Button sewer by the piece, a girl, two years' experience, \$4 weekly rate, 7 cents per hour.

*By the Chairman:*

Q. May I interrupt you there? Do you recall how many buttons, for instance, one of those button workers would attach to garments in a day?—

A. No, sir. I am sorry I have no idea.

Q. We will get that. I know it is a very large number. It would be interesting for the committee to get it, but we will get it from other sources?—

A. A male—

Mr. FACTOR: She would not be playing half the day.

The CHAIRMAN: It would surprise you what it means.

The WITNESS: Male operator, seven years' experience, \$10 per week, or 18 cents per hour.

Female finisher, \$4 per week, no experience listed here, 7 cents per hour.

Male presser, twelve years' experience, \$20 per week, 30 cents per hour.

Male presser, seven years' experience, \$7 per week or 12·7 cents per hour.

*By Mr. Factor:*

Q. How do you account for the difference between the two male pressers, one receiving \$20 per week and the other \$7?—A. I cannot say in this case not having copied these figures myself originally, not knowing the particular circumstances.

Q. There must be some reason, must there not?—A. There probably would be.

The CHAIRMAN: Is it piece work?

The WITNESS: No, sir, these were time workers.

*By Mr. Heaps:*

Q. What do you mean by time workers?—A. People who are getting a certain specific amount of money for a given number of hours per week.

Q. Supposing a man gets 20 cents per hour, is not he expected to do a certain amount of work within that hour?—A. That depends entirely upon the internal shop arrangements.

Q. I know from my own personal experience. I have been working at time work and I know if you have two hours to do a piece of work you are compelled to do it in the two hours. Is that what you mean by time work? Irrespective of the amount of work they perform, do they receive that amount of money?—

A. Irrespective of the amount of work they perform they receive that money.

Mr. EDWARDS: They do not perform any if they do not produce?

The WITNESS: Yes.

Mr. SOMMERVILLE: They must produce or they are not retained?

The WITNESS: Yes, sir.

Mr. KENNEDY (Winnipeg): Are you sure this is not piece work?

The WITNESS: I am quite certain of that. These were time workers according to my records.

*By Mr. Factor:*

Q. Do they keep a certain quota that they have to produce?—A. Again I cannot speak of this particular shop. I can say this generally that I do not think there is anything, shall we say, so sophisticated as any sort of quota system in most of the small clothing shops. People are hired to do work and the employer tries to get as much as possible out of them; but he does not have anything like the Bedeaux system to work for quotas that you will find in the larger establishments.

*By the Chairman:*

Q. A little later we will have some experts, both workers and employers, who will give us evidence on precisely what the practice is in that regard. If you will give me that list we will give it to the reporter?—A. Yes. Perhaps I could file it.

We were informed that there were some home work shops in Quebec, in which conditions were even worse than in the factories, but we did not get much reliable information about them.

*By Mr. Sommerville:*

Q. Is that the condition Mr. Francq was describing?—A. Yes.

Q. The kind of place where they take the staff down on trucks on Saturday?

—A. Yes.

Q. And in some cases where they work exclusively in the home?—A. Yes.

Q. A number of persons work in the same home?—A. Yes.

Q. Sometimes the members of the family and other persons come in to work?—A. Yes. I might explain one in Toronto. In this particular instance a father and one or two sons and a daughter had set up a little workshop in the two front rooms of their home and they were living in the upper rooms and carrying on contract work themselves in their home. That is what is known as a home shop, but that is a form of organization which has prevailed in the clothing industry not just in Canada but elsewhere to a considerable extent in days gone by. The worst form of sweatshop usually one will find in such an establishment. This particular shop in Toronto was too small to be subject to the jurisdiction of the Factories Act or of our Minimum Wage board, so that the members of the family were working there and working long hours for whatever they might receive.

*By Mr. Factor:*

Q. Less than four employees?—A. Less than five.

*By Mr. Sommerville:*

Q. You were speaking as to wages and earnings. Will you proceed?—A. "In Quebec as in Ontario, there was a great diversity of working hours, rush periods and long hours alternating with slow periods and short hours. In one shop in

Montreal in one week of August, we found that out of 31 workers, 11 were working 54 hours or less, 7 were working from 55 to 64 hours, and 13 were working over 65 hours. We found an extreme case of a head presser who worked day and night, running up to over 100 hours in one week..."

*By Mr. Young:*

Q. What did he earn?—A. I have not that. One jots down notes on these particular things without getting the history of the matters.

Mr. FACTOR: This party worked long hours.

*By Mr. Sommerville:*

Q. It is hours you are dealing with now?—A. Yes. "In other shops it appeared that when work was available, hours of almost any length would be worked.

In the country shops it appeared that long hours were even more general. Thus 176 female employees in a shop at Victoriaville worked 55 to 60 hours on the average in March 1933, while in one Joliette shop 14 per cent of the employees worked 55 to 60 hours or over in certain weeks of the autumn.

Shop conditions in Montreal and in country districts vary a great deal. Some are good while others are definitely bad. Most of the small shops in Montreal that we investigated were over-crowded and lacking in sanitary facilities. In one the general impression left by the disorganized over-crowding, foul air, absence of sunlight and piles of cloth was one of complete and utter disregard for the welfare and comfort of the workers. Driven by the iron law of competition the employer could think of nothing but keeping down his costs.

From what has been said, it appears that in both Ontario and Quebec, there has been an appalling degradation of labour standards during the depression. In both provinces labour in the men's clothing industry has been exploited and sweated. The suits we are wearing to-day, many of them, have been made in sweat shops, under disgraceful conditions.

*By Mr. Factor:*

Q. Would you not apply that statement to all the men's clothing shops in Toronto?—A. Not to all, by any means.

Q. You are applying it to the smaller ones, are you? Let us take a concrete example. I have a picture before me of the Tip Top Tailors.—A. I do not think they are shop men.

Q. This statement applies more or less to the smaller factories?—A. In Toronto, yes, pretty definitely; because in Toronto you have a situation where fairly good conditions prevail in a substantial section of the industry, and where very much poorer conditions prevail in a smaller section of the industry.

*By the Chairman:*

Q. You are speaking of shop conditions. When you say "shop conditions" you mean what?—A. Wage rates, hours of work, provision for physical amenities, all the things that go to make up working conditions.

*By Mr. Factor:*

Q. Do you think it is fair to include in your observations a remark such as this? "In both provinces labour in the men's clothing industry has been exploited and sweated. The suits we are wearing to-day have been made in sweat shops, under disgraceful conditions".—A. There is a very important phrase that you have omitted. "The suits we are wearing to-day, many of them, have been made in sweat shops under disgraceful conditions".

*By Mr. Young:*

Q. Have you any idea of the percentage of them; do you know how extensive it is?—A. Yes, I think I have some idea how extensive it is. Certainly I would say in the non-union section of the industry it is perhaps ten or fifteen per cent of the total in which there have been very bad conditions prevailing. In the province of Quebec the conditions generally have been worse than in Ontario; there is no doubt about that.

*By Mr. Factor:*

Q. In Toronto, Professor, you would say between 90 and 95 per cent of the production of the men's clothing is produced in those large and sanitary factories. Am I safe in making that statement?—A. Well, large and sanitary, Mr. Factor? No, not produced in the large and sanitary factories. Tip Top Tailors, of course, does dominate the Toronto industry and supplies a very substantial portion of all the output in Toronto. Then, there are a number of smaller shops employing from 50 to 200 workers, from 50 to 100; and then there are about 20 shops employing from 10 to 50 workers. I think you will find worse conditions in a number of those smaller shops.

Q. What percentage?—A. What percentage of the production of men's clothing is produced in those smaller shops?

*By Mr. Young:*

Q. Unsanitary shops.

*By Mr. Factor:*

Q. Unsanitary shops.—A. Shall we speak of them first as smaller and secondly unsanitary.

*By Mr. Young:*

Q. We are not so much concerned about the size of the shop as we are with the extent to which those conditions prevail.—A. So far as the Toronto section of the industry is concerned, I would say 10 or 15 per cent.

*By Mr. Ilsley:*

Q. Corresponding with the non-union proportion?—A. Yes.

Q. You do not say that in the non-union shops the conditions are bad, and in all the union shops the conditions are good. You do not say that, do you?—A. No, uniformly good. Of course, there is a very important point there. I think generally, one can say conditions, wage rates and all hours of work are generally fairly good in the union section of the industry. It is not a matter of praise or blame, just a statement of fact. The union interests, obviously, have officials checking up that kind of thing, and obtain fairly good conditions, within limits?

Q. I gathered you were complaining of some conditions in union shops as well?—A. Yes.

Q. Just for information, why are they not all unionized? Take the industry as a whole. You mentioned one or two places where unions did not exist. Is it because employees do not take the trouble to organize, or is it because their employers would not recognize them, or would dismiss them if they had organized themselves into a union. What is the fact about that?—A. A combination of both, I think, Mr. Ilsley. It is true, is it not, that the majority of the employers in any industry would prefer not to deal with any union, if they could avoid it.

*By Mr. Edwards:*

Q. Not always.—A. Not always. That is true, perhaps in the majority.

Q. Very many industries prefer to deal with the shop committee?—A. Yes.

*By Mr. Ilsley:*

Q. You mentioned one well known company that has a non-union system. Is it that they will not recognize a union or is it because their employees do not bother to organize, do not trouble themselves about it?—A. A combination of both. There is a non-union policy pursued. I desire not to deal with the union or non-union field—

The CHAIRMAN: Gentlemen, I think it would be a mistake for us to get into a discussion on union versus non-union, except insofar as the witness wishes to state what he found in his investigation. I mean, we are not going to call anybody to task because they run an open shop.

Mr. ILSLEY: We must keep remedies in mind.

The CHAIRMAN: Yes; but that would come as a matter of consideration of the evidence after it is received. That is the thought that strikes me. I would not like at this stage to get into a discussion on the question of union versus open shop.

*By Mr. Factor:*

Q. I just want to complete my statement. I am sorry to see this in the professor's concluding remarks, where he says, "In both provinces labour in the men's clothing industry has been exploited and sweated." Now you say that ten or 15 per cent of the production you would place in that category; is that right, professor, or would you go that far?—A. I think I could fairly go that far, Mr. Factor, speaking of Toronto alone.

Q. I am referring to Toronto.—A. Of course, some shops outside of Toronto of which we only obtained evidence for one shop outside Toronto—

Q. Toronto is the centre?—A. Toronto is the centre.

Q. Centre of the industry?—A. Yes.

Q. So that about 85 or 90 per cent of the production is made under conditions that you cannot complain of?—A. I would not say that, Mr. Factor. I think if you happen to analyze the situation that is prevailing, one must note this, and I was going to mention this later, employers who have endeavoured to maintain fair conditions for labour have been severely affected by the competition of employers who have not been maintaining fair conditions. That has tended to pull down the standards even in the good standard shop; and I may say this, Mr. Young, that it has impelled union officials themselves to consent to a change in the working rules, and that again is a thing which they would never have consented to in the absence of the terrible pressure of unfair competition upon the good standard employer. For example, the matter of speeding up. This is a matter of common complaint amongst workers in one very large firm in Toronto, whose name I won't mention for the moment. But they are speeding up terribly, and union officials conceded that speeding up. Union officials have been placed in the position where the employer with whom they deal says to them, "Look here, we just got to cut our costs; we do not want to cut wage scales particularly, but we do want you to make a concession to enable us to meet this competition from ruthless competitors."

Q. Please do not misinterpret my remarks. I am not at all saying that I approve of all those things in the matter that you brought up, but what I object to was this, "In both provinces, particularly the province of Ontario, labour in the men's clothing industry has been exploited and sweated." I object to that general statement; or at least I would like you to particularize it more than that.

*By Mr. Sommerville:*

Q. Following that up, may I ask this: did you find in both provinces the conditions that Mr. Franck referred to this morning, that very respectable firms who had maintained good conditions in their own plant, were forced by

this competition to give out work to contractors, and these again to other contractors, and those passed it down the line to some of those places where you found conditions prevailing. Is that the condition you found both in Ontario and Quebec?—A. Not very much so in Ontario, because the contract shop system does not exist in Ontario to anything the same extent that it does in the province of Quebec. There are some contract shops, a list of a dozen or so, mostly small, and they, of course, do take work from the general manufacturer.

Q. If they were taken by the contractor from the general manufacturer they would appear as the product of the general manufacturer when sold?—A. Yes.

Q. Although they may have been produced, we will say, for the purposes of argument, in some outside place by a contract shop where conditions were very bad?—A. Yes.

Q. And along the lines of the conditions you have given us?—A. Yes. I do not think Mr. Factor is satisfied with my statement. He does not seem to have been entirely satisfied, because a general statement is always open—

*By Mr. Factor:*

Q. Where 90 per cent of the production of men's clothing in the clothing industry in Toronto is produced, according to your own statement, under satisfactory working conditions,—shall I put it that way?—A. I would not concede that, quite, Mr. Factor.

Q. You would not quite concede that?—A. No. I think if you examine my detailed report you will find a further detailed explanation of the articles leading up to that statement referred to in both those provinces. There is no question about that. In this particular industry, and there are others, on account of the absence of union control, the conditions found were worse than in Ontario. That is the main factor. It is not because of necessity, things are better in Ontario than Quebec; it just happens by a variety, a number of reasons, union has not had the same control in Quebec as it had in Ontario, and so sweating and exploiting has been greater, I think, in Quebec than Ontario.

*By Mr. Young:*

Q. Do you find, Professor, in the shops that are efficiently managed, conditions as a rule are better than in the inefficiently managed shops, both working conditions and wage conditions?—A. I am afraid I cannot speak with any degree of experience on what you call efficiency of management, so far as the impressions of an outside investigator like myself are concerned. The impressions I would get, I would be inclined to say, that an efficiently managed shop, from a technical point of view, is one where usually you will find better labour conditions.

*By Mr. Edwards:*

Q. Those shops or larger employers that you speak of, do they farm out any part of their production, the so-called better ones that you have spoken of?—A. I believe in some cases they do.

Q. Do they give it to some of those so-called sweat shops?—A. I think in some cases, yes.

*By Mr. Factor:*

Q. Have you investigated that angle of it?—A. Not very specifically, no, Mr. Factor.

*By Mr. Sommerville:*

Q. Not in Ontario?—A. Not in Ontario.

*By Mr. Factor:*

Q. I am referring to Ontario.—A. You see, in Ontario that practice is not very plentiful; it does happen in some cases.

Q. I was under the impression—I may be wrong—although that system prevailed about 20 years ago or less, it had completely ended, that there was no farming out and taking of work to your home.—A. I am not referring to home work.

Q. No home work in Ontario?—A. I found myself one home work shop in Toronto. Perhaps there are others, I don't know, but there are a number of small contract shops.

*By Mr. Edwards:*

Q. That is what I had reference to, small contract shops.—A. Yes.

Mr. SOMMERVILLE: Further evidence will be obtained in that regard.

*By the Chairman:*

Q. May I, following that point out, just read briefly an extract from your report at page 93:

Naturally the burden of the cutthroat competition which has been described has fallen more heavily upon the firms that have endeavoured to maintain fair conditions of work and wages and that have avoided sharp competitive practices. We were informed that firms of the sort had quite definitely lost business to lower standard concerns.

That is the evidence of your investigation?—A. Yes, very definitely.

Q. What I wanted to ask you there was this: verbally a moment ago you were referring to a firm which I think is generally known as one of the most up-to-date, efficient and high-class firms in Canada; is it correct that the work in that firm has been so speeded up in recent years, with the consent of the union officials and the workmen, because of the competition they had been subjected to?—A. Yes.

Mr. FACTOR: Competition from what source?

*By the Chairman:*

Q. I was just coming to that. That is what we are trying to come to. Have you any idea, or have you found in the investigation that you have been carrying on, from what source that particular type of competition comes? Can you answer that?—A. I can answer that, sir, in this way, in terms of what I have been told by manufacturers in the industry, who are the people particularly concerned, and my information from them is that competition is coming (a) from certain shops in the Toronto area that have had bad labour standards, and more particularly still from shops in the Quebec area that have had very bad labour standards.

Q. That is the direct competition that you are coming to. I am speaking of the causes of that competition, for instance the low price that was paid for the goods of these poorer standard shops which gave them the business. From what source does that business come?—A. From various sources, I should say; but, of course, the manufacturers in the industry which have been maintaining fairly good labour conditions complain bitterly that a large buying organization, the department stores mainly, have been setting the pace in the price cutting, which has made it necessary for certain concerns to pass on the cuts to their labour.

Q. Taking the typical case we had in mind of a high-class shop that had been forced, with the consent of union officials, to do this, they could not get the business that they have been accustomed to getting from these large buying

concerns if they did not cut the price of the other lower standard concerns, is that correct?—A. In the case of this particular concern, my understanding is that in the past it is not so, very much, but the large buyers, I believe, have done so lately. The forcing of the pace regarding price cutting has effects on every section of the industry.

Q. It comes from the large distributor?—A. The forcing of the pace, I understand definitely has come from there, yes.

*By Mr. Young:*

Q. That is to say that the small dealer is willing to pay a better price?—A. He is willing to pay a better price if the manufacturer can force him to pay a better price. It is a matter of bargaining.

Q. He is willing to pay a better price if the manufacturer can force him to, but you said that the large distributor now is forcing down the price?—A. Yes.

Q. The small distributor then must be willing to pay a better price for these goods; why don't the factories sell to the small dealer?—A. Well, of course, that is rather difficult; if the small dealer is faced with competition from the big dealer, he will offer prices at retail which are distinctly lower; the small dealer obviously has to compete with the large dealer.

Q. The small dealer is not offering any better price?—A. I think it is fair to suggest that he would have paid a somewhat better price than he has been paying, in the absence of this forcing down of prices by the large dealer. This is purely hypothetical, of course. One cannot prove that by any mathematical device. One can only offer that, I think, as an opinion.

*By Mr. Sommerville:*

Q. Has the large buyers' price had the effect of lowering the price throughout the industry?—A. According to my information, quite definitely, yes.

Q. And that would affect all the factories in the industry, irrespective of the trade to which they were catering, the retail trade?—A. Quite definitely, yes.

Q. In other words, the retail trade demanding to be put in a position to compete with the large concerns, would demand a lower price than they otherwise would be willing to pay?—A. I should think so.

Q. And that has had an effect throughout the industry?—A. Yes.

Q. Does the size of these orders have a very substantial effect upon the price that was paid for the work?—A. According to my information, I think I should say this, that that particular problem was not the centre of our investigation, so that my information upon that comes from statements of manufacturers and other people interested, and such other evidence as came along more or less incidentally, but I was informed definitely that the size of the order did have something to do with the price; when a manufacturer who was given an opportunity of a substantial order, saw at least in that a chance of keeping going for a month or so, or something like that, he was tempted therefore to take the order at a lower price than the price he would have expected for a small order.

*By Mr. Edwards:*

Q. Is not that taken care of by a basis of discounts? A man for instance purchases 100 of an article and he probably gets 5 or 10 per cent discount?—A. Yes.

Q. A man purchasing 5 of the same article would pay on a net basis?—A. Yes.

Q. Is not that pretty well taken care of in all industries?—A. Yes, I think it is a common practice.

*By Mr. Young:*

Q. Do you mean to say that that counts in the price of products? That is to say if a small dealer buys an article at 100, a larger dealer who buys more of them will buy them at 90, get a quantity discount?—A. No, sir, I do not say there is a quantity discount. It is a question of the retailer buying from the manufacturer at so much per quantity, so much per dozen suits or what not, and a separate price being set, if you will, for each order which is given.

The CHAIRMAN: Next week we will have evidence from retailers and manufacturers right on this question and they will be able to bring documents to support precisely what is done, and I notice the Professor is handicapped in really giving definite answers to some of these questions.

The WITNESS: Yes, they cover matters, quite frankly, rather outside of the scope of this particular investigation. I am not particularly familiar with their practices in that kind of thing. I am compelled to give you, therefore, more or less second-hand evidence rather than first-hand on this point.

If I may proceed—

Mr. SOMMERVILLE: Yes, if you will proceed.

The WITNESS: The next section I have here is called the protection of labour, and is concerned with labour legislation in the two provinces, particularly, and secondly with trade unions.

The Ontario Factory, Shop and Office Building Act prohibits child labour; limits hours of boys and women to 10 hours daily or 60 hours weekly, except that permits may be granted for them to work  $12\frac{1}{2}$  hours per day or 72 hours per week between 6 a.m. and 9 p.m.; forbids overcrowding and dirty conditions; and enjoins employers to provide certain physical amenities.

*By the Chairman:*

Q. Who is a boy under that act?—A. A boy under this act is one from 14 to, I think, 18 years of age.

Many of these provisions are adequate. But limitation of hours to 60 in the week or  $72\frac{1}{2}$  under permit is a relic of the dark ages of industrialism and is thoroughly inadequate. These provisions date from 1884, when the original Factory Act was adopted. Men's hours are not limited by a law at all.

*By Mr. Sommerville:*

Q. The limitation of hours is 60?—A. Sixty.

Q. As they were originally placed in the Factory Act of 1884?—A. Yes.

Q. And men are not limited in any way?—A. No. But there is my point that under permit women's hours may be twelve in the day or  $72\frac{1}{2}$  in the week.

*By Mr. Factor:*

Q. Under the Factory Act?—A. Yes, under the Factory Act.

Our survey of labour conditions makes it clear that certain clothing shops in Toronto, notably the non-union shops, frequently violate the factory code with respect to hours, sanitary conditions, record keeping, et cetera.

These violations are explained by the fear of employees of losing their jobs if they make complaint; by the small penalties, ranging only from \$10 to \$50 for infractions of the law, which make but little impression on the mind of the unscrupulous employer; and by the difficulty of the inspectors in checking up on many small shops in men's clothing as well as in other industries.

Q. Do you know how many inspectors there are under the Factories Act, in Toronto?—A. I believe there are 18 inspectors in all.

*By Mr. Sommerville:*

Q. For the province of Ontario?—A. For the whole of the province; and it means they have to cover a great many industrial shops. The needle trade, of course, is one of the most difficult trades to regulate because there are many small shops, and it is awfully hard to check up when they are working at night and doing that sort of thing.

Q. And they are mostly engaged in looking after sanitation and other conditions in the factory than wage conditions?—A. The factory inspectors are not supposed to look after wage conditions, excepting they are requested by the Minimum Wage Board on occasions to help them out with their administration.

Q. Yes, but they are requested to see that the cards are up?—A. Yes.

Q. And notice given the employees that they may learn what their rights are?—A. Yes, that is part of their duties.

Q. Will you proceed?—A. The minimum Wage Act you have heard described, and I need not go over the few things that I have described here. Our evidence shows clearly that there has been serious violation of the act in the men's clothing industry, at least in the non-union shops. I do not think there is much violation of the Minimum Wage Act in the union shops in Toronto or elsewhere in Ontario. In one of three union shops from which we obtained the full information, we found two cases of violation, but in all six non-union shops, five in Toronto and one in Cornwall, for which we have information, we found apparent violations. The two most notable cases of violation in Toronto, which were definitely corroborated by investigation of the Minimum Wage Board and court conviction may be noted.

In one case, that of a shop employing about 35 workers, we found quite inadequate records, and the board discovered that the names of some 6 women employees who were being employed, and grossly underpaid, did not appear on the record, contrary to law. One day, in company with the vice-chairman of the Minimum Wage Board, who kindly permitted me to go with him, I visited this shop. Afterwards I learned that six women had been hustled out of the shop and hidden in an elevator for fear that the discrepancy between the records and the number of women at work would be discovered.

In the case of another firm employing about 100 workers, our information from the women was that practically all of them were being underpaid on the basis of a 44-hour week, the normal work week in the industry.

*By Mr. Factor:*

Q. The basis of the Minimum Wage Board?—A. No, because the Minimum Wage Board has never yet exercised its power to define a normal work week.

*By Mr. Ilsley:*

Q. That 44 hours is the week recognized by the Minimum Wage Board?—A. No.

MR. SOMMERVILLE: No, they recognize whatever was usual; whatever was the usual number of hours of work for any factory, they recognize it—not necessarily in the industry. One factory might work 44 hours and another factory in the same industry might work 60 hours. The 44-hour man would have to pay \$12.50 a week to his women employees, and the 60-hour man would pay the same, \$12.50; is that not so?

The WITNESS: That is permissible under the law, yes.

*By Mr. Sommerville:*

Q. But whatever was the previous practice, the first was permitted to carry on that practice, as being compliance with the act?—A. Yes.

Q. In this case I understand the firm had, for some considerable time, declared that it carried on a 44-hour week?—A. Yes.

Q. And then it endeavoured to get around the law by changing that to a 54-hour week?—A. Yes.

*By Mr. Factor:*

Q. Was that a union firm?—A. No, this was not.

Mr. SOMMERVILLE: A non-union shop.

The WITNESS: The firm claimed that its normal work week was 54 hours, as it had the right to do under law. But this was clearly deliberate subterfuge. The board decided that this could not be sustained. We have reason to suspect that this firm was keeping false records. I may add at this point that the firm in question, Ontario Boys' Wear, has pleaded guilty since our report was written to violation of the law in the case of practically all of its women employees of last October, and has been fined some \$200 and ordered to pay about \$1,700 in arrears of wages. This followed upon some three months of investigation by the Minimum Wage Board, involving a large expenditure of time and, I presume, of money. The firm, which is owned by Syrians, has an evil reputation for unscrupulousness in the trade, and fully lived up to its reputation in this instance by the efforts it made to resist the investigation, as by claiming its normal week was 54 hours, providing inadequate information, and bringing pressure to bear by every means in its power to persuade those concerned in pressing the case to cease fire. Frankly, I consider the penalty in this case was absurd, in view of the enormity of the offence and in view of the fact that so substantial a firm must have saved many thousands of dollars through exploiting its defenceless, foreign-born women workers during the last few years.

*By the Chairman:*

Q. I suppose, Professor, that all your opinions now are based upon the court record of these convictions.—A. Yes, sir, in this instance.

Q. And you would not express that opinion unless there had been some convictions.

*By Mr. Factor:*

Q. They were convicted in 59 cases.—A. They were convicted in 9 cases on ten counts altogether, one of the cases being the keeping of inadequate records.

*By the Chairman:*

Q. That is a matter of public record?—A. That is a matter of public record, of course.

*By Mr. Sommerville:*

Q. They were not prosecuted in 59 cases, but they paid back the 59 girls —A. I am not sure of the exact number.

Q. I think Mr. Stapells gave us that yesterday. This firm had already reported to the Factory Inspection Branch that the normal working hours for men was 54 hours weekly.—A. Yes, I think that is right.

The evidence we have gathered leads us to believe that there has been serious and extensive violation of the Minimum Wage law in the non-union shops in Toronto, with many experienced workers earning no more than from \$8.00 to \$10.00 weekly in place of the \$12.50 which they should receive.

Enforcement of the Act has certainly not been easy during the past year or so, for with heavy unemployment, women have been willing to work for less than the prescribed rates, and employers, hard pressed to make ends meet, are much tempted to evade the law under these circumstances. The fear of losing

their jobs, which amounts to virtual terror in most instances, makes women workers unwilling to complain and even willing to swear falsely that they are properly paid. This fear on their part cannot be over-emphasized, so that a mere absence of complaint on the part of women is no evidence that the law is being observed. Another factor of difficulty is the chronic unreliability of employers' records in the small shops. The number of hours worked is a key point in determining whether or not there have been violations, and it is easy for the employer to set down a smaller number of hours than the correct figure and thus to deceive the officers of the Boards.

Moreover the Board appears to have had an utterly inadequate staff to cope with the situation. Until recently the Board's inspection and court work has been done mainly by one person, the Vice-Chairman, with such assistance as he might obtain from the factory inspectors, for whom enforcement of the Minimum Wage Act is not a primary responsibility.

Certain of the methods of the Board appear to be inadequate. Notably the Board has not exercised its powers to declare 44 hours as the normal working week for the men's clothing industry; nor has it, it appears to us, been drastic enough in insisting upon the keeping of proper records by employers, as it is empowered by the law to do.

Further the penalties under the Act appear to be quite too low to deter certain employers from disobeying the law. A fine of \$20 and costs, which is commonly imposed on a violation, is scarcely enough to frighten the undercutting employer.

The union, it appears to us, has been a much more effective instrument to hold up woman's wages than the Minimum Wage law. At the same time, the law has been probably operating to hold up women's wages to some extent. The fact that we found men's wages practically as low as women's in some cases supports this view.

I turn now to conditions in Quebec.

Q. That is, the legislation in Quebec?—A. Yes, I think that that was very thoroughly covered by Mr. Francq this morning, and I just propose to summarize a few things which I have here.

Quebec since 1926 has had a Minimum Wage Law for women, which is administered by four commissioners and by seven inspectors. The rates for Montreal range from \$7.00 a week of 44 hours for apprentices to \$12.50 for more experienced workers, while lower rates prevail in smaller towns.

The regulations of the Quebec Commission are somewhat lower than those in Ontario, and the Quebec Act would appear to be even more difficult to enforce efficiently than the Ontario Act.

The Quebec Commission is empowered to exempt firms from the law in any case of "exceptional conditions", and the number of permits for exemption has greatly increased during the depression—from 94 in 1931 to 1,067 on July 1, 1933; thus violation of the intent of the Quebec law has apparently been countenanced to some extent by the Commission. It should be added of course that this has been in the face of very difficult conditions. Another grave defect of the Quebec law is that the courts may only fine firms that evade the law, while employees must bring civil suits to collect arrears of wages. Few employees dare to face the risk and expense of hiring a lawyer and proceeding to a lawsuit and the practical certainty of losing their jobs in consequence.

Our evidence indicates extensive violation of the Quebec Act. Of thirty-one establishments for which we have evidence of one sort or another, no less than twenty-four were employing women at rates below the minimum scales and in apparent violation of the Act. In all shops over ninety-five per cent of the women were receiving wages below the standard.

*By Mr. Heaps:*

Q. Were these women working on a piece work basis or on a time work basis.—A. In some of these firms, Mr. Heaps, my recollection is that some were on a piece work basis and some were time records.

*By the Chairman:*

Q. It is very much inter-related, is it not?—A. Yes, it is, more or less tied in together; but as I said a moment ago the time wage system is more common in Quebec in the country districts. The piecework system is a type which is more or less sophisticated, the wage system which occurs in the more developed industries.

If I may continue so far as we were able to discover the Quebec Board was not receiving reports from a substantial number of men's clothing firms in Montreal.

This incomplete enforcement is explained in part by inadequate staff and also by reports from employers who are allowed to report one week's wages for a specific month in each year. Employers tend, naturally, to select the week which makes the best showing. Moreover many employers keep inadequate and unreliable records. The Board admits the problem of false reports from employers.

We discovered methods of evasion in Quebec similar to those in Ontario—such as not entering all the names of workers on payrolls, changing the workers from one type of work to another so that they could be classified as "learners" of a new process, false reporting of hours of work, etc. In addition we found evidence that women workers were being replaced by men and boys who would accept rates lower than those set for women. This, although no violation of the law, clearly tends to break down enforcement, because it deprives women of their employment.

The Quebec Factory Act forbids employment of children under fourteen and since 1930 has limited daily hours of boys and women to ten, and weekly hours to fifty-five. But permits may still be given for boys and women to work twelve hours daily and seventy-two hours weekly. The hours of men in the clothing industry are still unregulated by law. It is clear from our evidence that provisions of the Act limiting working hours have been violated recently on a fairly extensive scale. Thus in four weeks of last autumn one hundred and four women and girls out of one hundred and fifty-two employed in three country shops worked fifty-five hours or over, while sixteen of these worked sixty-five hours or over. Many permits to work more than fifty-five hours have been granted according to the 1932 report of the Minister of Labour.

It would appear to us that the Inspection staff is by no means adequate to watch the situation in the seven thousand four hundred industrial establishments listed as existing in Quebec in 1930.

I might say at this point, sir, that we received very helpful co-operation from the Quebec Minimum Wage Board in our investigations, and we feel that it is only fair to say that we feel they are up against an extremely difficult and trying situation.

Mr. FACTOR: Mr. Francq explained that to us this morning.

The WITNESS: I have next a few notes on trade unionism, I might just say this in a word—

*By Mr. Boulanger:*

Q. Speaking of Quebec legislation, have you seen a copy of the bill which has been introduced in the Quebec House by the Minister of Labour for the compulsory extension of labour agreements?—A. You mean referring to hours of work.

Q. No, the compulsory extension of wage agreements in industry.—A. I think that is just within the last year.

Q. It was just introduced a few days ago.—A. No, I have not seen that at all.

Turning now to trade unionism; the Amalgamated Clothing Workers have maintained a fairly strong control of the industry in Toronto and Hamilton since the War, but in Quebec the Union was largely ineffective for several years preceding the strike of September, 1933. This was occasioned in part by factional breaks in the ranks of labour, leading to communist dominated unions which challenged the position of the Amalgamated. In September last the Amalgamated, which had fought the communists consistently, succeeded in breaking their influence and in gaining the allegiance of the great majority of Montreal workers as well as of many outside Montreal.

In Toronto the union has succeeded in maintaining wage rates and working conditions for its members fairly well, although as I have noted it has had to concede wage reductions since 1929. Union factionalism in Montreal, on the other hand, had made union organization practically ineffective to protect wage rates up to last September. The labour conditions then prevailing were so poor that the Union, while it gained important victories, was still unable to bring wage rates and other conditions up to anything approaching good standards.

We believe that the Union has operated as a stabilizing force in a badly disorganized industry, but by itself it appears that it cannot adequately protect the workers.

Thus both labour legislation and trade unions have proved ineffective for the protection of labour in this industry. During the depression the labour laws in both Ontario and Quebec have been flouted and in any event the labour laws of both provinces are far from adequate. Perhaps their most glaring defect is that both permit, in effect, the barbaric institution of the twelve hour day and the seventy-two hour week for women and boys.

The last two sections of our report contain some analysis of the difficulties of the industry which have led to the degradation of labour standards I have described and some proposals for reform. I should like to say just a few words on these points.

The depression ranks first, of course, among the economic forces that have brought ruin to this industry and to its employees. Prior to the depression the situation was far from good, with intense competition prevailing, small profits for most successful firms, and losses and bankruptcy for many. The depression has intensified this situation very much, forcing out of business many concerns, including a number of old-established and formerly successful firms.

There appear to be certain inherent weaknesses in the industry which have made it particularly weak to resist general depression. One of these is that it has for long been over-crowded with small firms which compete fiercely. Another is that it has to deal, on the selling side, with certain large buyers, department and chain stores, who are much stronger bargainers than the numerous, and usually small, manufacturers. A third is that it is subject to gross seasonal irregularity which does not breed prudent and far-sighted management.

The competitive process during the depression has become more and more ruthless. There has been amongst the various firms a desperate struggle for a declining market—too small a market to support all of them. Drastic price-cutting has been forced by some firms, and others have had to follow. Department stores, as a means of maintaining volume of business for themselves have dictated prices in "take-it-or-leave-it" fashion and have forced the pace in the price war. The merchandising practices of the big retailers, in putting on

less-than-cost sales of fine garments or well-known brands as loss leaders have forced down prices terribly on good quality garments. This has also dealt a severe blow at small retailers, and this in turn has further strengthened the bargaining position of the big buyers as against the manufacturers. To meet the reduced prices, certain manufacturers have turned to utterly unfair trade practices, such as misrepresentation of goods, false advertising, curtailment of quality of materials and workmanship and sales on consignment—as well as the sweating of labour and the violation of labour laws.

The more reputable employers have striven to maintain fair trade practices, to treat labour fairly, and to obey the laws. But in so doing they have been penalized, as against their less scrupulous competitors, to whom they have lost business, and they have been under severe pressure constantly to play the same cutthroat game.

This fierce, unethical competition within the industry, subject to pressure from without, has led to the sweating of labour and the creation of untold misery for the workers and their families.

We venture to suggest, in the latter part of our report, that this situation can only be cured by a greater degree of intervention by the state—first, by the extension and the better enforcement of labour laws; and second, by the establishment of an agency for self-government within the industry, supported by the authority of the state, which will prevent unfair competitive practices and will act as a constructive body to stabilize the industry to the benefit of workers, employers and the general body of consumers.

*By Mr. Factor:*

Q. In other words, control by the state?—A. We have in our reports some concrete proposals for a board of control in the industry which, as I say, would be a matter as large as possible of self government in the industry itself.

Q. Controlled by the state?—A. We think as a means of getting that, certain legislative action will be probably necessary. I have a few notes about labour conditions in other industries.

MR. SOMMERVILLE: Your proposals for control are important. Perhaps you would be good enough to give us a few minutes on that and the remedies you suggest.

MR. FACTOR: You mean self government in industry supported by the state?

MR. SOMMERVILLE: Yes.

THE WITNESS: Yes. The first thing we suggest is, of course, the expansion of labour laws to make much more difficult competitive under-cutting of labour standards.

*By the Chairman:*

Q. Including male labour under minimum wage laws?—A. Yes. We venture to suggest the extension of minimum wage legislation to provide that no man may be employed at less than the rates prescribed for the women.

*By Mr. Factor:*

Q. You are not advocating a minimum wage law for men?—A. No, not specifically.

Q. A fair wage law.

*By Mr. Ilsley:*

Q. What you just said was a minimum wage law for men no less than the minimum wage law for women?—A. Yes. You can call it that if you wish.

*By the Chairman:*

Q. That is to meet the abuse, I presume, of substituting boys and men for women where the minimum wage law for women seems to be too high to suit the wishes of the employer?—A. Yes.

*By Mr. Factor:*

Q. If you enact a minimum wage law for men what is there to prevent the employer from merely paying the minimum wage? Is that fair?—A. If he can get away with it; but presumably in setting up minimum wage standards you are only setting minimum standards absorbed by law. Competitive forces, presumably, can operate above those minimum conditions.

Q. You do not think the employer will take advantage of the minimum wage law for men and merely pay the minimum wage as the maximum wage?—A. No, I do not think, frankly, that that view is a correct one. In any period when there is good business, any kind of shortage of labour, no matter what your minimum scale may be, wage rates will be shoved up by competitive conditions.

Q. In periods of depression—your whole picture here is a picture of depression—in periods of depression, assuming there is a minimum wage law for men would not the employer or manufacturer take advantage of that and merely pay a minimum wage for the men employees?—A. I think that is the point. It might be that much to the good, apart from the minimum wage.

*By Mr. Sommerville:*

Q. You mean it would be that much better than present existing conditions?—A. Yes.

Q. At any rate, there would not be the inducement to dispose of women for the purpose of employing men.

Mr. FACTOR: Women should not have to work at all.

Mr. YOUNG: Nor men.

Mr. SOMMERVILLE: Is not that the idea, Mr. Chairman?

The CHAIRMAN: That is right. The place of the woman is in the home, in other words.

*By Mr. Ilsley:*

Q. What other changes would you make in the way of laws?—A. We have a variety of other suggestions in the report.

*By Mr. Sommerville:*

Q. You have first referred to their wages, proposals for control. A more adequate scheme of control must have some definite objectives?—A. Yes.

Q. And what are the objectives you seek to attain through control?—A. We have them listed here as five main objectives. In the first place, fair wages for the workers. Secondly, reasonable hours of work and reasonable conditions; thirdly, restrictions upon the unfair business practises which have been common in industry; fourth, general stabilization of the industry to obtain greater regularity of employment and to obtain the economies and efficiencies of better management; finally, we suggest that the interests of the consumer must be taken into account; that no scheme of control is worth a moment's consideration, the effect of which is merely to exploit the public. Those are the tests of control and the objectives which we endeavour to set up.

*By Mr. Factor:*

Q. Have you examined the code that is prevailing in the needle industry in the United States?—A. Yes.

Q. Did you advocate something like that in Canadian industry—in this particular clothing industry, I mean?—A. At the moment I would say I would answer your question in the negative. By saying that, the inclusion of a law of these specified provisions, it seems to me, is a matter upon which I have made up my mind for further examination of the situation. It seems to me in developing my plan of what I call self government in industry you have to consult those in industry regarding the whole series of more or less technical factors, and our proposals were for setting up a board of control, giving to it certain powers, notably the power of issuing labels to indicate goods manufactured under good conditions, and then making the board of control to some extent the legislative body to make its own rules regarding the conduct of the industry.

*By Mr. Ilsley:*

Q. Would there be one in each province?—A. We suggested a board of control for the industry in Canada which means, mainly, of course, Ontario and Quebec. Now, of course, the legislative factor comes in there, and we suggested a Dominion Act setting up this board with enabling legislation by the two provinces, Ontario and Quebec.

*By Mr. Boulanger:*

Q. By means of this board of control or board of discipline or board of supervision, whatever you may call it, do you suggest that the industry could settle its own trouble and do away with unfair and unethical practices and things of that kind?—A. We think that it could do so to a very large degree at any rate. It certainly could not settle the problem of depression; the problem of depression is over and above the industry. I tried to figure out what could be done, taking depression for granted more or less in this industry, to make conditions distinctly better, at least, than they have been, to eliminate some of the most grievous of the abuses.

*By Mr. Factor:*

Q. The reason I asked you about the code was that I understand there are a lot of manufacturers who are now protesting against that very code that is prevailing in the needle industry?—A. Yes. Quite frankly, we do not think of anything so rigid. Professor Scott and I—I might say that our proposals were worked with the manufacturers and leading people in industry. They were talked of pretty thoroughly then, because as I said some time ago their views are naturally against me in this kind of thing.

*By Mr. Sommierville:*

Q. And these suggestions and this report is offered in the interests of the manufacturers and the unions that you represent?—A. Yes.

*By Mr. Young:*

Q. Is this the situation, that there are more people seeking to make a living in this industry than the present condition of the market will support?—A. Yes. I think that is true, Mr. Young.

Q. That is the situation? Can you conceive of any remedy for that situation other than increasing the demands for their goods?—A. There are partial remedies anyhow, I think.

Q. You might remedy small abuses here and there, but to remedy the whole situation can you conceive of anything short of an increased demand for the goods?—A. I am afraid I have to answer you again the same way. It seems

to me there are partial remedies that are possible within the industry. For example, we can cut out people working 65 or 70 hours in one week. That, it seems to me, can be brought under control. We can cut out the paying of the very low wage rates. That, I think, is conceivable, surely. We can cut out unfair trade practices of one buyer or another.

*By Mr. Sommerville:*

Q. One of those unfair practices that you suggest ought to be remedied is the practice of selling what is called "a loss leader"?—A. Yes.

Q. It is one of the practices that has a tendency to injure the whole industry?—A. Yes.

MR. YOUNG: You spoke about a "loss leader;" will you explain what you mean by that?

MR. SOMMERVILLE: I am just going to bring that out, Mr. Young.

MR. YOUNG: Very well.

*By Mr. Sommerville:*

Q. I see on page 89 of your report that you refer to the device of the "loss leader" as being one of the things that you offer as a suggestion that ought to be done away with?—A. Pardon. We do not offer that specifically in the report. I am inclined to think personally it is one of the things that might be done away with.

Q. "But it was not alone the hard bargaining of the large buyers that the manufacturers resented. They claimed also that certain of the merchandising policies of the larger stores were ruining their trade. For one thing, the device of the 'loss leader' was pointed out. Overcoats made from Montignac, Crombie and Carr cloths, well known for their fine quality, have recently been on sale for such a price as \$25 in Montreal and Toronto stores, when such a price would not cover the cost of the cloth alone. In one case, of which we have definite information, the coats actually cost a manufacturer \$47 each to produce. There would be in these sales only a small number of the fine coats, along with a great number of poorer and cheaper ones, the fine garments being advertised only to attract buyers. Several manufacturers stated that advertising of this type killed their market for fine coats, since dealers were pressed by their customers to provide garments at prices as low as those advertised for the big sales. Well-known brands of clothing were also 'slaughtered' in the same way, we were told, by their use as loss leaders by department stores."

That is what you have in mind as one of the unfair practices of which your Canadian Association of Garment Manufacturers and your Amalgamated Clothing Workers of America object?—A. Yes.

Q. And that is one of the matters that you think should be brought under control, or one of the practices that you think should be brought under control, is it?—A. Yes. I think it is fair to say so, Mr. Sommerville. I do not suggest that that kind of practice should be cut out completely or can be cut out completely. It is something that involves very careful consideration.

Q. Has it been your experience from your observations and enquiries here that that practice affected the manufacturers in the industry?—A. Yes.

Q. That practice, you found, was one that is objected to alike by the rival manufacturers or by the manufacturers generally and by the unions in the shops?—A. Well, I should say the practices are objected to particularly by the manufacturers. The union people in general have not much concern with merchandising methods except as they see in certain merchandising methods factors which help to keep the labour conditions fair.

Q. And is that one of the factors that helps to keep labour conditions fair in these industries?—A. I think it can fairly be said it is one of the factors in the case.

*By the Chairman:*

Q. May I put a question to you now as an economist? It is an hypothetical one, if you like. Any concern, manufacturer or retail distributing concern, that sells a portion of its goods at less than cost for the purpose of attracting business to their establishment must necessarily add an unusually higher spread to some other goods in order to make up that loss; is that so?—A. Yes; if they are going to remain in business, obviously.

Q. Obviously. Therefore—I am asking you whether I am right and whether you agree with me in this—therefore, the sale of goods at less than cost of production must necessarily be contrary to the ordinary laws of economics, sound laws of economics?—A. Well, I am afraid, Mr. Stevens, I have some difficulty on that score. It is thoroughly regrettable that that sort of thing should be necessary. Under a competitive economic system I think there would have to be sales at less than cost on occasion, otherwise old goods will not be cleared off the market.

Q. There is a difference between clearing off old stock, remnants; everybody recognizes that?—A. Yes.

Q. I do not think anybody objects particularly to that. There is a vast difference between clearing off goods that are remnants and deliberately selling goods at less than cost?—A. Yes.

Q. We will have evidence on that later.—A. Might I suggest this in answer to your question to carry a little further: that kind of thing I think can fall within the realm of an extremely unfair competition; because when you go out and undertake a policy of this kind, you do not do it, surely, with the intention of selling permanently at less than cost; you do it as a competitive device, as a means of wrecking the business of some other man, by selling at less than cost. That kind of rate cutting and selling at less than cost happened in the United States, and caused or forced many railways into bankruptcy, and then amalgamation. Part of the rate cutting practice is the wrecking of a competitor and then getting in the position where you can sell at very much more than cost, and by this means compensating yourself.

Q. Of course, you would call that predatory cutting of business?—A. Yes.

Mr. FACTOR: Leader loss.

The CHAIRMAN: Loss leaders and predatory cutting of prices.

*By Mr. Factor:*

Q. Is not a loss leader considered a sort of form of advertising?—A. That is so.

Q. So that those employed in that firm say to the prospective buyer who needs an overcoat, "Here is a marvellous coat at the cut price of \$20."—A. Where this particular firm is selling coats at such and such a price in effect the firm is saying to you in advertising, we are also selling overcoats at a very much less price. Also, it is in effect, I should say, a form of deception of the consumer.

Q. You object to this form of advertising?—A. I do; it is very unfair advertising. I suppose all of us know of loss leaders, somehow or other.

*By Mr. Sommerville:*

Q. What is the ultimate effect upon the consumer of such a policy, followed to its logical conclusion?

Mr. YOUNG: He gets two coats for the price of one.

The WITNESS: He may, initially, Mr. Young; but after some time it may be that the firm which follows proceedings of this kind will get such control of that market that the consumer will get only half a coat for the price of one.

*By Mr. Young:*

Q. You said a moment ago the firm that sells a coat for half price would have to charge double price for something else. Now, is not this true that a coat at half price will draw a customer to this store, and other things at double price will drive the customer away?—A. No, sir, I do not think so, because I think most of us as customers are really very ignorant about coats. We buy; for my own part, I do feel I am a very bad buyer of coats, and I think I can be fooled very easily, and I suggest most of us fall in the same category.

Q. Might you not have profited by a loss leader?—A. Yes. Well, as far as coat advertising is concerned, I know nothing about cloth, as to what is good cloth. They could advertise that kind of cloth to me, and sell me something else, and I would not know the difference.

The CHAIRMAN: That is the trouble.

*By Mr. Boulanger:*

Q. That is for the purpose of launching new articles on the market.—A. Overcoats are not new articles.

The CHAIRMAN: As I said in regard to the price matter theory, we will have very practical evidence on that later on. Is there anything further?

The WITNESS: I have a few more statements to make.

The CHAIRMAN: Proceed, Professor.

The WITNESS: I have just a very little more, Mr. Chairman. I should like in conclusion to make a very few remarks about labour conditions in other industries, and particularly about the observance of the minimum wage laws in these other trades.

I am convinced that in Ontario, grossly inadequate wages for men and women and violations of the labour laws are much more common in many other industries than in men's clothing. Certainly men's clothing is much the least "sweated" of all the needle trades, largely because the union control is so much more effective than in others.

May I mention only a few cases that have been brought to my attention by a graduate student of the University of Toronto, Miss I. M. Lunn, who has been working on the problem under my direction for the last few months. She reports that in the cloak making trade, it has been usual to work overtime continuously. The hours were often from 8 a.m. to 8 p.m. (11 hours) and from 8 a.m. until 3 p.m. on Saturdays. If the firm had a rush of orders they might work till 9 everynight, and until 5 p.m. on Saturdays, a total of 70 hours a week. Twenty finishers interviewed state that not one of them was earning an average of more than \$12 for a 60 hour week during the season. In one shop, where finishers got a rise of 100 per cent after recent strike, they are still getting only \$8 per week.

In the dressmaking trade, she reports, it was necessary in many cases after a strike, to raise the price rates of finishers by 100 per cent, bringing them up to minimum wage board rates. In the case of shirt making, she reports that out of six experienced girls from one shop, who went on strike recently, five claimed to earn less than \$10 for a 54 hour week. The restaurant trade, she reports, has been particularly guilty of low wages and long hours. Thus, in restaurants on Spadina avenue, where a strike occurred recently, kitchen workers and waitresses reported weekly wages of from \$6.25 to \$11 for hours

running up to the unbelievable figures of 90 and 100. I have been given similar evidence of gross violations of the laws in the hat, cap and millinery trade, in the fur industry, in cleaning and dying, in furniture, in boots and shoes, in candy and stationery. It is significant of the conditions prevailing in certain trades in Ontario, that after several recent strikes, firms have agreed to pay their women workers the rates prescribed by the minimum wage board.

*By Mr. Sommerville:*

Q. By formal agreements?—A. By formal agreements.

Q. That was not achieved by the strike?—A. That was not achieved by the strike. May I mention one more incident to suggest the seriousness of the problem. Last week one of my students told me of several instances of gross underpayment of girls in candy factories. I asked her if I might have their names so that I could report the cases to the minimum wage board. "Oh no," she said, "the information was given by the girls in the strictest confidence, and they would be terrified of losing their jobs if they knew I had passed it on so that it would reach the board." Women dare not complain about underpayment when the spectre of unemployment haunts them. While I have no first-hand information for Quebec, I may say that Professor Scott, who did the detailed work on the Quebec section of our investigation, was under the impression that violations of the labour laws of that province were, if anything, even more common in other branches of the needle trades than in men's clothing. In Toronto and Ontario men's clothing, so far as the needle trades go, it is the best branch of the industry. What I have said to-day about low wages, long hours and violation of the law, applies less, I am convinced, to men's clothing than it does to the various other industries.

It is impossible for me to say very definitely, of course, just how extensive are infractions of the Factories Act and minimum wage laws in other industries than the one that we studied carefully. But it is pretty clear, I think, from such evidence as I have mentioned, that the situation is thoroughly bad in a number of trades. I am sure that further detailed investigation, such as we conducted for men's clothing, would reveal beyond question an unsavoury condition of broad extent.

*By Mr. Factor:*

Q. In other industries?—A. Yes.

*By Mr. Sommerville:*

Q. You have presented this report at the request of and in the interest of the Canadian Garment Manufacturers Association and the Amalgamated Clothing Workers' association?—A. Yes.

*By Mr. Young:*

Q. Have you ever tried, Mr. Cassidy, to trace the goods that you found to be made in such shops under unfair conditions, to find out who was reaping the big profit?—A. No, sir, I have never done that.

Q. You do not know whether it is passed on to the ultimate consumer or whether the immediate employer or some intermediary is grabbing off the big profit?

The CHAIRMAN: That is what we are going to try to find out.

The WITNESS: It can be done.

The CHAIRMAN: I think we will find it out. Now, I am sure we are all very grateful to Professor Cassidy for his very complete statement, and for the long time he has given to this matter. If there is nothing else at the present time, we will adjourn until to-morrow morning at eleven o'clock.

Mr. FACTOR: Before we adjourn, I should like to ask if you intend to investigate the other industries, as suggested by Professor Cassidy, so as to ascertain the conditions there.

The CHAIRMAN: Yes.

Mr. FACTOR: For instance, the candy industry, the fur industry, millinery industry, boots, shoes and furniture industries.

The CHAIRMAN: We will have evidence on all those shortly.

Witness discharged and committee adjourned at 5.45 to meet again on Thursday morning, March 1, 1934, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

March 1, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The first witness this morning is Mr. Tom Moore, president of the Trades and Labour Congress of Canada.

TOM MOORE, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Moore, you are president of the Trades and Labour Congress of Canada?—A. Yes.

Q. And perhaps you will just very briefly state the nature of that organization?—A. The Trades and Labour Congress of Canada is a national federation of some sixty respective organizations dealing with various occupations and industries. Each of these organizations has its own Canadian office which does its immediate work; therefore, what information comes to us either comes verbally or in conversations and contacts with these people, and not by direct investigation and information that we ourselves may collect. We are the exchange medium of general information. In addition, of course, we have what we call trades and labour councils which are central organizations in the respective cities which have general information that they likewise transmit from time to time, and these are the main sources of our information.

Q. You do not maintain an investigating staff at headquarters?—A. No sir.

Q. These investigating staffs are maintained by the constituent bodies of the Congress?—A. Yes. Just as Mr. Cassidy was representing the Amalgamated Clothing Workers along with the employers of that industry they maintain investigators wherever they need them. We do not find time to do as much of that. We are in too close contact with them to do it in a scientific way. We get it in an unscientific way.

Q. As the resolution deals especially with labour conditions in industry, do you desire to make some representations to the committee in respect of the Congress?—A. I think I would like, Mr. Chairman and Mr. Sommerville, permission to just present a short statement, first, with the explanation that this was drafted immediately after I received the notice last week-end to appear before the committee, and, therefore, maybe changed somewhat by the evidence that has been given, not in context but in wording. Before doing so, I would like the privilege, although it is not a matter of the enquiry, to express the appreciation which our organization have shown throughout the country for the courageous manner in which you, yourself, Mr. Chairman, opened up this entire question by your address on January 15. Correspondence to the office and general comment of our organizations expresses that; and also there is naturally a great interest that this has been followed by the appointment of

this committee so that evidence could be adduced and opportunity afforded as it has been already for evidence to be adduced which, while it has been well known in labour circles during almost the entire existence of labour activities, we feel will do much to arouse public opinion to the serious social consequences of these conditions throughout the country. We recognize, however, that there is more than just the adducing of evidence necessary. If there is to be any real benefit there must be some practical results, and, to a certain extent these may come from legislative action; and, therefore, what statement I have to present to you is being directed more to suggestions and general comment as to where the existing laws or new legislation might be helpful, and not from eliminating or curtailing some of the abuses which have been made so clear by the evidence you have already heard. From the discussions which have already taken place and the evidence adduced, it would not appear that this committee intends to confine its investigations respecting labour conditions merely to those prevailing in industries—supplying the requirements of department and chain store organizations—which is really the technical terms of the reference; but I take it, it rather seeks to ascertain the causes of the unfair practices in trade and commerce which have reflected themselves in the payment of inadequate wages and in unemployment among workers, and I think I can safely add serious loss to other classes of the community, and seek to recommend remedial measures with respect to the same. I think it will be recognized that sweatshop practices resulting from the pressure of mass buying soon extend and has become general throughout the industries affected. In other words, we cannot have reduction of standards to meet merely a mass order without it becoming general throughout the industry in order that other competitors with the larger firms might meet those conditions also. Likewise, where low priced products have been offered then chain stores and department stores attempt to meet this competition by insisting on prices which make similar exploitation almost inevitable. So we have a vicious circle. If the chain stores and department stores use their pressure to get low prices others try to meet that and in return employers or others seek the low prices, you have the power of the chain store used to see that they get a product that they can sell equally as cheap. Where is the responsibility? Wherever it does lie, the fact remains that what is generally referred to as sweatshop conditions are far too prevalent to-day and are not confined to industries or occupations directly doing business with either department or chain store organizations, which evidence has been adduced and can be adduced. I will be glad to co-operate with counsel in that respect, or advise where witnesses could be obtained with regard to sweatshop conditions and similar bad conditions; but personally I would like to suggest that the best evidence will probably be obtained—when I say the best, the most precise evidence—by the committee's investigators, if they appoint them, visiting the factories and workshops and obtaining first-hand information from employers and workers. I suggest this knowing the reluctance of those best able to give evidence to volunteer do so, being fearful of the consequences so far as their own personal interests are involved. That implies discrimination, and it is very prevalent and always has been wherever workers, even indirectly are known to have been involved in matters which come before public authorities and raise unfavourable publicity for their employers. Their occupation is not often very safe or their employment is not safe for a long period.

*By Mr. Heaps:*

Q. Would that apply to all employers in the same industry?—A. I would not say to all employers. There are a number of employers in every industry, and I think I can add a growing number who realize the benefits of co-operating with labour organizations and are assisting them, but they are a minority up to the present time.

Q. It would apply possibly to a number of employers who do not co-operate with the union?—A. It certainly would, and, in some cases to those who are co-operating. They are co-operating under pressure partially where there is an agreement, and it does not mean that it is an agreement that the employers would like to see perpetuated, only it is one which is accepted for the time being because of the pressure of the organization.

*By Mr. Sommerville:*

Q. Would that apply equally to manufacturers who are doing business with large buyers?—A. In some cases, yes, but in many instances, even the best employers, the large firms.

*By Mr. Kennedy (Winnipeg):*

Q. It is an armed neutrality?—A. There is often an armed neutrality during an agreement; as was said here in regard to union agreements in answer to a questionnaire, it is often only a trial and is often not satisfactory either to the employer or worker. It is not necessary for me to assure the committee that I will co-operate when I think of evidence that may be necessary from time to time.

*By Mr. Sommerville:*

Q. Speaking for the organizations of your congress, they are co-operating and will co-operate in gathering the material required?—A. Yes.

*By Mr. Factor:*

Q. How many organizations are represented by the Trades and Labour Congress?—A. We have 60 national and international unions with over 1,500 local unions throughout the dominion and some 30 boards and labour councils in the industrial centres throughout the dominion. There are numerous causes which have led to the present unsatisfactory conditions, some of long standing and others of more recent development. I would appreciate being permitted to make some general observations with respect to the number of these and at the same time respectfully submit proposals which I trust the committee may find worthy of consideration. I do that rather reluctantly because I have heard mentioned in the meetings so far that it is for the committee to decide its own courses and so forth. I do not want my suggestions to be taken as trying to unduly influence; it is only from my experience over a number of years in the labour movement.

The CHAIRMAN: Don't misunderstand any observations of that kind. We welcome any suggestions from responsible heads of any organization.

The WITNESS: With regard to sweatshop conditions, while, of course, the knowledge of this has not, perhaps, been recognized as fully by the public, it has been common knowledge amongst workers for a number of years—as a matter of fact, as early as 1900 an investigation was held, I think, by the now leader of the opposition who was then secretary of labour under the Postmaster General, Mr. Lemieux—I am speaking of the Right Honourable Mr. Mackenzie King—into sweatshop conditions, and as a result of this the House of Commons passed what is generally referred to as the Fair Wages Resolution. The regulations to give effect to the same were drawn and I am quoting that now: That a provision to suppress the sweating system and securing payment to working men and working women of fair wages, and the performance of that work under proper sanitary conditions.

*By Mr. Factor:*

Q. When was that passed?—A. About 1902 I should say—the Labour Department's Report of 1904 where probably one of the first drafts of the regulation that was necessary in contracts for the Post Office Department. The

resolution was headed, "regulations regarding the sweat system." It is some thirty years ago that the government took cognizance of it and started to try and prevent it, and stressed it in regard to their own purchases.

Mr. SOMMERVILLE: We already have that before the committee.

The WITNESS: Yes. I do not want to file it. These regulations were made part of not only government contracts for supplies purchased by the different departments but were also applied to works aided by grants of dominion public funds. In some lines the government itself buys in sufficient quantities to influence working conditions, and could by bringing these fair wage regulations up to date and providing for strict enforcement and for the purchasing of supplies only from such industries as observe these conditions through the entire year—not just for the life of that contract—do much towards the elimination of sweatshop practices.

*By Mr. Ilsley:*

Q. This fair wage clause applies to industries from which the government buys supplies?—A. It does, but there is no compulsion to exert it. The Fair Wage Act, which was passed in 1930, confines itself practically to the construction industry; whereas the origin of the fair wage regulations was to suppress sweat shop practices. If a government follows what I say should be the custom, they do insert the fair wage clause, but that only provides that prevailing conditions shall be accepted; to-day prevailing conditions are so bad in some industries that that does not mean anything except the perpetuation of unfairness; but when I say bring it up to date, our opinion is that if the Fair Wage Act was broadened so as to apply to purchases, and if it was brought up to date as it should, as it is in regard to the construction industries, it would fix a fair and reasonable rate irrespective of prevailing rates. Then the government will have a list, and anyone who is off that list for the violation of the Minimum Wage Act or maintaining sweat conditions, cannot contract for government supplies. It would soon have a much broader effect than the mere purchase of supplies itself, because everybody is ultimately wanting to do business with the government.

*By Mr. Sommerville:*

Q. This fair wage clause was designed for industry in normal times?—A. Suppressing sweat conditions.

Q. And when conditions become bad as they have during the past few years, then you think some change should be made in the fair wage provision?—A. I would put it the other way, designed to deal with sweat shop conditions, and as conditions became better, it went into the discard; when the conditions became rather negligently observed, and then that condition comes back to the full, re-introduce the conditions that were entered into in the first place. I think that would be a better way of putting it.

*By Mr. Factor:*

Q. I would like to develop that; you mean the governments have purchased their supply from the concerns that have sweat shop conditions; is that what you are implying?—A. Without any particular inquiry as to conditions, except where they have the fair wage clause inserted that they shall observe prevailing conditions. You take prevailing conditions in the needle trades; it is well known what the conditions there are, so far as suppression of sweat shop conditions are concerned.

Q. The reason I asked that, I have a recent complaint that the government made purchases of some goods from clothing concerns and there were sweat shop conditions there?—A. Quite right; only they were prevailing in that locality because there were no other firms but those.

*By Mr. Boulanger:*

Q. The government buys by tender?—A. Yes.

*By Mr. Sommerville:*

Q. Are not conditions prevailing over a particular contract investigated, and watched by the inspectors of the government, on a contract?—A. In theory, sir.

Q. Is it not so in practice?—A. Unless complaints are registered by workers.

*By Mr. Kennedy (Winnipeg):*

Q. Where a government calls for tenders—and I refer to any government,—is there always included in the terms and conditions what is referred to as a fair wage schedule or prevailing wage?—A. No, only where a department has recognized the practice and the request of the resolutions. There is no policy and cases have arisen where tenders have been called for without the fair wage clause conditions being inserted.

Q. Is it not the practice where it is inserted in tenders, that provision that the prevailing wage shall be paid by any contractor who receives a tender, from the labour union's end, that they make a check-up? Supposing I am running a factory and I am a successful tenderer for trousers, does the labour union of their representatives check up on that factory which gets the tender to see whether they are living up to the conditions?—A. If it is a union shop or partly organized, yes, if it is one you can get out to; but labour unions have their limitations in regard to the amount of money they can spend in investigations that are not particular returns to them.

Q. Is it your practice to check up?—A. Only where the union men may be co-operating.

*By Mr. Sommerville:*

Q. Mr. Moore, did I understand you to say that there was a fair wage clause or provision covering every contract?—A. Yes.

Q. There is such a provision?—A. There is such a provision, but it is made under two sections.

Q. And there is legislation covering the conditions and the fair wage?—A. It is made under two sections. The Fair Wage Act of 1930 covers what are known as (a) conditions, that is the construction industry; the purchase of supplies is covered by the fair wage resolutions on (b) conditions.

*By Mr. Factor:*

Q. How is it possible for a government to buy its supplies from sweat shops such as I have illustrated?—A. Because they buy from shops that have contracted at the lowest price and claim they are just observing prevailing conditions.

*By Mr. Senn:*

Q. These prevailing conditions are regional, are they not?—A. In many cases.

Q. They are not dominion-wide?—A. There have been different practices involved in it. Sometimes the government will write a dominion-wide contract, say in the case of shipbuilding or something of that kind, but generally in regard to supplies they are regional.

*By Mr. Sommerville:*

Q. And as a matter of fact, Mr. Moore, where the fair wage clause is or where the government contracts have been given, is it not a fact that usually higher wages are paid upon that government work than upon the other work that is prevailing or going through the factory?—A. Not usually.

*By Mr. Ilsley:*

Q. Is this an important factor, these government purchases? I should think the government purchases would be a very small proportion of the total purchases from industries in which sweat shop conditions prevail; and even if the government did refuse to buy the goods produced under these conditions, it would not be a fundamental thing at all.—A. I only say that the influence of that—because firms want to be on the fair list to contract with governments—would be greater than the actual amount of purchases.

*By the Chairman:*

Q. Where there is included in the contract the regular clause, what is known as the fair wage clause, and in addition to that there would be included an undertaking on the part of the contractor that he must observe the provincial minimum wage laws, that, of course, would help, would it not?—A. That would be a help.

Q. That has been added to the contract lately?—A. Yes.

Q. That would help; your point is, as I understand it that, in industries to-day the wage conditions has been so depressed that the fair wage production does not offer adequate protection to the worker.—A. Quite right.

Q. And that parliament ought to take into consideration that fact?—A. Yes. I was not wanting my word to go as a criticism of the present practice. It has been a common one over a number of years. I only want it taken as a constructive suggestion in that connection, whereby there can be something constructive done in the fight against sweat shop conditions.

Q. It does not meet the sweat shop conditions of to-day?—A. No, it does not to-day as they are now.

Mr. HEAPS: May I point out that many of these contracts which are government let, are subsequently sub-let and the great difficulty is with the sub-contractor. I know of one of two instances, in the case of coats and trousers, which have been let by the government, which have been—

The CHAIRMAN: I don't want to shut you off, but we want to get Mr. Moore's evidence.

Mr. HEAPS: What I wanted to point out is the question of sub-letting by the contractors.

The CHAIRMAN: That will come later in argument.

Mr. HEAPS: It is not argument, it is a fact.

The CHAIRMAN: I don't want to shut you off.

*By Mr. Kennedy (Peace River):*

Q. Have you many cases of this coming to your attention?—A. Quite a number over the past seven years. We have about five.

*By Mr. Factor:*

Q. What I understand, Mr. Moore, is that the fair wage clause is inserted in the contracts to-day. In the case of the purchase of caps that I have illustrated, there was no fair wage clause inserted in that contract, was there?—A. There have been omissions from time to time, but not deliberate, I do not think.

The CHAIRMAN: We can get a direct reference to that, and have it brought in.

The WITNESS: We had complaints about caps.

The CHAIRMAN: We must not allow observations to go on the record that such and such was the case. We will have the documents brought here.

*By Mr. Ilsley:*

Q. About these relief expenditures; they are large in volume and they are made by municipalities, or perhaps in some places by provinces with dominion contributions. Is there any check of sweat shop conditions made by the dominion government on these purchases?

The CHAIRMAN: We will submit a question to the—

The WITNESS: Not as far as I know.

The CHAIRMAN: —Department of Labour and the government authorities.

Mr. ILSLEY: I would like the witness's answer. He says not so far as he knows.

The CHAIRMAN: He could not possibly know.

The WITNESS: I only know this, that the agreement for relief between the dominion and the provinces, and between the provinces and the cities, the actual fair wage provision so far as construction work is concerned, but not so far as supplies on relief.

*By Mr. Ilsley:*

Q. That would be the main thing; the purchase of supply would be the main item, would it not?—A. I think so.

Q. Would not that make quite a big difference on these enormous relief expenditures?—A. I was looking up an item I had a record of, Toronto buying some 50,000 pairs of shoes alone.

Q. To which the Dominion contributes?—A. Yes.

Q. Then the Dominion exercises some control over the conditions in regard to this?—A. I will just say there, if the provincial government and municipal authorities could also be induced to follow the dominion policy, the influence would be very potent. I think that follows what you are saying.

Q. In so far as you know, they do not at the present time?—A. Not so far as supplies are concerned.

*By Mr. Sommerville:*

Q. Is it not a fact that municipalities such as Toronto, when making their contract with respect to supplies, insert a particular fair wage clause that prevail in the city of Toronto?—A. I think it is answered by the case that has been recently exposed in Toronto, where the contract for the supply of bread for the relief recipients was given to a firm, because of its price; and then it was exposed that the driver of one of the bread wagons, if not more, was receiving \$5 per week and commission over \$50, but he had no commission because he was merely delivering relief orders, and had to depend on city relief for assistance to the wage, showing that there is certainly no provision in that particular contract.

Q. When that was brought to their attention, was not that immediately remedied?—A. Yes; the man was raised to \$8 a week with commission over \$80.

*By Mr. Factor:*

Q. Is there a distinction between a fair wage and the prevailing wage, Mr. Moore?—A. Yes, a very great distinction. In the Fair Wage Act, the Minister of Labour is empowered to fix a fair wage. It does not matter—20 cents an hour may be the prevailing wage, with labour conditions; Eatons say a fair wage is 30 cents, and have done that.

Q. In these contracts, the term used is fair wage or prevailing wage in the locality?—A. No, I think you will find it is prevailing; that is one difficulty. If it was: "Must be paid a fixed fair and reasonable wage—

Q. In other words, the minister's power was not exercised, as the term prevailing wage was inserted?—A. I don't think I have made it clear. There are two kinds of fair wage contracts. One is under the Fair Wage Act which applies to the construction and building industry, and the other one which is founded on the old regulations of 1902, the resolution of 1902. In the Act itself it does provide that the minister has power to fix a fair and reasonable wage; in the other one, the custom is the prevailing wage.

Q. Therefore the prevailing wage may not be a fair wage?—A. May not be a fair wage.

*By Mr. Kennedy (Winnipeg):*

Q. Is this not the distinction, that it provides for a fair wage where there is a fair wage law applicable; where there is no such law then the prevailing wage shall apply; is not that the provision?—A. You say applicable; I know there has been controversy there in regard to the difficulty. A contractor gives a price say for a product that is only going to be one-twentieth of his output. He says: Unless you allow me to execute that at the prevailing rate which is common in other industries—I can't put part of my factory on a different rate that you may establish. So while you may not consider it fair, it has been accepted as the best and easiest method of doing business. Our suggestion is that the British system be followed of taking industries that are living up to the fair standard and putting them on the list only, and until people come up to that, missing them off the contracting list. Then you would not meet this condition and would have fair wages as the prevailing wages.

Q. Apart altogether from the law or the provisions of the law as to fair wages, is not the matter of the check-up and the enforcement by far the most important part?—A. Yes, and that should be done more fully than it is by the Labour department; they have a limited number of inspectors who to-day confine themselves very largely to investigating plants, and not to initiating investigations.

*By Mr. Factor:*

Q. Fundamentally, Mr. Moore, there is a great distinction in government contracts.—A. Speaking of governments generally; if they would exercise their right as they have the power to do, to provide for a fair wage in a contract, it would remedy the situation, but they don't do that; they merely provide for the prevailing wage in the locality.

Q. It may be sweat shop condition?—A. Absolutely, and competitive prices don't make it any better.

*By Mr. Edwards:*

Q. Is not the prevailing wage, Mr. Moore, more for public works and works under contract; the prevailing wage of a municipality may be 30 cents, 35 cents or 40 cents an hour, and that is the rate that should be paid on that particular job. Now, when you talk about factory conditions, I think we are getting a little bit at cross purposes, talking of different activities. All these goods that are purchased by the department, say the caps you spoke of, may involve what are known as sweat shop conditions, but you could not handle that with prevailing wages.—A. You could, by following the recommendations of the House of Commons Resolution, after the enquiry of 1900.

Q. You mean, by giving the business to firms that acquiesce in those provisions?—A. That would be all right, if the government would pay a rate consistent with good prevailing conditions.

*By Mr. Sommerville:*

Q. In other words, you suggest the fixing of a charge by the government on all their purchases?—A. That would avoid any prejudice.

Q. That might become a subject of controversy for a long time.—A. Yes.

Q. It might present a great many difficulties.—A. Yes.

*By Mr. Factor:*

Q. The government might stop, for example, the awarding of contracts by providing for the prevailing rate only, where it is known that sweat shop conditions exist.—A. All governments might do that.

*By Mr. Sommerville:*

Q. I suppose that has been a matter of controversy ever since 1900, when the report was made.—A. Before that, sir, when the investigation took place.

Now, the basis of collective bargaining is the trade union, where they have secured recognition from employers they have by methods of collective bargaining done much toward improving the conditions of employment, both in respect to wages paid, hours worked, and the protection of help, and to establish the maintenance of sanitary conditions in industry. Such action, however, has not been sufficient to protect industries and workers against unfair practices, as frequently, your employer and organized workers have to face losses in order to meet competition from the less scrupulous employer. I think that was elaborated yesterday by Mr. Cassidy to some extent.

Q. What do you mean by that.—A. You may have an employer entering into an agreement with a union, like in the clothing industry where 85 per cent of them are organized, that agreement itself might not eliminate sweat shop conditions, because the fair employer could only get business a little in advance of the most unscrupulous competitor. Therefore, the fact of the union agreement existing does not mean that the clothes made are under a fair basis; it only means that in the face of conditions, the fair employer and the organized worker must agree to meet them if they are going to stay open and do any business.

Q. Yes, and these conditions may prevail in the very best plants.—A. Sweat shop conditions may prevail in the best of plants if your wages paid are constantly menaced by that competition.

Q. So that when one is referring to wages and shop conditions, one refers to wages only rather than to physical condition.—A. That comes in very often, sir; but I might mention there, because it just came to my mind, that yesterday reference was made to the home working conditions in Montreal and in Toronto, and Mr. Cassidy said he thought they were perhaps largely prejudicial to health. We had a case of this kind a number of years ago as a result of which the Health Department took the power to stop home work on clothing because of the conditions they found existing there.

Q. Those conditions were unsanitary?—A. Clothes taken out were used as bedding, and children often with soils were put on these clothes, and they would be covered up with clothing that had been taken there to work on and therefore from the sanitary end, we were able to get that eliminated. I do not think it has spread back very much in Toronto yet, because of that condition.

Q. That was remedied thirty odd years ago?—A. In Toronto, but we have not removed it yet in some other cities.

Q. In Ontario, or in Quebec.—A. In Quebec, sir.

Q. Mr. Moore, you were saying that this competitive system, that resulted in the reduction of wages, were the result of the manufacturers being obliged to meet competition and being obliged to pay wages less than adequate for the maintenance of their men.—A. Absolutely.

Continuing this statement: to assist in the development of codes and fair practices in industry, which we think should be allowed to be developed, particularly in respect to labour conditions; the government, perhaps, through its department of labour should encourage collective bargaining as has been done through the National Recovery Act in the United States. Section 7a of the National Recovery Act very definitely sets down the basis of collective bargaining, frankly recognizing trade unions as the medium through which that should be done, to give effect to such a policy; that is, workers should be assured the right to form or join trade unions of their own choice, without restriction, of their right to refuse to work with non-union members of their respective trade, these unions to be free from employers control, which is not the case where company unions are formed; and (b) the right of combination be allowed to employers wherever control to prevent exploitation of consumers can be made effective.

*By Mr. Edwards:*

Q. In other words, a code of some sort, Mr. Moore?—A. A code suitable for Canadian conditions.

Q. A code for industry?—A. Yes, Sir; but checked by government supervision to protect the consumer, because we agree that the worker is himself a consumer as well as a producer.

*By Mr. Sommerville:*

Q. Will you just develop that for the Committee, Mr. Moore, the check by the government so as to protect the consumer. Just what have you in mind there?—A. Well, it is no use to the worker getting his wages raised, if as a consumer, he is going to have that taken away, and leave him poorer than he was before. We recognize that he has a dual capacity, as both producer and consumer. Therefore, where codes, may short-sightedly, be developed between employers and employees, in collusion—if such a thing could happen, and it is not outside the realm of practical possibilities—that might lead to a development from the consumers' standpoint, which perhaps ultimately would operate to the disadvantage of the industry; and so, to protect that, there should be some supervision of these codes, some sort of check made, to see that they are not to the detriment of the consumer. In every record I have in regard to the Combines Act, my impression is that it is too inflexible, and allows no exemption for combinations or associations between the firms which may be for their own protection, it is very inflexible so far as associations of employers are concerned. All combinations need not necessarily be evil, competition can be very helpful many times, probably quite as often as it is evil.

*By Mr. Ilsley:*

Q. You would have parts of the Combines Investigation Act repealed.—A. No, I think there could be exceptions made in it, the same as for trade unions; there could be exceptions so that industries could develop codes of fair practice, which have the sanction of the minister, or of the Lieutenant-Governor.

*By Mr. Factor:*

Q. You mean, employers could form associations and draw up certain codes?—A. Yes.

*By the Chairman:*

Q. In other words, is this your idea, Mr. Moore; that it does not follow because a group of employers gets together and formulate—using your own term—a code of practices within the industry, that that is detrimental to the public interest?—A. Not necessarily so, sir, not as detrimental as some of the competition we have found, which is very detrimental in some cases.

*By Mr. Ilsley:*

Q. From the labour viewpoint and particularly from the viewpoint of the consumer, it would inevitably raise prices?—A. It would be apt to do that in a lot of instances; but take milk delivery, for instance, when you have 10 or 12 milk wagons going down one street, it is not very profitable to any of the companies concerned when that service could be just as well rendered by one or two; that would give a far more efficient service, and it should be, at less cost.

*By the Chairman:*

Q. I was going to ask you this, Mr. Moore, asking you to make a transition of yourself back to your knowledge of the rates of labour—

The WITNESS: I am always like Jekyll and Hyde in that direction.

The CHAIRMAN: Yes. In your opinion, would the average consumer be quite satisfied if he knew he was getting an article that was produced under fair conditions and sold on a reasonable margin of profit, provided he knew that other people were buying the article more or less at a lower price?—A. Our experience does not show that, Mr. Chairman.

Q. You don't think the consumer would give a preference to an article of that kind?—A. I will go back a few years and recall the experience of the lady-garment-workers' industry, they devised a label, which I think they called "Sanitaire". It was devised by the employees and workers in the industry generally, as a means to indicate that fair conditions prevailed. That scheme did not last very long, because the consumer was not very much interested in seeing that the "Sanitaire" label was on the garment, to give him that guarantee. The same thing has applied in the union. We have spent millions advertising and making known the significance of the trade union label, but even yet, the consumer does not seem to know much about it, or its significance. There lies the remedy, and, of course, you all know of the course followed by the codes with their blue eagle.

*By Mr. Sommerville:*

Q. You think it is really significant that there should be a compulsory label of some kind?—A. No, I think it can be developed through these codes; but there might be a label there.

Q. How would you enforce your code, you would still have men who would present the same problem, by doing something else and bedevilling the industry.—A. Well, I do not know that I am prepared to go so far into the details of that, I would prefer to leave it in a general way.

Q. Perhaps I have stressed it too far.—A. It is a matter that will have to be developed because I do not think any one man's opinion, or the opinion of any one side on that, would be worth anything more than its service as a basis for discussion.

*By Mr. Ilsley:*

Q. It might be considered a blue eagle for Canada.—A. Well, we would like to see the union label which would signify right away that there would be fair competition.

*By Mr. Heaps:*

Q. A moment ago in your reference you made a suggestion with respect to collective bargaining, do you not find that at the present time it is rather difficult to organize employees, particularly in some industries?—A. I would say that the textile industry has been difficult to organize, particularly in the Province of Quebec. A great many other industries have not been organized at all, far from it. The boot and shoe industry, also, is a difficult one, and, of course, the pulp and paper industry is a constant fight.

Q. How about the automobile industry?—A. The automobile industry—well there has not been a tendency on the part of the men to have organization, perhaps because of the seasonal character of it; they would be employed for two or three months, and then they would be out of work altogether, and then when they get in season again they go back on and they are working full time.

Q. On the same point, Mr. Moore, have you found any opposition on the part of the employers in this industry toward allowing the employees to organize.—A. Oh, there is constantly pressure against organization; and we have many similar situations, when we have attempted organization in the steel industry.

*By Mr. Sommerville:*

Q. I suppose that is a common experience in that industry?—A. Yes.

Q. How do you explain that.—A. We have no machinery at the present time to force employers to recognize the union. There was a suggestion in 1919 of an order in council being issued by the government declaring that policy. I think the late Senator Robertson, who at the time was Minister of Labour, was dealing with that. There was some discussion about enacting legislation; but this old idea—I can't say your Latin "quid pro quo"—came in, that if you gave the employees the legal right to organize, you must also give the employer the legal right to employ any one who did not belong to an organization and that would close shut our principles of collective bargaining. Therefore I say that that right should be given to the worker in order that he could apply equal force and still maintain the right to work with non union members of his association, where now it is a deterrent; because he can only follow out his part of the agreement by having control of the discipline of the industry.

*By Mr. Young:*

Q. The right to refuse to work with a non member of the firm?—A. Yes.

Q. Does anybody deny him that right now?—A. In law, no, but I say where the law was proposed to give him the right to join an organization, it was insisted then we could not enforce it.

*By the Chairman:*

Q. In a closed shop that obtains to-day.—A. Yes.

Q. By agreement?—A. Quite right. I am speaking of—

Q. That is what Mr. Young is asking.

*By Mr. Young:*

Q. I do not get this. As I understand you, Mr. Moore, you say a man should have the right to join any organization he likes, and then have the right to refuse to work with somebody that belongs to another organization. Now, I understand there are two labour organizations in Canada?—A. Yes.

Q. Do you mean by that, that if a man joins one organization, the fellow who belongs to the other should have the right to walk out of the shop?—A. Yes, I mean this: an organization that has an agreement with the employer should be placed in the position to carry out the necessary discipline on any of those who belong to your organization or a part of the same organization.

*By Mr. Sommerville:*

Q. Another organization?—A. Another organization.

*By Mr. Young:*

Q. What you mean is not the right to refuse to work beside the other fellow, but to make the other fellow quit work?—A. To refuse to work alongside of him.

Q. You mean the right to throw him out, and not go out yourself?—A. Why not?

Q. Is that what you mean?—A. They do refuse to work alongside, also. We do not want to lose our jobs, no question about that. For instance, Mr. Chairman, may I develop this feature, the union label. It is stamped in the shoe and it signifies that the workers employed in the factory are all enjoying certain conditions arranged mutually with the employee and employer. The stamp carries with it an agreement, in the case of arbitration, machinery if any dispute arises in that particular industry. In the particular industry where that stamp is put on, it indicates that they are members of the association that owns that stamp. How can you enforce the guarantee that those conditions do prevail? You must have the right, when the employer says I am going to bring somebody in that does not belong to the association, to say "No, we cannot continue this agreement with somebody coming in that we have no power over, no discipline. If that were permitted, sufficient members would come in to make us ineffective. We must have the right of a closed shop to work with non-members of the association.

*By the Chairman:*

Q. These non-members may out-number the union members?—A. Yes, easily.

Q. Will you proceed, then?—A. The Industrial Disputes Investigation Act. This is another federal measure which can be effectively used against the maintenance of sweat shop conditions and for the exposure of such practices whether caused by mass buying or otherwise, as lead to payment of low wages and the imposition of poor working conditions. If the application of this act was extended to cover all tariff protected and subsidized industries and such other industries or commercial or financial institutions as might be considered advisable, from time to time, it would be possible for employees to obtain public inquiry into the reasons for such unfair wages and hours of labour that might prevail.

Experience has shown that while awards made by local boards established under this act are not compulsory of acceptance by either employers or employees, yet the development of public opinion resulting from these hearings has been a valuable aid in bringing about fairer conditions; further, the knowledge that such a medium of inquiry was available would act as a deterrent to the development of "sweat shop conditions."

*By Mr. Ilsley:*

Q. What does it cover now?—A. It covers public utilities of a special definite character, railways, canals. You come to the textile industry, and you find the workers sometimes from fear and imagination, perhaps sometimes from actual existence of discrimination against organization, do not organize. There is nothing by which the conditions of workers may be made public except, perhaps, an occasional inquiry of this kind.

*By Mr. Sommerville:*

Q. You would extend that to the whole range of industry in general?—A. I think that would include monopolies and semi-monopolies such as department stores are getting to be, because of their enormous pressure over workers.

Q. What do you mean by that?—A. Our Industrial Disputes Act could apply for a board, and this board that is set up could consist of one representative from the employers, one independent who could expose the actual conditions prevailing.

Q. Was not that found ultra vires of the Dominion?—A. Yes; and then the provinces enacted enabling legislation restoring power back to the Dominion. Legislation could be framed along that line. As a matter of fact, under the amendment framed in 1930 between the provinces and the dominion for the uniformity of labour laws, this matter was discussed, but it was expressed confidentially at that time a fear that anything done to the act might raise the question of its validity under the B.N.A. act, which subsequently developed to be the case, and therefore nothing was officially recommended.

*By Mr. Ilsley:*

Q. The fear of constitutional difficulties?—A. At that time, but that has been removed by order of the privy council and the enabling legislation passed by the provinces.

*By Mr. Sommerville:*

Q. To the extent of the act as framed.—A. I am not sure whether that enabling legislation does not also include any amendments that may be made thereto. I am speaking subject to correction there, but I think it does.

*By Mr. Factor:*

Q. Suppose you amend the act as suggested, and a public inquiry was held. How would you follow up the work of that inquiry?—A. We find by experience that the public interest aroused has been sufficient to bring the establishment of better conditions, not always satisfactory, but better conditions; and we feel that this would be a permanent means of constantly exposing those conditions as they would develop, and enabling workers, through the assistance of public opinion, to resist the driving down which has taken place at the present time.

*By Mr. Kennedy (Peace River):*

Q. Publicity alone?—A. Publicity alone. Nobody would want to continue to do business in that way, if they were sufficiently stigmatized.

*By Mr. Factor:*

Q. Could not a highly protected industry that is guilty of certain abuses in the matter of employment, be forced to change its method by use of the instrument of tariff?—A. Yes, not universally. It may be only part of the industry, and you would penalize the rest of the industry, and the workers.

*By Mr. Sommerville:*

Q. That would be penalizing the worker?—A. Who is not guilty of the offence. One part of it may be guilty, one small part.

Q. You would, by the process you indicate above, by the exposure to public opinion, affect only a very small proportion of the industry.—A. Quite right.

Q. You would still have firms indulging in bad practices. They would continue to do that.—A. In some instances, but I think many would be driven to establish better conditions; for fear of publicity is always a deterrent to people doing business with the public.

Q. At any rate, one of your constructive suggestions is the extension and development of the Industrial Disputes Act to all industry?—A. Yes. In the minimum wage acts process while minimum wage laws enacted through provincial legislation have not been as effective as organized labour desired, nevertheless the activities of the boards entrusted with their administration, have acted as a powerful aid in preventing the complete collapse of wage standards

in some industries. Their failure to prevent sweat shop conditions can be attributed primarily to the shortcomings of the legislation under which these boards operate and among the weaknesses which have developed are the following—these are, by no means, all inclusive.

1. With the exception of the provinces of Alberta and Manitoba, the provisions of these acts only apply to female labour which has left the door open to evasion by the substitution of male youths and in latter years, of adult males. The adoption of the provisions of the Alberta Act would remedy this. I think a question was asked of Mr. Cassidy yesterday in that regard as to whether or not the minimum wage did mean that. It is in practice, but not in theory, and in real intent is to protect women, and the minimum wage law does act as a deterrent. I have no cases to submit definitely, but I do know that store clerks have been employed at less than the minimum wage for women. I have a letter here that I have not authenticated, so I would not like to use the name of the firm, but it is in respect to Ottawa here, where the papers yesterday said everything was hunky-dory. It is the reverse. The firm concerned in this letter were up in police court a few weeks ago for evading the fair wages law for girls, and they fired the girls and put men in their places for less wages. This store is—

Q. In Ottawa?—A. It is in Ottawa.

*By Mr. Ilsley:*

Q. You ought to have an Ottawa witness.—A. I think, sir, the cases are more prevalent in Ottawa, and I think there are more abuses. I remember Mr. Fester admitting some weeks ago that the stores were worse in the city of Ottawa than in any other city.

Q. That is Mr. Fester's statement?—A. Yes. That is a fact. I have had a number of complaints that we have had to transmit to the board.

*By the Chairman:*

Q. Do you know of persons on relief in Ottawa who are receiving somewhat less than the minimum wage, or who cannot live on their wage?—A. There are people being assisted by the Welfare Bureau who are working full time.

*By Mr. Factor:*

Q. Did the Ottawa relief officer state he had any such cases?—A. He said he had not found any, didn't he?

The CHAIRMAN: That is quite a different situation.

The WITNESS: There are some that ultimately will be on relief, if they are not. For instance, here is a case of a man that I know, a barber that received no wages, in Ottawa; they receive 60 cents of every dollar taken in. If the shop happens to be one with the number of chairs that go to take care of good business, they might earn about \$17 a week at the present time. If it is one where there is not much business, and price cutting taking place, they earn less than around \$7 per week full time.

Q. Is he not on relief?—A. I don't know; if he is not on he soon will be, I imagine. Then, another case. Take bakers' drivers. I have taken a group and it goes to show that their standard is \$7 guaranteed, and commission. Under the present conditions, I think you would see that there is quite a low wage condition prevailing. There are a number of cases I could mention in Ottawa.

*By Mr. Ilsley:*

Q. That is due to the competition between barber shops?—A. Absolutely, sir. Restaurants. I think I can get evidence, perhaps of this thing. It is not unknown to-day for a certain type of store to bring girls in perhaps for the afternoon only at \$3 per week.

*By Mr. Sommerville:*

Q. What type of store?—A. I do not want to mention it, because I have not investigated it; it is general, sir.

Mr. ILSLEY: A violation of the Minimum Wage act.

Mr. SOMMERVILLE: Not a violation.

Mr. FACTOR: It is not a violation of the act as framed now.

The WITNESS: No, because a general store to-day hires a man on Saturday for each store, and those stores work from 7 in the morning until 8 at night with an hour for lunch, and the man gets \$2 for the day, for a day's actual labour; \$2 for a twelve hour day.

*By Mr. Young:*

Q. What could you do to prevent that store from hiring an extra man for Saturday; would you make them take the man for a whole week?—A. No, but they might pay him a day's wage.

*By the Chairman:*

Q. Your point is for 12 hours or more \$2 is too small a wage.—A. It is sir, because if he works 6 days a week, 72 hours, he would only get \$12. You could not get much out of that. My second point is under the minimum wage act the lack of power to definitely restrict the number of hours to be worked has created opportunity for evasion and entirely failed to protect those working short time and full time. I think that was developed by the other witnesses, sir.

3. Too large a portion of exemptions on the payment of minimum wages set is allowed for both (a) learners and apprentices; (b) piece workers who failed to earn the average wages when fully employed. In addition to the exemptions on piece work which were referred to by Mr. Francq as being 80 per cent, and the average 20 per cent were exempt in addition to that, of course, there is the partial exemption for apprentices, and it is there where perhaps most of the evasions take place.

Q. In what way does that evasion take place?—A. By hiring girls who are experienced and who are willing to get the job to swear that they never had any experience, and in some cases moving even from one department to another in the same store and putting them on the payroll as fresh employees.

*By Mr. Factor:*

Q. I asked Mr. Stapells precisely the same question, and he said there were no such abuses under his jurisdiction?—A. You have always got to remember he was only speaking from his records on what they dealt with. I think investigators going into some stores will find that it is not so.

The CHAIRMAN: You are satisfied it does not prevail?

The WITNESS: Absolutely.

*By Mr. Young:*

Q. Can you give specific instances?—A. No. I would like to say that in the beginning I want to be very careful of being authentic. I do not want to make any statement that cannot be verified, and it might need some digging back.

Q. If you are sure it occurs you must know of a case where it did occur?—A. As I told you the thing goes around in conversations with our representatives who could tell of this may be casually, but I do not keep the records.

Q. Can your sixty organizations produce information for the use of the committee to-day?—A. Absolutely.

Q. Have you records or have you not?—A. As I said, I will be glad to guide counsel where the investigator of the committee could go and find these things, and I know he would find them, or I would not make that statement.

*By Mr. Factor:*

Q. What is an apprentice in the legal term of the Minimum Wage law?—  
A. There again we have the custom milliner order. I do not know which order is in Ontario. It exempts apprentices from any provision of wages, and at our last convention in Windsor representatives from Kitchener brought a case of a custom milliner, where this firm had hired girls as apprentices and when they came in for the qualifying period they paid them no wages at all and they were discharged and new girls were brought in because of this provision. Therefore, the hired help was not receiving wages at all.

Q. Do you know of an actual case of that kind?—A. That can be produced from Kitchener.

*By Mr. Young:*

Q. A girl went in as an apprentice and received nothing, and when she was qualified to earn wages she was fired?—A. Yes.

*By Mr. Factor:*

Q. How long did she work?—A. Three or four months.

*By the Chairman:*

Q. You were speaking about the evasion of the Minimum Wage law?—  
A. Yes.

Q. Mr. Robkin who, I think, is the representative of one of the unions—the Amalgamated Clothing Workers' Union of America—A. That is the Montreal one, is it not?

Q. Toronto.—A. Toronto.

Q. He would be known to you?—A. Yes, sir.

Q. He refers to this subject, and I would just like to get your reaction to his view. He said, "it happened that on November 3, 1933, the Toronto Joint Board of the Amalgamated Clothing Workers of America called a strike against a firm in Toronto..." It was mentioned yesterday so I can give the name, the Ontario Boy's Wear—"...for the purpose of enforcing the Minimum Wage law and to abolish the sweatshop conditions that have prevailed in that shop. We immediately submitted to the Minimum Wage board a number of affidavits sworn out by female workers in the employ of the Ontario Boy's Wear to the effect that they never received the minimum wage." Now, the point is this, that the argument is that these evasions are quite common and that there is inadequacy of inspection or enforcement of the Act?—A. Yes sir.

Q. Now, you have very wide experience, and I think we have pretty general confidence in your views. Would you give your view on that point?—A. Yes. My very next statement was "inadequate inspection staffs and fear that too strenuous enforcement of the law would cause industries to move to other provinces." That is often used as a threat—"if you make it too difficult for us to operate here, it is less efficiently operated in some other province and therefore we will move there."

*By Mr. Ilsley:*

Q. Is it a real danger?—A. It is sufficient to prevent too strenuous enforcement.

*By Mr. Edwards:*

Q. Some industries have actually moved?—A. Yes, some have moved. In regard to inspection staffs some mention was made yesterday of the factory inspectors of the Ontario Minimum Wage board. I do not want to appear to contradict Mr. Stapells, the chairman of the board, but from the evidence given by people working in the factories the factory inspector, if he does do anything

at all, it is mighty casual; and based on that they have been asked for inspectors to be appointed by the board itself. There practically is very inadequate inspection in Ontario.

*By Mr. Ilsley:*

Q. Are there not enough inspectors?—A. Not enough. They have seven in Quebec.

*By Mr. Factor:*

Q. It is a pretty sad state of affairs if it requires a strike to enforce the Minimum Wage Act?—A. Yes, sir; but that is common.

*By the Chairman:*

Q. May I finish this point? Perhaps you could verify this: "To all our frequent enquiries the reply was that the board had investigated the books of the company and did not find the violations complained of by us. We kept on persisting and pointed out that the affidavits speak for themselves, and that the testimony in the court of justice would substantiate our charge that the firm was falsifying its books." Now, are you acquainted with those facts?—A. I am not personally, sir, but I think the information given you there, as I stated, would be accurate. It is not unknown.

Q. And that resulted in a strike?—A. It is not unknown in falsification for two sets of books to be kept.

Q. It resulted in a strike?—A. Yes.

Q. And as the result of the strike the case was brought to court and adjustments were made?—A. Yes.

Q. The repayment or payments of back wages were secured?—A. Yes, sir. That is common.

*By Mr. Factor:*

Q. Mr. Stapells said yesterday there were twelve inspectors in the province of Ontario?—A. Eighteen factory inspectors.

Q. You say that is an insufficient number?—A. I say the factory inspectors have not the time, and some of those, especially boiler inspectors are not conversant with the Minimum Wage law.

*By the Chairman:*

Q. It is not their business, of course; it is not their duty?—A. By law it says "there shall"; it is not a specific duty, and it is very casual.

*By Mr. Sommerville:*

Q. Section 18 of the Factories, Shops and Other Buildings Act says that it shall be the duty of every inspector appointed under this Act to report any violation of section 20 of the Minimum Wage act?—A. Yes.

Q. That is their obligation?—A. Yes.

Q. Section 20 of the Minimum Wage act requires the posting up of a notice?—A. Yes.

Q. By the employer as to the provisions of the Act?—A. That is the chief thing that the factory inspectors do. So far as the actual investigation of wages and hours—

The CHAIRMAN: He cannot do that?

The WITNESS: He cannot. He has too much to do already.

*By Mr. Sommerville:*

Q. If all the notices of the board are posted up and kept posted up, then the knowledge in the possession of the girls ought to be, should it not, the greatest factor in the enforcement of the Act?—A. They do not dare to say anything until they get fired or quit.

Q. You think that is effective?—A. Absolutely.

*By Mr. Factor:*

Q. The difficulty is, Mr. Moore, that the Act only provides a penalty of \$10 to \$20 for the breach of any of these provisions?—A. That is the next thing we come to.

*By Mr. Heaps:*

Q. Do you know how many inspectors are enforcing the Minimum Wage law in the province of Ontario?—A. Two members of the board.

Q. Who are they?—A. Miss Stephen and Mr. Fester. Miss Stephen has only been doing that during the last three or four months when the pressure became strong for inspectors. Then there was an inspector appointed in the person of Mr. E. W. A. Odell of Hamilton who has had long experience in factory work and factory investigations but unfortunately he is sick and therefore he is not operating at the present time. I think there is one other recently to which Mr. Stapells referred.

*By Mr. Factor:*

Q. He said four negotiators, he called them that?—A. There has been one for three or four months, two since then, and three during the last couple of months.

*By Mr. Heaps:*

Q. Until a few months ago there was one inspector for the whole of the province of Ontario?—A. Practically so. He worked very efficiently but could not possibly do it.

Mr. FACTOR: For 7,500 employees.

*By Mr. Heaps:*

Q. I think it would be almost impossible for one man to even casually observe an infraction of the Act?—A. Yes. I think whatever cases he handled he was very efficient. It was impossible to get around to sufficient numbers. That probably accounted for the strike there.

*By Mr. Sommerville:*

Q. Do you believe that to properly enforce the Act it would require a large staff of inspectors?—A. It does, sir. They have seven in Quebec, and as Mr. Franq said, they have not extended the number of orders until they have the personnel to follow them up.

Q. The seven in Quebec cover 30,000 employees but in Ontario they cover 77,000?—A. Yes.

Q. There was a difference in the policy, if you remember, in Quebec and Ontario; Quebec initiated inspections?—A. Yes, sir.

Q. And insisted upon it in all firms employing 100 or less?—A. Yes.

Q. While in Ontario they relied upon the reports of the firms and initiated inspections where they suspected something or had a complaint, or found something wrong?—A. Yes. I know from practice that they went a little further sometimes; that Mr. Fester would go from one end of the city to another, in

restaurants and stores when he had time to do it, but generally that is the practice. Our information is that the inspection should be continuous and initiative.

*By Mr. Ilsley:*

Q. As in Quebec?—A. Yes, as in Quebec; even more so.

Q. That is in the larger stores?—A. Yes. They had a much worse back-ground to start from.

*By Mr. Kennedy (Peace River):*

Q. I think in your opening remarks you said something about the abuses of sweatshop conditions that you had noticed for over thirty years. Do the sweatshop conditions tend to disappear in ordinary good times?—A. During the past so-called good times—that is the interval between the acute depression of 1923 and the present depression—they did not disappear because other factors have entered into it that have kept competition at a high pitch. Therefore, they have not disappeared.

*By Mr. Sommerville:*

Q. What are those factors?—A. In some cases, more up-to-date machine equipment has driven prices down, but I think in general we could say it has been mass buying.

*By Mr. Factor:*

Q. Do you know of any case where employers signed an agreement with their employees to accept wages less than those provided in the Minimum Wage Act?—A. I have had it told to me where the employees have been called in and told that they had an opportunity to get an order to keep them busy at the time if they can meet prices, and to do that they would have to accept less wages, and they have taken the alternative of less wages. I would not like to file the case, but I can give information as to where you can find it.

*By Mr. Sommerville:*

Q. And that is not confined to one industry?—A. Not by any means. It is doubtful to say whether it is the desire of the employer to get that order or whether it is the pressure of the buyer and he must meet that. Undoubtedly he knows if he is going to get that order he has got to meet that price.

*By Mr. Sommerville:*

Q. What are those factors?—A. In some cases more up-to-date machine equipment has driven prices down, but I think in general we should say it has been mass buying.

Q. Mass buying?—A. Yes.

*By Mr. Factor:*

Q. Do you know of any cases where employers signed agreements with their employees to accept wages less than provided by the Minimum Wage Act?—A. I have had it told to me where the employees have been called in and told they had an opportunity to get an order that would keep them busy for the time being if they cut the price, and to do that they would have to accept less wages; and they have taken the alternative, the less wages. I would not like to mention cases, but I can give you information where you can follow that up.

*By Mr. Sommerville:*

Q. And that is not confined to one industry alone?—A. No, not by any means. Of course it is doubtful to say whether it is the desire of the employer to get that order or whether it is pressure of the buyer who sets the price he must meet. Undoubtedly he knows if he is going to get the order he has to meet that price.

Inadequate penalties: money fines have not been sufficient to prevent repetition of offences and a prison sentence for persistent offenders would undoubtedly bring better respect for the enforcement of the minimum wage laws. Money does not mean much to some corporations.

*By Mr. Factor:*

Q. Like the licence fee?—A. Yes, it is like the licence fee, and the speak-easy, take it out of the next customer. Whenever they get fined, they only take it out of the workers during the next period between fines. Some of them do not mind that.

*By Mr. Sommerville:*

Q. Supposing you had a form of licence, and the licence was in danger of being cancelled for breaches of the Minimum Wage Act, would not that be a most effective weapon?—A. It would help materially, but I would still say that the persistent offender ought to go to jail; because after all, he is robbing the commercial girl of more than merely money. It leads much further afield than that in the case of female help, and a man that has turned to that deliberately, by refusing to remunerate her, when she has worked, for her labour, is condoning or assisting in breaking down morality.

*By Mr. Kennedy (Winnipeg):*

Q. If the law were enforced, there would be a lot of work in the construction of jails?—A. There is, as a matter of fact need for that now.

*By Mr. Kennedy (Peace River):*

Q. You said some little while ago something about publicity, fining a firm upon two or three occasions would provide quite a lot of publicity?—A. It does not seem to do, sir. Cases are just casually mentioned, and the fine can be paid and I do not think you would know much about it, not as much as if they were to be jailed.

*By Mr. Boulanger:*

Q. The papers do not mention them?—A. No.

*By Mr. Factor:*

Q. Do these factories obtain licences under the Factories Act, these various industries?—A. I don't think so.

Q. No licences at all?

Mr. SOMMERVILLE: They have to conform to the act.

The WITNESS: There is the charter of the company.

Mr. SOMMERVILLE: They have to conform to the conditions of the Factory Act, there is no licence.

*By Mr. Factor:*

Q. I mean, there is no licence issued by the provincial department?—A. No, only for special industries.

Q. Anybody can open up a factory without a licence?—A. There are some special industries get licences to-day.

*By the Chairman:*

Q. Do you think licensing generally would help?—A. I think it would; if there was a breach, withdraw their licences, put them out of business; although again that type would be very elusive as they are with the bankruptcy laws. They only stay out of business about a month, and then they start as their wife or some other company or something else. Their licensing might not be as effective as going to jail for the individual.

*By Mr. Heaps:*

Q. I would like to take you back to a remark you made; you referred to the question of cut prices by mass buying?—A. Yes.

Q. Was that done to meet internal competition or external competition?—A. Internal.

Q. In the ordinary factory?—A. Internal competition mostly, in the needle trades anyway; because I think it is safe to say that so far as the clothing trades are concerned, that more than 90 per cent of the sales are Canadian made. They are still enough protected from outside competition to prevent that. It is internal competition.

*By Mr. Kennedy (Peace River):*

Q. A little while ago you mentioned something about the union label on shirts and so on?—A. Yes.

Q. As being not sufficient to guarantee the sale; if there is any way of providing alongside of that union label that there was a fair price stamp as well, do you think that would help?—A. That is with this other label I referred to, the sanitized label?

Q. That was generally understood; I think that was one of the difficulties?—A. Yes, if it had government sanction given to it, it might help in that direction.

*By Mr. Edwards:*

Q. Do you mean by that manufacturer being permitted to put a retail price on his product?—A. I do not see any harm in that, if it is supervised.

Q. If it is supervised, provided the price is put on?—A. I do not see any harm in that.

Q. And that prevents price cutting?—A. We have lived past the age where we think production is the real factor; we recognize it is a duty to provide all workers with the opportunity to work. Of course, the ultimate of all that may be the socialization of industry to which we are going step by step.

Stabilization of employment: Mass buying, coupled with the demand for quick delivery often leads to disorganization of the industry. To meet the requirement of these large orders excessive long hours are, in many instances, worked for a short period. This in turn enables a moderate week's wages being earned at piece work or hourly rates inadequate for periods of more normal employment, and totally insufficient to provide against the part time or unemployment, which usually follows the completion of these orders.

It is evident that much of this could be obviated by closer co-operation between distributors and producers and the placing of orders with firms equipped to complete the same within the required time, without resort to over-time.

In respect to this mass buying, a new development to which consideration should be given, is that of municipal authority to meet the needs of their relief orders, and instances have arisen where, to secure these contracts, exploitation of labour has been resorted to. I was referring to the Toronto bakery case.

Q. That point where you speak about co-operation between producer and distributor, that is the placing of orders anticipating your requirements, seasonal requirements, certain months ahead?—A. Yes.

Q. That would relieve the situation very materially?—A. Yes. I think on that, wittingly or unwittingly, the department stores have given a lead to the present condition, because they have developed the special sale proposition which is largely advertised, and then they want a mass of goods to put on all at once, and to clear it all at once; they want it quickly; they want it while the fashion is on.

Q. Supposing there was a large department store which wanted to put on a sale of towels, for instance—50,000 or 100,000 towels—they could anticipate that two or three months ahead?—A. Yes.

Q. And that would keep your employees on an even keel, instead of rushing for a while and laying them off?—A. Yes, and further than that, I think they could eliminate a lot of it by seeing that where the contracts went, they have the equipment to do the job, instead of letting a job that needs 200 girls to do, or 200 employees, to a firm which has only about 50. Then, as an illustration of this might I read from a letter from the Joint Board of the Cloak, Suit and Dressmakers Union of Toronto. They had a strike recently:

Previous to the strike, conditions were intolerable. The cloakmakers worked as long as 60 and 70 hours per week while wages were the lowest in our history. Wages of \$15 to \$20 per week for experts was the usual custom and in view of the highly seasonable nature of our trade you can readily realize the average earnings of the cloakmakers prior to the strike.

In other words, when they were working this excess time, 60 or 70 hours, they were earning \$15 to \$20 per week.

*By Mr. Kennedy (Winnipeg):*

Q. What is the date of that?—A. February 19.

*By Mr. Heaps:*

Q. That is including female help?—A. Yes, that is a general statement. Now after the strike, he goes on:

From the above figures the increases as the result of the strike and wages all along the line for all crafts average from 25 per cent to 50 per cent. The hours are 44 hours per week with over-time completely abolished until all unemployed are absorbed, and after that over-time is limited to one hour per day for the first four days of the week, no more than four weeks per season, which means 16 hours over-time permitted in a period of six months.

This is the first time in our history that such a settlement has been obtained and as a result, the enthusiasm of our members have never been better.

It is now the third week since our people are back at work and we have placed 200 unemployed cloakmakers to work since the settlement.

*By the Chairman:*

Q. Were the wages given in there after the strike or before the strike?—A. Before the strike. For the rush period as I pointed out, they earn a greater wage per week. I will grant that during the rush period. But when it is over these piece work rates are no good to them on part time. They cannot live. They have got to go on relief.

*By Mr. Young:*

Q. You spoke about mass buyers wanting quick delivery. Supposing you are running a factory, and one buyer comes in and says, "I will take 1,000 uniforms and I want them delivered by a certain date;" then supposing, on the other hand,

that smaller buyers come in, each offering to take 100 uniforms; will they be willing to wait longer for their delivery than that one mass buyer for his?—A. That is a purely hypothetical question that I would have to leave to the buyer and seller.

Q. It is the essence of your statement.—A. No, I don't think so.

The CHAIRMAN: No, no.

The WITNESS: I think if a buyer is going to give an order for 5,000 of something to a factory where the factory was not in a position to execute that order, they resort to long over-time, while others are unemployed.

*By Mr. Edwards:*

Q. In these rush orders in which it is necessary to obtain over-time help and pay over-time wages, is that not a complete negation of the idea of the eight-hour day?—A. The over-time?

Q. The over-time?—A. Yes, absolutely.

Q. It is altogether out of balance?—A. I think if the International Labour Convention eight-hour day could be passed throughout Canada, it would eliminate a tremendous lot of these long hours, and these ridiculously low piece work rates paid, which have been made possible of acceptance even under pressure, for long hours, largely because they could not possibly live on a shorter hours, would be eliminated.

Q. In other words, you have not the desirability of having an equilibrium of hours?—A. Yes.

Q. Instead of working a few months at longer hours, work more months on a more even keel?—A. Absolutely, organization of industry.

*By Mr. Sommerville:*

Q. You still have the piece work rate in plenty of industries to-day, Mr. Moore?—A. Yes.

Q. So that the piece work system, with all its speeding-up, exists in those industries in which there is no over-crowding of hours?—A. Oh, it does exist.

*By Mr. Kennedy (Peace River):*

Q. Would the eight-hour day meet it; would it be an improvement?—A. It would be a step forward. It is nearly absolute to-day. In 1919 that was agreed to by the governments of the world unanimously and it has been given effect to by some, but not by Canada, because of our jurisdiction differences.

*By Mr. Heaps:*

Q. What has the code of the United States, what did it provide for by way of hours?—A. In some industries, 36 hours.

Q. A week?—A. I think I am right in saying that in the needle trade. I perhaps had better not speak from memory.

*By the Chairman:*

Q. We have those codes; I think a week is 40 and 44 hours.—A. Yes, but there are some 36, with the possibility of some further reduction by latest announcements.

Q. The suggestions of the International Labour Bureau are in force in the dominion field, as far as dominion jurisdiction goes?—A. Yes.

*By Mr. Sommerville:*

Q. The government have put it into operation, as far as this government or the government of Canada can do so?—A. Yes; subject to the settlement of the argument of which comes first, the egg or the hen; because they have power, if it is a treaty obligation, to put it into force, irrespective of provincial jurisdiction, and the legal argument is whether these international conventions are treaties; if you settle that, the dominion is free.

*By Mr. Ilsley:*

Q: It has never been settled?—A. No. It is pending that.

I referred to the development of mass buying by the municipal authorities and I think that is something that was mentioned earlier; that might be taken cognizance of so far as the influence of government may be recognized in making grants for relief purposes, because under this present pressure it is undoubtedly exercising a very big influence.

*By Mr. Sommerville:*

Q. Buying is in the hands of the municipality?—A. Yes, and often price is the only governing factor.

*By Mr. Ilsley:*

Q. Very often they require quick delivery, like the department stores?—A. Yes.

Q. Leading to long hours?—A. Yes.

One more thing, economic council: While inquiries, such as this now being undertaken by this committee are useful, it is desirable that there should be some method of dealing continuously with economic needs and industrial problems. To meet that requirement a national economic council should be established, which would act as a fact finding body on all questions affecting employment and unemployment and in general, the well-being of those engaged in industry, commerce and agriculture and, from time to time, make recommendations to the proper constituted authorities to deal with the same.

I think that is a very important thing that should be done, that countries have established their economic council of that kind; because there is a constant change taking place and new factors being introduced, that while we may have suggestions in some departments, are never related to the conditions of employment or the conditions of selling of agricultural products.

Other causes: Without attempting to enumerate all other causes which lead to the conditions under investigation or to minimize the effect which mass buying by department or chain stores has had upon labour conditions, I would direct attention to the following which undoubtedly have played an important part in driving down labour standards where they are to-day: (1) the endeavour of some employers to secure business at any cost; (2) over-capitalization and the endeavour to earn dividends on watered stock.

*By Mr. Sommerville:*

Q. Endeavouring to secure business at any cost?—A. Yes, at any cost at all. There are some people who started in a small way; they have been out of work a long time and they start, as has been pointed out, as a sub-contractor in the clothing industry. Their intention is to earn a living if they can. If there is pressure from above them, they will take business at any cost, because it is at least something.

Q. That must result from the effort of these people to secure business at any cost?—A. Yes, in many cases.

Q. And is that the way in which it operates?—A. Yes.

*By Mr. Young:*

Q. You think they do that because they are out of work?—A. Not in every case; some have ambitions to be employers, and some firms in business do not consider that it is any part of their duty to bother about conditions; they are only there to continue business.

*By Mr. Sommerville:*

Q. That is to say those who are selling goods make no inquiry as to the conditions under which they are produced?—A. No.

Q. The price is the consideration?—A. Price is the consideration, to meet the consumers' demand.

Q. And irrespective of what that price means to the worker?—A. None of their business; they have got to meet competition.

Q. And you say that is unfair competition?—A. I think it is an unfair condition. I am not blaming anyone for doing that, placing the responsibility, because it is competition that our system has developed, and if they did not do it they would not sell the products; they would go out of business.

*By Mr. Ilsley:*

Q. It is practically universal?—A. Yes.

*By Mr. Edwards:*

Q. Is not another factor that a great many industries have a very inaccurate cost system?—A. There is no doubt about that.

Q. They don't know what their goods cost them?—A. There is no doubt about that. Then over-capitalization and the endeavour to earn dividends on watered stock; that has played a very large part in low wage conditions. Unnecessary duplication of plants, resulting in having to meet fixed charges on idle plants. I think even a casual survey will show that there is far too much plant in almost every industry.

*By Mr. Boulanger:*

Q. The paper industry?—A. The paper industry is an outstanding example.

*By Mr. Edwards:*

Q. The iron industry?—A. I think any one of them shows that, right along the line. This is no doubt, of course, because of the restrictive action of the Combines Act and the growth of innumerable industries; that is where a code might operate to give the power of steadying.

*By Mr. Young:*

Q. You would not have the government close up some of these factories?—A. It would not have any power to do that.

Then there is the forced liquidation of stocks to meet bank loans and similar financial obligations. I think that is important, where they have been compelled to liquidate loans, they had to dispose of their stocks to department stores and large buyers, who bought them and put them on sale, to attract consumers.

*By Mr. Factor:*

Q. You mean that was the result of too much pressure by the banks?—A. I would not say too much, I think it was probably a matter of regular business.

*By Mr. Sommerville:*

Q. And that I suppose would have the effect of forcing down prices of ordinary things.—A. Absolutely, then the ordinary manufacturer has got to try to meet these plants placing bankrupt stock on sale. If a store has a bankrupt stock to sell, the man next door has got to do something to meet that if he is going to stay in business.

Then there is the desire of workers to maintain their independence and their consequent willingness to bid for jobs irrespective of the unreasonable wages offered. That is very, very prevalent among workers. It has been customary throughout this depression to look on a man who went on relief, as some one who had become a species of parasite on the community, and therefore a man rather than do that, would bid for a job at any price at all.

*By Mr. Young:*

Q. And they go below union wages to do that?—A. They will take anything at all. For instance, in the building industry right here in Ottawa, during the last two years, labourers have been offering their services for as low as 10 cents an hour, for the purpose of getting a job, rather than having to go on relief.

Q. Were any getting as low as that?—A. I do not think they were getting as little as that, but I do know that they were hired at as low as 15 cents and I do know of more than one instance where they were only being paid 20 cents an hour for a ten hour day.

Q. You know of cases where only 20 cents was paid?—A. Oh yes, there was a large apartment house building down here, built with labour which was paid at the rate of 20 cents an hour.

*By Mr. Boulanger:*

Q. That would be for unskilled labour?—A. That might be for unskilled labour, but the job was no easier because of that.

*By Mr. Young:*

Q. These men have no organization?—A. It is very difficult to hold them in any organization. We have some men who are accepting work at any price and these are aliens and Britishers, resident in Canada less than five years, because of their fear of deportation if, through their refusal to do so, they should become public charges. That situation is real, gentlemen, it is not hypothetical.

*By Mr. Factor:*

Q. In other words, Mr. Moore, do you recommend some amendment to the Immigration Act to prevent deportation?—A. I do not want to use this Committee as a forum to air my views on this question in.

Q. But we are interested in knowing them?—A. I think they are pretty well known.

Q. I mean, seriously speaking, Mr. Moore, I would like to get an expression of your opinion, because, as you know, that is a very important factor.—A. It should be done, Sir.

*By the Chairman:*

Q. Mr. Moore, stated that the fear of deportation is one of the impelling causes for the keener competition in labour. Now, that is his statement, and it is a very clear statement.—A. They would take the cheapest work they can get rather than become public charges. I wish to keep out of any political controversy just as I have done for about sixteen years, and I do not want to break my practice this morning.

*By Mr. Senn:*

Q. You have not mentioned machine production, either, have you, is not that considered a contributory cause.

The CHAIRMAN: I think he has already mentioned that.

The WITNESS: I mentioned it earlier. I did not put it down here as one of the principal causes. Mechanization has helped to bring down the standard somewhat by causing more unemployment, more because of the refusal to distribute labour more adequately to meet the situation, rather than because of the actual mechanization itself.

*By Mr. Heaps:*

Q. You recommend a shortening of hours, to some extent, I think?—A. That is essential, Sir. As mechanization extends some provision should be made for a more equable distribution of the available labour.

Now, with respect to conclusion. I am aware that some of the things dealt with in this memorandum raised the question of the respective authority of the Dominion and Provincial governments, as defined by the British North America Act. Organized labour has contended that where this acts detrimentally to the citizens of Canada, amendments to the Act should be sought. Minimum wages, I might point out, is essentially a matter of provincial legislation, and naturally so; but I think under present conditions there is some opportunity for improvement in the direction of uniformity.

Another medium whereby some progress might be made is set forth in the following resolution adopted unanimously by the National Industrial Conference held in September of 1919. That conference was convened by the government of Canada, under Sir Robert Borden, at the time, and later I think Senator Robertson took over because of the illness of Sir Robert. It was a conference of employers, organized workers and the public generally. These three groups were gathered together, and the whole field was covered very fully, I remember the conference very well. At that conference this resolution was adopted:

“Resolved: That the advantage of uniformity in the laws relating to the welfare of those engaged in industrial work in the several provinces of the Dominion of Canada be brought to the attention of the Government of Canada and of the Governments of the several provinces respectively; and, that this National Industrial Conference suggests the following as a means towards the end desired, namely:

The appointment of a Board as follows:

- (1) As respects the Dominion:
  - (a) A representative of the Government.
  - (b) A representative of the employers.
  - (c) A representative of the employees.
- (2) As respects each of the provinces:
  - (a) A representative of the Government.
  - (b) A representative of the employers.
  - (c) A representative of the employees.

“And that the Dominion Government be requested to ask the Government of each of the provinces to select or have selected representatives in respect of the province as above set forth”.

I would point out that acting on this recommendation a Dominion-Provincial Commission on Uniformity of Labor Laws was established by P.C. 721, dated 10th April, 1920, and would suggest a revival of this means of dealing with problems where cooperation between the Dominion and Provincial Governments is required.

Right on that, might I just add that I happened to hear Mr. Stapells when he was giving his evidence refer to one of the resolutions adopted at that Provincial conference which was that the Minimum Wage Board should seek the establishment of a uniform 48 hour week as the basis for minimum wage acts. That was one of the matters under consideration in 1920.

*By Mr. Ilsley:*

Q. But that Commission only met once. You would make it an annual affair.—A. I would make it subject to the call of the government, or, subject perhaps, to the call of the conference itself.

*By Mr. Sommerville:*

Q. Yes, that is what you refer to as a trade council.—A. I think it would be helpful where these matters of jurisdiction and things of that nature, matters of minimum wage laws, hours of labour, etc. are concerned, if we had some centralization of authority by which to handle them.

*By Mr. Heaps:*

Q. Are you in favor of centralization of authority as regards many of these instances you have dealt with here this morning?—A. I think it is inevitable.

*By Mr. Sommerville:*

Q. Do you think it is inevitable, under the method of distribution which has been introduced by the Chain Store and other large organizations?—A. Yes, we have the protection of trade tariffs for outside competition, which would bring down the labour standard in production; and competition between the provinces has been just as difficult and has brought about many of the present conditions.

*By Mr. Ilsley:*

Q. Your idea is that the British North America Act should be made to conform to the conditions of 1934?—A. Yes, Sir.

*By the Chairman:*

Q. Before you leave, Mr. Moore, there are one or two points I want to clear up. Did I understand you to say, with reference to home work conditions, that where work is taken home, unsanitary conditions were possible to such an extent that sometimes the material being worked on was used as bedding by the people who took it home?—A. That was shown in our investigation some years ago, but that has been eliminated by the action taken by the Health Department, largely as a result of our investigation.

Q. Do you think such conditions exist to-day where home work business is being carried on?—A. I have not been in the homes and I would not be able to express an opinion.

Mr. FACTOR: He means that that does not apply in the Province of Ontario.

The CHAIRMAN: He says, where it has been carried on.

The WITNESS: I could not make comparisons because I have not been in those districts, but in view of what the government has been doing, I presume conditions would be better.

*By Mr. Ilsley:*

Q. On this matter of centralization, would there be any disadvantage to labour in allowing some authority to deal with the matter; I can think of some that are possible, and I want to know if there are any you could think of?—A. I think there might be, they might possibly be at a disadvantage.

Q. Would there be any danger that provinces in which there was a low wage standard, and low working conditions, cutting down the general level of the standard of living?—A. It might temporarily, that is one of the difficulties you would have to face.

*By Mr. Sommerville:*

Q. You heard the report of Mr. Cassidy yesterday on certain branches of the garment industry, more particularly the men's clothing industry, and the conditions which he described there; from your general knowledge of labour conditions in Canada, would you say that the conditions described were confined to Toronto and Montreal and the surrounding districts.—A. Oh no, sir. I think that while they are in largest industrial centres of the country, and you would find complaints more numerous there, that relatively you would find similar conditions existing in any industrial centre throughout the Dominion.

Q. And are they confined to the industry which was described, namely the clothing industry?—A. I don't think so. For instance, here is a report which I presume is accurate, by Frank Mackay, the London Relief Commissioner, submitting a list to his city council of employed persons who are not earning sufficient money to maintain themselves on. One is an employee of a retail store, who is paid \$6 a week of 60 hours. Other cases of this kind were listed, and the London council, saying that they deplored such conditions, sent the list on to the trades and labour council. Then it goes on and quotes other cases—here is one of a man who is employed at a wage of \$9 a week driving a truck; and here is another who gets \$8 a week. These reports are from London, and I may say that similar conditions are reported by our office in Winnipeg. Our own trades councils there have been making some investigation and they find operators there who are receiving only \$10 a week and less for a full week's work.

Q. Operators who are receiving \$10 and less for a full week?—A. Yes.

*By Mr. Ilsley:*

Q. Has any phase of the situation in the Maritime provinces been brought to your attention?—A. They have very low wage conditions there. It is not developed industrially down there, not in the way we are referring to. I should say that the trades which suffer most are the ones I mentioned in my opening, the clothing trades; and what was said yesterday I wish to corroborate that conditions in the garment trade are the worst. There are quite a number of trades that have very little organization and among these I would include the furniture trade, but I am not going to discuss that, because I have no doubt that Mayor Kerr of Stratford will deal with that when he comes before you. Going back on my own personal observation for 20 years back, these conditions were prevalent then, and it has not improved very substantially since. Then competition is very keen in the candy trade, it is very bad in many of these small trades, and in the candy industry, there have been cases developed by the Toronto Trades Council. Then in addition to the candy-making trades, there is the shoe industry. These are probably the major ones and they are not very largely represented in the Maritime provinces, but there is the textile industry down there where wages are very low.

Q. Are there any industries in the Maritime provinces that should be investigated that you think of.—A. I will not say more definitely than in the textile industry down there, I think they are all—

*By Mr. Sommerville:*

Q. Then would you say that all the conditions described by Mr. Cassidy yesterday apply over the other industries.—A. Yes, Sir.

Q. And throughout Canada?—A. Yes, Sir. Whether it has any meaning or not, it seems, especially, to be these sales through department stores, and the way these goods are delivered.

Q. Were they sent by truck?—A. Might I just say that here is an industry that might interest you. This includes a statement of the results of an investigation in the automotive industry made recently by the Ontario Department of Labour. Reading from Appendix 3, of this report I find the case of a driver who worked seven days a week, a total of 100 hours, at a salary of \$12. Another driver who is reported from 6.30 a.m. until 5 p.m., seven days a week, for \$7 a week and board. Another driver worked 75 hours and got \$15.

*By the Chairman:*

Q. Has that report been made officially, yet Mr. Moore?—A. Yes, this is a report that has been filed. Highway drivers worked 72 hours and paid \$14.40 a week; eight drivers worked from 65 to 72 hours a week for six days a week. In another case it says, I pay \$10 a week, give board and laundry, and pay all expenses while away on trips.

*By Mr. Sommerville:*

Q. When was that report made?—A. This report was filed on December 6, 1933.

The CHAIRMAN: We want to get that in the record.

*By the Chairman:*

Q. Has that report been made yet?—A. Yes, it has. The report has been filed.

Q. We probably should have a copy of it.—A. 72 hours \$14.40. Another man receives as pay \$10 a week, "give board and laundry and pay all expenses while away on trips."

*By Mr. Factor:*

Q. When was that report made?—A. That has been filed; December 6, 1933.

The CHAIRMAN: We will get that. We will take a note of it and return it to you.

*By Mr. Young:*

Q. I would like to ask a few questions. Mr. Cassidy told us yesterday, Mr. Moore, that in the last two or three years, the trade unions have found it necessary to relax their rules somewhat, and you have found the same thing.—A. Yes. That is what I referred to a moment ago when I said the unions found it unsatisfactory. They have found those unsatisfactory conditions because of the pressure of non-union competition and mass buying.

Q. It is due to the pressure; that is, too much competition among workers for the business that is offering.—A. Too much competition among the employers for the business that is offering, and naturally among the workers.

Q. Are there too many people seeking employment in industry to-day; are there more people seeking employment in industry to-day than industry seems able to employ?—A. At the present long hours of labour yes, in every industry.

Q. In every industry?—A. I cannot tell you one where you could go from railways down where there are not more workers seeking employment than there is opportunity for work. And even if you went back to the so called peak year of 1929 they would not be able to absorb them. I had the head of a very reputable firm of employers tell me not long ago that if he could restore production to that of 1929 he would not be able to absorb more than 30 per cent of his employees because of the competition from new machines.

*By the Chairman:*

Q. Mechanization?—A. Yes, and mass buying.

*By Mr. Young:*

Q. If the general consumer were in a position to purchase all his requirements, would not that employ practically all our unemployed?—A. I did not get that.

Q. If the general consumer, the ordinary man— —A. Yes.

Q. —were in a position to purchase all his requirements, would there be this tremendous pressure among the workers, this competition for jobs that we find just now?—A. Not as much; because after all a man does not want to be put to the trouble of breaking in a new pair of shoes every day, because by that means he can purchase 365 pairs. He would only want to work as long as necessary to insure him comforts of living. Therefore, you cannot absorb all the workers, because of mechanization.

Q. You are convinced of that, Mr. Moore, are you?—A. Yes.

Q. If we could purchase to-day more than we could possibly consume?—A. More than you would desire to consume. You could then absorb what has been called luxuries, things to which the worker should be entitled. In that way you would absorb a certain amount of workers.

Q. I mean, if the ordinary purchaser had sufficient purchasing power to purchase something over the ordinary necessities, some luxuries, the production of those luxuries would give some employment?—A. Yes.

Q. And ultimately that would bring in a very high standard of living. A very large section of the community have found themselves suddenly deprived of their purchasing power, and that affects the general labour situation of the community as a whole?—A. It is a breakdown condition, sir, and that has been our objection to relief work without pay.

Q. It breaks down conditions?—A. There is no purchasing power left for the purchase of food and shelter.

Q. For one large group?—A. Yes; it creates a surplus.

Q. I have here, Mr. Moore, a report of the Department of Labour on wages, hours of labour in Canada, dated January, 1934. I suppose you are familiar with this document?—A. Yes.

Q. It shows wages and hours of labour. What I am trying to get at is the general picture of the whole scene?—A. Yes.

Q. For the last two or three days we have been hearing evidence of deplorably small wages and bad conditions in industry; but they were dealing more with local conditions than specific cases. What I am trying to do now, is to get a general picture. I find in this report dated January, 1934, that the hours of labour in manufacturing plants throughout Canada are fairly generous. Do I understand that this is not what you actually earn, but what actually would have been earned if you were employed a week?—A. Right.

*By Mr. Sommerville:*

Q. And paid union wages?—A. If the conditions which are supposed to be prevalent did prevail. For instance, you have an agreement for carpenters' wages in Ottawa of 70 cents an hour. They then take that as the recorded rate for carpenters in compiling these statistics. If you go around Ottawa, you will find a whole lot of men working for much less, especially in unorganized centres in Ottawa to-day, and therefore it does not give the true picture.

Q. This gives what would happen, if conditions were all right.—A. It gives the statistical picture.

The CHAIRMAN: Just one moment, gentlemen. What we have Mr. Moore here for is to give us factual evidence, not opinions upon theory. I think we shall come to a stage in the committee where we will be able to, each of us, advance his theory upon those subjects. It would be an enormous task for each of us to propound theories to the witness and ask him for confirmation.

Mr. YOUNG: Mr. Chairman, Mr. Moore is perhaps the one man in Canada who is familiar with these matters from the workingman's standpoint, and I want to get his views.

The CHAIRMAN: May I suggest that we call Mr. Moore here again for that purpose, because we have to adjourn now. We have another witness for this afternoon, and Mr. Young will have the opportunity to call any witness he desires.

Mr. YOUNG: How soon will that be?

The CHAIRMAN: We have a program that will keep us very busy next week.

Mr. YOUNG: Why not this afternoon?

The CHAIRMAN: We have another witness who has been here a couple of days.

Mr. YOUNG: Why not this afternoon?

The CHAIRMAN: No, not this afternoon.

The WITNESS: I will be available later.

Witness discharged, and the committee adjourned until 4 o'clock.

## AFTERNOON SESSION

The Committee resumed at 4 o'clock.

O. J. KERR, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Kerr, you are the mayor of Stratford?—A. Yes.

Q. You are also connected with the furniture industry as a worker?—A. I am.

Q. And the city of Stratford is quite a centre for the furniture industry in Ontario, is it not?—A. It is regarded as the furniture centre of Canada.

Q. About how many men are employed in the furniture industry?—A. In the city of Stratford?

Q. No; the industry in Canada?—A. About 10,000 odd in all Canada, 6,500 in the province of Ontario, in the city of Stratford there are 800.

Q. And in how many factories are they engaged in Stratford?—A. Seven.

Q. Seven factories?—A. Yes, sir.

Q. And you work in one of those factories, do you not?—A. Yes, when I work.

Q. You have been working in the industry for some twelve or fourteen years, I understand?—A. Yes.

Q. Are you also familiar with the factory conditions in the other Ontario cities in which the industry is carried on such as Hanover and Hespeler?—A. Mr. Sommerville, I have made a study of the furniture industry in all the places where furniture is made in the province of Ontario.

Q. And these centres are, as I understand, Hanover, Hespeler, Kitchener, Preston, Listowell, Owen Sound and in a small way in Toronto?—A. Yes.

Q. You are a machine operator yourself?—A. I am.

Q. And you have some evidence you desire to offer in the interest of the furniture workers in the factories?—A. Yes.

Q. Now, Mr. Kerr, what is the condition of labour in the furniture industry in the province of Ontario; what are the conditions of labour?—A. Well, Mr. Chairman, there are several ways in which I might answer that particular question, but naturally the conditions of work, the payment of wages is the one that affects the wage earner the most, and these affect the wage earner at the present time because they do not provide a decent livelihood.

Q. Yes. Now, what from your knowledge of the industry—what is the reason that you assign for the poor condition of wages in the industry?—A. The first thing, Mr. Chairman—if I might read a few remarks I have prepared here covering the questionnaire—I might say that I have prepared a few remarks covering the particular examination which you desire to make at the present time, and in such I would say that the full effect of the policy of mass buying in its relation to industry, both as a factor in trade depression with the concomitant evils of low wages and unemployment, is too complex a subject to be dealt with fully in the time at my disposal. I shall, therefore, confine myself to remarks of a general nature, touching mainly on the industry with which I am most familiar both by actual experience and study of the furniture business. Probably mass buying as practised by great mail order and chain store organizations does not actually cause depression, shall I say.

Q. Does not cause a depression?—A. Yes. But there can be no gainsaying the fact that they accelerate the downward course of prices and deepen the trough into which business is falling. There can be little doubt too that this practice is one of the biggest obstacles to industrial revival.

Q. What practice do you mean; are you referring to mass buying?—A. Yes. Several imponderable factors support this contention. The public are taught to expect cheapening commodities. The radio selling for \$200 in the fall may be bought for half that amount in the spring with every prospect of a further reduction in the summer. Naturally, the would-be purchaser evinces little desire to buy to-day and when this attitude becomes general stagnation results. The vanished or greatly lessened earning power of the worker is the other adverse factor, and I am convinced that this can be attributed to a very great degree to the mass buying practice of the big retail establishments. I propose to support this story both by quoting statistics and by the result of my studies. I want to ask you just to picture the situation for a moment. The manufacturer finds that orders are becoming fewer and fewer in spite of his best efforts. He probably manufactures a good line of goods of nationally known quality and service offered for resale at standard list prices by a dealer organization built up through years of effort. Perplexed by worry and lack of business he is called upon by a buyer representing one of the great retail stores and is offered an order of imposing size for one of his better known lines. True, the price is considerably below that which has been received, but the size of the order, the assurance that it will be a strictly cash deal, and the knowledge, probably gently insinuated by the buyer that if he does not accept the business one of his competitors will decide the question. Economies have to be practised, and the easiest solution is to cut the wages of the worker. This is done, and it is quite probable a small profit is shown. Meanwhile, though, the big store has out a sale and the manufacturer has the mortification of seeing his well-known, jealously priced merchandise offered for sale at figures frequently below his regular dealer's wholesale cost. The result is a steady cancellation of orders by his old outlets who find it impossible to compete. The way is now paved for the use of the big stick, and when the next buyer puts in his appearance he does so with the full knowledge that the manufacturer is at his mercy. With his regular connection broken, the factory owner cannot resist; another big order is given, not offered, this time, because there is slight chance of a refusal, and at a price considerably lower than the preceding one. Again wages are cut, piece work is reduced to

the point where the workman has been known to be indebted to the firm for the privilege of working at the bench.

This is not an idle statement; instances of this kind actually happened in my own city.

*By Mr. Sommerville:*

Q. Stratford?—A. Yes. The vicious circle is now complete. The wage earner in receipt of a mere pittance frequently helped by municipal relief is unable to purchase more than the bare necessities of life. This lack of buying power effects all industries and chain stores in their iniquitous drive for sales and more sales. They continue to drive prices down and progressively the worker receives less and less for his labour.

The above represents my belief on the situation, and so far as I can see there are only three or four solutions which I have to suggest to your committee, after you have asked considerable questions or I have been able to give you certain information.

Q. You say these low wages are paid in your industry; will you tell me how this system operates, when a big order is given, by a big buyer? How does the system operate in the factory, so far as wages are concerned?—A. Well, I can give you several instances.

Q. Perhaps you can tell the committee, in general, the procedure as to what happens?—A. I can relate some coincidences and cases.

Q. All right.—A. To my knowledge of the manner in which it operates, it is in this fashion: the buyer will come along to the manager of a plant—not a plant, but to probably all the plants—and he has his blue-prints, and he desires to place an order for a radio, a certain line of furniture, not only has he that blueprint, but also accompanying these specifications is the price, as I understand it.

Q. The price?—A. He quotes his price.

Q. He quotes his price?—A. That he will pay.

Q. Yes?—A. And should there be any reluctance shown on behalf of the manufacturer in closing the deal, he will show the specifications and the cost from another manufacturer where he can place the order; and incidentally that will be convincing to the manufacturer to accept the order for the wanted business.

*By Mr. Factor:*

Q. That is, he is already armed with the competitor's price, from another manufacturer; is that the idea?—A. Yes, that is his business.

*By Mr. Heaps:*

Q. Do employees work on a piece work basis in those furniture factories?—A. Yes, I am coming to that.

MR. SOMMERVILLE: We will develop that principle later. I am just getting the system outlined; we will fill in the picture later.

*By Mr. Factor:*

Q. I want to ask one question. That buyer would not have the price from the other manufacturer, or he could not drive a bargain with the second manufacturer.—A. Well, of necessity he has probably in his own organization efficiency engineers and superintendents of furniture that do know the business as well as the man he is buying from, and naturally he is equipped with costs and with the specifications, and he knows the article he wants.

*By Mr. Ilsley:*

Q. Not with an offer from another manufacturer to sell at a certain price?—A. In my case I happen to have heard that that is a fact. I may say it has come to my attention that that is a fact.

Q. What is a fact, that he gets offers from one and goes to another, is that the system of it?—A. As I understand it, yes.

Q. You just said that he has an efficiency man and knows the cost and it is that with which he is armed when he goes; that is the difference.—A. As well as the price set by another manufacturer, I presume.

*By Mr. Edwards:*

Q. He starts off with an estimate and blue print of his own shop?—A. Yes, in any case he has that.

*By Mr. Sommerville:*

Q. He has a blue print and estimate from his own shop, and wherever he may get a price or estimate, you say the price or estimate is given to the manufacturer as the price or the estimate at which the business will be placed?—A. If I may point out, Mr. Chairman, during all these years he is in the habit of buying and naturally he has the prices to compare, and if he wishes to cut them, all he needs to do is to take a percentage off and state that is what he will be willing to pay.

Q. Then taking this price given to the factory manager, what is the next step taken by the factory manager?—A. In many instances, I may say before they recognized the authority and the right of the worker to participate in the organization of his plant—

Q. That is before they recognized the union?—A. That is correct, before he recognized the union of the men, he would simply make a cut in the piece work prices or even the day work rates.

Q. Before the union was organized, the manager then just announced a price cut in the piece work rate or in the day work rate, is that right?—A. Correct.

Q. And you had either to take that or leave it?—A. That is correct.

Q. Is that the situation?—A. That is correct.

Q. Did you experience these cuts during the past two or three years, Mr. Kerr?—A. Yes, Mr. Chairman, during the past ten.

Q. During the past ten years?—A. Yes.

Q. But during the past two or three years, has that become increasingly so?—A. Quite prevalent.

Mr. FACTOR: I would like Mr. Kerr to give us an illustration of that, of the modus operandi.

Mr. SOMMERVILLE: There are a number of these; we will come to the result of these cuts in a few minutes.

Q. You say the men had either to take the cut or leave it; was that the actual situation in the plant before the union was recognized?—A. Yes. He had to accept those prices or they would secure a worker that would.

Q. To what level did these prices go—or perhaps you can give us some instances of the prices to which they were reduced by this procedure.—A. I may say some as low as 10 cents an hour, probably five, but I have three actual illustrations here. I can point out the exact cases.

Q. For instance, on the piece work, will you give to the committee what the result of these cuts is in the assembling of an upholstered chair; I think you have got an instance of that.—A. I may say we will call them factory No. 1 or No. 2, as you wish. They are all in the same position, regardless of whom they are.

Q. And in all the cities?—A. In the various cities that you previously named, yes.

Mr. FACTOR: Is there any objection to getting the real name of the factory?

Mr. SOMMERVILLE: I think we will leave that to our investigator.

The WITNESS: I can give you that, Mr. Chairman.

Mr. SOMMERVILLE: The name can be given, but we can get it from the investigator later.

Q. What were the reductions in piece work for assembling an upholstered chair, for instance? What were they formerly getting or what were they formerly paid, and to what price was it reduced?—A. As an example, Mr. Sommerville, the piece work price paid for assembling a chair bought very largely by one of the largest chain stores in the city of Toronto—

*By Mr. Factor:*

Q. Chain or departmental store?—A. Departmental store, in Toronto—dropped from \$2.05 to 95 cents.

Mr. HEAPS: Over what period was that?

*By Mr. Sommerville:*

Q. When was the \$2.05 paid?—A. That would be probably 1928-29.

Mr. FACTOR: And when the other price?

*By Mr. Sommerville:*

Q. When was it reduced down as low as 95 cents?—A. Previous to September, 1933.

*By Mr. Factor:*

Q. Do you account for the drop of price by the effect of the mass buying only?—A. Considerably, yes.

Q. But not altogether?—A. Not so, no.

*By Mr. Sommerville:*

Q. Take the assembling of that chair; what did that mean? What labour went into it; what was involved in it?—A. Principally putting the frames together, naturally; and of course, in this style of chair, it is mostly upholstery work.

Q. Putting the frames together, that is putting the springs in, the back, the seat and the arms?—A. Yes.

Q. Covering it with upholstery, finishing the chair?—A. Yes.

Q. Is that the operation that is involved?—A. In this case, assembling the chair, yes.

Q. That was reduced to a price of 95 cents?—A. Yes. I may instance another case.

Mr. FACTOR: I think we ought to develop this evidence a little more, to show what other elements enter into the reduction of the price.

Mr. SOMMERVILLE: Perhaps if we get examples, we will develop it with a number of them.

The WITNESS: May I be permitted just to answer that question at the present time in this way, that it is only natural that as the commodity price drops, so the piece work rate would naturally drop; and they would take advantage of the drop in the selling price, probably over a greater percentage than they should, in accordance with the same percentage of the commodity price.

Mr. SOMMERVILLE: Did I misunderstand you, Mr. Factor; did you think this 95 cents was the price of the chair?

Mr. FACTOR: No, the price of the labour.

Mr. HEAPS: Could you tell us how long it would take a competent mechanic to earn that 95 cents?

Mr. SENN: What would he earn per day?

The CHAIRMAN: One at a time, please.

Q. Will you answer Mr. Heaps if you can?—A. Probably three to four hours in some instances.

Mr. HEAPS: Three to four hours.

Mr. YOUNG: In some instances.

Q. Give us the average.—A. I do not think it is possible for me to do that without reference to the set of tables I have here.

Q. In some instances; will it be a high one or a low one?—A. Well, in this case that is what it may be.

Q. Which?

*By Mr. Heaps:*

Q. Three to four hours?—A. Three hours—I can give you exactly the cost of any piece of furniture you want to name.

Q. For a competent mechanic then, for that class of work, he would earn approximately 30 cents per hour?—A. Yes, where he should be earning 90 cents.

*By the Chairman:*

Q. That is a pretty skilled man, is it?—A. Yes.

Q. Can you answer Mr. Senn's question?

Mr. SENN: I just asked what he would earn per day at that rate.

Mr. SOMMERVILLE: 30 cents an hour.

The WITNESS: That is so, that particular instance.

*By Mr. Sommerville:*

Q. Were other articles reduced relatively in comparison with the upholstered chair, \$2.05 to 95 cents?—A. Yes; here is another instance, 45 cents to 17 cents.

Q. For what?—A. For assembling a certain chair.

Q. For assembling another kind of chair?—A. Yes.

Mr. FACTOR: I would like to have a little more detail in these instances. I would like to have a picture in the large scale. I mean this, just the mere fact of saying it was reduced from 45 to 17 cents does not convey much to me, unless you fill in the picture.

Mr. HEAPS: If you worked at the trade, it might convey something.

Mr. FACTOR: I know that; I would like to get at the matter more fully.

Mr. SOMMERVILLE: Perhaps as he comes down, he will deal with the various operations. You will see by the series of examples that Mr. Kerr has for you, that it will probably assist you in that.

Q. What was the next result; what other instances have you there?—A. The assembling of various pieces of furniture, all the ramifications of the production of a piece of furniture. I may relate this, and it will probably give you a particular example, Mr. Factor, that for dowelling 1,000 pieces, for which in better times the men were paid 60 cents, they received 25 cents.

Q. A thousand pieces were dowelled; what is dowelling? What does that operation mean? What does it include?—A. If you will take the front rail of a chair, this same chair if you will, there are two dowels in each end. For putting

in these dowels, prior to assembling the entire chair, he would have received 60 cents previously, and on this date of this example, he received 25 cents.

*By the Chairman:*

Q. For how many dowels?—A. 1,000.

*By Mr. Factor:*

Q. What do you mean by previously, 1928 or 1929?—A. He received 60 cents formerly; now he receives 25 cents.

Q. Yes, but how long ago?—A. 1929, 1928, 1927.

*By Mr. Sommerville:*

Q. Those prices that you relate as the former prices, related in each instance to the years 1927, 1928 and 1929?—A. Yes.

Q. And the reduction took place from then to 1933?—A. Yes, or 1932.

Q. That operation of dowelling included what, centering up the dowell and hammering it in?—A. These dowells have to be glued, hammered in so that the material would not be damaged, the excess glue wiped off and frequently placed on the rack.

Q. How long would an operation of that nature take?—A. Well, in some instances, three hours.

*By Mr. Young:*

Q. Per thousand?—A. Yes.

*By Mr. Sommerville:*

Q. Two or three hours?—A. Yes.

*By Mr. Heaps:*

Q. For which he received 25 cents?—A. At the present time, in this particular instance, yes.

*By Mr. Factor:*

Q. And he got 60 cents for that in 1929?—A. Yes.

Mr. ILSLEY: Are these figures what they got before September, or what they get now?

Mr. SOMMERVILLE: These are in September.

*By Mr. Heaps:*

Q. That same worker is using a machine all the way through, a man has to work at a machine to be able to do that kind of work?—A. No, I am speaking of dowelling, not boring operations, to which you have reference.

*By Mr. Sommerville:*

Q. What other illustrations have you there, Mr. Kerr?—A. Along the same line it is noted that two of the best cabinet makers made 12 cents an hour on piece work after a raise of 33 per cent had been obtained.

Q. After an increase of 33 per cent they made 12 cents an hour, these cabinet makers?—A. Yes.

*By Mr. Ilsley:*

Q. Was that September 1933, or not, the picture we get depends upon our understanding the figures you are giving; is this 1928 or 1929; are these wages

those paid before September 1933—why do you take that date, was there a strike then?—A. That is why they went out on strike, because of the conditions.

Q. That gives us an idea, if you will limit your comparative figures to that, please.—A. The next record will give you a general picture of that. Just before the strike prices for the assembling of a tea wagon were cut from 34 cents to 24 cents, despite the fact that there was 25 per cent more work on the article; all parts such as wheels, trays, drawers, drop-leaves, etc. had to be assembled for this rate, as well as hand-sanding on each part.

Q. What did they get at the peak, 1928-29, for doing that then?—A. 34 cents.

*By Mr. Young:*

Q. You say there was more work to be done on that lately; what more work?—A. Well, that is explained in this way, in the manufacture of furniture of late years, they have been demanding a better class of work and the pay did not increase in accordance to the importance of the work in that particular case.

*By Mr. Sommerville:*

Q. On the list you have there, Mr. Kerr, what other examples have you?—

A. The lowest paid department of this plant is the rubbing department. A man receives 5 cents for rubbing a mantle radio, and 2 cents for polishing.

Q. For rubbing and polishing, what kind of a radio is a mantle radio?—A. I have an illustration here.

Mr. FACTOR: How long would that operation take?

*By Mr. Sommerville:*

Q. We will get that in a few minutes. On this mantle radio, the average man received 5 cents for rubbing and 2 cents for polishing, that is 7 cents—how many pieces could a man do in an hour?—A. On a piece work system these men would receive an average of about 28 cents an hour, being able to rub only four radios per hour; on the cabinets the rubbers could only make 26 cents an hour.

Q. And this cut shows the kind of mantle cabinet you are speaking about?—

A. That is a good example of a mantle cabinet.

Q. And it sells for about \$29.00—A. Yes.

Q. Is the radio you are talking about the cabinet alone?—A. Just the cabinet.

Q. What does the cabinet sell for?—A. In the neighbourhood of \$3.00.

*By Mr. Ilsley:*

Q. To whom?—A. To the department stores and the large buyers who buy these; I believe the majority of the orders are for 200, 500, 1,000 and possibly 2,000.

*By Mr. Factor:*

Q. That is just the cabinets?—A. Just the cabinets.

Q. The Department stores buy the cabinets alone, that is the radio cabinet?—A. In many cases the larger corporations—not particularly the department stores.

Q. That is what I want to know.—A. But the radio corporations.—

Q. That is it, the radio corporation would buy the cabinet and put a set in it and sell it to the department store.—A. Yes, such as local people, or all the rest of them that are in the assembling business.

Q. The department stores do not buy the cabinet alone?—A. No.

*By Mr. Young:*

Q. Are all these cabinet radios polished by hand, or are some of them polished by machines?—A. They must be complete when they leave the factory, at least the majority of them.

Q. They are all polished by hand?—A. Yes, they are all polished by hand.

*By Mr. Heaps:*

Q. Do you know what these cabinets, which wholesale at \$3.00, sell for at retail?—A. The complete radio?

Q. No, just the cabinet alone?—A. They would not sell them that way, Mr. Heaps, they would put the instruments in and call it a radio, which they would sell at \$29.

*By the Chairman:*

Q. That includes the case?—A. Yes.

*By Mr. Young:*

Q. What was it in 1929 before the reduction of wages took place?—A. Probably \$5.00.

*By Mr. Sommerville:*

Q. The price of the radio cabinet was probably \$5.00?—A. It is because of mass buying that prices have dropped from \$5.00 to \$3.00, and they have cut all of their other costs, particularly their labor costs.

*By Mr. Factor:*

Q. The Department store does not buy the cabinet, you cannot blame the department store for the mass buying of cabinets?—A. Indirectly it has some effect, the trade will not buy at a certain price at which the large corporation must place these on the market; naturally they have to cut all the way down the line.

*By Mr. Sommerville:*

Q. What other examples have you there?—A. In the cabinet department, which is reduced to 6 cents apiece, where they were paying 18 cents.

Q. That was on radio cases, was it, on cabinets?—A. Yes. They were only able to assemble three an hour, and that would give them from 25 to 30 cents per hour. One man in the cabinet room received from 72 cents to \$1.05 for ten hours of work. I might just explain here that some radio cabinets that formerly demanded \$20, probably sell now for \$12; just to give you an example of the reduction in the price of the actual case.

*By Mr. Kennedy (Winnipeg):*

Q. The retail price of radios generally has gone down considerably, has it not?—A. Yes.

*By Mr. Young:*

Q. You say that the radio maker who buys these cabinets has lowered his price because the department store has put pressure on to him. Now can you tell us where the pressure originated; did it originate in the department store or did it go back beyond that?—A. I am of the belief that if a person who buys these radios at \$3 apiece were able to get the same radio for \$2.50, they would be inclined to get the radio where they could get it cheapest.

Q. That is not the question I asked you, Mr. Kerr; I asked you if the department stores put pressure on the radio seller; I asked does the pressure

start with the department store or does it start with the customer.—A. In all probability it starts with the customer; and if the customer happened to be a worker, he would naturally do that, because his wage has been cut.

Q. You think the customer could not pay any more?—A. Well it is only human nature to get a thing as cheaply as you can.

Q. You think then that the customer could pay more, if he could be made to do it, and the department store would pay more to the radio man, who in turn would pay more, and you would all get bigger wages. I want to get at what is the cause of price cutting; let us get down to the bottom of it.—A. It would take two or three hours to tell you that, if you ask me.

*By Mr. Sommerville:*

Q. I believe Mr. Kerr is a factory worker, and he does not go into economics.—A. I can discuss the economics of the situation with you, if you desire.

*By Mr. Young:*

Q. But he seems to be able to trace this to a certain point, and then stops. He can't go any further back.—A. It might stop there. Good economics probably would dictate the cause; again, I think it is rather previous to the question. We are referring to examples that I have here. I can only give you the figures you ask. If you ask a question from an economic standpoint I would be glad to discuss it with you. As far as the industry is concerned I am giving you concrete examples, which I think give a good explanation of these cases.

*By Mr. Sommerville:*

Q. Let us have some more examples, if you please.—A. Before the strike one worker, employed three years, received \$3 a week piece work—that is full time, fifty hours; during the six months before the strike.

Q. That was December 27, 1933?—A. Three months before the strike they did not make more than \$6.00 per week, these particular men. Another worker, 21 years' service in one plant, frequently paid as low as 8 cents, or ten cents an hour on piece work; and one excellent cabinet maker did not make more than \$1.75 for a ten hour day for the two years previous to the strike. Another one, a skilled machine hand for twelve months received in wages approximately \$495.

Q. That is a skilled worker, a machine hand?—A. The average wage for this period being, checking off lost time in the spring, 24 cents per hour.

Q. That was an efficient man, an experienced man.—A. A skilled machine mechanic. With the girl workers, the Minimum Wage Law was not in force until after the strike, the average weekly wage being 14.69 cents per hour, which would be the equivalent of \$7.34 per week.

*By Mr. Factor:*

Q. There were violations of the Minimum Wage Law before the strike, and no action was taken.—A. Yes, Sir.

*By Mr. Sommerville:*

Q. As a matter of fact in the strike you succeeded in getting the companies to sign an agreement to pay the minimum wage requirements.—A. Yes, I may say right here that I have before me a proposed agreement with the union and one of the manufacturers here in statement 7, says that minimum wages for women will be paid.

*By Mr. Heaps:*

Q. What work do women perform in furniture factories?—A. Oh, principally in the veneer department, matching veneer, and so forth, and the various operations.

Q. Do they work in the polishing department at all, in the rubbing department?—A. Some years ago they did. Not of late years.

*By Mr. Sommerville:*

Q. This situation with respect to the women not earning even a minimum wage, was that general where women were employed in the furniture factories before the strike?—A. Yes, in the various factories that employed women.

*By Mr. Factor:*

Q. Was there any union before the strike of the furniture workers in the incidents to which you have referred and illustrated there?—A. If I may explain, just for a moment; yes there was a union of a type, a craft union. I may just say there was a special effort on behalf of the union officials, trades and labour congress of Canada to organize a trade union because it was not felt that craft unionism was the better plan of union for furniture. At this time they would not accept that form of union, and that is the reason why 800 workers did in the space of four weeks join an industrial organization, which took in every worker in the furniture trade.

Q. The craft union did not efficiently perform its duties?—A. Absolutely.

*By Mr. Sommerville:*

Q. You think the craft was changed into the machine worker, and the type of union changed into the industrial?—A. Well, there is hardly such a thing as craftsmanship in the furniture industry to-day. I may explain that in this manner: that any upholsterer to be considered a mechanic, a good upholsterer would naturally finish and complete a chesterfield or a chair, where to-day one group of men would work on arms, another on seats, another on backs, and so forth.

*By Mr. Factor:*

Q. I cannot conceive of any union doing nothing about those low wages.

*By Mr. Sommerville:*

Q. Perhaps you have some tickets there showing earnings?—A. I may say, Mr. Factor, they tried their utmost to present their best possible—

Q. Do not let me disturb your procedure or order, if you are not ready to give me your tickets?—A. In answering your question, Mr. Factor, because of the form of the organization, it did not appeal to the workers in the furniture trade. That has been exemplified, I think, as I instanced before, by 800 tradesmen joining this union in the space of four weeks.

Q. What other instances have you then, of those low results from this work in the industry?—A. May I say at this time that the employer accepts special orders from buyers which can only be sold at cost, because in this manner they can cut down on overhead cost and keep the plant running. Further, it often happens that the buyers force the price down where the goods cannot be produced without a loss, and it is therefore necessary to cut wages in order that they may keep the business. That is their angle of it.

Q. And is this what you call the specials in the furniture industry?—A. Yes.

Q. Now, the specials are, as their name implies, special orders made for large buyers?—A. The buyers make special orders for the manufacturers.

Q. The buyers make special orders for the manufacturers, you think. What proportion of the time of the factory is taken up with special orders?—A. Well, I am conversant with one case. I think I would be safe in saying that this one factory, being of the most efficient type, in its organization probably one-third of its volume of business is special orders.

Q. These are the orders which you have referred to now as being taken at a price which necessitated those cuts that you referred to?—A. Quite a number.

*By Mr. Factor:*

Q. Sold at cost by the manufacturer to the retailer. Is that what you call special orders?—A. According to their own statement, yes. In one firm a suite which cost \$10.92 to produce was sold to a Toronto firm for \$11.92; and they in turn sell this same suite for \$18.90.

*By Mr. Sommerville:*

Q. Let me get those figures again. The cost of manufacture was \$10?—A. \$10.92.

Q. The sale price to the Toronto firm was what?—A. \$11.92.

Q. And the sale by the Toronto firm to the retailer was what?—A. \$18.90. Approximately, the labour cost would have been—

Q. Wait until I get the profit. That is \$7 profit on \$11.92?—A. Yes; \$6.98 to be exact.

Q. Of the \$10.92 cost, what proportion is represented by labour, what by material and what by factory overhead?—A. About \$3.30; material cost about \$3 and other departments' overhead and so forth, a little over \$3.

*By Mr. Factor:*

Q. Labour, \$3.30?—A. Approximately.

*By Mr. Sommerville:*

Q. So that approximately it is one-third labour, one-third material, and one-third overhead?—A. Seemingly, in this case.

Q. Is that not what is the general run in the furniture industry, approximately?—A. Pretty much.

Mr. EDWARDS: Does that include transportation?

*By Mr. Young:*

Q. Can you give us the same figures for the same article four years ago? Bring it down to the same rate.

*By Mr. Sommerville:*

Q. There are some other instances?—A. I have others, Mr. Young.

*By Mr. Young:*

Q. Give me the figures broken down for the same article for the two periods.—A. Yes.

*By Mr. Sommerville:*

Q. Let me understand this. Have you got the figures showing what would be the price from the manufacturer to the large buyer four years ago; have you those figures with you, Mr. Kerr?—A. I am endeavouring to give you the peak and the reduction. I would take it that the percentage would be the only manner in which I could relate it to you without going into the cost of the individual case.

Q. You have not got that?—A. Yes, I have. I have here the exact cost of every operation in the furniture trade in that particular buffet; but this would take considerable time for me to give you. I will leave this with you, if you like. That is a good example. It relates the percentage; I would say, from 10 to 40 per cent reduction.

Q. From 1929?—A. From four years ago.

*By Mr. Young:*

Q. It shows the 1929 prices broken down the way these present prices are in this article?—A. Yes.

Q. The present prices broken down and the former prices broken down, so that we can compare them.

Mr. SOMMERVILLE: I am afraid not.

The WITNESS: I will answer it this way, Mr. Sommerville; that the article to-day which cost \$10.92 here, probably four years ago would be \$14.

*By Mr. Factor:*

Q. Broken up how, one-third?—A. By approximately the same percentage as I have given you in this instance.

*By Mr. Young:*

Q. You have not got the retail selling price at that time?—A. Oh, about \$28.

*By Mr. Factor:*

Q. \$28?—A. Yes.

Mr. SOMMERVILLE: About 100 per cent marked up?

*By Mr. Factor:*

Q. Have you got the price from the producer to the retailer?—A. That is it, \$18.90. You have that cost.

Mr. YOUNG: No.

Mr. ILSLEY: Cannot the investigator get those costs exactly?

Mr. SOMMERVILLE: We will get the exact costs on scores of articles in a direct, scientific and thorough manner.

The WITNESS: May I say I have one here, the buffet, which is a very good example.

The CHAIRMAN: Will you leave that with us?

Mr. HEAPS: I wonder if Mr. Kerr has the figures for radio costs over the same period of years.

Mr. SOMMERVILLE: I am afraid not, but we will get them from the investigator.

*By Mr. Sommerville:*

Q. Now, will you just continue with your instances of what these piece work methods resulted in so far as wages were concerned on those special orders?—A. Just previously to that, Mr. Sommerville, may I state that large corporations send their buyers to the furniture manufacturer with an offer to pay a certain amount for a certain number of suites, and the manufacturer takes those orders because they can be put through under the overhead of the profitable order. This in one firm has developed up to a stage where the buyer has cut the price on orders to such an extent that they were seemingly obliged to request the workers to accept piece work cut and also in their day rate reduction.

*By Mr. Young:*

Q. You can give us a specific example of that?—A. Yes.

Q. You will give it to the chairman, the name of the firm, and the full particulars.—A. I will.

Q. Date and all.—A. Yes, I can.

*By Mr. Sommerville:*

Q. What cases have you?—A. Some of the wages paid to various mechanics.

Q. Give us some of the 17 employees you mentioned to me.—A. Here is one,

in any case: trim saw operator worked 114 hours, received \$18.72. That is an average of 16 cents an hour.

Q. 114 hours is two weeks work.—A. Yes. This was two weeks previous to the strike, September 14, 1933.

*By Mr. Ilsley:*

Q. Are you going to give us some wages after the strike?

Mr. SOMMERVILLE: He is going to give us a proportion of the increase.

The WITNESS: I was just about to say, Mr. Chairman, right here, after the strike this same operation commanded 35 cents an hour.

*By Mr. Young:*

Q. Under present conditions?—A. It is not, as yet, enough for the mechanic. Rubbers and polishers, average pay on radios, was 28 cents an hour, 7 cents for rubbing and polishing a mantle radio, 6 cents an hour on one I showed you there. Cabinet makers, working 10 hours, receive \$1.05, an average of 10 cents an hour. Again, 10 hours, received 72 cents, just about an average of 7 cents. In this plant, the highest average was 30 cents an hour.

Q. That was last September? Have you not got the figures for the present time?

*By Mr. Sommerville:*

Q. Mr. Kerr, perhaps you will give us what the percentage of increase was which was obtained as a result of the strike?—A. If you wish me to.

Q. Approximately.—A. If you wish me to go just a little bit ahead of what I have to offer you, I can do that.

Q. Would you give it to us, approximately 10 per cent, 20 per cent, or 25 per cent, the approximate increase.—A. I can give you both. In this case, September, 23·3 cents; the new rate is 28·5 cents.

*By Mr. Factor:*

Q. Per hour?—A. In one department. Another department 25·3, an increase of 26 cents—26 cents is the rate now. Another department, 21·3, increased to 26·3; another department 27·6, new rate 31·7. I wish to state, Mr. Chairman, that this is still under the piece work system, not day rate, not a guaranteed day rate by any means. Another department 30·1 to 34·3. In this plant of over 100 employees, the average rate per hour was 25·9 cents previous to the strike; after the strike, 30·2.

Q. Were those rates accepted by your new union?—A. Not acceptable by any means, but the best possible arrangement that could be made at that time.

*By Mr. Sommerville:*

Q. Have you some tickets showing the earnings of those employees, Mr. Kerr?—A. Yes. If I might continue the special rates, I should be pleased. In another plant machine room 30 cents per hour average, 35 cents finishing room; cabinet room 35, assembling 30 cents to 35. In another plant, one of the largest in Ontario, 35½ cents, machine room; cabinet, 26 cents; boys under 21, 13·8; young men over 21 years of age 21 cents. In another factory 26, 25, and 23 cents.

*By Mr. Young:*

Q. Is it the same work as the boys did, or work of a different type, and in different factories?—A. Yes. Cabinet room 26 in the other factory. It is 23 in the last mentioned factory. May I say, Mr. Chairman, that I have figures not only for the city of Stratford but in various towns and cities that Mr. Sommerville noted there.

*By Mr. Sommerville:*

Q. These variations to which Mr. Young refers are variations in the result of the piece work?—A. Yes.

Q. They are the piece work results. That is to say, the men working on piece work could not make more money than that, or did make the money that is referred to?—A. Yes.

*By Mr. Young:*

Q. In some factories they made more than others?—A. Yes.

Q. That was the hour rate?—A. Yes, the average.

*By Mr. Kennedy (Peace River):*

Q. How many hours did they work?—A. From three hours and up—two hours—five to nine.

*By Mr. Young:*

Q. Would the piece rate be so much, or was this because they did more work in one factory than in another?—A. It is the average rate per hour.

Q. That is what they earned. Why did they earn more in one factory than in another? Was it because of the average rate that was paid or conditions were such that they could do more work?—A. Both.

*By Mr. Heaps:*

Q. Could you give the committee an approximate average of the number of weeks a furniture employee would work in the year?—A. Well, under the piece work system a great number of them—as you say, the average—that example I note here of the man earning \$495 in a year at 24 cents an hour is an example of how long he worked. The same would relate to a man earning 30 cents an hour or 50 cents. His time in many cases is only half the time he worked previous to the depression.

Q. Would he work eight months in the year on an average?—A. In many instances.

Mr. SOMMERVILLE: During the year 1932?

*By Mr. Heaps:*

Q. Take the last year. How many weeks work did they have in a year?—A. I would judge about half to two-thirds of the regular time, many of the employees.

*By Mr. Young:*

Q. They would all get that?—A. Yes. I want you to understand that the worker was always at the call of the whistle.

Mr. HEAPS: Yes. I want to find out what the annual wage of these men or women employed in the industry was. You gave us a figure of \$490 in one case. In the other case the men worked on piece work averaging from 20 to 35 cents per hour. Your contention is that they will work from six to seven months in the year?

The WITNESS: Yes. In many instances he was at his bench practically all the time. That is the fallacy of the piece work system.

Mr. HEAPS: Is that the actual amount of time he worked, approximately six to seven months?

The WITNESS: Yes. I have given you the average per hour for a 50-hour week.

*By Mr. Sommerville:*

Q. For a 50-hour week, and in the trade I think the variation was six to nine months that men worked in the industry?—A. The average. May I say, Mr. Chairman, according to the Statistics Bureau that 1,200,000 laid off work would be a good example of how many men were cut out of work.

The CHAIRMAN: That is not quite right. I think at the peak 1,300,000 were on relief, at a certain time. Therefore, that was not the number of workers that were off. Your statistics were not quite right.

The WITNESS: No.

Mr. FACTOR: You are treading on dangerous ground there.

*By Mr. Young:*

Q. Would you say the industry is working a little more than 50 per cent of normal?—A. I believe.

*By Mr. Factor:*

Q. In 1933 what was the average weekly pay of a cabinet maker?—A. Not over, roughly speaking—not over \$12 a week.

Q. And they would be employed about seven months during the year?—A. Not always. Of course, with the piece work system you see, Mr. Chairman, they may work seven hours one day and they may be off half a day. If they are working straight time, of course, I believe the average would be in accordance with the number I have quoted here.

*By Mr. Sommerville:*

Q. Now, you have some tickets showing the wages earned by experienced men in the industry?—A. Working on radios in this particular firm a man with 30 years' experience—by the way he has six children—he had earned at this time for seven and three-quarters hours \$1.43. Another case, one and three-quarter hours, 24 cents; seven hours, \$1.36; ten hours, \$1.92; ten hours—this is another man—\$1.08; nine hours, \$2.54; ten hours, \$2.31; ten hours, \$1.49; ten hours' work, \$1.23; ten hours, \$2.38; ten hours, \$1.52; ten hours, \$1.86; another ten-hour day, \$2.03; ten hours, 76 cents; ten hours, \$1.10; eight hours, 97 cents; ten hours, \$2.58; ten hours, \$1.45; ten hours, \$2.96; ten hours, \$2.31; ten hours, \$1.42.

*By Mr. Factor:*

Q. Were they all experienced furniture workers?—A. Yes. I quoted one man who had thirty years' experience.

Q. All these others were experienced men?—A. All mechanics in the trade except the unskilled men, helpers and apprentices.

*By Mr. Sommerville:*

Q. Are those indicative of conditions in that particular plant where that particular employee worked?—A. Quite prevalent.

Q. What other instances have you, Mr. Kerr?—A. If I might just at this time, Mr. Chairman, give you a picture of the cost that is related in some of our sales catalogues—

Q. Without mentioning any names, or any catalogue?—A. I do not think it is necessary; you know. In this case a suite selling for \$57.95, I note in one paper of recent date, was advertised for \$57.95 and a few days later advertised for \$59.95.

Q. By the same firm?—A. By the same firm, the same suite. As I was able to secure the price in one of the factories in one of the towns mentioned

here it could not be made for less than \$65 approximately. I do not believe that was made in the province of Ontario—in the province of Quebec, probably, where the standards are a little bit lower and they are not on the same basis of work as we in Ontario are.

Q. Have you some competition from the furniture factories in the province of Quebec?—A. That, of course, is quite prevalent.

Q. And does that affect the prices that they get for work in your factories?—A. It depends considerably on the amount that they buy, when I speak of these orders—mass purchases.

*By Mr. Ilsley:*

Q. The \$65 figure you give is what is called hearsay evidence of the cost?—A. Only from one superintendent of a factory; that is all.

Q. Do you know what factors entered into that? Is it interest on capital and everything of that sort? You do not know anything about that?—A. Yes. I may say I do. I could have; but I did not understand Mr. Sommerville intimated I should give you that; but I can.

Q. Will you give Mr. Sommerville the name of the department stores and manufacturers and this can all be checked up?—A. Yes.

*By Mr. Sommerville:*

Q. May I get this clear. The incident you refer to concerns a suite that was offered at \$57, and the cost to make that suite in the factory that you refer to would be \$64?—A. Practically.

Q. It sold less than the cost at which it could be manufactured in your factory?—A. Just so.

Q. That is the illustration, and that is the purpose of the illustration.

Mr. ILSLEY: I thought he was going by what a superintendent of another factory in another province told him the cost was of making this suite.

Mr. SOMMERVILLE: In the other factory; in the Ontario factory.

Mr. ILSLEY: Where it was made. Is not that right?

Mr. SOMMERVILLE: No. That is not right.

The WITNESS: There is a suite advertised here at \$57.95. The factory related to—the superintendent told me he could not make that suite for less than \$64.

Mr. ILSLEY: That is another factory, not your factory, not the factory you are acquainted with; it is another factory in another province.

Mr. YOUNG: That suite came from another province, but you do not know what it cost.

The CHAIRMAN: Why not let the witness give his own version.

The WITNESS: It is here pictured.

*By Mr. Sommerville:*

Q. Is it a dining room suite?—A. Yes, Mr. Chairman, it is advertised there for \$59.95 and in the paper I have before me it is advertised at \$57.95. That factory which I referred to—the superintendent told me according to his figures he could not produce it for less than \$65.

Q. Before you go on to that, let us clear this matter up. This is not the factory that made this suite to which you refer, but if that factory to which you refer had made it they could not have made it for less than \$65.90; is that the point?—A. \$65 in that case.

Q. The indication is that it was made in some other place.

Mr. FACTOR: Don't let us paint the picture darker than it is.

The WITNESS: It is dark enough.

*By Mr. Factor:*

Q. You do not know what the actual cost price of that suite that was advertised for \$59.95 was?—A. Well, no; but I can give you glowing examples. If you ask me the cost of any piece of furniture, I have it in my possession.

Q. We are on this one. There is a dining room suite that is advertised for \$59.95. Can you tell me what this retail store paid for this suite?—A. To the manufacturer?

Q. Yes?—A. If they were buying it from the factory that I have reference to they would have to pay \$65.

Q. Yes. I understand that.

Mr. SOMMERVILLE: That is what would be paid for this piece of furniture if it were made in this factory in Ontario; that would be the cost to make it, \$65.95.

Mr. ILSLEY: He knows that because the superintendent told him.

The CHAIRMAN: Gentleman, is not this the point: if this suite had been made in the factory about which he has been giving evidence and under those conditions regarding wages which have been spread on the record then, where those conditions obtained, the suite would have cost \$65; is that right?

The WITNESS: In many cases that would have been the cost. That is one extreme point I am endeavouring to bring out in the competition.

The CHAIRMAN: Is not this the point: if a suite sold for \$57 which you say would cost \$65, it is left to us to imagine what the labour conditions are in the factory in which it was made at that price.

Mr. FACTOR: I hope we get better evidence than our imagination.

The WITNESS: Mr. Chairman, regarding the remarks of Mr. Factor, I want to tell him if he will let me at some time I will be able to give the exact labour cost, material cost and any other cost regarding some of these examples.

Mr. FACTOR: I am not trying at all to argue with you; I am trying to get the evidence in shape so as to know what this suite that is selling for \$59.95 cost the retailer.

The CHAIRMAN: He does not know it. Mr. Kerr, suppose we leave that one and deal with something you have knowledge of.

Mr. HEAPS: The witness made reference to the fact that in other parts labour conditions are not the same, but if there are any other places in Canada worse than in Stratford where they get 25 and 30 cents I would like to hear of them.

Mr. SOMMERVILLE: The witness is speaking of Ontario.

*By Mr. Heaps:*

Q. Are there any other places in Ontario worse than Stratford?—A. That would indicate to me that there are some places.

Q. In Ontario?—A. Some places in Ontario and some places in Quebec.

Mr. FACTOR: What would that indicate to you?

The CHAIRMAN: We are dealing with a supposition. There is no use going any further because we cannot get the fact. We can go on with something he does know about.

Mr. SOMMERVILLE: Will you go on with the illustrations you know of?

Mr. FACTOR: There is no use creating too much atmosphere without getting down some facts.

The CHAIRMAN: Let us get on with something that he does know about.

*By Mr. Sommerville:*

Q. Will you give the illustrations you are aware of, of the cost of articles that are advertised; you referred to one, a bedroom suite?—A. Yes.

Q. Will you give me that, please?—A. One that is advertised for \$59.25.

Q. You have got that picture there?—A. This factory said that it cost \$33; they sold to this particular buyer.

Q. The buyer that advertised this suite, this 3-piece bedroom suite that you refer to, was advertising for \$59.25?—A. Yes.

Q. The factory sold it to them for \$33?—A. On their own statement, yes.

Q. That left a profit of \$26.25?—A. Exactly so.

Q. That is the profit to the vendor of the bedroom suite. What is the labour cost in that bedroom suite that sold for \$33; what is the proportion of that in labour?—A. About one-third of that.

Q. About one-third?—A. Yes.

Q. \$11; so that in that event, the spread between the manufacturers' price and the sale price, of \$26.25, was more than double the entire labour cost in the manufacture?

Mr. ILSLEY: \$59.25; you said \$26.25.

Mr. SOMMERVILLE: The spread was \$26.25, which was more than double the entire labour cost in that suite of furniture.

*By Mr. Factor:*

Q. In this particular instance, do you know what the total cost to the manufacturer was?—A. Well, Mr. Factor, he sold it at \$33.

Q. Would he be losing money on it, or making money on it?—A. According to his statement, these special orders very, very seldom make anything, and most generally they lose or break even, in accordance with putting these special orders through the factory under the same overhead as their regular orders.

*By Mr. Sommerville:*

Q. You have an illustration that you referred to, of a wardrobe?—A. Yes, as I have the figures, where a wardrobe cost \$10.84.

*By Mr. Young:*

Q. The factory cost?—A. What he sold it at?

Q. That is the factory selling price?—A. No, he received \$11.

Q. He received \$11?—A. Yes; he claims it cost him \$10.84.

*By Mr. Sommerville:*

Q. The manufacturer made 16 cents over and above the factory cost?—A. Apparently in this case, as it has been intimated to me.

Q. And the sale price by the store was what?—A. If my memory serves me correctly, it was advertised at two different prices, I believe; \$7.70, I think, added on that.

Q. \$7.70 added on the \$11?—A. Yes.

Mr. YOUNG: \$18.70.

The WITNESS: Sold for somewhere around that. They would sell it at different sales, I presume, at different prices.

Mr. KENNEDY (*Peace River*): Will we get these costs and statistics.

Mr. SOMMERVILLE: Yes.

Mr. ILSLEY: We will use these as a basis, I would think.

Mr. SOMMERVILLE: Yes.

Mr. FACTOR: Enlarge on the picture later on.

The CHAIRMAN: Oh, yes, we will get the precise data on that.

Mr. FACTOR: This just gives us a glimpse.

*By Mr. Sommerville:*

Q. In this instance there was a spread of 60 to 70 per cent over cost?—

A. Yes. As you have asked me to present them in this fashion sort of, I have the cost here.

Q. What do you say as to your knowledge of whether or not that is the usual spread known to the workers in the furniture trade as between the manufacturers' selling price and the large retailers' selling price?—A. Yes, it is quite prevalently known by the workers, almost exactly the difference in the cost and the retail price.

Q. And what is that percentage that is known to the workers?—A. We presume that it is about 70 per cent.

*By Mr. Young:*

Q. Where do you get those figures, the 70 per cent that you presume?—

A. We have investigators in our union; and the same as Mr. Moore related to you, it is their duty, they find those things the same as any other organization.

*By Mr. Sommerville:*

Q. What other instances have you?—A. I can give you another factory, Mr. Chairman, where the old rate of 19 men mechanics was 35¼ cents; the new rate since the strike is 45 cents.

*By Mr. Young:*

Q. Piece work?—A. Yes, mostly piece work.

*By Mr. Sommerville:*

Q. In the doing of this piece work, do I understand that the rate is set for an hour, and then you are supposed to produce an article within a certain time, and if you produce the article in less than that time, you get a bonus or an advantage?—A. There is the time payment which is commonly known as a bonus.

Q. How does that operate?—A. That is the straight piece work system, in dollars and cents.

Q. How does it operate?—A. May I say that a certain operation where a person would be given probably three hours, say, to rub that top, if they complete that operation in 2½, they get 3 hours' pay.

Q. Three hours' pay?—A. Yes, whatever the rate may be; in many cases it may be 20 cents an hour, may be 25, 30 and so forth.

Q. And the amount that they save is what is referred to as a bonus?—A. Exactly.

Q. And referred to as so many points, is that right?—A. Yes.

Q. And when you find the men are getting to a point where they can produce that piece of work in the 2½ hours instead of the 3, what happens under the system?—A. If they wish to make wage slashes as they have done, and it comes to the efficiency engineer, there is the possibility that the next time an order goes through of a similar nature, that the price may be two and a half.

Q. Two and a half; is that a fact?—A. I know that.

*By Mr. Young:*

Q. You have seen that happen?—A. I know that to be a fact.

*By Mr. Sommerville:*

Q. Is that the way the cuts take place in the piece work plant?—A. They have.

Q. What other instances have you there?—A. Take in this particular plant where girls were employed, the minimum wage was not enforced until after this strike, the average weekly wage being in the neighborhood of \$7.50.

*By the Chairman:*

Q. Do you find any reluctance on the part of these girl workers to complain that they are not getting their just rates?—A. They complain, Mr. Chairman, but in many instances they do not care to have it made public for fear of losing their job. That is prior to the strike. Now, of course, all the complaints come before their union.

*By Mr. Factor:*

Q. Where would the Minimum Wage Board come into this picture? Would they get the pay sheets for the average twelve weeks?—A. I am rather inclined to think that they have been somewhat delinquent in the past. I may relate that the Trades and Labour Council some four years ago had a glaring example of a girl's wages being \$3 for 70 hours work. It was brought to the attention of the board, a man was sent down to place the case before the board, and up to the present time we have not heard anything about it.

*By Mr. Kennedy (Winnipeg):*

Q. Would that be a fair commentary on their general activities?—A. I am not acquainted with some of the cases they deal with now, but at that time, that instance is a fact.

*By Mr. Sommerville:*

Q. That is some four years ago?—A. Yes; and no doubt this council and the union have carried on their activities, has been noted here, in many cases the minimum wage has not been enforced.

Q. Since the strike and the improved conditions in wages that were obtained, which you have related, have there been any efforts at cutting to meet these specials even since September last?—A. Yes, Mr. Sommerville, there is, in this respect: I know one plant where they had told the officials of the union to influence the workers to accept—at least to consider a 10 per cent reduction, so that they may be able to accept a large order that was coming, intendedly so.

Q. From one of these mass buyers?—A. From one of the biggest buyers in Toronto.

Q. Do you know of any instance where the employer asked the men to sit in with a view to reducing wages, so as to take an order?—A. The proposition was put up to the officials, as I have just said, to consider the matter.

Q. By the employer?—A. They would intimate that we should consider that, so that they may be able to compete with the other firms for these orders.

*By Mr. Factor:*

Q. In Toronto, who sells the most of the furniture, the departmental stores or the exclusive furniture stores, do you know?—A. Well, the larger organizations naturally handle most of the special orders, because they place orders in lots of say 100 suites, where a small buyer may buy two or three suites.

Q. You mean the departmental stores handle most of the special orders?—A. Yes.

Q. But generally speaking, in the furniture business, do the departmental stores sell more, or the exclusive furniture stores; do you know that?—A. Yes, according to the manner in which they order, naturally they sell the most.

*By the Chairman:*

Q. Which, the departmental stores?—A. The departmental stores. I can give you the names according to my brief.

Q. The Department store distributing system, we will speak of it in that way.—A. Exactly, and throughout the length and breadth of Canada. May I relate here again that this is still in the furniture centre, where the average wage is 20 cents an hour for a twelve hour day. Examples can be quoted that men with over seven years experience are getting as low as 5 cents an hour on piece work.

Q. Yes.—A. Another plant in the same place, a cabinet maker gets \$12 for 90 hours' work. Here is another example of an upholsterer—even after a 100 per cent increase he was able to make from 35 to 40 cents an hour.

*By the Chairman:*

Q. Alter the increase?—A. After he had received a 100 per cent increase in this case; and a cabinet maker, 25 years' experience, in still another plant, might make some 16 cents an hour.

*By Mr. Factor:*

Q. Do they know when it is a special order, do the employers tell them.—A. Just as surely as they know when pay day comes, they know when their orders come in.

Q. They are told that it is a special order.—A. They certainly are, Mr. Factor.

*By Mr. Sommerville:*

Q. Now, will you refer to the next plant, Mr. Moore.—A. The men cut from 60 cents an hour to 40 cents an hour.

Q. What kind of work would that be?—A. Probably upholstery work. In some of these cases the men work 73 hours per week.

*By Mr. Young:*

Q. Did these men benefit anything by the strike, where they got as low as 40 cents an hour?—A. In any case where they have had difficulty such as a strike, they have benefited.

Q. They were cut from 60 cents an hour to 40 cents an hour and now they are getting the same thing, the same 40 cents.—A. It is not where the strike took place that I am referring to now.

*By Mr. Sommerville:*

Q. You are referring to another centre?—A. Yes.

*By Mr. Factor:*

Q. Would the strike have any influence on the other complaint, in increasing prices?—A. Yes, Mr. Factor, I think it is common knowledge that a considerable number of firms, not only in the furniture industries, but others, immediately after the strike or even before it was settled, had increased their employees ten per cent. I have read of that in certain cases, and know it to be a fact that they have. I have some more examples, in another city, where the workers under 21 received 18 cents, 12 cents, 12½, 12, 15, 12½, 25, and 12½ cents; unskilled 17½, 22, 25, 19, 27, 18, and 20 cents, etc.

*By Mr. Baribeau:*

Q. You believe that the conditions are worse in Quebec.—A. I believe that, yes.

*By Mr. Sommerville:*

Q. They are bad enough with you, are they not.—A. They certainly are. Still another plant, where unskilled men are receiving 20 cents, 25, 18, and 15 cents; semi-skilled men 30, 25, 30, 26½, 27, 26, 22, 28, and 30 cents.

*By the Chairman:*

Q. That is what they are receiving now?—A. Yes, in these plants. Skilled 30, 35, and 30 cents—there are many examples of that kind. Piece work, in their plant for boys under 21 12½ cents an hour; their unskilled over 21 were receiving 20 cents 25, 15 and 18 cents an hour on the average; raised to 28 cents. Piece work, again semi-skilled, 30 cents, 25, 27, 22, 26, 28, and 30 cents through the piece work system, and they have been increased to 35 cents since the strike. Skilled men, piece work, 30 cents, 30, 35, etc., they have been increased by the efforts of the strike to 40 cents an hour.

Now again we have in another town, where married men average 20 cents an hour; still another company in that town, 15 cents an hour, and again 20 cents an hour. Here is another town, where they receive 25 cents an hour, an average of 20 cents an hour, and 30 cents an hour—and I could go on and relate the situation throughout the whole industry in Ontario in all these various towns.

*By Mr. Sommerville:*

Q. In these illustrations you have given us an indication of the condition that exists generally in the towns of Ontario in which the furniture industry furnishes.—A. Yes, might I relate a couple of examples of the injustice of piece work prices, where a certain manufacturing company had an elevator man on production on a basis previous to the strike, and because of the depression and the small volume of business, his earnings were as low as 75 cents per day. The minimum wage act for women had never been observed in this factory, signs had been posted throughout the plant as was required by law, but no improvement has been made in the wages paid. One man's production of suites built at the following rates; for upholstering the two arms 20 cents each, or the complete suite of six arms \$1.20.

Q. Will you let me get just what that means; assembling, that means putting the springs in, and covering, and finishing and all that.—A. And upholstering.

*By Mr. Factor:*

Q. How long would that operation take?—A. According to the work which might not necessarily be complete—probably an hour to an hour and a half for some operations. These jobs go through the factory, you see there are two chairs to a suite, that would be 20 cents; then for springing the back of the suite, 25 cents, and for springing the seat of the suite, 25 cents.

Q. That is putting the springs in the back and in the seat, and he would get 25 cents for each operation.—A. In some factories, the time required for the average worker to spring the back and the seat—the complete suite would take 1 to 1½ hours. These suites wholesale at \$129.50, with its best quality of covers and for \$49 in the poorer quality of covers, a trade job known as an automatic.

*By Mr. Young:*

Q. Is all of the rest workmanship; some of that difference perhaps is accounted for simply by the difference in the quality of the covering, but that is an enormous difference.—A. That is the spread which is due largely to the difference in the quality of the covering.

Q. What is the spread in price there?—A. These suites sell at wholesale for \$129.50 for the best quality of covering, and for \$49 in the poorer quality of covering.

Q. That difference of \$80 is for the quality of the covering.—A. Yes, please note that there is a big difference when good quality of mohair is used as the covering for the whole suite.

Q. The quality would warrant that spread in price.—A. Yes, just the difference in the quality of the material, in that instance. Mr. Chairman, I may say that here I have what you were relating to a little while ago, the cost of the entire suite.

*By Mr. Sommerville:*

Q. We can get these subsequently for investigation?—A. You can have them, yes. Now, here is another one relating to special orders in 1932 and 1933, where the contractor's price is considerably below the regular standard, in order to keep the plant in regular operation, with the result that the piece work rates, really the wages paid, had to be reduced to meet the reduced sale price. In negotiating the settlement in the furniture workers' strike in my town, this particular company stated that they would not be able to take any more special orders because of paying a higher wage rate, they could not meet competitive prices and at a meeting of a shop committee with the management, he asked the men to consider taking a ten per cent reduction in wages while working on special orders.

Q. And this was recently, since the strike?—A. Yes. And he said he would guarantee that it would not comprise more than a percentage of the work.

Q. What percentage of the work?—A. I believe in this case it was one third. I have still another case where a firm met losses in competition with the firms that they have to come up against where they would make a cheaper grade of material in building a frame, and where this manufacturer related to a meeting of his employees but a short time ago that he had a plan for producing a type of article which he believed would almost completely squeeze out the small manufacturers in the competing market. I am giving you his statement as he gave it to the employee.

*By the Chairman:*

Q. Did he say there what this plan is?—A. Yes, it is in the construction, where probably in the case which I related to you, where he put in a dowel in a substantially assembled article, he would change that in the construction and the whole form and the assembling of that particular suite—I think that is what he had in mind.

*By Mr. Sommerville:*

Q. Would he make it more substantial?—A. No, it would be a cheaper article.

*By Mr. Young:*

Q. He is going to chase out the man putting out the cheap article?—A. He is going after him, in any case. Very often men are required to remain at the factory for the entire day, while during that time on a number of occasions they would only have about an hour's work in their particular line.

*By the Chairman:*

Q. That is they have to stand by?—A. Absolutely, and in the majority of cases the average man's wage earned in this way is 45 cents for nine hours in these cases.

Mr. FACTOR: That is for one hour's work, really.

*By Mr. Sommerville:*

Q. How does the stand-by system work?—A. Usually the men are paired, and naturally the one remaining would secure all the work; consequently both remain to obtain their share. That is one of the fallacies of the piece work system.

Q. One man has to stand by the other.—A. Yes.

*By Mr. Young:*

Q. You said something about a man having to pay the company for the privilege of working there, that he would have to pay for the privilege of working at the factory.—A. Yes.

*By Mr. Sommerville:*

Q. Do you mean by that statement that in some instances the piece work system was so bad, that the men were indebted to the company?—A. Yes. A man would probably have two weeks work on a certain number of pieces of that suite, he would receive we would say 40 cents an hour for 100 hours, and it might take him 150 hours, so he would start in when he started another job by owing that job, by falling below the price that was given, and when he drew his pay, naturally he had to owe the other job, in order to make an average of 30 cents an hour.

Mr. FACTOR: Do you understand that, Mr. Sommerville.

Mr. SOMMERVILLE: I think I got it.

Mr. FACTOR: I am sorry to say, I can't, yet.

*By Mr. Sommerville:*

Q. A man would be allowed \$40 for doing 100 hours' work, is that right?—

A. He would be paid \$40 for a job that would take him 100 hours.

Q. That job would take 100 hours, that would be the amount allowed for that job, and if a job took 200 hours, what then?—A. Well, he got \$40.

Q. He got \$40 for the 200 hours, and when he started on any other job, he owed the first job the 100 hours; is that it?—A. Yes, and there would be, maybe, ten men working in the shop.

Q. In other words, when he took longer than was necessary to do that job, then his excess was charged on the next job, or charged against the next job; is that what I understand, Mr. Kerr?—A. Well, he had to do it in any case. He only got \$40. That is what I am trying to point out.

Mr. YOUNG: To whom did he owe this money?

Mr. FACTOR: I would like that explained. Perhaps it is the ventilation, but I am particularly dense in that regard.

*By Mr. Kennedy (Peace River):*

Q. In other words, he was allowed 40 cents for 150 hours?—A. As an example, that is right.

Q. He got \$40?—A. He got \$40 for that particular job.

*By Mr. Factor:*

Q. He may have to work 100 hours or 150?—A. Yes.

*By Mr. Sommerville:*

Q. That man is being paid in hours.—A. Yes.

Q. And if he took 150 hours to do a 100-hour job, then he owed 50 hours?—A. He only got paid \$40.

Mr. ILSLEY: Just a second. I think that can be explained.

*By the Chairman:*

Q. Where he would owe this would be those extra hours he took on that job; he could not do work on another job and earn additional money.—A. Yes.

Q. In other words, he lost 50 hours there?—A. The man lost time, yes.

*By Mr. Sommerville:*

Q. The manufacturer didn't lose any, did not pay an increased amount?—

A. No, he did not; he paid \$40 for the job.

*By Mr. Young:*

Q. Now, Mr. Kerr, you said that labour was the easiest thing to cut. Has there been any cut in the price of material?—A. I presume they rather consider the material at a fixed cost, which I say, so far as competition is concerned, they presume that they would all pay pretty much the same price, whether manufactured in Toronto, Stratford, Hanover or Owen Sound.

Q. As the prices of furniture are down, and as the wages are down, what has happened to the price of your raw material, your upholstering, your springs and your lumber? Has it come down very much?—A. Some of it.

Q. Has it come down in the same proportion as wages?—A. I am inclined to think not; at the present time I think it is going up.

Q. Will you tell me where you get your raw material; is it imported? Do you use Canadian lumber or imported lumber?—A. Not very much imported but veneers and so forth.

Q. Your coverings, what about them?—A. Coverings? Considerable of them are made right in the city of Stratford and the city of Woodstock.

Q. Not much of them imported?—A. Some, probably. I think the Canada Year Book will give you exactly the importation in the furniture trade.

Q. I suppose all made in Canada?—A. Yes; considerable amounts are made, some of them right in the city of Stratford.

Q. You cannot give us any figure to show whether the price of that material has come down or not?—A. I have not, not with me. I have, yes; of course that is not the angle I was to deal with when instructed by your chairman.

Q. We can probably get that from somebody else later on. You do not know anything about their overhead?—A. Yes, I do. I related instances. I can show you in one case, yes. Do you want overhead on that one article?

Q. Or in general?—A. I would not be expected to give you that.

*By Mr. Edwards:*

Q. Do you state that overhead is figured on a certain percentage on labour costs? Is not that the way it is done?—A. The entire costs.

The CHAIRMAN: He does not know that.

The WITNESS: Yes, I do.

Mr. EDWARDS: That is not so.

Mr. SOMMERVILLE: We will get that from the manufacturers.

The WITNESS: They will apportion a certain amount of labour costs, material costs,—the usual practice is 70 or 80 per cent on the actual labour cost.

Mr. EDWARDS: In many instances, more than that.

The WITNESS: I mean, I am just quoting these figures.

The CHAIRMAN: Are there any more questions, gentlemen?

Mr. FACTOR: What is the program for to-morrow, Mr. Chairman?

The CHAIRMAN: We have one witness. You are discharged, Mr. Kerr, and thank you very much for coming.

The WITNESS: It was a pleasure.

The CHAIRMAN: There is one witness from Alberta, Mr. Frawley, who desires to leave, and we would like to have him to-morrow morning. His evidence will not take very long. I circulated among the committee a memorandum that he submitted, or a brief, outlining the practice in Alberta.

Mr. ILSLEY: In regard to the retail stores?

The CHAIRMAN: He is a member of the Attorney General's department for the province of Alberta. He is going away and I think it would be very useful from the committee's point of view to hear him explain the system they are applying in Alberta in administering some phases of retail control.

Mr. KENNEDY (*Peace River*): Milk.

The CHAIRMAN: Milk, and some system they have in regard to bankruptcy applications.

Mr. FACTOR: Debt adjustments.

The CHAIRMAN: Administration of assignments, and so forth. We will meet to-morrow morning at 11 o'clock.

Committee adjourned at six o'clock to meet Friday, March 2, 1934, at 11 o'clock.

HOUSE OF COMMONS, ROOM 368,

March 2, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday's meeting record merely the presence of the witnesses, the passing of certain formal resolutions and filing of exhibits. Unless there are any questions, we will declare the minutes approved.

The purpose of the meeting this morning is to hear Mr. Frawley, of Edmonton, Alberta. Mr. Frawley is, if I remember rightly, a member of the Attorney General's Department of the Province of Alberta.

JAMES JOSEPH FRAWLEY, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Frawley, you are associated with the Attorney General's Department of the Province of Alberta?—A. I am.

Q. And you have had some experience in the problem of actual milk distribution in the Province of Alberta?—A. That is right.

Q. Will you just give to the committee, please, the background that resulted in your making certain investigations into that distribution?—A. Yes.

Q. And the findings of that investigating committee?—A. Yes. It was thought, Mr. Chairman, that the experiment in our province with price fixing of milk might be of some interest to your committee; and if I only arouse some interest and some curiosity, then I will have discharged my function; and any further information you may want to get arising out of that curiosity, of course may be got on the ground from the Board of Public Utility Commissioners, under whose jurisdiction milk is now handled. Since the first of July, 1933, milk has been under the control of the public utilities commission. The statute is chapter 18 of the Statutes of Alberta, 1933, and it is an act to amend the Public Utilities Act of 1923. Perhaps you would like to have this copy of the statute. (Exhibit No. 22.)

*By Mr. Senn:*

Q. Do you refer to fluid milk or all the milk produced?—A. The market milk, the fluid milk. This statute was brought about largely, I might say, arising out of an investigation which was conducted by a small fact finding committee appointed by the Alberta government, of which I was chairman. The other members of the committee were the provincial dairy commissioner and the professor of animal husbandry at the University of Alberta. We went up and down the province investigating conditions in the production and distribution of milk. We found, of course, just about the same facts as were disclosed in the very exhaustive inquiry which was conducted here last year, and therefore I need not worry or labour you with the conditions that we found.

*By Mr. Sommerville:*

Q. May I ask if you made a report?—A. Yes, we made a report.

Q. May we have a copy of it?—A. I have not got that report. That was a confidential report to the Minister of Agriculture, purely a departmental matter, and I have not got it. The economic conditions which prevailed were, of course, as I say, the usual ones which existed all over Canada. The falling prices of farm produce in 1930, 1931, and 1932, had caused farmers who had been butter-fat producers to go into the production of whole milk, which is technically designed as market milk, and they did that, of course, on an ever increasing scale. The surplus which was in that way created had a very unfavourable reaction upon the prices which the large city distributor could pay. The large city distributor is a sort of common carrier for the milk of the producers in the district surrounding the metropolitan centres of Calgary and Edmonton in our province; and with all the surplus coming in, of course they had to reduce prices because there is a fairly limited outlet for that surplus. We have, of course, in our province, no condensery, so there is a fairly limited outlet for the surplus. In addition to that, it was found that the producers who had been shippers to large plants, began to distribute their own milk, coming into the cities of Calgary and Edmonton on small rounds, and selling milk at prices below what the large and properly established distributors could sell milk at.

*By Mr. Senn:*

Q. You have no pasteurization?—A. No compulsory pasteurization; when that exists, as in the city of Saskatoon, then some of these problems disappear. Perhaps they have others to make up for it. I might say, perhaps by way of interruption, that we cannot claim to be exclusive in this business of price fixing in the milk business. The city of Winnipeg shares the distinction, or otherwise, with the province of Alberta in that respect. As a matter of fact, it is quite fair to say that in Winnipeg it was in existence and we largely followed—we went to Winnipeg and discussed the matter there with Mr. Cottingham, and we pretty well took over his legislation when we started.

These people came in, and as I say, cut prices of the large distributors, and it had reached a very serious situation. It was created in the cities of Calgary and Edmonton in the distribution of milk at the time our committee was seeking out these facts. It was pointed out to us that there was danger to the continuity of supply if this ruinous competition were allowed to continue; because they said, and with some force, that as a more or less surplus milk price was being paid to the producer who shipped to the plant, that the producer would in time be forced out of production. It is fair to say that there was plenty of production, and that situation may not have arisen just at once, but certainly the theory was there, and it was a sound one. Then the evil of the chain store selling of milk was brought to our attention as well. There are two chain store organizations in the city of Calgary, and one in the city of Edmonton; and it was alleged to us that one at least of these organizations was taking advantage of the demoralized distribution and was selling milk at a low price, largely to attract other customers to its stores.

*By Mr. Factor:*

Q. What do you mean by chain stores?—A. Are they stores dealing exclusively in milk?—A. No.

Q. Departmental stores?

*By Mr. Sommerville:*

Q. Food stores.—A. General food stores, Mr. Factor. The practice of selling milk, or any other commodity, for that matter, at a low price to attract

other custom is sometimes—and perhaps properly so—referred to in distributing circles as the use of loss leaders. At the time our committee was beginning its inquiries—

*By Mr. Factor:*

Q. You mean the milk is used as a loss leader?—A. Milk was used as a loss leader.

Q. A loss leader in these chain food stores?—A. Yes, that is right. When we were conducting our inquiry, this particular system of stores was selling regularly at two cents under the wagon price, at one to two cents under the prices of other small stores, and at times were going so far—

*By Mr. Young:*

Q. You say wagon price; that means delivered price?—A. Yes.

Q. Delivered to the door?—A. Delivered to the door, commonly called the wagon price.

*By Mr. Sommerville:*

Q. Two cents a quart under?—A. Yes, two cents a quart; and one to two cents under what other small stores were selling for; and from time to time virtually giving milk away in conjunction with other sales, such as fruit—I want to be guarded now, I don't know what other commodities they used—but they did do that.

*By Mr. Factor:*

Q. Give them away freely?—A. Yes, give them away—well, that is a figure of speech; they either give them away or sell at a loss price.

*By Mr. Sommerville:*

Q. Do you mean that the process is this, that if you bought say a dollar's worth of goods, you got a bottle of milk?—A. Yes.

Q. For two cents?—A. Yes. I wish I had got the particulars of that, but they are very easily available. I think they used breakfast food a lot.

Q. Perhaps on your return, you could have someone furnish the committee with the information?—A. Very glad to do that.

Q. By the way, Mr. Frawley, the Alberta retail merchants propose presenting their case to this committee a week from to-day, and if you could get into communication with them and ask them to have that material available, it will supplement this.—A. I will ask Mr. McKay.

Q. Thank you.—A. Let me say just this in connection with the loss leaders, that public utility control of milk has entirely eliminated the loss leader in the merchandising of milk in Alberta, because our price fixing orders specifically prohibit it, and there has been none here directly our orders came into effect.

*By Mr. Factor:*

Q. Will you elaborate on the term "public utility control"?—A. Yes. This is what we did—and perhaps I should explain that the statute proceeded at once to amend the definition of utility in our general utility act by adding these words: "Public utility includes any plant, premises, equipment, service or organization for the production, processing, handling, bottling, distribution, supply, delivery, keeping for sale or the sale of milk, including products thereof in a liquid form." Then the board is given other powers. Having got milk as a public utility, then the act proceeds to give the board jurisdiction to do certain things.

*By Mr. Senn:*

Q. You read that over rather rapidly; is that broad enough to include the farmer distributor?—A. Yes.

*By Mr. Sommerville:*

Q. Production and distribution?—A. "Any plant, premises, equipment, service or organization for the production, processing, handling, bottling, distribution, supply, delivery, keeping for sale of the sale of milk." It is practically, word for word, the Manitoba definition.

Q. And it really was aimed at the farmer distributor—perhaps not aimed at him, but it was really brought about through competition of the farmer?—A. Perhaps the immediate cause was the pedlar who came in selling his milk at cut rate prices.

*By Mr. Kennedy (Winnipeg):*

Q. In fixing your price of milk, was there one fixed price for the wagon and not for the chain stores or was there any latitude?—A. What I thought I would do was file two orders now in existence, the Calgary order and the Edmonton order. I thought I would keep them for a moment, because I might have to refer to them. They very fully set out the prices; it is all divided up into schedules, and when I come to that I will glance through the order with you. Dealing with the set-up, as a result of legislation the board was given jurisdiction to hold hearings, and to prescribe—after having heard the evidence and come to some conclusion, they were then empowered to prescribe the areas wherein their regulations would have effect; and I may say at the moment there are only orders in the cities of Calgary and Edmonton. There are applications pending from Lethbridge and perhaps from Medicine Hat; but in any event, at the moment there are only orders in Calgary and Edmonton.

Then, they have power to require all persons who produce and distribute and keep for sale and sell, to have a licence. I may say at once that is something which the board has not yet done, but speaking for the chairman of the board, perhaps—I have been counsel to the board in connection with milk since this legislation—I think very, very likely there will be a system of licensing set up. If I might elaborate on that, the reason for it is this: otherwise we are left to prosecuting for infractions in the police court. If we have a licensing system, we can accomplish much more, and not be subject to the temperament of magistrates. We can simply withhold their licence, if we have good reason.

*By the Chairman:*

Q. You have power to license?—A. Yes, we have power to license. And I might say this year the act is being strengthened somewhat, to give the board a little better power in connection with licences, refusing licences.

*By Mr. Factor:*

Q. That is a provincial licence?—A. Entirely provincial.

Q. Do they require a municipal licence?—A. That is to enable them to sell milk at all. They have to have a municipal licence. That directs itself entirely to a public health matter.

Q. Now they would have to obtain two licences, a municipal and provincial?—A. Quite. Ours would be the public utility licence you can call it, if you like just a remark now under the power to fix rates; probably if I read this particular paragraph, because it is perhaps the central feature of the legislation; it will be better. It reads: "That the board shall have power to make regulations, notwithstanding anything herein contained, to approve or

establish from time to time schedules of minimum rates at which milk shall be supplied by the respective classes having regard primarily to the interests of the public and to the continuity and quality of supply, and in so proceeding the board shall not be bound by any rule of law or public utility practice to see that any rate of return is provided on any plant, equipment or investment in excess of the actual value thereof for the time being."

The Board of Public Utilities in Alberta had hearings in the summer of 1933 in the cities of Calgary and Edmonton and they promulgated orders shortly following conclusion of those hearings; and taking the Calgary order, which seems to be a little better drawn than the other one, the conditions that it provides, briefly going through it, are as follows: First, the price to the producer of \$1.95 per 100 pounds, that is 3·6 butter fat standard. That is what he gets for his sweet milk. Then, of course, he is faced with taking a surplus price for everything that is not used as sweet milk.

*By Mr. Heaps:*

Q. Might I ask what the butter fat content is to the consumer?—A. It varies. The distributors have been elaborating somewhat. They are putting out 3·6 milk; they are putting out jersey milk; they are putting out 5 per cent homogenized milk, and putting out a special nursery milk; but it is paid for on the basis of 3·6, and everything that tests above that is paid for accordingly.

Q. What I wanted to find out was what the consumer gets, 3·3 or 3·6 or what?—A. It depends on what he pays for it. If he pays 10 cents, he gets 3·6 or 3·7 milk; if he pays a little more he will get jersey milk, 5·2, and so on.

*By Mr. Senn:*

Q. Are those rates set by the board?—A. Yes, I am reading from the order of the board, this board's order fixing that rate, and they are departed from under penalty on violation of the board's order, of course. The next classification is prices to be charged by distributors and stores; and we find that the wagon price for milk, following upon \$1.95 per 100 pounds to the farmer, is 10 cents a quart and 6 cents a pint; that is the wagon delivery price.

*By Mr. Factor:*

Q. 3·6 butter fat?—A. 3·6.

*By the Chairman:*

Q. What is that again, the price?—A. 10 cents a quart and 6 cents a pint.

*By Mr. Young:*

Q. Bottled, I suppose?—A. Bottled and delivered on the doorstep. Jersey milk is 12 cents a quart and 7 cents a pint; nursery milk is 12 cents a quart and 7 cents a pint.

The next classification is prices to the stores from the plant. What we started, and are still doing, we scaled down the price, having in mind what the store uses, and what that means to us. When the average daily sales of a store do not amount to 10 quarts, then he shall pay not less than the wagon price, that is to the distributor. To stores whose average daily sales amount to not less than 10 quarts and up to 30 quarts, they pay 9 cents per quart and 5 cents per pint. What he sells for is his own business. Our rates are minimum rates. I am going to cover minimum prices for you in a moment. To stores whose average daily sales are 30 quarts or more, they pay 8 cents per quart and 4½ cents a pint. Let me say at once that there is a case which is rather interesting; that in Edmonton—this is the Calgary order, it is a different thing altogether. The

store situation is not an evil there; there are no chain stores, or were no chain stores or any other kind of stores, as a matter of fact, cutting prices of milk. So in Edmonton, strangely enough, the price which the store charges is the wagon price throughout.

*By the Chairman:*

Q. Which is charged to the store?—A. No, it is charged by them.

Q. By the stores?—A. By the store to the consumer.

*By Mr. Sommerville:*

Q. In other words, there has been no price cutting by stores in Edmonton?—A. Even more than that. It seems that stores in Edmonton can charge more, and the people are satisfied. It raises an interesting question as to whether or not people should not pay more in stores because they have the accommodation of going at all hours of the day.

*By Mr. Senn:*

Q. Of course, those stores distribute; I suppose they really distribute the milk, don't they?—A. The store?

Q. Yes, it is carried out with their delivery order; people do not go and get it?—A. Of course, chain stores,—they all go and get it. That is something we considered when we were looking into it. Sometimes the corner grocery store will deliver milk. I think he just absorbs that delivery cost. Now then, the price of the stores to the consumer—dealing still with Calgary—the price of the stores to the consumers for milk sold by the store and carried away by the customer was the same as the wagon price, 9 cents per quart; so that they must charge not less than 9 cents per quart to the customer who comes into the store and takes it away with him. The milk delivered by the store to the customer must be not less than the wagon price. The cream prices there just varies with the milk price in a sense, but the prices are all fixed to the consumers; but if you are interested I will give you this, I will be glad to file these orders with the committee.

The CHAIRMAN: I wish you would please.

*By Mr. Sommerville:*

Q. Then the store and the wagons are to be on exactly the same basis as to the price delivered to the home.—A. That is right.

Q. These cash-and-carry system stores may sell for a minimum of 9 cents, but there can be no price cutting below 9 cents.—A. That is right.

Q. There can therefore be no loss leaders.—A. We do more than that, in our order we go further than that, we say, no sale or offer to sell milk, or agreement shall be made in combination with the sale of or the offer for sale of any other commodity; and there shall be no rebate on the price fixed by any order of the board; and that restriction, gentlemen, is not just on the rebate, but we say the giving of milk or cream, or any other commodity without charge, or the giving of tickets exchangeable for milk, cream, or any other commodities.

*By Mr. Factor:*

Q. Does that apply to restaurants?—A. No, we do not endeavour to fix the price to restaurants, or to fix the price which they shall charge. The fact is at the moment that we have only had to prosecute one distributor—some distributors are in the habit of selling twelve tickets for the price fixed by the board for ten, that is one difficulty we have met; and his solicitor pleaded that he was not selling twelve tickets, he was selling ten tickets and giving two tickets away. I am afraid the magistrate agreed with him, so we had to appeal.

*By Mr. Factor:*

Q. Were the penalties quite substantial?—A. You will find that in the copy of the Act which I have filed with the Committee, essentially the penalty is “shall be liable upon summary conviction therefore, to a penalty of not more than \$250 and costs for every day during which any product has been so sold by him.”

*By Mr. Kennedy (Winnipeg):*

Q. Have these orders been challenged in the courts?—A. Oh, yes, there is the case I was just speaking of a moment ago, where we had to prosecute one man and the magistrate seems to think he was right.

Q. Then the question of validity has not been raised?—A. The question of validity was raised in that case and also the constitutional aspects of the question.

*By Mr. Edwards:*

Q. It is presumably then within the right of the province to fix the retail selling price on this product?—A. When I say it is presumably I went so far as to read the Board of Commerce case (1922—1—A.L.—191) *re* validity Board of Commerce Act (9 and 10, Geo. 5, ch. 37); Combines and Fair Prices Act (9 and 10, Geo. 5, ch. 45). My opinion may not be worth very much but I have not much doubt that the province has the power to fix the price of milk, and for that matter anything else in the province.

Q. They found it very satisfactory to have honest prices, and to get rid of cut-throat prices?—A. That is our whole experiment, and much of the success of this experiment is the benefit of our experience in price fixing. Perhaps I could break in now to say that this passage was contained in the Speech from the Throne in the provincial legislature which opened on the 8th of February; after the formal recitals and the present state of the province, and proceeding with the indication of the proposed legislation the Speech from the Throne went on to say: My government will propose that the principle of this legislation be extended to other products and to the distribution of other commodities in order that unfair competition may be avoided, that prices to producers may be stabilized, that fair wages may be paid, and the price to the consumer may be maintained at a just and equitable level.

*By Mr. Factor:*

Q. You said that the validity of that Act had been challenged in the police court?—A. Yes, I did.

Q. What happened?—A. The magistrate disagreed with us and held that it was unconstitutional.

Q. Yes, I see?—A. But I will be guarded in what I say because there are many newspaper men behind me and I do not want to be given too much attention.

Q. Did you appeal that?—A. It is in appeal now: 24 hours after he did that it was in appeal.

*By Mr. Young:*

Q. Can you tell us how many quarts of milk there are in 100 pounds?—A. There is either 38·8 or 40, I think it is known as 38·8 principally; the small distributor calls it 40 but the big distributor, who buys a little more carefully, calls it 38·8.

*By Mr. Senn:*

Q. According to the excerpt you have just read from the speech from the throne, the object of this legislation is to regulate prices to the producer?—A. No, I think they go further, Mr. Senn, perhaps I should read it again; it says,

"My government will propose that the principle of this legislation be extended to other products and to the distribution of other commodities in order that unfair competition may be avoided, that prices to producers may be stabilized, that fair wages may be paid, and that the price to the consumers may be maintained at a just and equitable level."

Q. At least that is one of the provisions?—A. Yes.

Q. And I presume it regulates the amount of surplus milk that is to be paid for to the consumer; have you any jurisdiction over that?—A. The plants do, of course.

Q. Without any inspection?—A. At the moment without any interference by the board. I should perhaps say this, that recently the chairman of the board made a rather instructive address to the Alberta Dairymen's Association, or something of that sort, and he went into that; first he gave an account of his stewardship and he made the statement that the effect of the orders had been to give producers a considerably higher price for their products, although I am quite aware, he says, that some of the producers would tell you that they have not benefitted to any appreciable extent from these orders of the board; this board has investigated some of these complaints and I am convinced that in those cases the complaint has generally arisen by reason of the way in which the average surplus is arrived at; the method adopted by various distributing concerns in regard to determining this average vary and sometimes these methods are so complicated in their working out, that they are almost sure to give rise to dissatisfaction. It should be possible for a fair and reasonable method of arriving at these averages to be evolved by agreement between the interested parties, but if not, it will be just one more problem for the board to deal with.

I have no doubt that with our legislation we could send a technical man into the plant and study the question of surplus payment.

*By the Chairman:*

Q. Will you state briefly how it is now done at the plants?—A. I wonder if I should not retreat from that, Mr. Chairman, because it is very, very complicated. Put very, very roughly and generally, the farmer is paid city sweet price, \$1.95, for the milk that goes into the bottles to be distributed to the trade, and he is paid a surplus price for anything else which the distributor has to sell to the churning department, or to his buttermilk department, or to his cheese department. Now then, the manner in which this is arrived at is: the farmer brings in say 1,000 pounds of milk in a two-week period, and of that quantity 30 per cent would go into surplus and 70 per cent would get the higher rate.

*By Mr. Senn:*

Q. I beg your pardon, did you say his surplus would be 30 per cent?—A. I am just taking a hypothetical case for purposes of illustration, in this particular case it might run 30 per cent and 70 per cent. We have found cases where it was half and half. In some plants, in 1932, in some plants in Calgary and Edmonton.

*By Mr. Sommerville:*

Q. That is, before the legislation was passed, you found it running fifty-fifty?—A. Yes. The advantage of the legislation, I suppose, is that the evils of the cut-throat competition was reduced and as a consequence the large distributor could sell more milk, and then, of course, he could pay a bigger price on the city sweet, and that would give a higher price to the farmer.

*By Mr. Factor:*

Q. And if he sells more milk there is less surplus?—A. Yes, if he sells more, there is less surplus.

*By Mr. Senn:*

Q. Yes, Mr. Frawley; the great difficulty as shown by our investigation last year was the amount of milk the distributors took in for fluid purposes, and if they got too much milk, the percentage paid for as surplus would be greater. You say in your case it amounted to 30, 40, and in some cases, to 45 per cent? Have you any system of contracts there between the distributor and the producer?—A. No, it varies.

Q. I understand that the Province of Alberta has zones outside of which they do not take milk for distribution in points like Edmonton.—A. Yes, in Edmonton they have no zone, but I believe that principle applies.

*By Mr. Kennedy:*

Q. Might I get this point clear, have you any organized system for the supply of milk by the producer to the distributor.—A. None at all.

Q. That is left entirely to them.—A. Yes.

*By Mr. Senn:*

Q. Does not that nullify very largely the effect of the legislation, so far as the producer is concerned?—A. No, the producers have got to find some remedy for that. They should control their production of milk more. All of these multifarious questions come in to it. As I say, our board is just an experiment and I think it is a very successful experiment, but I do not think it has cured all the troubles in the milk business.

*By Mr. Sommerville:*

Q. It has not cured production problems, you are dealing only with distributing?—A. Largely, we have gone after it from the distribution end.

*By Mr. Boulanger:*

Q. You are of the opinion that there should be central shipping stations, I suppose?—A. Yes, that was talked about, we had hours and hours of evidence presented on that in our hearing. As I recall, he will be privileged to keep his surplus at home, but some of the distributors said they wanted that surplus to come in. They did not want the farmer to separate his milk, and sell it as cream in competition with the distributors, and I think our answer to that is that that can be solved by the provision of appropriate orders, and by their proper enforcement.

*By Mr. Senn:*

Q. Do you not think, after all, with a man selling fluid milk at a considerably advanced price as compared with the producer who sells to a cheese or butter factory, that you are building up a rather preferred class?—A. Well, we have heard that too, Mr. Senn, and I think undoubtedly, they are entitled to something more; how much more is the problem.

Q. I know, but within a definite area, how are you going to keep these bootleggers out of the market—that is what they are called, I believe.—A. By enforcing legislation. We have an inspector in Edmonton now, and also in Calgary, a full time inspector, who does nothing else but see to the enforcement of our orders by visiting producers, distributors, householders, plants and stores; and to the best of his ability, he sees to the enforcement of the board's orders. I think they are doing it very successfully.

Q. Then there are really two classes of farmers; one who happens to be able to sell milk to the distributor, and one who is outside of that.—A. Oh, yes, that distinction is there, of course; but the one has to maintain strict health conditions, and conform to requirements, which are more exacting than those required of the man who ships cream, he does not have to live up to them.

Q. And then with that man who has his stables under inspection, and who has to live up to sanitary regulations, and so on, do you exercise any control over where he sells his milk; you do not make it compulsory for the distributor to buy his milk?—A. No, he either sells his milk at the plant or he can get a little wagon and sell it himself; but he has got to sell his milk in conformity with the board's orders.

Q. He has to sell it at the board's prices, so long as he does that, there is no restriction?—A. No, so long as the board's orders are conformed to, it is open for everybody.

*By Mr. Sommerville:*

Q. What you have fixed is a fair price?—A. We brought the small peddler up, he was selling it at 8 cents, and we brought him up to 10 cents.

Q. May I just ask you at this point; having fixed a fair price for the sale of the commodity which meant a fair price for the merchant who handled it, that tended to ensure fair wages to those employed in that industry?—A. As a matter of fact the price we picked was the price as it then was, and we did not break any new ground in the matter of fixing those prices.

Q. Then, you prevented the bringing down of prices?—A. exactly. We stabilized what we had.

Q. And that meant that you prevented the breaking down of fair wages and fair conditions of trade?—A. Right, because at the big plant they are operating—I have no brief for anybody—you will understand that—but the big plant has certain employees to whom they pay certain wages, and they have to operate in competition with the man who has all of the work done—production, distribution and everything—by his family. Now, that is a problem, of course, and to meet that we simply insisted that the family producer and distributor brought his price up in fairness to everybody concerned.

Q. The family would benefit by that?—A. Yes, and I think I should say this, the reason for many of the orders issued by the board were to intervene to prevent the chaos, the ruinous prices, and the chain-store selling which was demoralizing distribution, and we had to frame our orders to meet those conditions at the outset. We are now making an audit in the plants of the distributors, we now have our auditors in one of the largest plants in Edmonton, perhaps the largest plant in Alberta, and a thorough audit in respect to that firm is practically completed. When we have all of these big plants properly audited, then we will know whether the orders we have made go far enough, or if they go too far. In time the board will have completed these audits, and then they can revise their regulations more intelligently than we were able to at the outset, when we were fixing these orders.

*By Mr. Senn:*

Q. But at the present time you do not exercise any control over the amount of surplus milk?—A. In all fairness to the board, and in answer to that question, I should say that the chairman of the board is a vigorous man, he has the government behind him, and I think undoubtedly, if this surplus continues to give dissatisfaction, that he will put a man in these plants, and set up an arbitrary system.

Q. Have you producers' associations there?—A. Yes.

Q. Do they co-operate with the distributors?—A. They carry on negotiations about this surplus.

Q. They have no say about the setting of prices, you don't take them into consideration?—A. I should say we do. The producers as well as the distributors, appear there at the hearings of the board.

Q. The board, then, is really a board of arbitration between the distributors and the producers, particularly with regard to the setting of prices?—A. Well, I can only say it is a public utility board, and it follows the practice of public utility boards.

Q. That is really what the committee on agriculture and colonization recommended last year, was it not?—A. Your committee?

Q. Yes.—A. That there should be public utility control.

Mr. SOMMERVILLE: A board of control between producers' associations and distributors in cases of disagreement with respect to prices. I think the sense of the committee rather contemplated regulations through an organization similar to the grain board.

The WITNESS: You mean a provincial board?

Mr. SOMMERVILLE: No, a dominion board.

Mr. SENN: No, it was to be a provincial board; it was a board to be appointed by the provinces, I have not got a copy of that report here.

The WITNESS: Mr. Kennedy got this report for me, and I find this at page 562 of the Journals of the House of Commons, Vol. LXXI, 1932-33: "Producer's Share of the Consumer's Dollar; the matter of a just share of the consumer's dollar as it relates to the distributor and the producer, is important to the conduct of the milk business. That each should receive a just share as a remuneration for his efforts is recognized, having due regard to the consumer's interest."

"Our investigation has thrown considerable light upon this problem, in as much as it shows conclusively that the producer's share has decreased very substantially during recent years.

"Such evidence as was directed to the point leads your Committee to the conclusion that the producer is not receiving an equitable share of the money paid for milk by the consumer.

"The milk distribution business is made possible by the industry and investment of the primary producer and it is the opinion of the Committee that the primary producer is entitled, at least to a much greater share in the ultimate proceeds of the sale of this product."

*By Mr. Factor:*

Q. I notice that your Act makes provision for legislation being extended to the prices of other commodities as well?—A. Yes, Mr. Factor, that has not been made use of to date, and it is a matter of speculation as to what form the extension would take. The reference in the Speech from the Throne as to the form it will take just mentions other products; beyond that I am not in a position to make any statement at the moment.

Q. But you will have this legislation, which entitles you to control the price of practically any commodity?—A. Limited though to the condition precedent, which is very definite: "Upon it being made to appear to the Lieutenant Governor in Council that any food products grown, produced, processed or manufactured in Alberta is being offered for sale by retail in Alberta, at a price so low as to be calculated to jeopardize the continuity of sufficiency of the supply thereof, or to embarrass the legitimate operations of persons engaged in the production, processing, manufacturing, or distribution thereof." I mean, there is a condition precedent there and it is therefore limited by that.

Q. If that condition prevails, you have legislation which enables you to control prices within that restricted area.—A. An order in council may be made by the Alberta government directing the board to take on that extra work.

*By Mr. Sommerville:*

Q. As long as business proceeds in legitimate channels and shows no unfair tendencies, you do not interfere.—A. That is right.

Q. But when those unfair tactics appear—A. Yes.

Q.—and they are likely to interfere with continuity of supply or the activities of those engaged in the business, you interfere?—A. Yes.

Q. Or, rather, you have the power to interfere?—A. And I think this is the situation which was found when the board was set up in the spring of 1933.

Q. After a full inquiry you adjudicate upon its primary principles, and when you have found those conditions do exist, the board acts, under its orders?—A. Yes.

*By Mr. Factor:*

Q. Up to date you have only utilized it in the milk industry?—A. Yes.

*By Mr. Edwards:*

Q. In those commodities, I presume you refer entirely to farm products. You say manufactured products in some cases, something like manufactured farm products, flour or something like that.—A. Yes.

Q. That is right?—A. Yes.

Q. Not a general manufacturer?—A. No. This section, which has never been utilized, was directed primarily to the control of the sale of those kinds of food products, "grown, produced, processed, or manufactured in Alberta." That is all.

*By Mr. Sommerville:*

Q. Sold in Alberta, of course.—A. "And offered for sale by retail in Alberta at a price so low as to demoralize—" and so on.

*By Mr. Kennedy (Winnipeg):*

Q. I should like to touch upon this further point. In the event of a farmer having a large surplus of milk available, for distribution, would you suggest your board contemplates controlling that production?—A. No. It might make an order that something more than what is being paid now for that surplus be paid, something more than the premium over the butter fat price; that is about all.

Q. They do not contemplate controlling who shall produce milk or who shall not?—A. The answer is that the power by legislation is given them to do that. One of the powers given to the board is: "to require all persons to produce, distribute, keep for sale or sell milk in any such area to be authorized by the board so to do, and to fix the terms and conditions upon which such authorization may be obtained."

Q. I want to get that clear. You suggest then, that your board has, under that legislation, power to say to a farmer who shall produce milk and who shall not?—A. I do not want to go too far. There is the section. It is a question of what it means, how far we can go.

Q. This is not a legal argument. I do not want a legal argument. I want to know if that is what your board had in contemplation?—A. The board has never gone into that.

Q. Is that what the legislature had in mind?—A. Then, it does become a legal argument. It might be said to go so far as to prohibit the production. We are getting into such large language there—

Q. It is very important?—A. It is important, quite. But it has never been done. That is my limitation; I do not want to get too far into the field of speculation.

*By Mr. Sommerville:*

Q. The principle, so far, has been not to interfere with the regular production?—A. That is true.

Q. Only to fix the price of purchase and price of resale?—A. That is true.

Q. If certain conditions that are vicious are found to exist?—A. Yes. I say, Mr. Sommerville, there are men producing milk now not economically; they are not getting rid of their poor cows. This is only an opinion; it may be that the board could do something about that, I do not know.

Q. I do not want to interfere with you in your procedure. Will you just proceed?—A. Perhaps I should just say this, and that is all. There has been another feature of milk and the sale of milk in Alberta, that is a problem; and representations have been made to the board with regard to this matter. I refer to the sale of tinned milk or canned milk. The board at the moment has not done anything about it, because they would have to resort to power under the subsection that has not yet been used; but I do wish to say something about it here, because it is a problem and it involves too, the question of chain stores.

Q. competition from canned milk, sir?—A. Competition from canned milk. Now, there were sold in 1933 in Alberta condensed, evaporated and powdered milk to the total of 219 cars, approximately 90,000 cases, 50 cars of which came from British Columbia, and the balance from eastern Canada.

*By the Chairman:*

Q. Did you say 50,000 cases?—A. 90,000 cases in 219 cars.

*By Mr. Senn:*

Q. Would that be used mostly in large centres of population or in lumber districts?—A. No doubt that a lot of it goes up to the north and used there.

Q. In the mines?—A. Yes.

*By the Chairman:*

Q. It is sold, of course, in the cities?—A. Sold right in the cities. I will just deal with that. This is really why I am mentioning it. I have some information here with regard to the price to the chain stores of this milk. It should be verified; it can easily be verified by this committee.

*By Mr. Sommerville:*

Q. The canned milk?—A. The canned milk. I am just dealing with canned milk to round out what I am saying. The factory price to chain stores per case of 48 tins of this milk is \$4.25 less 2 per cent, or 8 $\frac{2}{3}$  cents per tin. The wholesale price to an individual grocery store for resale is \$4.55 per case or about 9 $\frac{3}{4}$  cents per tin. Those are my own calculations; I think they are about right.

Q. \$4.55?—A. \$4.55, or about 9 $\frac{3}{4}$  cents per tin.

*By the Chairman:*

Q. 9 $\frac{3}{4}$  cents?—A. Yes.

Q. What was the other one?—A. 8 $\frac{2}{3}$  cents per tin.

*By Mr. Young:*

Q. Are these sold by the same party in each case? Does the same man supply the chain stores and the individual stores?—A. It is a milk company. I am referring to a brand of milk tinned somewhere near Vancouver, in the Fraser valley, I think. It is sold to the chain stores through a broker; it does not go through an ordinary jobber or warehouse, it goes through a broker.

Q. Do they sell to the individual storekeeper in the same way?—A. No, the individual storekeeper has got to buy it from the jobber.

Q. From the wholesaler?—A. From the wholesaler. He does not get the factory prices. On many occasions in Calgary, chain stores and department stores have advertised and sold 3 tins of this milk for a quarter.

*By Mr. Factor:*

Q. Cost price?—A. That is  $8\frac{1}{3}$  cents per tin, or in other words, one-third of a cent below their own costs and almost  $1\frac{1}{2}$  cents below the small stores cost.

*By Mr. Young:*

Q. Regular prices?—A. No. I have seen one—one was given to me the other day in Calgary, milk eleven, which is probably eleven cents. That is, I suppose about ruining prices.

Q. That is a loss leader?—A. That is a loss leader. Now, there is an example of it here that I want to bring to your attention. It is really worse than that. On the 10th instant, in Calgary, one of the leading departmental stores advertised 4 tins for 31 cents.

*By the Chairman:*

Q. The 10th ultimo?—A. 10th January—10th February, this is March now.

*By Mr. Factor:*

Q. Four for 31?—A. Four for 31, or one cent under the cost, at least, that I have given you. Now, as I say, I want to be guarded. These costs are given to me, and they are reliable, or I would not give them here, but they should be checked.

*By Mr. Factor:*

Q. Do you know how much the department store paid for that particular shipment that they sold at 4 tins for 31 cents?—A. No, I certainly do not.

Q. In any event, they must have paid less than  $8\frac{2}{3}$  cents.—A. Or more, Mr. Factor; I do not know anything about that.

*By Mr. Sommerville:*

Q. Your figures are based on very large purchases?—A. It is \$4.25 per case, less 2 per cent; of course, that is a large purchase.

*By Mr. Factor:*

Q. You think that is the lowest price it could be purchased at?—A. The lowest that my informant gave to me; the only one he gave to me, and he got it from a very reliable source, he assured me.

*By Mr. Young:*

Q. What is the source, the seller or the buyer; somebody else told him?—A. Yes.

The CHAIRMAN: Mr. Frawley, I think, has been very frank. He tells us he does not know this of his own personal knowledge. He states we can check it up; but he suggests from his experience and contact that that is a very common thing. Many business men, of course, know a thing without being able definitely to prove it. I think we can accept his word, and we will re-check this by an examination of the factory.

Mr. FACTOR: No one is doubting Mr. Frawley.

The WITNESS: No, but I have limitations, and I want you to appreciate them.

*By Mr. Senn:*

Q. Do you think that the canned milk trade is growing?—A. I would not venture an opinion about that, Mr. Senn. Let me complete it, when something is serious, it depends on what you mean when you say "serious". To illustrate this practice of using this canned milk as a loss leader, I have here an advertisement in the *Calgary Daily Herald* of Friday, January 5, 1934 (Exhibit No. 23), where this milk was advertised at three tall tins for 13 cents with the purchase of one pound of a certain brand of chain store tea at 37 cents. You can make your own calculations and it works out at considerably less than 8½ cents per tin.

*By Mr. Factor:*

Q. Loss leader?—A. Loss leader.

*By Mr. Young:*

Q. Which was he giving away, the milk or the tea?

Mr. EDWARDS: You cannot buy that tea at any other store.

The WITNESS: You cannot buy that tea at any other store.

*By Mr. Factor:*

Q. Was that a department or a chain store?—A. Chain, food store. Now then, I went a little further, or at least the people who are interested in this, and they broke down and analyzed that price in the light of the milk which they are selling, ordinary fresh market milk, and I would be glad to file this with the committee (Exhibit No. 24). It is a calculation, I presume, made by one of his technicians, and the result is that 2.6 quarts of milk, or what would amount to 2.6 quarts of milk, are being sold for 13 cents or 5 cents a quart; and the board's order is in Calgary, 9 cents.

Q. Is that a common occurrence in food stores?—A. Now, I am certainly going to say I do not know, Mr. Factor. It is given to me as an instance. You can take that for what it is worth. It might never have happened before, and may never happen again.

Q. It is more or less a form of advertising?—A. Surely.

The CHAIRMAN: It is well known that frequently milk has been used in the way that Mr. Frawley has described. It is quite common. I think we can take his evidence as indicating what is carried on in many cities; because I myself personally know of many instances such as this.

The WITNESS: The point I want to make is, we stopped it as far as ordinary market milk was concerned, but we cannot without taking further legislative powers, do anything with it.

*By Mr. Sommerville:*

Q. You say you have stopped it so far as raw milk is concerned?—A. Fluid milk.

Q. But you cannot?—A. Not under the present legislation.

Q. You cannot stop the canned milk at this competitive rate?

*By Mr. Factor:*

Q. Why; does not that clause 3 cover it?—A. I was going to say—

Q. Does that clause not give you authority?—A. Including the product from any local farm.

*By Mr. Sommerville:*

Q. It may be powdered milk?—A. Ordinary evaporated milk is local; it is condensed down to a small tin, about six inches high.

*By Mr. Factor:*

Q. I mean, the general clause, clause 3 gives you authority to regulate anything that is sold?—A. Three?

Q. Yes.—A. This particular product is made in British Columbia.

Q. You are talking about the province of Alberta, coming from there?—A. Yes. We have no condensed milk at all, but our canned powdered milk comes in from some other province. This present legislation is limited to what is produced, processed, manufactured in Alberta; but of course, as a matter of legislative validity, I do not suppose that we are bound by any such restriction as that. I think we could control sale by retail in Alberta of this milk even though it does come in from British Columbia.

Q. But you have not done so?—A. No.

Q. Why?—A. Well—I read you the speech from the throne, and you know what it said.

The CHAIRMAN: I think they have made pretty good progress for one year.

Mr. FACTOR: We are all going to do a lot of things these days.

*By Mr. Young:*

Q. How much milk is in these tins?—A. Here is the whole thing broken down and analysed. He says there are 2·6 quarts of milk in one of these tins.

*By Mr. Senn:*

Q. Has it the average butter-fat content?—A. It is guaranteed, yes. It contains guaranteed test of 7·8 per cent butter fat. My information does not permit me to say—

*By the Chairman:*

Q. What did you mean when you said in your evidence that there were 2·6 quarts of milk in the tin?—A. In the 3 tins that are sold for 13 cents.

Q. In the unit that was sold?—A. In the unit that was sold. Thank you very much. This has been worked out by this man at 5 cents a quart. I just want to say this. I do not know what question—

*By Mr. Young:*

Q. Just a moment, at that point. Is that what they put in the tin? Is that what was condensed to go in the tin, 2·6 quarts? They could not put 2·6 quarts into those tins?—A. No; they are little tins, evaporated milk.

Q. They have to add water to make it work out to that amount, to arrive at the same amount of milk as there was before?—A. Naturally he added water and so on.

Q. When sufficient water is added to those three tins to bring them back to the first content, 2·6 quarts, it is palatable, good milk?—A. I would not drink it.

The CHAIRMAN: It is excellent; I have lived on it for years. Of course it is good stuff.

Mr. YOUNG: Is it as good as fresh milk?

The CHAIRMAN: If you are familiar with it, you would just as soon have it as fresh milk. It is excellent stuff. I have used it for years.

The WITNESS: It is a good product, no question about that.

*By Mr. Young:*

Q. I am not speaking about the desirability of it. People use it as well as fresh milk?—A. It depends on the individual.

The CHAIRMAN: It is a question of taste.

The WITNESS: Yes.

The CHAIRMAN: It is very often prescribed by doctors to infants.

Mr. FACTOR: Mr. Spotton says he uses condensed milk too.

The CHAIRMAN: There is an advertisement.

The WITNESS: Now, I think I should say that my present information does not enable me to say to what extent the practice of using canned milk that we have been talking about as a loss leader has increased since the Utility Board's orders were made prohibiting the use of market milk as a leader, but there have been representations made to the board, and that is all I will say. I do not want to make any accusations at all.

*By Mr. Sommerville:*

Q. There have been instances recently?—A. Quite.

Q. Since the board's orders have been made?—A. Quite.

*By Mr. Factor:*

Q. February 10th?—A. No, January. Now, then, concluding, I think it can fairly be said that the public utility control of milk in Alberta has received the general approval of the various branches of the industry concerned.

*By the Chairman:*

Q. You are fairly well satisfied with the experiment?—A. That is a very good way to put it, Mr. Chairman.

*By Mr. Young:*

Q. What do you do with your skim milk product?

The CHAIRMAN: Feed it to hogs.

The WITNESS: Sell it back to the farmer at about—I cannot carry that in my mind.

*By Mr. Senn:*

Q. Do you regulate prices at all of the by-products, Mr. Frawley?—A. I have not heard of an endeavour to do that. You say "by-products"?

Q. I mean offal and skim milk.—A. No, we have not, but we could do that very easily. It does not bulk large in the business. One distributor in Calgary started to sell out his skim milk—he was selling at about 4 cents a quart, if I remember—.

Q. There is butter milk.—A. I think butter milk is in the board's order; here, it is right here.

*By Mr. Young:*

Q. What about this man trying to sell skim milk?—A. I think he stopped it.

Q. Why; there is nothing against him selling it?—A. No.

Q. You do not forbid it?—A. No.

*By Mr. Kennedy (Winnipeg):*

Q. Will you clear up that point for me? In connection with the milk that is treated as surplus milk, paid for at a different price, does your board control in any way or determine in any way what will be treated as surplus milk and what will not, in other words?—A. No.

Q. In other words, here are two producers of milk in a community delivering milk to the distributor. It is left to that distributor to bargain with them

as to what portion of their milk will be paid for as surplus milk and what otherwise is it?—A. Yes, perhaps it is, but it is uniform; the practice is a uniform practice to all people who ship.

Q. Yes, I know, but your board does not control that?—A. At the moment, no.

Q. Prior to the introduction of your legislation in Alberta, did the producers have what might be called a producers' association, in the attempt to stabilize prices?—A. Yes, and still going strong.

Q. Still?—A. Yes, it has not interfered with—it has not taken over the function of the producer, as I said. My opinion—and it is not for me to say—but I think a great deal can be done by a strong producers' organization in regulating production.

Q. Was it the practice for the producers' association to have discussions with the distributors fixing a price, what would be paid for the milk?—A. Yes, a seasonal practice.

Q. And still is done?—A. Yes—no, the board now comes and says that shall be the practice.

*By Mr. Young:*

Q. You pay \$1.95, or at least your order requires that you pay the farmer \$1.95 per 100 pounds which figures out at about 5 cents a quart, and the retail price is 10 cents a quart; you never looked into the spread there, did you, to see whether that is a fair spread?—A. We have spent many long hours going into the question of spreads. The policy the board adopted, being required to make an order, was to stabilize the existing conditions; and as I said before, now a thorough-going audit of distributors is being made under the direction of the principal auditors' office. These reports are being filed with the board, and as I say, gradually more or less intelligent orders—I use that word for want of a better one—will be made with respect to this question of spread. But perhaps it is fair to say from what reports the board has got in from the audit, and they only affect one side, there is no profiteering going on. I think it is fair to say that.

*By Mr. Sommerville:*

Q. And in the public hearings that precede the fixing of any order; I observe that your legislation provides that the amount of return to the distributor shall be based upon the then existing value of his building, and not upon any previously set capital structure of the company?—A. That is right; and perhaps if I just simply say, or refer to what the chairman of the board said about that matter—

Q. May I just ask, after your reference would you be good enough to let us have a copy of the chairman's address, because there may be matters of interest in it?—A. Yes. It was a very good speech. I don't think he would mind my giving it to you at all, Mr. Sommerville.

He says that about this: "The board is not bound to see that any rate of return is provided on any plant in excess of the actual value thereof for the time being. It would appear therefore that for the purpose of this particular part of the act—meaning as distinguished from this general body in which they fix telephone rates, gas and water rates, but under the particular part of the act—the board will have to follow rather the principle of reproduction costs less depreciation and not prudent investments."

*By Mr. Factor:*

Q. You have not really investigated the spread of prices between the producer and the distributor?—A. Oh, it would not be fair to say that. We have investigated. We have questioned thoroughly distributor after distributor and

we have had the benefit of counsel for the consumer, counsel for the distributor, all through, inquiring into this question of spread.

Q. And your conclusions are arrived at that the spread between 5 and 10 cents a quart is a reasonable one?

Mr. SOMMERVILLE: It was not between 5 and 10 cents.

The WITNESS: That is commonly called the spread; the price paid to the producer per quart, and the price paid off the wagon, that is referred to commonly as the spread, for want of a better term.

*By Mr. Factor:*

Q. There is the difference; 5 cents a quart for the producer and 10 cents wagon price.

Mr. EDWARDS: What about the surplus?

*By Mr. Factor:*

Q. What about the producer?—A. The producer does not get 5 cents a quart for all his milk. Oh, no; that depends on the surplus again. But you asked me whether we are satisfied that is a fair spread. I might say again the orders of the board were made as of necessity to stabilize the chaotic situation, and not until all these audits, thorough audits, are submitted to the board, will we be able to say definitely if it is fair spread.

*By Mr. Kennedy (Winnipeg):*

Q. Would you care to express an opinion as to just how this legislation has worked out from the producers' view? Has it stabilized production, or tended to stabilize it?—A. Well, I think that if the secretary of the producers' association were here, he would say that the legislation has been of benefit to the producer; but with still great surplus in the plants. As Judge Carpenter has said to this convention, he hears complaints that the board's order has not increased prices or has not bothered, and he says when he investigates this case he finds it is a case of this great surplus that is going on, because after all he is levelled off in his fortnightly pay cheque; he is levelled off considerably by virtue of the price that is paid to him for his surplus milk, and if it is then running 50 per cent or more, it is going to bring it down below.

Q. It is a very interesting experiment from the producer's point of view?—A. Yes.

Q. In your view, has that improved the price generally that is existing for his products, because if it is so working out, it is a very important piece of legislation?—A. Yes. I think in fairness, if to no one else by myself, I should say that in the speech from the throne again the statement was made—I wish I had taken that part of it; it is downstairs in the committee journal—

Q. If you will allow me to interrupt, I would be much more interested in your view than what is contained in any speech from the throne?—A. Well, all right then. I think I would say that it has been a benefit to the producer, yes. I was going to talk about Mr. Cottingham; I would rather that he spoke for himself. He was in eastern Canada until yesterday, and it would be well if Mr. Cottingham could have come and talked to you.

*By Mr. Senn:*

Q. You exercise no audit whatever over the amount paid for at the contract price and what is paid for at the surplus price by the distributors?—A. We know we can go in and check up these fortnightly returns.

Q. That is to say, if a distributor is selling so much milk on the street as fluid milk, does the amount that he pays to the farmer for it correspond with what he is buying?—A. There is no question about that. I would not say there is the slightest question about that.

*By Mr. Sommerville:*

Q. That would be deliberate fraud?—A. That would be deliberate fraud.

Q. Of the board's orders?—A. And deliberate fraud of the producer; and we have never had any suggestion but that everything that goes into bottles for the retail trade or the wholesale trade, sold for fluid milk, that the producer is paid his full sweet price for that; no question about that.

*By Mr. Kennedy (Peace River):*

Q. You have not gone into the question as to whether or not the present prices provide a reasonable return to the producer on his investment, from the standpoint of investment and labour and so on?—A. Let me say this, that we heard a good deal of evidence on producers' costs, and we got as close to it as I think it is possible; it is a very difficult question, I need not say; but the price that we fixed of \$1.95, certainly seemed to the board to be a price which did take into account the reasonable costs of the producer.

*By Mr. Senn:*

Q. Is that \$1.95 laid down at the distribution plant?—A. It depends on whether they sell themselves or not. That is the price, of course, at the plant.

Q. That is the plant price?—A. Yes.

*By Mr. Heaps:*

Q. What was the date when this fixed price came into effect?—A. The board's order, August 9, 1933.

Q. Could you say whether, in the meantime, from the ninth of August until the present time, there has been any change in the production or consumption of milk; that is, the amount of milk that is being used?—A. I would be very glad—I could get those figures very easily. I personally, am not prepared to say, but those figures could be obtained; if they are not available at Ottawa, they could be sent down by the commission.

*By Mr. Kennedy (Winnipeg):*

Q. I presume these fixed prices are subject to change from time to time on application?—A. Oh, yes. I think there has been a change, as a matter of fact.

Q. This is relevant to the question of Mr. Kennedy of Peace River: in arriving at the price, you do take into consideration the cost of production, because if you come into a dry season with a limited grass supply, you will probably have an application for increased prices.—A. Yes. There is a difference in Calgary and Edmonton. The producers get a different price in Edmonton than they do in Calgary, a different situation, drier in climate.

*By Mr. Heaps:*

Q. Does the increase in the price of milk in any way tend to decrease the consumption, as far as you know?—A. That is a question. The fear was expressed to the board that by increasing the price beyond what it had been, it would decrease the consumption. I think it is fair to say that it has not.

*By Mr. Young:*

Q. I suppose your principal competitor is canned milk?—A. I would not like to give too much importance to the canned milk. I really don't know.

Q. If you raised your price, would people buy more canned milk?—A. I think they would be driven to canned milk.

Q. And if you lowered it, they would buy less canned milk?—A. I think so.

Q. Generally speaking the more of your milk you sell and the higher you charge, the more they will pay in British Columbia or eastern Canada?—A. That is true. The board's business is to have in mind the consumer and producer.

*By Mr. Sommerville:*

Q. The lowest producer gets the worst price in the country?—A. I think that is right.

*By Mr. Young:*

Q. The regulating feature is the price of canned milk, then?—A. Oh, no, that canned milk is just sort of a sore thumb, more or less. It will be dealt with.

Q. The price canned milk sells for really does not affect the situation?—A. I think many distributors would right up and tell you that it did, and get very hostile about selling three tall tins of milk for 13 cents. No doubt the distributor would submit to you a full answer about that.

*By Mr. Factor:*

Q. I am still puzzled on the spread. I want to check those figures; the price to the producer of \$1.95 per 100; that figures out about 5 cents a quart, is that right, using 38·8 quarts?—A. Using 38·8, yes.

Q. The price of the distributors, the wagon price is 10 cents per quart?—A. That is right.

Q. That is double?—A. Well, that is Calgary, using the Calgary order.

Q. I cannot get into my head this difference between 10 and 5 cents; why is there such a spread, between 5 cents a quart and 10 cents a quart?—A. Well, I don't know. Now you are getting into speculation. There are too many distributors is one reason.

Q. I would ask you to develop that; that is a very important thing.—A. I could discuss it with you at some length privately, and tell you what I think. I have heard about all these things; one big thing is duplication of distribution, having five wagons on one block in the morning and that sort of thing.

*By Mr. Sommerville:*

Q. Cost of distribution?—A. Cost of distribution.

*By Mr. Factor:*

Q. Let us have a little light on it—we will just discuss it—what your opinion is?—A. I think that is one large thing; that the cost of distribution takes too much, the cost of delivery; the cost of just even delivering takes too much of that 10 cents.

*By Mr. Heaps:*

Q. Is there bottling too; pasteurizing?—A. All that. One thing I would be glad to do, I would be glad to send you down from Edmonton the figures that were submitted at our hearing and laid down to decimals, showing what they paid for delivery, what they paid for bottling and pasteurizing.

*By Mr. Sommerville:*

Q. Would that be for breakage in bottles?—A. Yes, and how much for administration; that is something the distributor always counts.

*By Mr. Factor:*

Q. Would you get that?—A. Yes.

Q. That will account for some of the spread in price?—A. It will account for it.

Mr. SOMMERVILLE: It will break down the whole spread and tell us where it is.

*By Mr. Young:*

Q. Then at the same time, how much you lose through loss or breakage of bottles, bottles not being returned?—A. I would take a typical distributor and I will give you that basis.

Mr. SENN: That was entered into fully in the investigation last year before the agricultural committee, and it is all on file.

The WITNESS: There is a thousand pages of very interesting reading there.

*By Mr. Boulanger:*

Q. The orders which you have filed do not deal with the price of butter?—A. No.

Q. Or cream or ice cream?—A. No. It is what is called market milk, that is fluid milk sold by the trade as milk.

Q. I do not suppose you could tell us the spread between the price of factory butter and the retail price?—A. I am very happy to say I do not know anything about it at all.

*By Mr. Young:*

Q. Do you contemplate issuing orders authorizing this one to sell milk and that one not to, the producers?—A. The situation might develop where that would be required by way of revoking licences.

Mr. SOMMERVILLE: That would be by way of breach?

Mr. YOUNG: No, because there was too much coming on the market.

The WITNESS: If the board has power to revoke licences or cancel licences, I think you could say for any reason you thought sufficient.

*By Mr. Young:*

Q. If there was too much milk on the market you might find it necessary to say to a certain producer, "You quit."—A. That means for their own benefit, I suppose.

*By Mr. Senn:*

Q. Did you ever make any study of the British system at the present time?—A. The control?

Q. Control, pooling of all profits from butter and cheese and fluid milk.—A. No, I don't know anything about it. I am told it is very useful, that it would repay study.

The CHAIRMAN: Is there anything else you wish to ask Mr. Frawley?

*By Mr. Sommerville:*

Q. There was another matter on which you were going to speak to the committee while you were here, was there not?—A. Well, Mr. Sommerville, I did just mention very, very sketchily with the Chairman the matter of the slaughter sales of bankrupt stocks. I don't want you to think I am a Doctor Jekyll and Mr. Hyde, but there is a piece of legislation in Alberta called the Debt Adjustment Act, which relates primarily to farmers, but which contains part two, a separate part, which relates to retail merchants, and I have the very questionable distinction of being official referee under part two of the Debt Adjustment Act. That is a piece of legislation which has, of course, no validity whatever if it comes into direct conflict with the Bankruptcy Act, but as long as it does not come into direct conflict with the Bankruptcy Act we have been able to do, and we think we are doing a lot of good to the small retail merchant who finds himself crowded by his creditors—perhaps creditors

who do not understand, creditors who live in eastern Canada and out of the province and are somewhat unfamiliar, perhaps, with the situation. So we have, for some time been endeavouring, with more or less success, to keep the props under these retail merchants when they have an enormous amount of money out in the country owing by farmers which they cannot collect at all. As a result of that work, I have come in contact with some of these retail bankruptcies and as I say, I do not want to draw any conclusions; that is why I would rather say that I have not been able to obtain enough information on slaughter sales of bankrupt stocks to really warrant my saying much to you. There is an old saying that one swallow does not make a summer. So the problem—we have it here, we have it in Alberta; I suppose you can see much more in eastern Canada.

*By Mr. Factor:*

Q. A depression problem?—A. A depression problem.

*By Mr. Sommerville:*

Q. That is bankruptcy?—A. Yes.

Q. It is not one of these ordinary loss leader sales?—A. No—well, it is connected with loss leader sales in this instance, the case I have in mind, which is where a departmental store bought up a large bankrupt stock of a druggist who had failed, and put the stock in on the shelves at cut rate prices. But that is going on all the time.

Mr. BOULANGER: Ten cents on the dollar.

The WITNESS: The strange thing about that is, it happened that a man buying this stock of a dispensing druggist at very little on the dollar, started up again as a dispensing druggist.

Mr. FACTOR: Ought to have the creditor of that druggist given that information?

The WITNESS: There are a thousand things enter into that.

Committee adjourned at 12.20 p.m., to meet on Wednesday, March 7, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

WEDNESDAY, March 7, 1934

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The first witness to-day is Mr. J. S. McLean of Toronto, whom it will be recalled wired me as Chairman of the Committee the other day, and in that telegram he took exception to certain statements made by Mr. Laver in the evidence he gave before this committee on the previous day, and in that wire Mr. McLean—and, by the way, that wire was read before the committee and published in the records—, said: "I also respectfully request the opportunity at the earliest possible date of putting the facts officially before the committee"; and to reply to the statement by Mr. Laver regarding the employment by Canada Packers of two persons whom it was alleged were also on relief in the city of Toronto, among some 41 others. Will Mr. McLean please come forward.

Mr. J. S. McLEAN, called and sworn.

The CHAIRMAN: Gentlemen, may I just suggest again, you have been very good and have cooperated very well in the past, that you let the witness make his statement and let the counsel of the committee get the matter as clear on the record as we can; and, within reasonable bounds, possibly we could reserve our questioning of Mr. McLean until that is done. There is no disposition to cut off questions at all, but if we would try to observe that practice as well as we possibly could, I think it would be better for the record.

*By Mr. Sommerville:*

Q. Mr. McLean, you desire to make a statement to the committee, with respect to a matter referred to by Mr. Laver?—A. Well, I judge, sir, that my evidence to-day—that you would wish to-day to hear from me in respect to more than this. It is true that I am here, that I requested an opportunity of giving evidence in regard to these two cases.

*By the Chairman:*

Q. Do I understand, Mr. McLean, that there is something in addition to that you wish to say?—A. The whole live-stock industry is involved in this, and the packing industry.

Q. Well, Mr. McLean, perhaps for the purpose of clarity of record we should dispose of this matter regarding wages first, and then we should be very glad to hear your statement, and to hear it as fully as you like, of the general situation; although I would point out to you it was not part of our program to commence that particular examination just now?—A. I misunderstood that; I sent word to you, as you know, that I would like to get away on vacation, and I would like to cover that matter as well.

Q. We might be able to accommodate you, but first we will clean up this matter of the employees to which reference was made by Mr. Laver?—A. Then, shall I go on, sir.

Q. Go ahead, Mr. McLean?—A. I have before me and have read carefully the reports of this committee, which include—this number is number 2 of February 27—and the first case reported in Mr. Laver's evidence—. I may say that I knew nothing of the fact that Mr. Laver would mention my firm until I saw his evidence, or the report of his evidence that appeared in the Toronto papers the morning following. I immediately called Mr. Laver and told him that I was satisfied that the statements he had made in regard to the employees of Canada Packers were entirely without foundation, and asked him for the names of the two employees to whom his evidence referred. He replied that he could not give me the names, and although I pressed very hard, and said that I felt entitled to the names as a matter of right, I did not get them from him; so, following that, I wired Mr. Stevens, as he has mentioned. Twice since then I have called Mr. Laver's office and pressed him to give these names, and each time I have been refused. On Saturday of last week, two auditors came to our office with a letter from yourself, Mr. Sommerville, asking me that they be given access to our wage records, and they have been there for several days. Now the record of Mr. Laver's evidence, these are the statements and they are just a few and I think it will not take long for me to give you those to which I take exception. On page 60 there is a question:

“Are these 41 persons that are on relief on full time pay?”; and the answer was,

A. In every instance but one.

Q. So that you have 40 of the 41 on full time pay?—A. Yes. Then on page 62,

Q. By the way, these 41 cases are illustrations that you have prepared by request?

The answer to that I do not quite understand, it is “Just”; I presume that means yes, or exactly.

On page 63;

A. No. I cannot answer your question, Mr. Factor, except to say this: that we have verified from the firms the statements these employees make:

Q. Did you verify any of those circumstances?—A. They are all verified.

Q. Was there any reason given by the employer?—A. None.

Now, in regard to these statements which were selected from Mr. Laver's evidence, I wish to say, first, that Mr. Laver at no time called Canada Packers to verify the statements in regard to Canada Packers' employees.

*By Mr. Factor:*

Q. Pardon me, Mr. McLean, but I do not think Mr. Laver suggested they were verified by the employers, he said that they were verified by declaration of the employee?—A. I misunderstood it, if that is the explanation. I can give you the page if you wish to refer to it, or I can easily read it; I have no thought but that the meaning he intended was the one that I read into it. I cannot answer your question, Mr. Factor, except to say this, they said: “That we have verified from the firm the statements those employees make.” However, that is what I take the meaning to be. Now, the two employees—I might say that Mr. Stevens yesterday at my request gave me the names of these two employees so that I have looked them up—the two employees in question were Mr. Blank, and Mrs. Blank.

*By Mr. Sommerville:*

Q. Perhaps you had better not name them?—A. I don't see how I am going to get along without naming them, Mr. Sommerville.

Q. My reason for that suggestion, Mr. McLean, is that it has been the policy of all the authorities connected with relief not to publish the names of persons who are on relief, and that is the reason, I understand, why Mr. Laver took the position that he could not disclose to you the names of any persons on relief; and now they having been given to you for purposes of verifying, this committee has not got the names, as they were not put in evidence; my suggestion to you is that one of them is a man and the other is a woman, and if you will refer to them just in that general way, you will have answered the statement made by Mr. Laver, without subjecting those persons to the publicity which would be involved in naming them as individuals?—A. I acquiesce in that gladly; I would only suggest that if the same delicacy had been observed in respect to the firms involved, I think it would have been better.

Q. Well, that is your opinion, Mr. McLean?—A. That is my opinion; I think when I have finished with this evidence, you will feel it is justified.

Q. Now the first case is that of a man, is it not?—A. Yes, on page 69; here is the evidence in regard to the man.

Q. What is the next?—A. Canada Packers, full time employee, \$10.50 per week.

Now I have that man's name, as I said from Mr. Stevens, and these are the facts in regard to that man; he is a shipper in the provision room, aged 25, married; he has been 7 years with Canada Packers; his average wages, or his rate per hour, was 40 cents in 1933—his rate up until October was 37 cents, and in October, it was raised to 40 cents.

*By Mr. Factor:*

Q. That is the rate per hour?—A. That is the rate per hour—40 cents.

*By Mr. Sommerville:*

Q. Up to what time?—A. It was 37 cents up to October, and from October forward, 40 cents. The average wages which that man drew throughout the whole year 1933 were \$17.75 per week; and for the first three weeks in 1934, the first three weeks of January 1934, his wages were about the same; I have not got the exact figures, although I have the sheets here so I can give you any information you wish.

Mr. FACTOR: Pardon me, Mr. Sommerville, but have you copies of the affidavit this man made?

Mr. SOMMERVILLE: Yes, I think we have. (Affidavit produced and passed to Mr. Factor for his perusal).

*By Mr. Sommerville:*

Q. Will you go ahead, please?—A. If you wish me to go ahead I may say that these sheets that I have here are the records from our pay office, showing the wages week by week. They go back for two years. Now, for the first three weeks of this year, this man drew \$17.46, \$19.90, and \$13. The explanation of the low rate in the third week is the fact that he was off voluntarily for a day and a half and his wages for that week were \$13. Now, at the end of the third week it became necessary for us to reduce the gang in which that man was working, he was working in the production shipping gang, and on account of the very marked advance in the price of hogs which has taken place recently, the domestic sales of provisions have fallen off about 20 per

cent; that made it necessary to reduce that gang because their work was cut down about 20 per cent. The foreman of the gang let out the only single man who was on the gang, and it was necessary to let out two men, so he had to let out one married man and this was the man whom he chose. Before letting him out, or either of them out, the time of these two men was reduced for two weeks, and during these two weeks, the man in question drew \$6.80, and \$9.90; and at the end of that week, that is the week of February 1, the man was let off. That was on January 27, he was let off, and on January 31 he applied to the city for relief.

*By Mr. Factor:*

Q. What was that date?—A. January 31, I am speaking from memory—I have it here, but I think that is a correct statement—he applied to the city for relief and as the basis for relief is a statement of wages, he was asked to give his wages, and he gave his statement to me, which I have signed, as this; that he made the statement that during the last two weeks he had drawn \$10.50, but he explained that that was on broken time; and, of course, that was the correct explanation. He had worked only seventeen hours one week, and twenty-four hours the following week; so that he made the statement of \$10.50. As a matter of fact his actual wages for these two weeks was not \$10.50, but \$9.90; and he was put on relief for one week and drew relief for only one week. On the following Monday, a week from the day on which he had been let out, he was given employment. Our employment man sent for him and gave him a job on the painting gang. At this season of the year we repaint, we do a great deal of painting on our plant; it is the spring house cleaning and a gang of about ten men is put on this rough painting; they do not need to be painters. And the job lasts for four or five weeks. That man was put on that job, has been on that job for weeks, and is still on it. On that work he draws labourers' wages, 33 cents an hour. One of the reasons why the foreman selected this man was that his wife also works for Canada Packers, and has worked for Canada Packers for four years. I have her pay sheet here, too. Throughout last year, the year 1933, his wife drew an average of \$11.50. I think that is right—no, \$13. Throughout the whole of 1933 this man's wife drew an average of \$13, and he drew an average of \$17.75, a total of \$30.75. The man is emphatic that he made no statement that \$10.50 was for full time. He says that his statement was clearly that \$10.50 was for broken time.

Mr. FACTOR: The declaration does not say full time at all.

Mr. SOMMERVILLE: The declaration says \$10.50 per week.

Mr. FACTOR: It does not say full time.

Mr. SOMMERVILLE: It just says what his earnings are.

Mr. YOUNG: The papers said full time.

Mr. SENN: At the time he applied for relief he was not employed.

Mr. SOMMERVILLE: At the time he applied for relief.

*By Mr. Sommerville:*

Q. At the time he applied for relief, then, Mr. McLean, do I understand that he was not employed by Canada Packers?—A. Yes.

Q. And three weeks previously he had drawn \$10.50?—A. \$9.90 actually.

Q. From your company?—A. Yes.

Q. Was he maintaining his family at that time, or were they living separate, maintaining separate homes?—A. No, he and his wife both worked in the plant and they have no children.

Q. Were they maintaining separate homes?—A. No.

Q. Do you know that?—A. I do not know; I do not think so.

Q. So that for the three weeks previously to the time he went on relief his earnings with you had been \$9.90?—A. Yes.

Q. On how many days of the week did he work at Canada Packers to earn \$9.90?—A. I do not know.

Q. You do not know that?—A. No.

Q. What is the system by which these men are paid? Do they come in in the morning and punch the clock?—A. Yes.

Q. And when they leave at the close of the day they punch the clock?—A. Yes.

Q. And is their pay cheque made out on the basis of the time between the punching of the clock going in and the punching of the clock going out?—A. For the most part it is; but the actual record of the time is checked, and is taken, if there is a difference, from the foreman's book, wages book—each foreman has a wages book.

Q. Is it not a fact that you do not pay on the time clock record of men's time?—A. Well, where there is a divergence, a disparity, where they do not agree, that is the punching of the clock—the men might come in at half past six and not go to work until seven. We check all the punches, all the time sheets by the foreman's book, and I might add that all the men very carefully keep a careful record of their own time.

*By Mr. Factor:*

Q. What happens if he comes in at half past six and does not start work until eleven?—A. Well, I do not suppose that does happen in actual facts; but he would be paid at eleven o'clock because it would be revealed on the foreman's book.

Q. In other words, he is standing by from half past six until eleven waiting for work?—A. Well, no, he is not standing by; I do not suppose that would actually happen in practice.

*By Mr. Sommerville:*

Q. As a matter of fact, Mr. McLean, the man is paid for the exact time he is engaged upon the job?—A. Yes.

Q. He is not paid for the time that he is on the premises?—A. No.

Q. He is not paid—A. There is no great disparity in the time.

Q. I beg your pardon?—A. There is no great disparity in the time.

Q. He is not, at any rate, paid from eight o'clock in the morning until five o'clock at night?—A. No, except in the markets; in the city markets they are paid a weekly wage.

Q. We are talking about the plant generally?—A. No.

Q. Your system, then, is that when the men come in in the morning and punch the clock their time does not begin until they are called in, or until they begin to work on the particular job?—A. Yes.

MR. FACTOR: Who keeps a record of the second period?

*By Mr. Sommerville:*

Q. Who keeps a record of the time at which the men commence on the actual job?—A. The foreman on the job.

Q. And the man commences on the instructions of the foreman?—A. Well, yes.

Q. So that in his own time he waits in your waiting room until such time as the work is ready to proceed?—A. Well, ordinarily, a man just arrives in time for his work and goes to his work and that is all there is about it.

Q. Are there not many many instances in which a man has to wait until the cattle or the hogs or the live stock are there for him to commence his operations?—A. Well, it may happen and probably does happen. I know nothing of that. You spoke to me about it in Toronto yesterday. I have not had time to investigate it. I do not think it is a large factor in this.

Q. My reason for asking that, Mr. McLean, is this: a partial report has been forwarded to me from the auditor, and I just wanted to know whether or not this was the practice; that the men are paid only from the time they commence their work and when they finish their work?—A. The time they are actually working in their places would be possible, of course.

*By Mr. Heaps:*

Q. Is not your plant open at fixed hours during the day, or is it open 24 hours of the day?

*By Mr. Sommerville:*

Q. Mr. McLean, you answer Mr. Heaps.—A. Well, it is not open—there are some operations they actually do at night. For instance, we do a great deal of shipping at night. There is no other work that goes on at night.

*By Mr. Heaps:*

Q. What are the fixed hours of the plant?—A. Ordinarily you might say that except for slight exceptions it opens at seven and generally closes about 4.30, with the exception of shipping, which has to carry on.

Q. What is the regular working week of the employees?—A. From 7 to 4.30, 48-hour week, 6 hours or 8 hours for five days.

*By Mr. Factor:*

Q. Have you a schedule of wages there?—A. I am not just sure.

*By Mr. Heaps:*

Q. The salary you have mentioned of 37 cents an hour to a man is on the basis of a 48-hour week?—A. Yes.

Q. In the ordinary factory they have a fixed hour basis of from 7 to 5, an 8-hour day. I was wondering if there was any divergence from that system in your plant?—A. No, most of our departments—or our practice would be exactly that. The manufacturing department and the killing departments could not do that because one has to depend on the arrival of the stock from the markets.

Q. If an employee comes in when the factory opens at 7 and he has nothing to do until 8.30, his time does not commence until 8.30 in the morning?—A. No.

*By Mr. Sommerville:*

Q. In other words, he is waiting there in his own time at his own expense?—A. I think—

Q. To commence operations for the company; is that not so, Mr. McLean?—A. Yes—I do not know but what you might have more information about that than I have; but my answer to that would be this; that the men in the killing gangs, which are the working gangs, are told each day on what time to report the following day.

Q. If they report on the following day at the time they are told, are they paid from the time that they are told to report?—A. No.

Q. Or are they paid for the time that they actually commence work?—  
A. Paid for the time they work.

Q. And during the week that may aggregate quite a few hours of waiting for work to begin after they are told to come in?—A. Well, I cannot tell you about that, because I never heard the point mentioned; so that I cannot think that it is very important, until you mentioned it to me yesterday.

Q. The report that has been sent to me indicates that there are eight men who are employed on beef killing, casing, beef killing, pork cutting, offal trimming, and the actual time paid these men, as you see, was  $36\frac{3}{4}$  hours in that week, and the elapsed time, according to the clock was  $46\frac{1}{4}$  hours, making a discrepancy of  $9\frac{1}{2}$  hours in that week?—A. Yes.

Q. The second man's time for which he was paid was 22 hours, and the elapsed time was  $30\frac{3}{4}$  hours, making a discrepancy of  $8\frac{3}{4}$  hours; and the man was paid for 22 of the  $30\frac{3}{4}$  hours the sum of \$8.80. The next man was paid for 44 hours, and the elapsed time by the clock was  $49\frac{1}{2}$  hours. His discrepancy was  $5\frac{1}{2}$  hours. The next man's time was  $36\frac{1}{2}$  hours for which he was paid, and his elapsed time was  $41\frac{3}{4}$  hours, making a discrepancy of  $5\frac{1}{4}$  hours. The next man was paid for  $41\frac{1}{2}$  hours; his elapsed time was  $48\frac{1}{4}$  hours; and his discrepancy in hours was  $6\frac{3}{4}$ . The next man was paid for  $28\frac{3}{4}$  hours, his elapsed time was  $35\frac{1}{2}$  hours, and the discrepancy was  $6\frac{3}{4}$  hours. The next man was paid for  $35\frac{1}{2}$  hours; his elapsed time was 41 hours, and his discrepancy  $9\frac{1}{2}$  hours. The next man was paid for 35 hours; his elapsed time was  $46\frac{1}{2}$  hours, and his discrepancy was  $11\frac{1}{2}$  hours. In other words during that week the discrepancy in the hours of those eight men—when I refer to discrepancy in hours I mean the difference between what they were paid for and what the time clock check showed—was 63 hours. Are you aware that that runs all through your plant? Is that the way in which the system works out through your plant?—A. I should say my answer to that is, I am aware that it does not. It could only occur in regard to certain gangs, I should think. But I should think, Mr. Sommerville, that I do not wish to say too much about this because I never heard the point mentioned until you mentioned it to me yesterday.

*By Mr. Factor:*

Q. Therefore it may be showing the same unfairness in the whole system?—A. Now, I would rather that there was nothing said in regard to unfairness on the part of Canada Packers to its employees until you see that you get all the facts; because that is what I am complaining about in regard to the first day. These auditors came to Canada Packers on Saturday morning. They came with a letter from you. I asked them what the name was of those two employees who had been referred to here. They said they could not tell me.

MR. SOMMERVILLE: I did not have it myself; I told you that.

THE WITNESS: It seems funny to me. At any rate, that is what happened. These auditors were there all day Saturday, all day Sunday, all day Monday. They did not ask us for any information about what was going on. If they had asked us this question, we could have looked into it on the spot. I have no doubt we could have given you—I certainly would have been able to give you very much more complete information than I am able to give you now.

*By Mr. Factor:*

Q. Do you dispute the records of your factory?—A. I don't know. All I say now is this: if there is any practice of wasting, if there is any wasting of men's time, there, it is a thing that I have not been aware of. And I admit that if there is wasting of time on any scale such as those indicated, which I doubt, because it is eight men out of 1,200, remember that—

Q. Well,—A. Just a moment. If there is any such waste, I will see that it is corrected at once. I cannot think it is very serious or I would have heard of it before this. I am quite satisfied that the employees of Canada Packers have confidence in the management of Canada Packers, and are confident in their wish to treat them fairly.

*By Mr. Heaps:*

Q. Are your employees organized, Mr. McLean?—A. They have—they are not members of any international union, no.

Q. Are they members of any organized union?—A. Well, it is a kind of haphazard one, Mr. Heaps. Whenever there are, at various times, conditions in the plant which are under consideration and we ask for a committee to be appointed, the committee is elected by the employees, and from time to time at certain periods, adjustments are made, and that committee is active and then it lapses. It happens at the present time that we are in a period of lapse. That is not, in any sense, by reason of any wish expressed or felt on the part of the management.

Q. How often do you meet the employees to discuss wages and labour conditions?—A. Well, the superintendent and the foremen—they are a matter of constant discussion.

Mr. FACTOR: Are these eight men all in one department, or in different departments?

Mr. SOMMERVILLE: Different departments.

The CHAIRMAN: I think we had better let counsel proceed.

*By Mr. Sommerville:*

Q. Mr. McLean, we have had this subject brought to the attention of the committee from another angle and that is why it is necessary for us to pursue it. I point this out to you. Here is a case of a man in the plant working 7 successive days, or every day for some time, at any rate, and the total time paid was 26 hours, although his elapsed time was 30 hours. For that time he was paid \$8.05. The next man worked there 6 days, and the total time paid him was 22 hours; his elapsed time by the clock was 33½ hours and he received \$8.80. The next man was paid for 28¾ hours in the six days he worked and his elapsed time was 38 hours. His wage was \$9.90?—A. How many of these have you?

Q. This is a sample sheet?—A. How many? You see, you are implying this is a very general condition. Now, I do not know whether it is or not, but I do know this—

Q. Well, I am suggesting that this is what is supplied to us as a cross section through a number of different departments?—A. Well, it is not a cross section through a number of different departments at all, I can assure you of that.

Q. You had better let me give you some of these departments, and when I finish it you will see. The next man was paid for 31½ hours and his elapsed time was 43.57. He was paid \$10.40. This is a woman that is next. The woman in question in this case, who was there 6 days, was paid for 33½ hours, and the elapsed time was 37.43. The amount paid was \$8.40. This man that you refer to here in the smoke meat department in this particular week, which is the week ending March 1st, was there 6 days, his elapsed time was 48 hours—that is a full week, is it not?—A. Yes.

Q. And he was paid for 43 hours, getting \$14.20. These are the various departments: shipping department, sausage packing department, offal trimming, cooler department, pork cutting department, and repair man. Then, we have

the beef killing department, casing department, beef killing department, and so on. These are the various departments referred to in this cross section?—

A. How many are there altogether?

Q. Eighteen; this is only a sample sheet, I understand?—A. What do you mean by that?

Q. That indicates the system that is followed, that the men check in at a certain time when they are paid only from the time they commence work?—A. Mr. Sommerville, I would like to say this again, that I am not aware of this condition; that the way in which you asked these questions and the implication of these facts—your stating it is a cross section indicates or seems to imply that that is a universal practice in Canada Packers. If it is, it is very surprising that I have not heard of it before; because as I said before, I am quite sure that the employees of Canada Packers have confidence in the wish of the management to be fair to them; and if there is any unfair treatment to the employees I think we would have heard of it. I suggest that it could have been very much more satisfactorily dealt with if your inspectors, who were up there three days, had raised some of the special points and let us discuss them on the spot. I am not able to do it now, and I say that the implications that you are attaching to this are just the same as the statements—the wrong statements and implications that were attached to the previous evidence in regard to our wages.

Q. Mr. McLean—A. I would like to finish, if you don't mind. I think Canada Packers is a fair employer. We seek to pay the highest wages that are paid in our industry. Since the depression there has been one decrease in wages which was put into effect in December and January, 1931 and 1932.

*By Mr. Young:*

Q. What percentage?—A. The average was about 10 per cent. There were some special cases that were reduced more than that, men who were pensioners and that sort of thing, but in the main it was 10 per cent.

*By Mr. Factor:*

Q. That does not help us to solve the particular problem that we have on our hands?—A. Wait a minute, now; all I wish to say is this: I am not disputing any complaint where 1,200 people are employed. It is inevitable that there will be inequalities and even injustices. I think that any injustice that there may be in this is a minor one, because if it had been a major one I would have heard of it. What I am saying is that any implication that the employees of Canada Packers are not treated with consideration and fairness is very unjust, and that we have suffered from that charge and I do not wish us to suffer from it again.

*By Mr. Kennedy (Peace River):*

Q. How do you account for this statement in the telegram which you sent: "Without names I cannot specifically refute Mr. Laver's charges but I feel sure his statements are quite without foundation; the lowest wage which a regular male employee at Canada Packers, Toronto, can draw a full time week is sixteen dollars and eighty cents"?—A. That is quite correct.

Q. That is 48 hours?—A. That is 48 hours.

Q. Is it not fair you should inquire into the case of men where quite evidently they have no chance to get full time?—A. I cannot have expressed myself clearly or you would not say that. I am quite willing to inquire into the conditions, but there is no point in asking me questions about things I

know nothing of. If, Mr. Sommerville, you send an inspector up there again, I will spend as much time as he wishes going into the conditions, and I am quite certain that between us we will subscribe to the same statement of facts and send them down to you.

*By Mr. Factor:*

Q. You have already admitted that the men get paid only from the time that they commence work?—A. Yes.

Q. And this simply illustrates in figures what has actually happened?—A. Yes.

Q. And this is a sample case?—A. I don't know—if these facts can be proved they are right.

*By Mr. Young:*

Q. What we want to get at is how much money these men are earning. Can you tell us the total number of men you have employed in your factory, the total wages paid for the year, and then we can get the average earnings?—A. I cannot tell you that; I can get it for you by wire.

MR. SOMMERVILLE: I think I can give it to you, Mr. McLean. The average number of persons employed from December 1st, 1933, to March 1st, 1934, at the St. Clair avenue plant is approximately 1,239, including foremen. The average wage paid weekly to these 1,239 employees is \$17.20, including the wages paid to foremen.

Q. That is the position, is it not, Mr. McLean?—A. I do not know.

Q. I thought you had made some inquiries before sending your wire in?—A. No, I made the statement in regard to our female employees.

Q. What I am asking now, and relative to that, is whether under your system while the plant may be open 48 hours in the week and while persons may be on the premises 48 hours in the week, is it not a fact they may only be paid for 43 hours because they are working there just 43 hours?—A. I have already stated that.

Q. If that is so, take the case of a woman who is drawing 25 cents an hour—I think that is the wage which the lady was drawing that is in question—if this was for a 48 hour week, if she was working 48 hours, she would draw \$12, and if she was working for 43 hours out of the 48 during the week, she would be drawing \$10.50?—A. Yes.

Q. Although she might be on the premises the whole week, the 48 hours?—A. All of this implies that this is a very general system; and what I am saying is that, without having any definite information, I am sure it is not.

*By Mr. Edwards:*

Q. Mr. McLean, how else would you get at it, unless you did pay so much per hour?—A. I would like Mr. Sommerville to tell me. What would you suggest?

MR. SOMMERVILLE: Mr. McLean, I am not suggesting anything. We are hearing evidence.

MR. KENNEDY (*Peace River*): Let us get the facts.

The CHAIRMAN: May I interrupt for just one moment; this whole matter arises out of the evidence given by a witness, Mr. Laver. We did not know that Mr. Laver was going to give the evidence that he did. Mr. McLean promptly disputes that evidence and calls it into question, publicly repudiates it. In the short time that elapsed between that time and when Mr. McLean requested to be heard—he requested to be heard yesterday, but we could not arrange it because of the absence of the members of the committee, but we arranged it this

morning,—it has been possible for us to verify to a degree the evidence that Mr. Laver gave, the basis of it. Those are the facts upon which we are now questioning Mr. McLean.

The WITNESS: Mr. Stevens, there is no verification of any evidence that Mr. Laver gave. Every statement that he made is absolutely incorrect.

*By Mr. Sommerville:*

Q. Let us come to that; Mr. Laver's statement was that this gentleman, who was a shipper, swore before him that he was earning \$10.50 per week at the Canada Packers?—A. For full time.

Q. Well, that is his statement, that the man was earning \$10.50?—A. Wait a minute, that is Laver's statement, that the man swore that he was drawing \$10.50 for a full time week.

The CHAIRMAN: \$9.90.

Mr. FACTOR: At the time he applied for relief.

*By Mr. Sommerville:*

Q. At the time he applied for relief?—A. For the three weeks previous.

Q. For the three weeks previous he had earned \$9.90 per week?—A. Yes.

Q. And during those three weeks he had been at the plant each week, and had been paid for the time that he actually worked?—A. Yes.

Q. Do you know whether or not he was paid for the time shown by the clock as having been the time that he spent at the plant?—A. No, I don't. If your representative had asked me that yesterday, I could easily have found out.

*By Mr. Factor:*

Q. Have you a record there of this man's elapsed time and actually paid time?—A. I do know this, that I talked to that man after I got his name yesterday, and I have the facts here which I wrote down at his dictation and which he signed, and he made no mention whatever of this.

*By Mr. Sommerville:*

Q. Take the elapsed time of this man for the week ending March 1—

Mr. FACTOR: When you say "elapsed time" you mean unpaid time; is that not the better term to use?

Mr. SOMMERVILLE: No.

Mr. YOUNG: The time he was on the job.

*By Mr. Sommerville:*

Q. I am giving it to you this way, the elapsed time as shown by the time clock for that week was 48 hours and 58 minutes; that is his actual elapsed time on the premises. For that period he was paid for 43 hours according to the records, so that his deficiency according to the difference between the time clock and his pay time, was five hours, and he received for that week \$14.20 as the pay for 43 hours. What would he have received for 48 hours; what was the rate?—A. 33 cents; at that time he was working on the painting.

Q. That is \$1.65 more than he would have received for that week if he had been paid according to the time clock?—A. Yes. I very much doubt those figures for the reason that I was speaking to the man at 10 o'clock last night.

Q. Well, let me give you the figures. On February 28 he reported in at 6.43 and he left at 4.31—

The CHAIRMAN: That is 6.43 in the morning?

*By Mr. Sommerville:*

Q. Yes, 6.43 in the morning, and he left at 4.31 and was allowed for 8½ hours. On February 27, he checked in at 6.45 and left at 4.33, 8½ hours?—

A. Let us check up on that; remember, I am just trying to get information. 6.43, of course that would be 7 o'clock.

Q. 7 o'clock?—A. And he left at what?

Q. 4.33?—A. That is 4.30.

Q. 4.30 is your closing time?—A. There is 7 to 12, that is 5 hours; and from 1 to 4.30 is 3½ hours. That is 8½ hours. He was paid for what, eight?

Q. 8½ hours?—A. That seems to work out.

Q. 6.46 to 4.30?—A. That is 7 to 4.30; that is 8½ hours.

Q. And 6.43 to 11.59, that would be in the morning?—A. That would be 12 o'clock; that would be 5 hours; what was he paid for?

Q. For 5 hours on that?—A. All right.

Q. The next was 6.42 in the morning to 4.31, 8½ hours?—A. That is 8½ again.

Q. For the half day on February 22, four hours?—A. Where is all this waste time?

Q. I am just showing you?—A. It does not show; there is no discrepancy there at all; he was paid for the exact length of time he was on the plant.

Q. That was for his 43 hours on that week?—A. Yes.

Mr. FACTOR: He actually remained on the plant for 48 hours, you said. I think you said, Mr. Sommerville, that his elapsed time was 48 hours.

Mr. SOMMERVILLE: Yes, according to the records here used.

The WITNESS: Mr. Stevens, I would suggest that I would be glad to come down again at any time you wish; I suggest that the discussion on this material be left until I get an opportunity to go over it with your representatives there, and then we can get the facts. There will be no dispute then about the facts. The point is now, that although these men have been in our plant for three days, they have given us no indication of what facts they were accumulating, and what facts you wished to question me on.

The CHAIRMAN: Perhaps we could establish one or two things.

The WITNESS: We could establish now that the figures in regard to this man are not right. That is the same kind of thing we had the last time.

Mr. FACTOR: I would like to get at this thing of 48 hours elapsed time, and being paid for 43 hours.

*By Mr. Edwards:*

Q. What do you mean by spending 48 hours; the man is engaged by the hour, not by the day or week; what is meant?

Mr. FACTOR: He is standing around waiting for work.

Mr. EDWARDS: Can he not leave?

Mr. YOUNG: He checked out at noon on one day there, or did he go back in the afternoon?

Mr. SOMMERVILLE: Oh, yes.

Mr. YOUNG: He came back in the afternoon.

Mr. SOMMERVILLE: No, he checked out at the time.

The WITNESS: The point is that the hours that you have read there do not conform to the statement you have made.

*By Mr. Sommerville:*

Q. You think you would prefer to look into that condition?—A. Yes, and I think you should too. I do not think it is fair to bring me down here and cross-question me on this without letting me know what you propose to do.

*By Mr. Kennedy (Peace River):*

Q. You sent a telegram to the committee requesting an opportunity to put the facts before the committee?—A. So I did; I have not had any chance yet.

The CHAIRMAN: You stopped in your presentation.

The WITNESS: No, I didn't; Mr. Sommerville interrupted me.

The CHAIRMAN: No, no.

The WITNESS: All right, then.

*By Mr. Sommerville:*

Q. At the close of the man's case; I thought you wanted to deal with that separately from the woman's?—A. The man's case—the only facts you have given me about this man's case do not support the charge that you are implying in all your questions; the hours check up exactly with the hours you have read to me.

Q. I hope, Mr. McLean, that you will not think for one moment that there is any suggestion of any charge. We are ascertaining what the facts are, as to exactly what your system is in the plant, and if the system is, as you say, that men will check in and will not be paid from the time they check in but only from the time that the work may commence; you realize that throws a different light upon the picture, and that is what we just want to get at?—A. Excuse me, I cannot accept that summary of the situation. Canada Packers' name was introduced into this discussion last week. The statements that were made were wholly incorrect. I do not say that they were intentionally incorrect at all, but a serious injustice was done to my firm by reason of that, and I came down to correct that. Now you ask me a lot of questions that I am not able to answer, and that you knew in advance that I would not be able to answer, or that you might have suspected I would not be able to answer; although you had your men in that plant for three days, they have never said a word about it.

Q. I just received this report this morning, Mr. McLean, so I am just as much in the dark as you are?—A. I don't accept that, Mr. Sommerville; you are not in the dark at all. These men were acting under your instructions there.

*By Mr. Factor:*

Q. What is your opinion, Mr. McLean, as to the system of paying a man for the actual time that he works and having him stand by and wait for the work?—A. The implication of that question is that it is a prevalent practice in the plant. That is what I challenge. I am sure it is not.

Q. You say it is not?—A. And if it is, I will correct it.

Q. Well, that is something.

The CHAIRMAN: That is more to the point.

Mr. FACTOR: Yes.

The WITNESS: I have been corrected; you don't suppose that you can run a plant with 1,200 men without ever having any injustices or inequalities.

*By Mr. Factor:*

Q. You know the Minimum Wage Board provides, in most of their orders, that you have got to be paid for the time waiting for work?—A. Yes.

Q. I just wanted to know whether that provision—

Mr. SOMMERVILLE: I thought we would come to that in a moment.

*By Mr. Kennedy (Peace River):*

Q. Does elapsed time include bench time, a man working at a bench there, whether he works or not? What is the practice?—A. The practice in the plant is that the men come in in the morning at seven o'clock—you see 6.41, 6.42, 6.43

and so on—they are supposed to get in to their departments by seven o'clock. When the whistle blows at seven the men are supposed to be there, and in the main they are there. The foreman has a time book; each foreman in the department has a time book with a list of his men, and he records his gang at work in the morning, he records the exact time the men start to work.

*By Mr. Factor:*

Q. It may be eight o'clock?—A. It may be eight, or it may be any time.

Q. On this particular point, with this system, where there is a man standing by in a factory for an hour without getting paid for it, I would like to get your reaction on that point?—A. I don't think that happened. That is the point, the first thing. I get all the information about that.

*By the Chairman:*

Q. Let us get this clearly; as head of that institution you declare that it does not happen?—A. No, I don't; I said I never heard of it before. I say it cannot be very prevalent or I would have heard of it. Don't you think that is reasonable?

Q. I think it is reasonable if you are acquainted with what goes on in your plant, but it strikes me from the information that is available that you are not?—A. Now, on what do you base that statement?

Q. Well, there are quite a number?—A. Here are 16 men out of 1,200.

Q. There are a large number, obviously, who follow the system of entering the plant at a given hour, who stand by and are called to go to work at certain times?—A. Why do you say obviously?

Q. Because we have cases?—A. You have got 16 cases. There are 1,200 men working in that plant. Here is what I suggest, that it would be far better to postpone this for these facts; would not it be better to wait until I can get these facts?

*By Mr. Sommerville:*

Q. Of course it would be?—A. I came to give you the facts in regard to these two people, and I have it here—

*By Mr. Factor:*

Q. You did not expect to admit that conditions of that sort existed in your plant?—A. I am a member of a reputable firm and I expect to be treated fairly.

*By Mr. Sommerville:*

Q. When we come to the question of fair treatment, you will get fairer treatment from me than you will get from anybody else; I will have you understand that. Yesterday, when I learned for the first time from a score of your employees that that was the system I intimated the contents of the telegram to you. You say I have not been fair; but I intimated that was the evidence I had, and I asked you if that was the story, and you said you would look into it?—A. I remind you, you have not been fair to me; you have had these men in the plant for three days. I persist in the statement that I made about these abuses, that Canada Packers is a reputable firm that seeks to pay its employees fair wages.

*By Mr. Factor:*

Q. You have made that speech, Colonel, about half a dozen times?—A. I am not "Colonel", I am just plain McLean.

Q. That does not help us one bit in deciding what we are discussing now; are you suggesting that the auditors falsified the figures?—A. Not at all, I am suggesting that if there has been any unfairness to these employees, it will be rectified.

Q. You had better calm down and help the committee, instead of criticizing counsel and the committee for not being fair?—A. It is a matter of opinion as to whether the phrase I used was an improper one or not.

*By the Chairman:*

Q. Now, Mr. McLean, do you wish to proceed with your statement?—A. I would rather, yes. I would like to give you evidence in regard to these other facts, in regard to these other employees, before you leave it.

Q. Will you give us what you wish to say regarding the woman, now?—A. Yes.

Mr. FACTOR: Before we leave this point I would like an understanding that Mr. McLean will come back with the information.

The CHAIRMAN: As a matter of fact we will go into the whole business thoroughly, but for the moment it would appear desirable to have Mr. McLean complete his evidence on this point. He does not appear to have all the facts about his own plant, but the checkers may give us something on this.

The WITNESS: I think I know the facts regarding my plant pretty thoroughly, Mr. Stevens. I say I have never heard of these complaints before.

*By the Chairman:*

Q. Of course, I do not want to offer evidence; but one could. However, I would like to hear what your statement is.—A. You mean with regard to this woman?

Q. Yes, if you please.—A. Well, here are the facts in regard to the woman: the woman is married, with three children; she has worked with Canada Packers since July, the last week of July, 1933; prior to working for Canada Packers she had been employed by the Swift Company. These are the facts that she gave me last night.

Q. Go ahead, Mr. McLean; we are waiting, go right along.—A. As I said, this woman, prior to being employed by Canada Packers was an employee of the Swift Canadian company. When she came to Canada Packers on July 27, she came on the recommendation of the superintendent of the Swift Company—or rather he called up and asked our employment man if he had a place for her, he said that they did not, but she was a competent woman, so she was taken on. In recommending her, he stated that she had worked for the Swift Company for some time; during the months of March, April and May she had been off on sick leave and had worked for the company again during the month of June. From July 27, until the middle of December, a period of, I think, about seven-teen weeks—I have not added it up—she drew an average of wages of \$11.80 per week.

Q. When was that?—A. From the time she joined on July 27, to the middle of December. I think I had better just read this as I have it, instead of speaking from memory. I omitted to mention that she was started, as female employees are frequently started, at 23 cents per hour. On October 19 she was raised to 25 cents per hour. The wages, July 27-October 25, \$11.80 per week. Now, during all that time, from the time she came to us until the middle of December, this woman was on full relief from the city, although she was drawing an average of \$11.80 per week from us.

Q. She had three children to support?—A. Yes. And the middle of December the city discovered that—remember I am not expressing any view as to whether that was right or wrong, I am saying that the city discovered the

middle of December that she was on full relief, apparently not having known it before, and cut her off relief. The way that occurred was that her father went down to draw vouchers—this is her story as I took it down at her dictation last night—and they asked where she was, and he informed them she was working; and she was cut off relief for a period of three weeks. In the last week of December she met with a motor accident, she was in a motor and an accident occurred, and by reason of injury, and by reason of a certain court action in this connection which followed that, she was off for some time, she lost a good deal of time. The week ending December 27, her pay was \$5.80; the week ending January 4, her pay was \$8.40; and January 11, \$12.90; and January 18, \$6.70.

*By Mr. Factor:*

Q. How many hours of work did she put in?—A. Whatever length of hours is represented in the amount at 25 cents per hour. On January 3, 1934, she again applied for relief, stating she was not on full time, and that her average pay was only \$9 per week. That was correct. At that time, on January 3, she was put on partial relief, and the partial relief continued until the end of January, when she was again put on full relief. Now her wages during the month of January were \$8.40, \$12.90 and \$6.70. These were broken weeks. Then beginning January 25: \$10.75, \$11.20, \$10.30 and \$10.90.

*By Mr. Sommerville:*

Q. That is up to the 15th February?—A. Yes.

Q. Have you got it up to the 22nd?—A. Yes, on the 22nd it was \$8.90; and on March 1, \$8.40. Now you know cases where her wages fell below the standard of full time, 50 hours at 25 cents an hour, it is accounted for by the fact that she was off part time; but the facts in regard to this woman are these: I want to point this out just because relief plays an important part in the process by which our name was introduced into this: this woman drew full relief during May, June and July, and also drew sick benefit from the Swift Company—of course that had nothing to do with us—from the time she joined us she worked full time, getting \$11.80 during all the time from the 1st August until the middle of December. She still drew eleven dollars and something from us and full relief, and that was cut down to partial relief; and then at the end of January, she was again placed on full relief.

Q. You admit that the provisions of the Minimum Wage Act apply; I think \$12.50 was the minimum wage a woman could get?—A. Yes, that is correct. No, sir, the rate is not 25 cents, but at first, 23 cents.

Q. Yes, but that is the first pay of an inexperienced worker; this was an experienced woman from Swift's plant who came to you?—A. Not at all, it is an inexperienced worker—first year of employment—

Q. First year of employment, whether experienced or not?—A. Yes.

Q. We gathered the impression from Mr. Stapells that such a woman would be considered experienced?—A. She is what we call inexperienced help, that is one of their own rulings; she was taken on at 23 cents an hour, and that is quite in accordance, our employment man tells me, with the provisions of the Act.

*By Mr. Factor:*

Q. That is exactly what I want to find out. I understood, Mr. Sommerville, that the minimum wage for an experienced worker was \$12.50; and that for inexperienced workers, it was six months at \$10 and six months at \$11. If she is in the inexperienced class it is a clear breach of the Minimum Wage Act?—A. As to that I have no knowledge. These are the facts, and our employment man tells me that that is quite in accordance with the terms of the Act.

*By Mr. Young:*

Q. And she does the same kind of work for you as she was doing for the Swift company?—A. I am not sure of that, I judge it was.

*By Mr. Factor:*

Q. What I mean is, what do you require in order to classify an employee as an experienced worker?—A. Well, I can't answer that either. It may be that all women are taken on at 23 cents an hour.

Q. If that is so, then it is a clear case of a breach of the minimum wage act where they are experienced help?—A. Well, I would not be too sure of that, Mr. Factor.

Q. Well, here is the board's order?—A. All I know about it is that our employment man has assured me that whatever he does is strictly in accordance with the Act.

*By the Chairman:*

Q. Here is the law, as published by the government in Toronto, and in Toronto, the rate is \$12.50—there it is?—A. Yes.

Q. I mean, it is no question of opinion; it is not your opinion, or ours, we are guided by this?—A. Yes, but are you quite sure what the regulation is in regard to women employees who are taken on?

Q. She is classified with you as experienced?—A. Let us dispose of that this way, Mr. Stevens, that I do not think any injustice has been done; I have been assured by the foreman that these are strictly in accordance with the Act—if it is not, it is easily recompensed.

*By Mr. Ilsley:*

Q. You are entitled to show before the committee that it is in accordance with the Act, if it is; I do not know whether it is or not myself?—A. I cannot tell you.

*By Mr. Kennedy (Winnipeg):*

Q. Would it be fair to state your position as this, that irrespective of prior experience where taken on with your company during the first period of employment, women are considered by your company as inexperienced?—A. Now, I cannot answer that either, because I did not ask the question, but I do know that these women are taken on at 23 cents an hour.

Q. I gathered from what you said that your foreman told you that they always took them on at the lower rate of pay?—A. No, I do not know that. I did ask in connection with this, in the general discussion, are you sure that Canada Packers complies absolutely with the Minimum Wage law; and his reply was definitely, yes. Now, if that is not correct, I have nothing further to say.

*By Mr. Sommerville:*

Q. Did I understand you from your earlier statement to say that in the women's department the hours of labour for the week were 48 hours?—A. We, I think, by arrangement with the Minimum Wage Board, and by a definite understanding with them, women's work, because they have special jobs, women's work hours are 50 hours a week, and that brings them within the terms.

Q. Then do you base your \$12.50 on the 50 hour week, or on a 48 hour week?—A. Fifty hours, in the case of women.

Q. Is that by special arrangement, or is that the regular practice of your plant?—A. No, all that has been concluded fully with the Minimum Wage Board.

Q. Then may I ask—you stated earlier that Mr. Laver's department had not enquired from your plant about the earnings of these women?—A. No.

Q. Were you under that impression?—A. I was under that impression.

Q. Well, Mr. Laver, at the time, produced a letter from Canada Packers, dated February 13, 1934: "to whom it may concern; the bearer, Mrs. Blank, is an employee of our West Toronto plant. Since the beginning of the year, she has lost considerable time owing to sickness and business conditions. Her average wage for the period mentioned would be about \$9 a week. Canada Packers, signed George Bartholomew."—A. That is correct.

Q. Will you please not mention that name?—A. It is good all around as far as I am concerned.

Q. That may be, but after all this poor woman is having struggle enough with her three children and I think perhaps it would be better not to mention her name. At any rate, the city did find that she was earning about?—A. Oh, no, the city did not. This woman was applying for relief, and it was necessary to get a statement, and so she came to Bartholomew who is our employment man, and got that statement.

Q. And that was to affirm to the city that she had been earning about \$9 a week?—A. Yes, for these three broken weeks.

*By Mr. Senn:*

Q. But it was given to the lady and not to the city?—A. Given to the lady, yes; and he at that time had no knowledge that she had ever drawn relief before, you see she was suffering from illness at that time as a result of the motor accident.

Q. This was February 13, and she was not working every day?—A. No, she was not.

Q. During the week of February 8 to 15, what did she earn on the 9th, 10th, 12th, 13th and 14th of that week?—A. Well, my understanding is that that low covers the weeks of January 4, January 11, and January 18.

Q. Yes, but this letter is dated February 13?—A. It did not apply—it did not have reference to these weeks. Would you mind reading that letter again.

Q. Yes, the letter states that she was employed "in our West Toronto plant since the beginning of the year, and she has lost considerable time owing to sickness and business conditions. Her average wage for the period mentioned would be about \$9 a week?"—A. Yes.

Q. Well now, from the record that is before me she worked on the 25th January, the 26th January, the 27th January, the 29th January, the 30th January, and the 31st January. She worked six days and that week was paid for 44 $\frac{3}{4}$  hours?—A. Well, Mr. Sommerville, it is easily settled. Here is the wage record; you have it here.

Q. \$11.20?—A. January 4, week of January 4, \$8.40.

Q. January 25, is the one I have?—A. January 4, \$8.40; January 11, \$12.90; January 18, \$6.70; January 25, \$10.75; February 1, \$11.20; February 8, \$10.30.

Q. What you are saying, I think, is that she was ill at that time?—A. She was off a good deal; that was the reason which was given. I think it was correct.

Q. February 3 was the week that you referred to, February 5, February 6, February 7, February 9, February 10, February 12, February 13, February 14, February 16, February 17, February 19, February 20, February 21, February 23, February 25, February 26 and February 27. If there is a standby practice with reference to female employees or any employees that would affect their wages during that time, would it not?—A. I do not understand.

Q. If she is not paid for the full time that she is on the premises, but only when she is working, it would affect her wages for that week?—A. She would be paid for whatever time she works.

*By Mr. Factor:*

Q. May I interrupt? Is there a practice prevailing in regard to female employees standing by, too?—A. Mr. Factor, I have told you what I know. I cannot tell you any more. The next time I am before you if you will invite me, again, I will have all the facts.

Q. You are the president of this concern?—A. Yes.

Q. And you do not know that there is such a practice?—A. No; I have told you that several times. I do not know. I do not think there can be much or I should have heard.

Q. There is some of it, then, is there not?—A. What can I say to you?

Mr. EDWARDS: That is not a fair question.

*By the Chairman:*

Q. You do not know?—A. I do not know. That is my answer.

Q. Can you explain to the committee what the system is in regard to the number of hours worked? As you stated, that 48-hour week was the actual number of hours worked?—A. Yes.

Q. And females work 50 hours?—A. Yes.

Q. Why are the hours longer for females?—A. They work in different departments; it is lighter work, and besides, the standard at which we start females is 25 cents. In order to comply with the minimum wage board, they have to work 50 hours, you see.

*By Mr. Sommerville:*

Q. That is to say, your standard of 25 cents an hour causes them to work 50 hours in order to comply with the provisions of the Minimum Wage Act?—A. That is the rate at which they start.

Q. If you had 48 hours a week for women as you have for men, you would have to pay more?—A. It would be 25 and a fraction.

*By the Chairman:*

Q. A moment ago in speaking about this woman who came from Swift's, you said she was receiving something from the sick benefit fund?—A. Yes, \$7.25 a week.

Q. Have you a sick benefit fund?—A. Yes, just the same.

Q. Why didn't she get something from you?—A. She does not go on sick benefit until she has worked continuously for four days; until she does that, sick benefit fund does not apply.

Q. She was not sick very much during those periods?—A. Yes—at any rate, she had broken time and gave as a reason that she was ill; it was not continuous illness.

*By Mr. Young:*

Q. Her short time was due to the fact she did not report for work some of those days?—A. Yes, that is so.

Q. There is no other reason?—A. No other reason, whatever; it is simplicity itself.

*By Mr. Heaps:*

Q. Your factory starts to work at 7 o'clock in the morning?—A. Yes.

Q. And the workers punch a clock? Suppose they come in at 7.30, are they allowed to come in the factory?—A. I presume they are; I do not know, Mr. Heaps. I should think that is something that rarely occurs.

Q. No. I have worked in factories, and I know of my own knowledge that people come in at 7.30 o'clock.—A. You see we work in gangs, Mr. Heaps. I think there would be very few exceptions to the fact of the gangs starting together.

Q. That would have an important bearing on the question of stand-by. Your factory opens at 7?—A. Yes.

Q. And the work they have to do may come in at 8?—A. Yes.

Q. I was wondering if you could give any information on that particular point?—A. I can easily get it; I don't know.

MR. EDWARDS: The department heads will have to give you that information.

*By Mr. Sommerville:*

Q. Was there a change made on the first of March in the method of paying women in your plant? Do you know of any change?—A. No.

Q. Is there an experiment being made during the current week to find out how many pieces of work can be turned out by the women?—A. There may be, but I do not know.

Q. You do not know of that?—A. No.

Q. The matter of experiment was brought to our attention from some source?—A. That kind of thing goes on continuously. Each foreman is continuously working to improve the efficiency—

Q. To increase his output?—A. Yes.

*By Mr. Factor:*

Q. You mean, speed up the workers?—A. Well—

*By Mr. Sommerville:*

Q. That is what it results in, I presume?—A. No, it is not what it results in. All of your questions, I think, imply again that there is an attempt to treat employees unfairly. Now, what I want to make clear, Mr. Factor, is this: that there is no attempt in that or in any other way. We attempt to improve our efficiency, of course. You all know that efficiency is an important part of every organization; you must know that. Every intelligent employer does that. Well, we are constantly seeking to reduce costs on our operations. We do that by improving the organization and making the work more satisfactorily, and of course, by eliminating lost time and lost motions.

Q. Is there not a system whereby in certain operations the work has to be performed within a certain time in your plant?—A. What operations?—There is no—I do not think there is. It may be said that any operation has to be performed in a certain time. We are seeking constantly, in our work every day, to improve the efficiency of our operating gangs, of course.

*By the Chairman:*

Q. What about the man on the ham-boning belt? A belt comes along, and he is required to bone so many hams, or he does not hold his position?—A. Well, there are belts all through. I do not know of any ham-boning belt; I do not think there is one.

Q. Not a ham-bone belt, a belt to carry hams to the man who bones the ham?

MR. FACTOR: You had better be specific; Mr. McLean is very technical.

THE WITNESS: I object to that very strongly. I do not think I am in the least technical.

*By Mr. Factor:*

Q. You have objected quite a lot?—A. I am down here to give you all the facts in regard to the employment conditions of Canada Packers.

*By the Chairman:*

Q. I am sorry to say that you do not seem to have the facts; that is the trouble?—A. How can I possibly anticipate all the questions that you are going to ask? You have had your own men in the plant for three days. We could have easily examined all these facts.

Q. May I ask you this question: are you acquainted with your plant in Hull?—A. Yes.

Q. Do you know the rates of wages paid there?—A. No.

Q. Now, I am going to submit to you what is complained of before the statement is published. After you look at it, can you tell me if you are familiar with those rates of wages?—A. No.

Q. For male and female workers?—A. I do not know what the rates are at all. I do not know whether these are correct or not.

Q. You cannot tell what the rates are over there?—A. No; I am sure they are lower than they are in Toronto, I know that.

Q. We will have to ask you to be prepared with some knowledge of those facts some time later, because they will have to be reviewed.

MR. FACTOR: I think we should also have some knowledge of the operations. I think the committee should get some information on the point that you raised.

THE CHAIRMAN: Yes. Now gentlemen, if we are through with that part—I regret to say it has not been very satisfactorily answered—we might proceed.

THE WITNESS: May I ask you this: Do you consider that it is correct to state that I proved that Mr. Laver's statements were entirely wrong?

THE CHAIRMAN: You have asked me my opinion. I do not intend to comment on it, but I would say no, I do not think you have.

THE WITNESS: May I just refer to the statements? Here is a statement of Mr. Laver that I have taken exception to. I wrote them down. The questions are these:—

Are these 41 persons that are on relief on full time?—A. In every instance but one.

Now, later in regard to the man the question was asked specifically:—

Was the \$10.50 for full time week?

And the answer was—

Yes.

Do you consider that statement was correct?

MR. FACTOR: I suggest, Mr. Chairman, you obtain counsel before you answer questions.

THE CHAIRMAN: No, Mr. McLean. I simply say this: I do not think the matter is satisfactorily cleared up at all, and I do not share your views that Mr. Laver's statement is wholly disproved. It is quite true that there are discrepancies here and there, but your knowledge of the details is so vague that it is impossible to get at it.

THE WITNESS: I submit my knowledge of these details is absolutely complete in the two cases I knew of, and that I came down to explain to you.

*By Mr. Sommerville:*

Q. You do not know whether there was any waiting period for these men at all?—A. You proved it, that there is not, because you read out those—

THE CHAIRMAN: No, no, Mr. McLean.

*By Mr. Kennedy (Winnipeg):*

Q. With your permission, Mr. Chairman, I should like to say this: Mr. McLean, do not your own records and your own statement show that this woman was getting paid at a less wage than was called for by the Minimum Wage Act of Ontario?—A. No.

Q. It seems to me it stands open.

The CHAIRMAN: I will tell you this: we shall come to our conclusions on that later; but we must not let you think we accept your decision on that. In regard to your employees in Hull, I ask you to familiarize yourself on that, because we will have to go into it later on. Unless there are more questions on this incident, and unless Mr. McLean wishes to make a further statement of a general character, I would ask gentlemen, that Mr. McLean be permitted to make his further statement as consecutively as he desires.

The WITNESS: Well, before leaving this wage business, Mr. Stevens, I would just like to say this, that we feel badly about the statements that were made and the employment of unfair treatment which we read into the statements. I do not consider this is by any means the very important matter or the important matter concerning which you will wish to examine me in connection with the work of this committee. As you know, I am in the packing business, which is a branch of a much larger and much more important industry, the general livestock business of Canada. Now, the livestock business of Canada has always been important, but in the last year or two it has become particularly important inasmuch as it has become the chief avenue through which the agricultural surplus of Canada is marketed. Canada is a country that produces, and must continue to produce, a very large agricultural surplus, and the agricultural problem, which is the problem of Canada, because agriculture is Canada's basic problem, has always been and still is the problem of finding the best markets for the surplus. To put it a little more clearly, that surplus could go abroad in one of two forms. It could go abroad either in the primary products of grain, wheat,—as a matter of fact, in practice wheat is the grain that has chiefly been exported in the form of animals or animal products. I would like to stop a moment to dwell on the special importance of exports in agriculture. To begin with, it is quite clear that they are more important because of the fact that Canada produces so large an agricultural surplus; so that it is evident we must find export markets for that surplus. But they have another and very special importance that is frequently not realized even by farmers themselves, and that is this: that where a surplus exists, for instance in wheat, the price of the wheat in Canada, not only of the wheat that is exported, but all wheat produced in Canada, is determined by and depends upon the price that is available in the export market for wheat; similarly in hogs. The price of all the hogs that are raised in Canada is determined by the price that is available in the export market for Canada's bacon.

Up until the year 1929, and if I may say the period from 1920 to 1929, the greatest part of Canada's surplus agricultural products was exported in the form of wheat. Between 1920 and 1929 wheat exports grew from \$220,000,000 to \$476,000,000.

Mr. KENNEDY (*Peace River*): Bushels.

The WITNESS: Dollars. The export figures are expressed in the records in dollars. Whereas animals and animal products which are grouped in the export figures, in 1920 were \$150,000,000, and in 1929 they were \$55,000,000; so that you see the trend was a very marked one. Wheat had increased from \$220,000,000 to \$476,000,000 whereas animal products had declined from \$150,000,000 to \$55,000,000. In 1929 or during all of that time, it never occurred

to most of us that there would ever come a time when Canada would not be able to export all the wheat she could produce. However, in 1929 that time came, and for the first time we began to wonder whether there would be an export market for all of our wheat. And during 1930, 1932 and 1933, it became more and more evident that it was not an easy thing and that it might not be a possible thing to sell abroad the surplus wheat that Canada could produce. That gave a special and a new importance to the livestock industry; because the only alternative method of exporting the agricultural surplus, the only alternative method of exporting it in wheat, was to export it in animals or animal products, cattle, hogs, bacon, cheese, butter, eggs, poultry and so on.

Now, because we could no longer export our surplus in wheat, and because we must export our surplus in the form of animal products, it becomes very important to study the markets of the world and to produce the kind of animal products in Canada which will find an outlet, and which can be sold on the markets of the world; and the fact that the domestic price, the total price is determined by the price that we are going to receive for the exports, because of that fact, it is further important that we should direct our animal production in the channels which will bring back the highest price for that product. We have had a very dramatic demonstration of the importance of the problem and of the benefit of the export markets within the last two years, by reason of the Ottawa agreements which assigned to Canada a quota of 2,500,000 hundred-weight, which is roughly  $2\frac{1}{2}$  million hogs. By reason of that Ottawa agreement, which gave Canada an outlet in Great Britain for  $2\frac{1}{2}$  million hogs per year, or roughly 50,000 hogs per week, and by reason of the additional and very important factor that Great Britain decided on a policy of restricting imports of bacon in order to encourage the pig industry at home. By reason of these two factors, the price of bacon within the last twelve months has advanced in England from 40 shillings to 90 shillings. I am quoting now the price for Canadian bacon.

*By the Chairman:*

Q. During what period?—A. During the last year; a year ago now bacon was selling in England at about 40 shillings—I am speaking from memory. That was the lowest point, and that was just about now, and to-day the top official price for Canadian bacon is 90 shillings, and the actual price of all the bacon that is going over is somewhere between 85 and 90 shillings. As the market has advanced from that 40 shillings to the 90 shillings, you see it has been possible to sell the Canadian bacon, the product of the Canadian hogs, at this ever increasing price; and by reason of that ever increasing price, the price of hogs has been increased in Canada from  $3\frac{1}{4}$  cents, which it was a year ago now,—that is the low point, which was about a year ago now—from  $3\frac{1}{4}$  cents f.o.b. Ontario points to this price of  $9\frac{1}{4}$  cents. You can see that that is of extreme importance, that it is a matter of the very greatest importance for Canada. That advance in price from  $3\frac{1}{4}$  cents to  $9\frac{1}{4}$  cents, or 6 cents a pound live weight, is equivalent to \$12 a hog. In other words, the Canadian hogs, the hogs that are being marketed to-day in Canada, are selling for \$12 per hog more than they were a year ago to-day, entirely by reason of this market that they have got in England due to the Ottawa treaty and to the English policy.

If you would be interested, I think I could give you in a moment a calculation of what that has been worth in dollars to Canada. Canada produces and markets annually about 6,000,000 hogs, which is roughly 500,000 hogs a month. Of that 6,000,000 hogs that were produced in Canada last year, there were exported to England the product of about 600,000 or about 10 per cent of the hogs; by reason of the price that was received for these 600,000 or 10 per cent of the hogs, this enormous advance has taken place in Canada in the price of

hogs; and if we take the average advance—I don't know what the average advance is, but if we guess it as half the difference between  $3\frac{1}{4}$  and  $9\frac{1}{4}$ , say 3 cents a pound advance, that is \$6 per hog. The advantage to Canada of that English market in the last twelve months has been six times six million or \$36,000,000. That is a very important factor in Canada's agriculture.

Q. Over what period did you say that was?—A. Over twelve months.

*By Mr. Sommerville:*

Q. For a twelve-month period there was a \$36,000,000 increased return to the farmers growing hogs?—A. Yes, there was a \$36,000,000 increased return to the farmers growing hogs. Now, the point that I am specially anxious to emphasize is this, that although Canada did reap that benefit, which I have calculated roughly at \$36,000,000—remember that that figure is just obtained in this way, that I have averaged  $3\frac{1}{4}$  and  $9\frac{1}{4}$ , and multiplied by the weight of the hogs—although Canada did reap that enormous benefit from the bacon industry of England, Canada might have reaped a very much more important benefit if her hogs had been as good, we will say, as the Danish hogs; for all during that year Canadian bacon sold in England at an average price of about 10 shillings—8 to 10 shillings less, on the average, than the Danish bacon. Suppose we say that it is 10 shillings, less 8 to 10 shillings: suppose we say that Danish bacon has been shipped longer than Canadian bacon to the British market, and even if our hogs were as good or our bacon were as good as Danish bacon, that we would not quite get the Danish price; at least this is certainly true that if our bacon in the last year had been as good as Danish bacon, we would have got at least 6 shillings a hundredweight more for the bacon that was actually shipped, 6 shillings a hundredweight, that is per 112 pounds, the equivalent roughly to a cent a pound live weight, the equivalent price in Canada. So that if the Canadian hogs has been better, had been as good as Danish hogs, Canada would have had 6,000,000 times \$2 or an additional \$12,000,000. The Canadian farmers would have realized an additional \$12,000,000. There, gentlemen, it seems to me is the point on which the attention of Canada should be concentrated. I am quite aware that everybody who is at all familiar with the livestock problem realizes, in a general way, that it would be better,—that Canada would benefit greatly if her hogs were as good as Danish hogs, but very few people have ever converted the situation into actual figures, and very few people realize that Canada lost last year and is losing every year, a sum roughly equivalent to \$12,000,000. If we raised 7,000,000 hogs instead of 6,000,000, it would be \$14,000,000.

*By Mr. Sommerville:*

Q. \$2 a hog?—A. Yes, a cent a pound live weight.

Q. \$2 a hog on your entire crop of hogs?—A. Yes. This committee amongst other things, is charged with the duty of investigating the relations of the packing industry to the livestock industry generally. It is my view,—and I have been in the livestock or in the packing industry all my life and I think I am more interested in the welfare of the Canadian livestock industry than in any other thing, and the circumstances of my business have made it possible for me to understand that, I think, as well as I understand anything,—that one of the chief reasons why Canada continues, year after year, to suffer this loss which would be quite easily corrected if there was co-operation all round, lies in this fact: that there is not and never has been genuine and confident co-operation between the two branches, the two chief branches of the livestock industry, those being the producing side and the packers. I do not wish to enter on a defence of the packing industry; I do not wish to say anything about the packing industry other than this, that I think the packing industry in Canada performs a very important function. I think it performs it reasonably well. I am quite sure that the packing industry seeks to discharge its function of the marketing

agency of livestock as efficiently as it can; but for forty years, for all the time that I have known anything about it, the whole situation has been cursed with this lack of confidence and lack of co-ordination and confident co-operation between the farmer and the packer.

*By Mr. Kennedy (Winnipeg):*

Q. Will you express a view there as to why this lack of confidence exists? —A. Yes, I was just going to do that. It goes back a long time; my memory goes back thirty-five years. In the beginning I think it was very largely a transfer, an overflow from American conditions. I am not basing any opinion on what the American conditions were, but it is certain that that same attitude of suspicion as between the producer and the packer did exist in the United States, and I think in its origin that it was a good deal of a transfer from the United States situation. Now, wherever the responsibility for it lies, there is no question about this, that it is an enormous misfortune to agriculture, to the livestock industry of Canada and to Canada generally. It is very important if abuses exist in the packing industry, that they should be corrected; and it is very important if abuses do not exist in the packing industry, that somehow or other the farmer should be induced to change his attitude in regard to that and to co-operate, not to the advantage of the packing industry—because from a national standpoint I would look upon that as being one of entirely secondary importance—but in his own interests. If I am right in my conviction that the reason that Canada lost, or did not realize this \$12,000,000 last year on hogs is largely traceable to this situation, then it is quite evident that it would be to the advantage of everybody, and particularly to the advantage of the farmer, to correct it.

I think it lightens up and gives perspective to the problem a good deal to try to get away from it, and to look at what actually happens in the production and marketing of livestock; and here is what I think does happen: To begin with, this will be accepted as an axiom that the farmer cannot receive more for livestock than the product is sold for in the end. This product does not all go through the packers' hands, but it goes through the packers' and smaller hands and the product is ultimately sold. Cattle are bought and the sales are composed of salt beef, and so on, and the hogs are bought and the sales are mostly hams and bacon and so on; but whatever is the total amount received for the total livestock products, that constitutes the limit of what the farmer may receive. Between that sum—which is the ultimate sum received—and what the farmer gets, what intervenes?

Well, the first step is the packer. There is deducted from the total sum realized for the product, the packer's expenses or the packer's total charges. What do they consist of? They consist of his expenses plus his profits. Then back of that there are other charges, yards and transportation and so on. The two main factors in the situation are the producer and the packer, and for the present I am considering only those. I would like you to keep that in mind, and I would like you to examine these problems that I have been discussing, in the light of that framework: That the total livestock is sold for a total sum, whatever it is; that from that sum is deducted the packers' expenses and the packers' profit, and that neglecting for the present those largely minor charges, the farmer gets the balance.

Now, where do the farmers' interests lie? I think it is clear that they lie here, that the packers' charges should be as low as possible. That is clear. Also that the packers' profit I will not say should be as low as possible—perhaps even the farmers would not have wished me to phrase it that way—but that the packers' profit should be a reasonable profit.

*By Mr. Senn:*

Q. A legitimate profit?—A. Yes, a legitimate profit. These clearly are the farmers' interests. But what is the chief interest of the farmers in this situation? It is this: That the packer be so competent to do his job that he receives the highest possible price for the product that is sold. The farmers' interests hinge and depend so absolutely on the ability of the packer, on his efficiency to begin with, which reduces the expenses, and his ability to sell that product at the highest possible price.

*By Mr. Sommerville:*

Q. And to make the finest quality?—A. That, of course, is involved in the price. Every interest that the farmer has got is at the same time the packer's interest. Let me stop a moment there. What are the packer's interests? You do not need to argue about this proposition, that the packer's interests are to reduce his expenses; every packer tries constantly to do that, as I explained to Mr. Factor a little while ago. Everything that the packer does in his own interests is automatically in the interests of the farmer, except in this point of profit. You may say there is a divergence of interest there; the packer wants to get as much profit as he can, and all the profit that the packer gets is taken from the farmer. That is true. Now, the point is this—and there has been a great deal of misconception about the profits of packers in Canada—one fact about the profits of packers in Canada is that since 1920, since 1919, the close of the war, there have been no profits at all. I do not mean that individual firms have not made profits; they have; my own firm has.

Q. Your own firm?—A. Has made profits. I don't mean that every packer has lost money; but what I say is—and you can easily verify this—although I have never made a calculation, the facts are so clear that I am sure of the statement that, taken as a whole, the packing industry in the last fifteen years has made no profits at all, but losses and very heavy losses. However, that does not clear the situation because those losses may have been due to extravagant management or to too many plants or to a great many things. In other words, that may have been due to the fact that the packing industry, taken as a whole, has not been upon its job, the farmers' job, efficiently; and within limits, that is the case. That is one of the reasons why the packing industry has not been profitable. It was chiefly then during the war, that the packing industry, the same as every other industry that was producing the necessities of life, was profitable; prices were going up and up and up; it is then that every business makes profits, when prices keep going up and up and up. So that all the packing houses during the war made profits, and by reason of that fact and by reason of the additional fact that there was constant pressure for more and more and more product, the packing houses in Canada kept extending their plants, building new plants and so on. After the war they found themselves with a very much curtailed outlet. We shipped hundreds of millions of pounds of bacon and beef to Europe during the war; and after the war, within three years, our whole export trade had practically disappeared. So the packers found themselves in this position, that they had far more plants than they needed for the volume that was available, and each plant kept struggling to maintain itself, which of course was the only thing that each plant could do. The whole packing situation was in a very unsatisfactory condition, unsatisfactory for the shareholders of the packing company and also unsatisfactory for the farmers, inasmuch as there were too many plants and too much expense attached to doing their job. Well that gradually corrected itself just in the way all such situations correct themselves; one business after another just disappeared, went into liquidation. I do not know how many of you are familiar minutely with the packing industry, but Armour & Company of Chicago had their Hamilton plant closed and later closed their

plant at Chatham. These plants had been developed during the war for the export business, and it was the important end of their business; during the war it was the chief end of the business, and that closed the Gordon Ironsides Fair Company, of Winnipeg, which was the largest company, I should say—probably second only to the P. Burns Company—that closed, and so on. Well, that went on and on, and all this process of attrition went on with the situation going from bad to worse, and finally the last step and the most constructive step that was taken in my view was the formation of the company that I am attached to, namely Canada Packers. Four of the largest companies then in operation in the packing business merged to form Canada Packers. By reason of these plants closing and by reason of the merging of these four businesses in Canada Packers and consequent reduction in the cost, in the amount of expense that was attached to the marketing of live stock in Canada—I should think there was a subtraction there of expense from the cost of marketing live stock of perhaps ten million dollars, or perhaps twelve million dollars a year;—and the packing house industry began to get on a better basis, but still not without its difficulties, as those of you who know any of the companies are aware.

Now, I have not yet dealt with the question of profit, and I wish to deal with that end; and in this I am not arguing the packers' case, I am trying to make clear what the broad position is. It is quite clear that the packers can't go on with the packing industry, losing money year after year, after year. It will finally disappear, so that there must be some profit. Now, what is the interest of the farmer? To begin with, the interest of the farmer is that the packing industry should be a sound, competent and profitable industry; but it is also in the interests of the farmer that the packers profits should not be too great. Now, the nature of the packing business is such that the profits invariably, even when the profits are highest, are very small. The profit that the packer makes is a very small percentage of the total volumes of sales. Now, if this is the case, that answers it all. You see, if the packing industry performs this extremely essential service for the farmer, and does it for an extremely small percentage of profit, that really disposes of that side of the case.

Now, I am not going to dwell on that, except to make this statement: that that is the case in the packing industry, and it always has been the case, that in the packing industry, the conditions of competition and the conditions under which the packing industry is carried on are such that in the nature of things the packer could not make a large profit. He may make a sum of money on large operations that bulks to a considerable sum, but the thing that the farmer is interested in is how much per pound, or what percentage of net profit he makes, you see. Now, I will not say more about that than to say that it should be the function of the packing industry if it is doing its job efficiently for the farmer, to do that job for a very small profit; a profit which when stated in exact terms I do not think any farmer, or any body of farmers ever have challenged, or ever will.

The CHAIRMAN: Mr. McLean, I am loath to interrupt you, but it is now five minutes past one, would you be well satisfied to come back this afternoon?

The WITNESS: Oh yes, I think it would be better.

The Committee adjourned at 1.05 p.m., to meet again at 3.30 p.m. this day.

## AFTERNOON SESSION

The Committee resumed at 3.30 p.m., continuing the examination of Mr. J. S. McLean.

The CHAIRMAN: Mr. McLean was in the midst of a statement when we interrupted him, but I think he ended a portion of the statement at a point where we rose for lunch, and I would ask him now to continue his statement.

The WITNESS: In thinking it over I feel that it has been an imposition for me to make so long a statement before all you parliamentarians.

The CHAIRMAN: We are very modest, Mr. McLean, you need not worry.

The WITNESS: I do appreciate very much the opportunity of making this statement, and the hearing that I have had of it. I think I have covered most of the ground that I wished to cover, and touched on most of the points that I wished to emphasize. By way of recalling what I think is the most important point of all, I dealt principally with the hog situation, because at the moment hogs are the branch of the livestock industry that best exemplify the underlying principles with which I have been attempting to deal, and I stated that the English market, an outlet for 600,000 hogs, or ten per cent of our total production in the last twelve months, since March of last year, had been of enormous value to our hog producers. I made an estimate of the value. I did not make any recalculation of that. I would like you to know that was just an estimate I made on the monthly output, multiplying 6,000,000 hogs by \$6. But the point that I wanted to emphasize most was that although that enormous profit was made by reason of that deal, a further profit of \$12,000,000; that is, \$2 per hog on 6,000,000 hogs—

*By the Chairman:*

Q. You mean, that was the profit to the farmer?—A. Yes.

*By Mr. Factor:*

Q. I don't get that—six million dollars to the farmer, you say?—A. Yes, that that further profit might just as well, or would have been made if the product of Canadian hogs, the bacon that was shipped to England, had been on a par with the Danish bacon, which is the chief competitor with the Canadian.

The CHAIRMAN: I think you made that clear this morning.

*By Mr. Factor:*

Q. What would the benefit be for the packers?—A. There would be nothing for the packer, only just the same as he gets now. Well, that is clear, if you stop to think about it, I think; and if I may take a few minutes I will do that. You see the packer gets a fee for his services. He buys hogs, ships bacon over there, and when market conditions are favourable, he makes a profit. It happened that in the last twelve months the packer has made a very large profit on that export business, because it has been shipped practically all the time on an advancing market. The packer buys his hogs to-day and the bacon is sold in England two months from to-day.

*By Mr. Young:*

Q. You have no way of hedging sales against purchases like you do in grain?—A. No, no hedging at all; the product is consigned. On an advancing market the packer makes an extra profit equivalent to the advance that has taken place between the dates he bought the hogs and the dates on which the bacon sold, just as on a declining market he pays that loss. That may be a little confusing, and I must make it clear. Every time the English market

advances, that is immediately cabled out to Canada, and within ten minutes the news of that advance is spread all over Canada from the Atlantic to the Pacific.

Q. Well, this drop that took place in the price of hogs yesterday, did that come from London?—A. Yes, it came from two factors; for one thing the market the last two weeks has been above the accustomed level due to bad roads, you see, there has been a specially tight situation on hog deliveries, and the market has been two or three shillings above the accustomed level.

Q. How does that come, the export level fixes your price we will say at 9 cents?—A. Yes.

Q. Then the roads get bad, and you make above that?—A. Yes.

Q. Why is that?—A. Because you have to. There are not enough hogs for the fresh pork trade in the hands of the packers, and, of course, there are packers who are not interested in the export trade at all, and there is a scarcity of fresh pork, and everybody comes in to buy hogs for the fresh pork trade.

Q. I see; then this price prevailing, which I spoke about this morning, 9½ cents was really the domestic price, it was not the British price?—A. Yes, domestic—two or three shillings above the export market has been the basis of the week. We have had an unprecedented stretch of bad roads. But to go back to Mr. Factor's question, I want to make that clear, that the market substantially is always at the export level. You see if the market advances the Canadian price here goes up immediately, and if the market declines, the Canadian prices goes down immediately; and the hogs are bought on the basis of the English market practically all the time. Remember, that is not an absolute rule, because there are a hundred variations to it. But the variation from the export basis is always small, so that if the hogs, if the bacon were select, it would bring six shillings more, and the farmer would benefit correspondingly. I hope I have made that clear, Mr. Factor; so that if throughout this year bacon had sold all the time at a price six shillings higher than it actually did, the Canadian farmer would have received a cent a pound, two dollars a hog, or \$12,000,000 more for his hogs this year; and that will be the case next year, and the following year and every other year, until finally we do get on to that basis. And so it is for that reason that I think the great problem in the livestock industry to-day, as I see it, is immediately, or at the earliest possible date, to get our hogs to a basis where our product, the bacon that we ship, will command a high price on the English market. Now, that is a problem of breeding and of feeding.

*By Mr. Senn:*

Q. Do I understand you to say, Mr. McLean, that our hogs, graded as select, do not produce as good a type of bacon as Danish bacon?—A. They are very good hogs, but they are not so good as the Danish. If we could ship all select we might get a better sale price for our bacon.

Q. Practically ten per cent of our production of hogs, they tell me, is exported?—A. Yes.

Q. Can you tell me what proportion of hogs which come to the abattoirs are select; what percentage?—A. They get about 20 per cent.

Q. How do you account for the fact that we can't send 10 per cent of first-class select bacon overseas?—A. For many reasons, the two principal ones are the select hogs don't all go to the export packers, which cuts it down, I suppose, about 50 or 60 per cent, and these hogs are killed by packing houses, which are not in the export trade; and of the actual select hogs that are killed in the packing houses, about 25 per cent are bruised in such a way that they are not suitable for Wiltshire sides. Then besides that these packing houses that export bacon also have a domestic trade; they can't divert all their good hogs from their domestic trade to their export trade.

Q. Well, I was discussing this question with a gentleman who was identified with your organization some time ago, wondering if we could supply bacon in the British market, and along with that, he suggested that enough good bacon, select bacon could be culled out from the production of the different abattoirs to take care of all the export trade; is that not correct?—A. No, it is not correct; because the answer is that every exporting house tries to get its actual share of the best bacon it can get with proper consideration for its domestic trade,—its actual share of the best bacon it can, because otherwise they are heavily penalized for shipping inferior bacon; so that the bacon that actually does go is the best available bacon for shipment to be had in Canada.

*By Mr. Kennedy (Peace River):*

Q. The reason bacon is not bringing as good a price as the Danish—is it your opinion that it is wholly due to the class of hogs that are coming on the market; are you quite sure packing methods in Canada are up to the Danish standard?—A. Yes, I am quite sure packing methods are up to the Danish standard; but distance is a factor, that is geographically; but I think you have been in England recently, Mr. Kennedy.

Q. Not for a great many years?—A. I thought you were there recently. I have not heard anybody, that is any Englishman who would state that Canadian bacon was discounted because its cure was not as good as Danish.

Q. What is the reason then, the length?—A. Length and conformation, and more than anything else, the thickness of the belly.

*By the Chairman:*

Q. Right while you are on that point, Mr. McLean, I would like to remind you to do something which I think would be useful later. We will have some evidence here later from some of the experts in the marketing end of Canadian products in England, and there are some features about that on which they may have suggestions for improvements. Could you instruct some one in your plant, if you are away, to be prepared to give evidence on that point, if it should arise?—A. Oh, yes.

The CHAIRMAN: I do not want to confront you with anything now, without giving you an opportunity to prepare a reply.

*By Mr. Young:*

Q. Hogs are not supplied at the same rate for every month of the year?—A. No.

Q. Through what months do you get your heaviest shipments?—A. Well, from September to January generally.

Q. The winter months?—A. Yes.

Q. What is the percentage of hogs marketed during these months?—A. The overload of these months is not so great as it used to be, but I just hate to give you percentages; I should think September, October, November, December and January, those five months, would be about six-tenths of the total production marketed.

Q. Well now, Mr. McLean, you told us that the price of hogs a year ago, or a little more, was 3¼ cents?—A. Yes.

Q. And yesterday, or the day before, the price was 9¼ cents; can you give us the price per month—we will say from November 1932 up to the present time?—A. No, but I can from March of 1933; I had it made out yesterday afternoon.

Q. I would rather have it from November of 1932, because you tell us that these are the months of heavier shipments, but that your March shipments get lighter?—A. I am sorry I cannot give it, just January and February. In January and February of 1933 it was \$3.25. These are the average prices per month.

Q. Yes?—A. March \$4.50; April \$5.00, May \$4.75, June \$5.25, July \$5.75, August \$6, September, \$6.25, October \$5.25, November \$5.75, December, \$6.00, January \$7.75, and February \$9.00.

Q. Now, Mr. McLean, can you tell me how you arrive at the 6 per cent increase in the price of hogs during that year, when there was only one month in the year that it was 6 per cent above the beginning? You told us this morning a price six cents higher and stated that that might add \$36,000,000 to the Canadian farmer?—A. Three cents.

Q. From  $3\frac{1}{4}$  to  $9\frac{1}{4}$ ?—A. Yes, on the average.

Q. You said that made a difference of \$36,000,000 to the Canadian farmer during the year the empire agreements have been in force. Will you tell me how you arrived at that figure?—A. Yes. From  $3\frac{1}{4}$ —Remember, I safeguarded myself by saying I was making a mental calculation on the subject. It is a very large number of millions. I am not vouching for the 36. Here is the way I arrived at it. From 3.25 up to 9.25 is 6 cents, six cents a pound live weight. I averaged that; I took the two tops and averaged it. There was an average advance of 3 cents a pound, which is \$6 a hog, and on 6,000,000 hogs it is \$36,000,000.

Q. Look at the figure you have given by the month,  $3\frac{1}{4}$  cents advance, and then the next month the average is  $1\frac{1}{4}$ ?—A. Remember, I am talking about 12 months, from March 1 to March 1.

Q. We want to get the whole picture for the whole year. I find that in the last two months there was a 3 cent increase, and prior to that the increase was very slight?—A. It is a very substantial increase. I made a calculation at the end of December; I made it carefully for the 10 months between 1st March and the end of December, and there was an advance in the English market which had been worth \$22,000,000 to the Canadian farmer. If you are interested in the calculation it is made in detail in an article in the Mail and Empire that I wrote, reviewing the livestock industry.

Q. What I am interested in is the statement you made that we received \$36,000,000 more for our hogs because of the 6 cent increase. There has been no such increase?—A. I think I will stand on the \$22,000,000. That is my memory of it when I calculated between March 1 and the end of December. In January the average price was 7.75, which is an increase of  $4\frac{1}{2}$ , or \$9 per hog; \$9 per hog on 500,000 hogs is \$4,500,000.

Q. You have taken the January price as compared with—A. With the 3.25.

Q. Yes?—A. That is \$9 on 500,000 hogs, which is \$4,500,000. Then February  $3\frac{1}{4}$ , 9.00; 5.75 on a 200 pound hog, is \$11.50, and on 500,000 hogs, it is \$5,500,000.

*By the Chairman:*

Q. Roughly?—A. So \$4,500,000 plus \$5,500,000 makes \$10,000,000 to add to thirty-two. Remember, I do not vouch for the figures, but what I am saying is that this advance in the market has been worth an enormous amount, has been an enormous benefit to the Canadian producer.

Q. You let it go at that. You now say "enormous" and you withdraw \$36,000,000?—A. No; that is the advance; but I submitted it subject to it being an immediate mental calculation. I change it now to the \$22,000,000, plus 10, which would be \$32,000,000. That is subject to correction.

*By Mr. Young:*

Q. That is subject to correction?—A. Yes.

Q. Are there any other factors, Mr. McLean, which might enter into the price of hogs at the moment? How about the price of hogs in other European countries?—A. Well, the price of hogs in other countries is pretty low just now.

Q. In Denmark, for instance?—A. They are low, because they can only export a very small proportion of their hogs.

Q. Can you give us any figures?—A. No, I cannot.

Q. You cannot give us any figures?—A. No.

Q. If it should transpire that the price of hogs in Denmark has advanced since this time last year, or since the agreements were formed, that also would not apply to your figures?—A. No.

Q. Yes?—A. No.

Q. Because Denmark gets no benefit from the agreement.—A. I do not understand what you mean.

Q. Denmark gets no benefit from the agreement, and if the price of hogs in Denmark has gone up, there must be some other factors?—A. Denmark does not get any advantage from the agreements, it is at a disadvantage because of the agreements, but still has the benefit or the partial benefit of the English market.

Q. It still has the benefit of a partial market?—A. Yes, but only partially what it was before.

Q. Is it not that they pay a duty to get into that market?—A. No.

Q. No?—A. No.

Q. Just a quota?—A. Quota.

Q. Now, I should like to ask you another question.

Mr. KENNEDY (*Winnipeg*): Do you mind my interjecting just one question which may throw some light on the question, Mr. Young?

*By Mr. Kennedy (Winnipeg):*

Q. Can you tell the committee what is the present difference in the prevailing price of hogs in Toronto and Chicago and to what do you attribute that difference in prices?—A. Well, the Chicago price is very low.

Q. Can you give us the figures?—A. I am sorry, I cannot; I think about 4½ cents.

Q. The Toronto price?—A. The Toronto price, 9½.

Q. The difference between 9½ and 4½?—A. Yes.

Q. To what do you attribute that difference?—A. Entirely to the fact they have not got an export outlet for surplus.

Q. I am interested in that because I have heard it said these empire agreements were of no use to the farmer. Do you attribute it to the empire agreement?—A. Of course, largely. There is no argument, I think, that these empire agreements are the explanation.

Q. You attribute the difference to that?

Mr. FACTOR: I think we are treading on some dangerous ground.

Mr. KENNEDY (*Winnipeg*): No, it of vital importance. It is facts we want.

Mr. YOUNG: Yes.

*By Mr. Kennedy (Winnipeg):*

Q. To what do you attribute the difference in the present prevailing prices of hogs in Toronto and Chicago?—A. It is to the fact that we have unrestricted access to the English market for all the surplus that we have got.

Q. By reason— —A. Plus the fact that the English department of agriculture has entered upon a policy to put up the price of hogs in England in order to make the pig industry of England profitable.

Q. We have an unrestricted access to that?—A. Yes.

*By Mr. Young:*

Q. What did you say the present price of hogs in Chicago was?—A. I think 4½ cents.

Q. Then, there is a processing tax to be added to that? The processing tax is a subsequent payment to the farmer?—A. I do not understand the pro-

cessing tax very well, but I do not think the processing tax is distributed to all farmers; it is distributed to certain farmers in consideration of their reducing production.

Q. That amounts to  $2\frac{1}{4}$  cents a pound, on the hogs they sell?—A. I would rather you would not ask me for details of that, because I do not know.

Q. That would make a difference of  $3\frac{1}{2}$  cents a pound to be added to the price of hogs in Chicago?—A. I don't know that.

Q.  $2\frac{1}{2}$  cents to be added to the price of hogs in Chicago that the farmer ultimately receives?—A. I doubt that is the case, but I would not want to say; I don't know.

Q. You do not know anything about that. Do you know of the difference between the American hog and the Canadian hog? The price you quote here is for a Canadian select bacon hog. Is that hog known in the States at all; do they raise them?—A. No.

Q. What kind of hog do they raise down there?—A. A fat back hog.

Q. A class of hog that would not go over in this country.

*By Mr. Senn:*

Q. That is not the price for the select bacon hog on the Toronto market?—

A. The price for the bacon hog?

*By Mr. Young:*

Q. This hog is not raised in the States at all?—A. No, it is a different hog entirely.

Q. What is the present hog production of England?

The CHAIRMAN: Is that a fair question?

The WITNESS: I do not know.

Mr. YOUNG: If he does not know, he should say so.

The WITNESS: I do not know; I think they market about 4,000,000 hogs a year.

*By Mr. Young:*

Q. How many?—A. Remember, I am not sure.

Q. Are they capable of increasing their production?—A. Yes.

Q. Enormously?—A. Yes.

Q. What about cattle? Has the price of cattle advanced in England along with the price of hogs?—A. No, not to the same extent.

Q. They have not?—A. No.

Q. Is it natural to suppose that the British farmer, finding that the hog prices have advanced greatly because of the empire agreements, and the price of cattle not advancing to the same extent, that he will swing from cattle to hogs?—A. Well, there is certain to be a very large increase in hog production in England.

Q. And the result will be, of course, that the British farmer, having decided to do that, as we say, will agitate for a smaller quota to Canada and outside countries of hogs coming into that country?—A. When his hogs increase, I have no doubt that is exactly what will happen.

Q. What is he doing at the present time in regard to cattle?—A. I do not understand what you mean.

Q. Has he raised any objection in regard to the shipments of cattle from Canada?—A. All that I know is what is in the press. You know that as well or better than I do.

Q. I would like you to say it, so we can get it on the record. I cannot give evidence, you see.—A. Yes. He has requested the Dominion government to limit for the first three months of the year to the same number as last year. I understand.

Q. To limit the number of our cattle for those three months? That is what is being done this year. They are going to place some further restrictions, I understand; that is correct?—A. I do not know.

The CHAIRMAN: As a matter of fact, I do not think that last observation is correct.

Mr. YOUNG: It is not correct?

The CHAIRMAN: I do not think so.

Mr. YOUNG: I was just depending on the press report.

The CHAIRMAN: It is a little dangerous, sometimes.

*By Mr. Kennedy (Peace River):*

Q. About what grade of hog would the American live hog compare with?

—A. We really have a type of hog, but it would be—the only hog that we have that is like it, is our sow, the fat sow, sows that have been fattened after breeding.

Q. The fat sow is pretty heavy?—A. Those American hogs would not bring anything—would bring a very bad price in this country.

*By Mr. Sommerville:*

Q. Mr. McLean, you intimated that Canada Packers, Limited, is the result of a merger of several companies?—A. Yes.

Q. These companies are the Harris Abattoir— —A. Yes.

Q. And Gunn's?—A. Yes.

Q. And the Canadian Packing Company?—A. Yes.

Q. And what is the other one?—A. The William Davies Company.

Q. These four companies merged?—A. Yes.

Q. When were they merged?—A. August, 1927.

Q. Did all these plants have independent operating plants in Canada at the time of the merger?—A. Yes.

Q. Have any of these plants been closed since the merger?—A. Yes.

Q. What plants were closed?—A. The first of them was the Canadian Packing Company plant, the former Matthews-Blackwell plant at the foot of Bathurst street, in Toronto.

Q. That plant was closed?—A. That was closed.

Q. What other plant?—A. Then the Harris plant and the Gunn plant were merged into one.

Q. The Harris plant?—A. They were alongside each other in the stock yard.

Q. The Harris plant and the Gunn plant out on St. Clair avenue?—A. Yes.

Q. They were merged into one?—A. Yes.

Q. And they work in conjunction with each other?—A. They work as one plant.

Q. As one plant now?—A. Yes.

Q. And, then, what happened to the Davies plant?—A. Do you wish them one step at a time?

Q. Yes, if you will take them one step at a time.—A. Then, the Davies plant and the Canadian Packing plant at Montreal were merged into one, were linked up.

Q. Where was the Davies plant?—A. The Davies and Canadian Packing plant were at Montreal; they were alongside each other.

Q. These two plants at Montreal were alongside each other, and they were merged?—A. Yes.

Q. And was either of them abandoned, or are both of them being used?  
—A. No, both of them being used as one unit, the same as in Toronto.

Q. What was the next step?—A. Then, the Davies plant was closed.

Q. Where, at Toronto?—A. At Toronto. It was closed in January, 1932.

Q. And it is still closed?—A. Yes.

Q. Have any other changes taken place in the plants of the merger?—

A. Well, I do not think I know exactly what you mean.

Q. I just want the full history to see if there was any other change?—

A. No; that reduces the nine plants. There were originally nine plants, and there are now five operating units.

Q. Just prior to this merger of those four plants, the Canadian Packing Company represented an amalgamation of some plants did it not, Mr. McLean?

—A. Yes.

Q. What plants or companies were grouped in the Canadian Packing Company plant?—A. The original components of that business were George Matthews Company, which had its headquarters at Peterborough.

Q. It had plants where?—A. Had a plant at Peterborough and at Hull and at Brantford. The Lang Packing & Provision Company which had a plant at Montreal and the Park, Blackwell Company which had a plant in Toronto. That is going back a long way, forty years. In the course of years, these three businesses were merged; and at the time, in 1927, were called the Canadian Packing Company.

Q. Were any of those plants closed, those component plants?—A. The Brantford plant of that company had been closed before the merger, before the Canada Packers merger.

*By Mr. Factor:*

Q. That is George Matthews Company?—A. Yes.

*By Mr. Sommerville:*

Q. When was the Peterborough plant closed, or is it still operating?—A. It is still operating.

Q. Still operated by the present merger?—A. Yes.

Q. Was there any other plant of the Canada Packers closed?—A. No.

Q. Did any of the other companies that came into Canada Packers—constitute a merger of companies? Was the Davies Company a single company or was it the result of mergers?—A. No, there was a reorganization within it, but it was a single company.

Q. It was a single company?—A. Yes.

Q. Was the Harris Abattoir a single company?—A. Yes.

Q. Was Gunn's a single company?—A. Yes.

Q. There are now in the final merger how many plants operating in Canada?  
—A. Five.

Q. And there are how many closed?—A. There is really only one, the Matthews; the Canadian Packing Company plant was sold and dismantled and the Davies Company plant is closed.

*By Mr. Factor:*

Q. You said they were reduced from nine to five?—A. That is correct.

*By Mr. Sommerville:*

Q. One of them is closed, the others were merged?—A. Merged.

Q. Merged into a single unit; have you a larger capacity than you at present use in your packing plant?—A. Yes.

Q. As a result of the merger of these various plants?—A. Yes, we could handle much more livestock in the plants we are at present operating; and of course, if the Davies Company were open we could handle a very large quantity still.

Q. What other large packers are operating at Toronto?—A. The Swift-Canadian Company is the largest.

Q. Yes?—A. And the Wight Packing Company.

Q. The Swift-Canadian Company, and they operate at the stockyards also?—A. Yes.

Q. And then in addition to that, the Wight Company?—A. Wight.

Q. The Wight Packing Company?—A. Yes.

*By the Chairman:*

Q. How do you spell it?—A. W-i-g-h-t.

*By Mr. Sommerville:*

Q. Is their plant at the stockyards?—A. No.

Q. Their plant is where?—A. About a mile away.

Q. These three companies operate at Toronto?—A. Yes.

Q. What large packing plants operate at Winnipeg?—A. Canada Packers, Swifts and P. Burns.

*By Mr. Factor:*

Q. Canada Packers is your firm?—A. Yes.

*By Mr. Sommerville:*

Q. You mentioned Canada Packers, Swift's and P. Burns?—A. Yes.

Q. What large packers operate at Montreal?—A. Canada Packers and Wilsils are the two.

Q. And then are there other points at which Canada Packers are represented, where other packing plants are in operation also?—A. Well, we have a very small plant at Moose Jaw.

Q. But these three plants are the main plants?—A. Yes.

Q. Toronto, Montreal and Winnipeg?—A. Yes.

Q. You were speaking a few minutes ago of the hog market situation, and you intimated there was a rise in hogs from  $3\frac{1}{4}$  to  $9\frac{1}{4}$ ?—A. Yes.

Q. That is for the bacon hogs?—A. Yes.

Q. And the bacon hog is the basic hog; the price is fixed as the basic hog?—A. Yes.

Q. And then the select hog is a dollar more?—A. Yes.

Q. That dollar is added as a result of arrangements with the Department of Agriculture of Canada as a premium, it is not?—A. As a result of a conference that was held in Ottawa years ago.

Q. As a result of the conference between the Department of Agriculture and the packing interests and the producers?—A. Yes.

Q. And that dollar premium has prevailed ever since?—A. Yes.

Q. So that when the price of hogs is quoted at  $9\frac{1}{4}$ , that means the bacon hog, while the select hog is  $10\frac{1}{4}$ ?

Mr. YOUNG: No.

*By Mr. Sommerville:*

Q.  $9\frac{1}{4}$ , 50 cents a hundred?—A. Yes.

Q. That is right, is it not?—A. That is about it.

Q. You are reckoning a hog at an average of 200 pounds?—A. Yes.

Q. Below that standard of the bacon hog, there are a number of various grades of hogs, are they not?—A. Yes.

Q. And those grades are set as a result of government or department regulations, are they not?—A. Yes.

Q. And how many grades are there, would you say—or perhaps you can give them to us?—A. I can give them to you, but I may not be exactly right, for I have very little to do with buying hogs; at the top there is the select; bacon is second, as you say, and the select gets a premium of a dollar; below the bacon is the butcher.

Q. As you go along, would you just give us the differential of the grades below, if you can; below the bacon comes the butcher?—A. I may not be able to do that, because I am not sure.

Q. Below the bacon comes the butcher hog?—A. Yes.

Q. And that has a differential of 50 cents a hundred less, I understand?—A. If you have looked it up, I have no doubt about it. I am not sure. I don't have anything to do with buying hogs.

Q. What is below the butcher?—A. The heavies?

Q. The heavies?—A. I think probably the lights and heavies are grouped.

Q. What is below that again?—A. There would be sows and stags.

Q. There is a differential on all the grades below the bacon grade, is there not?—A. Yes.

Q. And this differential runs from 50 cents a hundred to \$2.50 a hundred, if I am correctly informed?—A. Yes.

Q. So that when you buy a carload of hogs, you buy the entire carload?—A. Yes.

Q. That is, they are graded according to government regulations?—A. Yes.

Q. And you pay for the carload of hogs according to the grade into which the hogs fit?—A. Yes.

Q. Having regard to this differential of from 50 cents to \$2.50 below the bacon hog?—A. Yes.

Q. When those hogs are graded, are they sold in separate grades or do you just take the whole lot?—A. You buy a carload and they are graded up and they are paid for on the various prices.

Q. You have intimated that approximately half of the packers are not interested in the export market?—A. Yes.

Q. And therefore half of the packers would not be particularly interested in select hogs for their ordinary fresh pork trade?—A. Oh, yes, yes.

Q. In the domestic trade, is there not a larger demand for shops and for butchers than for selects?—A. Oh, no; every packer would much rather handle select hogs and nothing else, because they are the most profitable hog; there is an equal demand for the others.

Q. Is there not a large demand for butcher hogs and shops, as they are called?—A. Well, that is for the fresh pork trade.

Mr. ILSLEY: What are these "shops"?

Mr. SOMMERVILLE: Another grade.

The WITNESS: There are lights and heavies.

*By Mr. Sommerville:*

Q. Lights and heavies?—A. They are hogs that are cut up into chops and so on.

Q. In your practice of buying, do you insist on getting all the grades when buying the butcher grades?—A. We have no absolute rule on that, but I should say in the main that we do; the question does not actually arise in practice. You buy the carloads; that is the way the business has always been done.

*By the Chairman:*

Q. That is the custom?—A. Yes.

*By Mr. Sommerville:*

Q. Supposing a merchant were selling the shops and the lights and the heavies out of a load, and reserving the butchers and the bacons and the selects for the packer, is it not your practice to refuse to accept this division by the livestock commission man and to insist on all the grades at the differentials that have been fixed?—A. It is a case that I should think very rarely happens in actual practice.

Q. By the way, how are these differentials fixed? How did you arrive at them?—A. They are fixed by a conference of the Joint Swine Committee, an official committee appointed by that original conference, a permanent official committee.

Q. Then the differential in the price of hogs is not affected by the day to day quotations on the hog market?—A. No.

Q. The only change that takes place is in the price of bacon hogs?—A. Yes.

Q. On the market?—A. Yes—well, they all go up.

Q. All go up?—A. Yes.

Q. As the bacon hogs go up, they all go up?—A. Yes.

Q. Because the differential is a fixed one?—A. Yes.

*By Mr. Senn:*

Q. Excuse me a moment, did I understand that the differential does not fluctuate from time to time?—A. It is altered from time to time by the decisions of the Joint Swine Committee.

Mr. SOMMERVILLE: It does not vary according to the price of hogs.

The CHAIRMAN: Altered by decision of the committee, he says.

*By Mr. Ilsley:*

Q. Whom does this committee represent?—A. The original conference was called in 1921, I think. It was a conference to discuss the problems of the hog industry in Canada, and the chief problem was the improving of the breed of hogs; and in order to encourage the breeding of higher class hogs, it was decided to pay a premium for selects. Before that conference closed it appointed a permanent committee to deal with this premium, to deal with these differentials, because there had to be some authority which would change the differential to meet the varying shifts of trade and the demand.

Q. It is a committee of this conference?—A. Yes.

*By Mr. Senn:*

Q. Is not that largely affected by the price of hogs at the time the joint committee meets?—A. By the conditions that obtain generally at the time the joint committee meets.

Q. And the price as well?—A. Yes.

*By Mr. Ilsley:*

Q. I want to get to the bottom of this; what is this conference, a conference of packers or of the producers?—A. No. The conference originally was a conference representing all the interests, producers, packers, government officials and so on; but the committee that deals with this under the aegis of the department, the federal Department of Agriculture, is a committee called the Joint Swine Committee, the members on which I think are appointed by the Western

Canada Livestock Union and the Eastern Canada Livestock Union, and some by the government; and the packers' representative on it is Mr. Todd, secretary of the packers' council. It is a permanent committee of about five or six or seven people.

Mr. SOMMERVILLE: They meet at intervals.

*By Mr. Factor:*

Q. What is this packers' council; is that an association of the packers?—A. Yes.

Q. You are formed into an association?—A. Yes.

*By Mr. Sommerville:*

Q. Then this packers' council, the association of packers, is a definite organization?—A. Yes.

Q. And Mr. Todd is the secretary?—A. Yes.

Q. Representing the interests of the packers?—A. Yes.

Q. Through that association?—A. Yes.

Q. This differential which is fixed, or was fixed many years ago, is practically the same from year to year, is it not?—A. It has been changed, I don't know how many times; two or three or four times.

Q. In the last ten years?—A. Yes.

Q. That is to say the changes have not been many?—A. No.

Q. And it is a more or less definitely fixed rule in arriving at the price of the various grades?—A. Yes.

Q. And then I think we have it clear, Mr. McLean, that that price is not affected by market fluctuations, except as the prices of bacon hogs go up or down?—A. The differentials are not affected.

Q. In some parts of the country you found a larger demand for heavies and fats, didn't you, than in others?—A. Well, there is never very much of a demand for the heavies and fats.

Q. Take, for instance, in the Montreal market, do you find there is a larger price paid for heavy hogs?—A. Yes. Most of the heavies get there.

Mr. YOUNG: How much above the market do they bring?

Mr. SOMMERVILLE: I am going to bring out that very question.

*By Mr. Sommerville:*

Q. Am I correct in this statement that the Montreal market does not recognize this differential as far as heavy hogs are concerned?—A. Well, I think there always has been a good deal of difficulty in Montreal. They do not enforce the differentials the way all the other markets do.

Q. A good deal of difficulty. You mean in Montreal they pay more for heavy hogs than is paid in other parts of Canada?—A. They pay more for all kinds of hogs.

Q. But they pay more proportionately for heavies?—A. Yes, I think so at most times of the year.

Q. In other words, in Montreal you have a competitive market on heavies that you have not got in other parts of Canada?—A. Well the Quebec—the lumber trade of Quebec takes the heavy hogs. There is not much of a demand anywhere else.

Q. And because of that you get a larger price for heavies that are sold in separate grades in the province of Quebec?—A. Yes, because of the freight.

Q. Not only because of the freight but because of the demand, the market?—A. At times. On the whole, perhaps, there is; but the prices are pretty well equalized all over the country. If hogs are worth so much in Montreal, they are worth that much at Winnipeg less the freight.

Q. Now, Mr. McLean, is it not a fact that many times on the markets of Canada butcher hogs would bring as much as bacon hogs if they were offered in separate grades, rather than being lumped in the whole, or tied to the whole shipment?—A. Oh, no; I do not think so.

Q. Well, do you not find out of your experience that not only butchers but shops will bring as big a price as bacons if sold separately?—A. This kind of questions are difficult questions to answer because on the same market on the same day there are all kinds of people representing all kinds of trade looking for things, and it is pretty difficult to generalize on anything. The reason these differentials were established was that they represent as nearly as they can be represented in a fixed schedule the different values, the relative values of the different hogs.

Q. You have just hit upon the very point I was going to ask about. You say the various markets and the various people seeking different grades. If you could sell the grades separately, instead of tied together, in Toronto we will say, would there not be buyers in Toronto who would seek butchers and shops rather than buy the whole carload all the way from heavies down to selects?—A. You see, you are asking a question that would involve a complete change in the method of marketing hogs, the methods that have obtained for forty years—and it is impossible for anybody to answer that question intelligently; at least, that would be my view. There may be a demand for a carload of this or that kind of hogs on a certain day, but whether or not a change in the system would make any change in the price, I do not think anybody can answer.

Q. Is there any chance of trying it?—A. I do not think there is any reason why it should be tried. On the other hand, there is no reason why it could not be.

Q. Is there any means under our present system of distribution of hogs for trying out this system in Toronto, in the Union stockyards, for instance?—A. Well, no, because the methods of marketing have followed those that have always obtained and the differentials are adjusted to present methods of marketing.

Q. Let us take it at that. Suppose I am a buyer having a shop trade in fresh pork and I go onto the Toronto market and I desire to get a carload of shops and butchers, I would have to buy several carloads of hogs before I could get out of them my carload of shops and butchers, would I not?—A. I want to be as helpful as I can, but you are putting up entirely theoretical questions. There are no such buyers.

Q. There is no opportunity to find out whether there are or not, because the system does not provide for it?—A. The fact is there are none. These hogs go onto the market as they come. They come either in carloads or they come by trucks and they are purchased under the methods that there are. It would be possible to change the whole scheme and adopt any general scheme of marketing hogs that anybody had decided on, but the whole thing is hypothetical, and I would not want you to press me too definitely as to what would happen under the thing because I do not know. It is anybody's guess.

Q. You are the packer; you are the man who handles more hogs than anyone else, and we are asking you on behalf of the committee to make any suggestion as to an improvement in the method of distributing or marketing hogs. At the present time there is just one method. Under this you buy the hogs as they are, and you have to take the whole car and to take all grades, don't you?

The CHAIRMAN: Perhaps, Mr. McLean thinks that the present method is the best and ought not to be altered.

The WITNESS: I haven't got a view on it. It is the method that is followed universally.

The CHAIRMAN: Oh, not universally?

Mr. ILSLEY: In Canada?

The WITNESS: Oh, yes.

Mr. FACTOR: For the last forty years?

The WITNESS: Yes.

Mr. SENN: Mr. McLean said Mr. Sommerville's question was a hypothetical question. Is there no demand on the Toronto market for shop hogs separately?

The WITNESS: You are asking me an awful lot of questions I never thought of before. You must remember—

*By Mr. Sommerville:*

Q. You haven't had to think about them because there has been just one system?—A. No. I think I know the implication of these questions you are asking, but I think you would do better if you could get somebody who knew more about hog buying than I do. I am trying to be as helpful as I can.

*By Mr. Factor:*

Q. You seem to stop where we want help?—A. I do not see the point of that. I do not think that is—

Mr. SOMMERVILLE: I do not think Mr. McLean intends that.

Mr. FACTOR: Not deliberately.

The CHAIRMAN: Unfortunately.

The WITNESS: No. Let us get this right. You are suggesting, or I understand you are asking me if some other method of selling the hogs would be a better method to set up.

*By Mr. Sommerville:*

Q. I am asking you if you have any suggestions along that line?—A. But you have been leading along with a series of questions.

Q. I have been asking you certain questions about grading and selling. Perhaps I can put it to you this way: under the present system a carload of hogs comes into the market. The government grader states how many hogs there are in that car of a certain grade?—A. Yes.

Q. So many selects, so many bacons, so many butchers, so many chops, so many thick, so many light sows, so many heavy sows and so many stags; is not that the system?—A. Yes.

Q. Now, when he has done that those hogs are not divided and put into various pens to sell under those grades, are they?—A. No.

Q. The whole car is treated as a car and sold as a car of hogs?—A. That is the ordinary practice.

Q. And the price of those hogs is the bacon price to-day, or yesterday, we will say, of 9.25; is that right?—A. Yes.

Q. And to that 9.25 is added 50 cents a hundredweight for the selects that may be in that car, and from that 9.25 is taken the differential of 50 cents to \$2.50 on the other grades?—A. Yes.

Q. If I came along I could not buy any of those hogs without taking the whole series of grades; is that the system?—A. No. It is not quite so rigid as that. It is the practice, the ordinary practice.

Q. Now, if your interest as a packer required the acquiring of premiums and premium hogs and bacon hogs for the export market, would you not prefer to have all the selects in one pen and buy the bacons in their separate grades and buy them as such rather than buy the whole thing from premiums to stags?—A. I do not know that we would prefer it at all. I do not think that as between the two systems—if there were two alternative systems of buying under consideration, I do not think the packer would have any view one way or the other.

Q. He would not have any view?—A. One way or the other. I think his selects would cost him about the same no matter which way it was.

Q. If there were more competition among more buyers for those hogs not used in the export trade, you would expect a higher price for the lower grade hogs, would you not?—A. No, I do not think so.

Q. You think that competition would not improve the prices of them?—A. This is so highly theoretical that I do not think it is possible for anybody to give a convincing answer on this. My view would be this, that the price that is paid for the total quantity of hogs is determined by the price that can be received for the product. It is the price I was trying to give expression to this morning, and whatever system of buying you follow or you adopt that price will be determined by the ultimate price that is available for the product.

Q. Yes, but if the domestic demand increases your price the farmer will get a larger return, just as to-day you told us that the domestic demand has raised the price 50 cents above the export price?—A. Yes.

Q. And so the domestic demand to-day has increased the return to the farmer that is really not warranted by the export market?—A. Yes. That is a very temporary situation.

Q. It might be made permanent if you had competition?—A. Oh, it could not be.

Q. If you had a permanent competition for your domestic demand, might you not have that condition for your lower grade of hogs?—A. You mean you have a condition on which the hogs would be permanently held above the export level?

Q. You mistake me—not the export hog. I am referring to the lower grade hogs which are not export hogs and which are now differentiated against to the extent of \$1.50 to \$2.50 a hundred. Would you not have free competition in those hogs which would raise the price of those hogs and give the farmer a better return?—A. You mean by a different system the price of those hogs that are differentiated against could be brought up to the export basis?

Q. Not necessarily to the export basis—at any rate an improved price, a higher price than they get now?—A. I do not think so. I do not think anybody could answer that question with confidence. I do not think so, because I think these find their own intrinsic level.

Q. Do they? They do not get a chance to find their level at present because there is a fixed level for them; they must stay at \$2 and \$2.50 below export level?—A. You mean that rigid differentials should be abandoned?

Q. I am asking you as an export packer?—A. You are not asking me at all; you are suggesting this scheme, and I want to understand the scheme you are suggesting.

Q. Take the present system which you say has been operating so long, this rigid scheme; I am asking you if a change in the scheme to give free competition to the butcher grades of hogs would not improve the return to the farmer? Do you recommend the scheme as the desirable goal?—A. As I said before, it is entirely a hypothetical question and my reply would be, "I do not think so". It would be "no".

*By Mr. Young:*

Might I put a question in another way: suppose we could not ship hogs to the stock-yards at all; or suppose all hogs were shipped to the stock-yards and there they were graded selects to one pen and bacons to another, and so on and then the buyers and all other packers were invited to come and bid on the hogs they wanted, what effect would that have on the differential?—A. Well, I think the answer is the same as I gave to Mr. Sommerville, that is, the total price that would be paid for the hogs would be just the same because it is determined by the price that is available for the product.

Q. The price that is available for the product, the price that will be available only for the selects and the bacons.—A. Oh, no.

Q. Then you have those other hogs that are sold in the domestic market?—A. The outlet for the other hogs would be still just exactly what it is now. You see, I am taking it for granted that the packer under the present conditions markets all the hogs for as much as he can get for them; the packer would still continue to market the hogs and I do not think he would get any more for the hogs, so that while there might be some spread as between the different grades the total price that would be received would be exactly the same.

*By Mr. Sommerville:*

Q. The gross return you think would be the same?—A. Yes. Remember I am not posing as an expert on this.

The CHAIRMAN: You are a pretty good authority. I don't know of anybody in Canada who is better.

The WITNESS: Because it is a purely hypothetical question.

*By Mr. Sommerville:*

Q. You have to deal with the question of buying the hogs every day?—A. I have given you my view as clearly as I can.

Q. By the way, when you were buying your hogs at 3.25, it cost the same to process a 3.25 hog as a 9.25 hog?—A. Yes.

Q. And it cost exactly the same to transport the finished hog?—A. Yes.

Q. So that your costs for a 3.25 hog laid down in Liverpool would be the same as a 9.25 hog?—A. The costs attaching to it, yes, the expenses.

Q. I do not mean the price?—A. The expenses attaching to it, yes.

Q. Perhaps you may not be in a position to give us this information at this time, but is there a larger profit to you in the handling of a 9.25 hog than there is in the handling of a 3.25 hog?—A. That is an easy question to answer. When we were handling 3.25 hogs there was no profit at all.

The CHAIRMAN: Of course, that is a safe answer.

*By Mr. Sommerville:*

Q. The alternative is, when handling a 9.25 hog there is a profit, in handling hogs or any other product?—A. Yes, when the market is increasing. I explained that this morning.

Q. And your market has been increasing?—A. Oh, yes.

Q. So that the 3.25 hogs that you bought in January of 1933,—you sold in the English market two months later, did you?—A. Yes, about two months.

Q. On the basis of 4.75 hogs in Toronto?—A. Yes.

Q. And the 4.75 hogs that you bought in Toronto you sold in the English market on the basis of hogs in Toronto at 6.25?—A. Yes.

Q. And the 6.25 hogs that you bought in Toronto you sold in the English market on the basis of 9.25, or thereabouts?—A. Well, that is the idea.

Q. That is the idea, yes, and, therefore, there has been that steady improvement in prices of bacon and, therefore, steady improvement to you in the return on the hogs?—A. Just to make that point clear I will differentiate between the automatic profit that comes to the packers in the market and the operating profits that you hope to get regularly in buying and selling. On a market that remained absolutely level the packer would hope to get an operating profit of say a quarter of a cent a pound.

*By Mr. Ilsley:*

Q. Whether they sold high or low?—A. Whether the hogs are high or low. As a matter of fact, when hogs are low it is very difficult for a packer to get a profit, but when high it is much easier.

Q. Why is it easier when they are high?—A. Because the fact that they are high implies they are high because they are in great demand and it is easier to get your price; and the fact that they are low means that there is no buyer.

*By Mr. Young:*

Q. When you say there is no profit in hogs at three and one half, what do you mean by that,—to the packers?—A. I mean if we were selling on export trade, but it might apply closer to the domestic trade, that when conditions are such, when the hog market is in that position it is extremely difficult to make a profit on operation.

*By Mr. Kennedy (Peace River):*

Q. You have paid your costs, wages and salaries?—A. The costs for one thing are relatively so much higher to the price of hogs.

Q. But were you able to pay interest on your investment, salaries, wages and so on?—A. Well, our results year by year are published, but that would be a long story to get into.

Q. Well, a great many farmers in the country at least are interested in this question of stock-yards. It is the practice in some parts of the country, is it not, for the packers to have buyers out in the country buying directly from the farmer?—A. Yes.

Q. Why do the packers do that? Why do the packers keep buyers scouring the country for cattle?—A. To deal with hogs first, that has been the almost universal method of buying hogs in Ontario, and the reason is that the plants are located all over Ontario, and very largely most of them are at points where there are no yards, and it would be clearly an undesirable expense for a packer in Kitchener, for instance—there are two yards there—to buy hogs on the Toronto market, hogs from the country around Kitchener and then have them shipped back to Kitchener to the plants there.

Q. Well, there are no buyers then seeking to buy hogs from farmers bringing them into the Toronto market?—A. Oh, yes.

Mr. SOMMERVILLE: The Toronto plant?

*By Mr. Kennedy (Peace River):*

Q. Why do they keep them when they have stock-yards there?—A. Well, the method of buying hogs, that is kind of a long story, and I think I should try to make it clear.

Mr. SOMMERVILLE: This becomes important because the whole question of marketing of livestock is within the purview and after this investigation doubtless it will be taken up, but I understand you are going away on a holiday and ordinarily this would come up after there has been some further inquiries?—A. You see, the practice of buying hogs arises from the plant situation; you can understand that; these plants are scattered all over Ontario.

*By Mr. Factor:*

Q. I thought there were five plants altogether?

Mr. SOMMERVILLE: There are a number of small plants that Mr. McLean is referring to.

THE WITNESS: They are not very small plants either.

Mr. SOMMERVILLE: They are smaller, shall we say, than the mergers perhaps. We will deal with them only from the stand-point of the merger of the big plants. What is the situation as it affects Swift's and Canada Packers, do they have buyers in the country buying hogs?—A. I should not think Swift's do, and we have no buyers in the country buying hogs.

Q. In Ontario?—A. No.

Q. But you do have buyers shipping directly from Alberta?—A. No, we have no buyers shipping directly from Alberta. We buy a good many hogs in Alberta f.o.b. country points.

*By Mr. Senn:*

Q. Before you leave that, Mr. McLean, you say you have no buyers in the country, but a certain proportion of the hogs that come to your abattoir come by truck do they not?—A. Yes.

Q. Do you ever pay the truckers a premium for the hogs they bring in?—A. They bring the product to the abattoir, they bring the hogs to the abattoir and we pay for them just the same as we buy any other products.

*By Mr. Sommerville:*

Q. Do you ever pay the truckers a premium for bringing in hogs to your plant rather than taking them to the market?—A. No. The trucker gets a premium in the fact that he does not have to pay market dues. We pay the market price whatever it is.

*By Mr. Senn:*

Q. The trucker brings the hogs in to your abattoir and you send the returns back to the farmer by the trucker. I am told that in many instances truckers receive a premium from the packers for bringing those hogs direct to the abattoir?—A. I have heard that statement made. I don't think it is correct.

Q. I don't know either?—A. It is certainly not correct so far as our firm is concerned, or if it is I don't know anything about it. Remember, there is a lot about our business that I don't know. I am saying that just because I am trying to be helpful to you.

*By Mr. Sommerville:*

Q. In fairness to you, as Mr. Senn has said, information has come to several members of the committee from a number of people to the effect that the packer who has hogs delivered direct to the plant often times pays the trucker himself, not for the farmer but the trucker himself, not only the amount that he would get for the farmer but he is paid on top of that a bonus, or a premium or an allowance for bringing to the plant a certain number of hogs per week or per day?—A. I don't know that.

Q. You don't know that practice?—A. No.

*By the Chairman:*

Q. Would you say it is not correct, Mr. McLean?—A. I don't know.

*By Mr. Factor:*

Q. Does it occur with your consent?—A. I don't think so.

*By the Chairman:*

Q. What proportion of the hogs that you handle in the Toronto plants are brought direct to the plants either by railway cars or trucks and not passing through the Toronto Livestock market?—A. Oh, I should judge 50 or 60 per cent.

*By Mr. Sommerville:*

Q. That is, going through your plants?—A. Yes. Some of these hogs are bought from drovers who assemble car loads in the country.

*By the Chairman:*

Q. But there are more truckers to-day than the old fashioned drovers?—A. Trucking is increasing rapidly.

*By Mr. Sommerville:*

Q. Then, Mr. McLean, with respect to Alberta you say a lot of hogs are bought f.o.b. loading or shipping points in Alberta?—A. Yes.

Q. And the price that is paid in Alberta is fixed by the market price at either Calgary or Edmonton, is it not?—A. Oh, no. You see, the hogs that I know about, that I hear about every week are the pool hogs at southern Alberta point, at Lethbridge or Blind Man Valley, and at Ponoka. There are a group of farmers there who send in their hogs every week; they have six to eight car loads in each of these pools. Supposing a cable comes from England that the market has advanced—

Q. The cable goes to the packer, the cable doesn't go to the farmer.—A. The cable goes to the packer and to the market too. The cable is published in the papers; but there is a place where a packer very often wishes to get hogs, where he can buy five or six car loads, or it may be seven or eight or ten, and every packer in Canada bids on those hogs or puts in an offer on them. They are sold on certain days every week. Those are the Alberta hogs that I know of.

Q. The price that is paid is related to the price, however, that is fixed on the stock-yards, that is, the public market in the stock-yards.—A. I am thinking of it, of course, from the pool man's point of view. We do not know what price is being paid, or do not know very accurately what price is being paid. I would rather say that the price on the Calgary and Edmonton yards was generally fixed by the price paid for those f.o.b. hogs.

Q. That is, you would say the price on the Toronto yards was fixed in the same way if you have 50 to 60 per cent of the hogs going direct?—A. You see, it just happens you mention those Alberta hogs, and it happens that a situation exists in Alberta that does not exist anywhere else as far as I know, because of these pool hogs.

Q. But Mr. McLean, do you not fix your price for those Alberta hogs on the basis of the market price of the day that is fixed by the stock-yards in open competition and published?—A. Oh, well, the same conditions determine both, of course.

Q. Yes, you would not pay them more than the market price?—A. Oh, we frequently do.

Q. You frequently do?—A. Oh, yes. For instance, here is a load of say six or eight trucks and there is a chance of buying six or eight or ten decks at one time; that frequently happens.

Q. And you know when the market is likely to go up, because you are the buyer?—A. We don't know very much about it, but we always have to have a judgment.

*By the Chairman:*

Q. Just on that point, in Great Britain, your representative sits in with the trade over there and they agree on the price of bacon, don't they?—A. Yes.

Q. You get that advice, of course?—A. Yes.

Q. And you are in a better position, of course, to know what the market price is likely to be than the farmer in Alberta?—A. Oh, yes, we are, but that price is cabled every week; it is published in the Friday morning paper every week.

*By Mr. Ilsley:*

Q. Why are you in a better position to know then?—A. Because we have our own agent there and we are getting cables every day.

Q. You know before it is published?—A. No, we do not know before it is published but we always have a view; we frequently have a view that the market is going to advance, and when we have that view we try to buy up all the hogs we can.

*By the Chairman:*

Q. You would know pretty well, for instance, towards the end of this week from your cables from your representative who sits in with the British buyer that next week the market was likely to stiffen?—A. We generally have a view.

*By Mr. Sommerville:*

Q. What do you call a view?—A. For instance, we have a view that the English market will decline this week.

Q. And you get that view from the cables from England?—A. From numerous cables; we have two or three cables every day.

Mr. FACTOR: It is not a view, it is a knowledge.

Mr. ILSLEY: He says it is an opinion.

*By Mr. Kennedy (Winnipeg):*

Q. Cables contain the information on which you base your view?

The WITNESS: I think you misunderstand me, Mr. Factor, or you would not suggest it is a knowledge. I have been trying to explain that we have our views; that is our business to estimate the market all the time. We are frequently wrong.

*By Mr. Kennedy (Winnipeg):*

Q. You say that your view is very often wrong?—A. Exactly.

The CHAIRMAN: The price is fixed each week by conference between the Canadian representative and the buyers over there of bacon.

Mr. KENNEDY (Winnipeg): Oh, yes.

The CHAIRMAN: For the ensuing week.

Mr. ILSLEY: Does he know what it is going to be fixed at in advance or is he just guessing, forming a guess about that.

The WITNESS: I wish we did know.

*By Mr. Sommerville:*

Q. What happens then when this conference takes place in England? Are your representatives at that conference?—A. Well there is a committee of Canadian agents—there are one or two representatives selected from all the Canadian agents.

Q. Yes?—A. Who meet the representatives, a small committee from the buyers, under the chairmanship of an official of the exchange.

Q. Yes, and this committee then, some representing Canadian agents and some the buyers, under this representative of the exchange as Chairman, fix the price for the following week?—A. Yes.

Q. That price is cabled to you, is it?—A. Yes.

Q. And they fix the price for the following week; I just want to get that clear?—A. The price is fixed each Thursday.

Q. The price is fixed each Thursday?—A. During the week some trading is at a definite price when the trade is made, but most of the trading is done on the basis of—bacon is sold on Monday, Tuesday and Wednesday, the price to be the price fixed by the committee on Thursday?—A. It is not fixed for the following week, it is fixed for the past week.

Q. That is, Thursday's conference fixes the price that prevails from the Monday previous to the Thursday, to the Saturday following?—A. That is, on trades that have been left open.

Mr. FACTOR: That is not the information I got from the Chairman's remark, I thought it was fixed for the following week.

*By Mr. Sommerville:*

Q. Let us get this now; on the trades that are left open—what do you mean by that?—A. Some bacon is sold and the deal definitely closed.

Q. At a price?—A. At a price. For instance, the market runs between 85 and 90 shillings. There would be some bacon sold to-day on which our agent and the buyer will agree to, say a price of 86 shillings, they will give us a cheque; but on some transactions the price would be left to be determined when the market was fixed on Thursday.

Q. Oh, yes, and on the open deals the Thursday conference fixes the price to be paid on that bacon?—A. Yes.

Q. Now Mr. McLean, with respect to that Alberta situation, our information is that of the hogs that are slaughtered, we will say at Edmonton, 98 per cent are bought in the country (these are 1932 conditions, our figures are for 1932) and shipped direct to the plant, while 2 per cent were bought upon the market?—A. Yes.

*By Mr. Young:*

Q. Did you say these were all bought in the country, that some of the farmers would load hogs and ship the packer without consulting anybody? Are these direct shipments?—A. Mr. Sommerville knows more about that than I do.

Q. The farmers had the hogs shipped out to the packing house?—A. I submit if the percentage is 98 there must be a great many farmers or drovers who do that who have a connection with either Swift and Company or P. Burns & Company, and they just buy runs each week and ship to the plant.

Q. Now, as a packer, if these figures are correct—and these figures give us for 1932 the condition in Northern Alberta—since the price of hogs is fixed on the open market, do you consider that a healthy state of affairs to have the price of the 98 per cent of the hogs shipped direct fixed by the 2 per cent that are on the market?—A. You are asking me a question about a territory that I am not personally familiar with. My view in regard to this whole subject is that the method of buying has very little effect on the price, when the price is determined, as I have explained two or three times, by the total sum at which the product can be sold, and that however you buy the hogs—there may be some shade of differential as between grades if you buy on a graded basis—however you buy hogs the total price that will be paid will be the price which is determined by the outlets.

*By Mr. Ilsley:*

Q. Excuse me, I do not know anything about this, but I just want to ask a question; there is a certain spread between what you pay and what you get for the bacon, I suppose?—A. Yes.

Q. And you would intimate that the spread is determined by the high quality you get?—A. No, there are millions of transactions, and I am not intimating that at all; but the total effect that works out in a way that I can not explain, and that nobody else can explain, but it does work out; the total effect is that the price paid is determined by the outlet, and the price obtainable for the product, I think I could illustrate that to you—I realize that you are asking for information, and I realize that I am not giving you a very con-

vincing answer; I don't think anybody could—you must realize that I am talking about a business in which millions of transactions occur. Now, I cannot tell you the exact laws that govern each transaction, but I do think I understand the principle that is behind the total business. That is what I am trying to make clear.

Q. Exactly?—A. Now, in regard to whether or not that did obtain, I do not think you could have a better proof—that is hardly the word I want—of the thesis I am trying to maintain in just exactly what has happened in the hog market this year. The English market advanced step by step, as it advanced the price of hogs went up; it went up at Edmonton just as it did at Toronto, Peterborough, Hull and at every other point, because the outlet for that went up.

Q. The competition of buyers of one kind and another in Canada is perhaps what keeps that spread uniform?—A. You have put your finger on it, I do not know why I did not think of that. Everybody knows what the outlet is, and then when the buyer sees that there is going to be an advance in price, everybody goes out after the hogs.

Q. If you destroyed that competition in some way, there would be nothing to keep the spread from being excessive?—A. No, it all hinges, first on the basis of outlet, and then there is active competition for the hog.

*By Mr. Kennedy (Peace River):*

Q. Is the competition less with the packers; buyers out in the country than it would be if they were all going to the central yards?—A. No, I do not think that—I think a pretty fair thesis can be put up that a change in buying methods might make a change in price of hogs; but I think fundamentally the final answer is what I have said, determined by the amount of money available for the product.

*By the Chairman:*

Q. Just one or two questions there. In your statement this morning, and again this afternoon, you mentioned that the export market was really the determining factor; that is your contention, and that is the basis of your thesis, and of this long statement?—A. Yes, but remember there are qualifications to it, as I explained to Mr. Young, that determine the price of hogs. Now, what has accounted for the advance in the price of hogs in Canada this year has been the advance in the price of bacon in England this year.

Q. Now, we export approximately 10 per cent?—A. Yes.

Q. Then the price to the farmer of the 90 per cent that is consumed domestically is determined by the 10 per cent that is exported—that is your argument?—A. Yes.

Q. Now then, the question I would like to propound to you is this, you may say it is theory, but it is very vital, I think, to the farming interests that produce these hogs: is it not possible that the method now involved in the merchandising of hogs after they come to the markets, either direct or to the stock yards, militates against the price of the 90 per cent of the domestic hogs?—A. No, not at all, because the price that is paid for all that 90 per cent of the domestic hogs is exactly the same price.

Q. That is because of the system?—A. But the basis is determined by the English market.

Q. No, what has the English market got to do with all the grades below bacon hog?—A. Because there is a differential, and because of this formula upon which it is agreed to buy hogs in Canada.

Q. Precisely, because of an arbitrary formula adopted and now in vogue?—A. I do not think you have got the point I am trying to make. I am not

claiming it is right. What I am saying to you is this, that the price of hogs in Canada, and of all the hogs in Canada, is determined by the export market; and whatever changes you make in the system of buying hogs, hogs that go into domestic consumption, you do not make any change in the export market, and that is the thing that determines.

Q. That is your theory, your way of propounding it. What Mr. Somerville and others have tried to get at is this, that a very substantial proportion—your proportion is 90 per cent—that is sold here, is not affected by the bacon hog feature at all. Therefore, if there was a freer market, and a freer method of competition in these other grades—butchers, stags, heavies, lights, and so forth—if there was freer competition for these grades in Canada, would there not be a tendency for the market to pay a higher price for these 90 per cent of the hogs marketed?—A. Well, remember I am just giving you my thesis, and I think you are overlooking that thesis, Mr. Stevens.

Q. I do not think so?—A. I think you are overlooking this, Mr. Stevens, that I am taking it for granted that all the product that is sold in Canada, as well as all the product that is sold in England, is sold for as high a price as is obtainable.

Q. Under the present system?—A. I do not see the system on which you buy hogs has anything to do with the price you are going to obtain for your hogs?

Q. That is a question of opinion?—A. I do not think it is a question of opinion. How can it affect it? How can the man that buys that pork—the man that buys that pork does not know anything about where those hogs were bought. You will probably concede this, that the packer gets all he can for the stuff he has to sell. I think we get all we can for the stuff we have to sell both here and abroad. I think the fundamental consideration in this thing that we have been discussing this afternoon is that if you take it for granted that the packer is getting all he can, I do not see how you can increase the total price that is paid the farmer except by reducing the expense to which the packer is put.

Q. How are you going to say that the packer has got all he could, for instance?—A. I cannot see how you think—

Q. There is no objection, for instance, to the consumer in town here when hogs were selling from \$2.90 to \$3.25—there is no reason to say that the consumer would have objected to paying \$4 or \$5. They did not object when they went to \$4 or \$5?—A. No. You see, that was because the market was cleared of the surplus at the time. I think I may reasonably speak of this, that the packers market that product as well as they know how—I was going to say as well as anybody could, but I will say as well as they know how. You have got the packers all interested. You might change the packers, who might do better. I think the fundamental thing is that the price that the farmer gets for the hogs is determined by the price that is available for the product.

Q. It seems to me that farmers are fairly well satisfied this year because hogs are high, but last year when hogs were low, it was a different story. Half of last year and prior to that hogs were \$3.25, which is not a fair price to a farmer for his hog?—A. What do you mean by fair? That is all that could be got for the products.

Q. Is it not a ruinous price to the producer? Let us get one fact. Is not that ruinous?—A. Why do you ask me that question?

Q. I ask you your opinion. Do you consider the farmer is getting a living price?—A. The farmer is operating at a loss, no doubt of that; but I would like to interject in here that nobody suffers so much when prices are low—

Q. As the farmer?—A. Next to the farmer as the packer, because the packer—remember, I am in the livestock business 365 days of the year. You gentlemen at Ottawa intervene once in a while, and Mr. Sommerville intervenes

once in a while. The soundness of our business depends on the total livestock industry being sound, and nobody is so anxious for the farmer to have remunerative prices as the packer.

Q. Let us take that for granted. The fact remains that the price of \$3.25 is ruinous to the farmer. We will admit that?—A. All right.

Q. Then, if we can discover that there is in this system presently in vogue, something that could be improved on in the way of marketing or some other system that may be adopted that will improve the prices in the domestic market, is it not desirable?—A. Certainly; it is just as much in the packers' interest as the farmers. Excuse me for one moment. There is no disparity, there is no divergence of interest between the farmer and the packer. The theory that you are working out is based on the assumption that the packers' interest and the farmers' interest clash. That is not the case at all.

Q. All I can say is the farmer is the goat. That is the thing that worries me. I am telling you very frankly that insofar as beef is concerned, when we come to it, we will find that the condition is far worse there than we have found with the hog.—A. Well, a year ago—

Q. I think it is the primary duty of this committee to search out and find just why it is that the farmer is always left holding the bag?—A. Let me tell you what is the primary duty of this committee, what I think it is, particularly in regard to the packing business. I am not here in the position of a school teacher at all, but I spent my life in this business. That is what I came down here for, and that is why I asked for the privilege.

Q. Quite so?—A. The duty of all of us is to try to introduce changes, if any, if we can agree on the change in the method of carrying on the livestock industry in Canada, which will bring the larger returns to the farmer. That is what you are after; that is what I am after. I have been speaking to you this morning—by the way, I did not get the chance to finish my speech—I got on this question.

Q. I thought you were through?—A. No. I would like to have added some more. Speaking to you this morning about a change in the method of carrying on the livestock industry which would immediately bring in the farmers \$12,000,000 a years more—

*By Mr. Sommerville:*

Q. By producing better hogs?—A. \$12,000,000 a year. There is something to be done in Canada, gentlemen, that will bring immediately \$12,000,000 a year more to the farmers out of hogs alone. It will not bring in a nickel to the packer—well, I should not say that. I do not think their profit will be—

Q. They get their returns?—A. They get their operating profit. The packer in insisting on that and asking for those changes year after year—because we are losing \$12,000,000 every year—is thinking solely of the interests of the man who produces those hogs. Now, I think this committee has an opportunity in that regard. I know that you are honestly seeking to benefit the farmer in those changes in the methods of buying hogs that you speak of. Personally I do not care what method is adopted for selling hogs. I am not opposing the change, but what I am saying is I do not believe it will add a nickel to the price that the farmer will get for the hogs; whereas, I do know a way whereby you can add \$12,000,000 a year.

Q. Suppose we add \$12,000,000 a year to the farmers of this country by growing 50 per cent more select hogs than we are doing now, when they come to the market, under the present system, if every car of hogs that you buy contains 50 per cent of select hogs instead of 10 per cent the farmer would have to sell you the sows and the heavies and the lights and the butchers and the shops at a fixed differential, would not he?—A. It would depend on the formula that you adopted in buying.

Q. The present formula?—A. The present system is a system that was adopted in the judgment of all the people involved represented in the joint swine committee. These were not representatives of the packers' interests at all. The packer has one representative and there are six other representatives on the committee.

Q. That is not to say as it was in the beginning, is now and ever shall be. If we can find an improved method of marketing, it is the desire of this committee to do so.—A. Well, you see what I—

Q. Let me illustrate it. When you were paying \$3.25 for bacon hogs by carload lots in the same year in which you bought bacon hogs, 80 per cent of the hogs were below bacon, were they not—70 per cent?—A. You are speaking of the general average.

Q. Yes. Seventy per cent below bacon?—A. Yes.

Q. So that 70 per cent was bought for less than \$3.25?—A. Yes.

Q. And some of them would be bought for 75 cents a hundredweight with a fixed differential on which you bought when you were buying at \$3.25?—A. Yes.

Q. So that the farmer who sold his carload of hogs and had to sell them by that fixed differential may have got only 75 cents a hundredweight for some of his hogs, and \$1 a hundredweight for some of the others and \$1.25 for the rest of them. What the committee desire to know from you is this: if he had been able to take out these cheaper grades would he not have found, then, on the competitive markets a higher price than 75 cents a hundredweight or a dollar?—A. You want me to answer that? Well, my answer is that I do not think it would. I do not think you could, for the reason I have given you.

*By Mr. Ilsley:*

Q. When the price gets down to \$3, you take away the whole value of the hog?—A. Well, that is the intrinsic value of the hog.

The CHAIRMAN: No, no.

Mr. ILSLEY: You say the poor hog was 10 per cent, whereas this good one was 20 per cent. You take it all.

*By the Chairman:*

Q. Here is another question I would like to ask, Mr. McLean. You spoke about a conference with the packers and so forth. I remember sitting in on a conference, and your representative at that meeting stated very definitely and very positively that they preferred to process a substantial proportion of their export business in seconds, as he termed it—that is seconds when it became bacon—for the British market. How do you reconcile that with your statement that you would prefer to have selects?—A. That statement—are you sure you understood it?

Q. I am dead certain of it.—A. Well, I don't understand.

Q. Furthermore, there have been a lot of complaints about that second-grade bacon?—A. There are a lot of complaints about everything the packer does.

Q. No, no— —A. That is the thing that I am talking about; and let me tell you this, Mr. Stevens, that we are talking now about something that I do not think is worth \$100 a year to the Canadian farmers.

Q. What?—A. This thing about the changed system of buying, and we are not talking about this thing that everybody admits is worth \$12,000,000 a year. That is what I hope will come from your committee.

Q. Will you please just stick to this second-grade bacon that I am speaking of for the moment?—A. You are speaking about something that I don't know—I think you must have misunderstood.

Q. No, I do not misunderstand. I understand very clearly two points; one is that complaints came from Great Britain during the past six months because of the inferior class of bacon that we have been sending over there, not our best, not our select, but our second grade. There have been a lot of complaints. I am stating that definitely, and knowing what I am talking about?—A. It is possible you do not understand all those complaints.

Q. Well, of course I can read English, and I am fairly well informed of them?—A. Yes, yes, but you are not in the bacon trade. I cannot understand this, because packers do not send their product over there to sell at rotten prices. They send their product over there to sell at the best price they can get.

Q. I did not say to sell at rotten prices. I said there was a substantial portion of that bacon shipped out of here this last year, we will say this last nine months, about which there have been considerable complaints on the British market because of its inferior quality?—A. I can explain that, too.

Q. That is one statement. The second is this, that one of your representatives said that they preferred to send a certain proportion, and he said a very substantial proportion of what he called seconds,—I have forgotten the exact term that he used—

Mr. YOUNG: Butchers.

*By the Chairman:*

Q.—this soft bacon rather than firm, first-class bacon, because there was a market for it in the old country. What I am coming to is this: You have stated that the farmer should raise select hogs and the bacon type, and if they did they would get \$36,000,000 a year more?—A. No.

Q. I mean to say \$12,000,000 a year more in increased returns; how do you reconcile those two positions?—A. Well, Mr. Stevens, they are very easily reconciled. Your difficulty is that you have not spent thirty years in the packing industry.

Q. Take it for the moment that I don't know anything about it; I am a disciple looking for information?—A. Well, I am trying to give it to you. You must admit that I am trying to be helpful. If we were raising all bacon or all select hogs, there would not be any seconds shipped.

Q. That would be a desirable position?—A. Yes, of course, but the seconds are here. I will just tell you what I think of this thing that is arising here—

Q. May I ask before you leave that, or make this point, that out of this mixed carload that you buy,—and which you insist upon and have insisted upon very frequently here to-day as the right way to buy,—there will be at least 60 per cent that will be below the bacon type; that is reasonable, I think?—A. No.

Q. How much?—A. Selects are about 20 and bacons are about 30.

Q. Well, 50 per cent?—A. All right.

Q. I think that is a little high, but we will take your own percentage, 50; that 50 per cent is bought at a very low and arbitrary cut of one to two dollars below the bacon type?—A. No, it is not very low.

Q. Never mind whether it is low; it is lower by one or two dollars?—A. Yes.

Q. That is the point?—A. Yes.

Q. And is there more profit in it if you can send a substantial portion of your bacon to the old country in that second grade because of the low price you buy those second-grade hogs on the market?—A. There is none of them ever goes to England.

Q. I am told there is a substantial amount of them?—A. No. You see, those seconds that go to England would be entirely shops and butcher hogs.

Q. That is what I am saying?—A. Bacon hogs, I mean; out of the 50 per cent, there would not be anything of that lower 50 go to England.

*By Mr. Sommerville:*

Q. Do you mean to say make Wiltshire sides out of bacon hogs and selects only?—A. In the main, yes.

Q. In the main; do you not make some of your Wiltshire sides out of butcher hogs?—A. No, I don't think there would be—you see, you are asking questions that really have no importance.

The CHAIRMAN: Oh, no, no. It is for you to answer.

The WITNESS: Well, the answer is no.

*By the Chairman:*

Q. The answer is no, meaning that you do not?—A. Yes.

*By Mr. Senn:*

Q. What about heavies?—A. There are no heavies; the kind of heavies that are discounted do not go to England; there are heavy Wiltshire sides in the selects and the bacons.

Q. They are trimmed down to conform to the weight?—A. Yes.

*By Mr. Sommerville:*

Q. Now, Mr. McLean, you said for the most part that bacon headed for the English market was made out of bacon hogs and selects?—A. Yes.

Q. What is the least part made out of?—A. The which?

Q. You said for the most part these were made out of selects and bacons; what is the least part made of?—A. I do not think there are any Wiltshire sides going to England that would not have been bought amongst the selects and bacons.

*By the Chairman:*

Q. None at all?—A. I don't think anybody could answer that question absolutely, because you don't follow your individual hogs, and there might be a regular grading, and all of that.

Q. Would you say definitely there were none?—A. Yes.

Q. That is that?

*By Mr. Kennedy (Peace River):*

Q. Mr. McLean, a little while ago—A. I should like to explain about those seconds, Mr. Stevens—I have cut in twice when you were talking, sir.

Mr. SOMMERVILLE: Perhaps you had better answer Mr. Kennedy.

*By Mr. Kennedy (Peace River):*

Q. A little while ago you were telling us that there was a great deal of common interest between the packers and the farmers?—A. Yes, if I believe anything, I believe that.

Q. We were discussing, a little while before, that the question of profits; then we discussed the question of the loss to the farmer of 3½ cents a carcass. I wonder if you would file with us a financial statement for the year, and every year since 1927, I think, when Canada Packers was organized?—A. Yes.

Q. And I think I should also like to see its salary list?—A. Yes.

Q. The list of accounts; I don't know if it is a fair statement to make—possibly you can say it is not correct—but I have been informed that your own salary, for instance, is \$50,000 a year?—A. Well—

Q. And that you have certain other interests and certain other companies with which you are associated. I may say that that is one of the things, and

possibly you want to say something about it, that has created the feeling amongst some farmers that there is not this common interest which ought to exist between the two branches in the livestock industry?—A. I don't know what your policy is going to be in regard to salaries. If you wish to investigate salaries, I have not got the slightest objection to that. My salary, as it happens, is not half of \$50,000 a year.

Mr. KENNEDY (*Peace River*): It is well that we should know that.

Mr. FACTOR: What is the capitalization of the Canada Packers Limited?

The CHAIRMAN: Suppose we ask, Mr. Factor, so that we will have it absolutely right, that Mr. McLean file these statements, the annual statements of the company?

The WITNESS: I will be glad to.

Mr. FACTOR: Will that show the capitalization?

The CHAIRMAN: Yes, we will see that it does.

*By Mr. Young:*

Q. Before we leave this matter, there is a question or two that I would like to ask; you told us this morning that the price of bacon in England rose from 40 to 90 shillings in a year?—A. Yes.

Q. That is an advance of 50, or advance of from 4 to 9, or five points?—A. Yes.

Q. You told us also that the price you paid for hogs—A. 40 shillings.

Q. —that is equal to an advance of 4 to 9?—A. Yes.

Q. Or five points?—A. Yes.

Q. You told us also the price you were paying for hogs went from 3½ to 9½, or an advance of 6 points?—A. Yes.

Q. You have increased the price you receive for your products by five points; you have increased the price you pay to the farmer by six points; and I suppose when the market is going the other way you will reverse the process?—A. But Mr. Young, you will see that the unit is not the same; the shillings are per 112 pounds, and the cents or dollars are per 100 pounds; that would be corresponding.

Q. Pretty nearly corresponding?

The CHAIRMAN: Gentlemen, we have persecuted Mr. McLean physically pretty severely. I wonder if there would be any objection to a little recess.

Mr. FACTOR: Will that financial statement that Mr. McLean is going to file, give the number of employees in his packing plant?

The CHAIRMAN: Yes.

The WITNESS: Any information you want.

*By Mr. Ilsley:*

Q. I have here your sixth annual report and balance sheet?—A. What year?

Q. For the year ending March 30, 1933. And you state in this that from the time of your merger in 1927 until the present the number of operating plants has been reduced from 9 to 5?—A. Yes.

Q. The number of persons in head office staffs has been reduced from 797 to 374, and the number of employees has been reduced from 3,641 to 2,483?—A. Yes.

Q. That is about 33 per cent. The number of road salesmen has been reduced from 317 to 194?—A. Yes.

Q. And your total reduction in operating expenses has been \$7,000,000 per year, the equivalent of 40 per cent?—A. Yes.

Q. But that the volume has gone down and that accounts for your estimate at 20 per cent?—A. Yes.

Q. Now, that means a very important economic condition effected in the department—the packing industry—as far as those four companies are concerned?—A. Yes.

Q. Now, I want to ask you this question—it may be a difficult one to answer. Has the farmer got the benefit of those economies to any extent?—A. It is not difficult to answer at all, because I can give you the exact figures. Prior to the merger these four companies combined were making a loss of a million dollars a year—I think that is for a period of three years, we calculated. Since the merger—the figures are given there—

Q. You have been making a profit?—A. We have been making a profit each year—The figures—if you haven't got it I could find it—\$900,000. Is it not \$900,000?

Q. The average profit per year is \$900,000?—A. The shareholders involved have a benefit of \$1,900,000 a year. The rest of the benefit has gone to the farmer.

Q. Where is the rest of the benefit?—A. There was a total saving—a total reduction in expenses of \$7,000,000.

Q. Per year?—A. Yes. And remember that is not all saving because there has been a reduction in volume. But one cannot be absolutely mathematical on this, and there is no question that in addition to the benefit to the shareholders there has been a very good benefit to the farmers.

Q. Yes, but now look: you have merely paid the farmer the market price through these years, have you not?—A. Yes.

Q. And your competitors have paid the market price?—A. Yes.

Q. How has the farmer got any benefit from this particular merger?—A. Don't you think it all relates itself to this principle I have been talking about all day, that while we provide for all that it can be sold for we reduce the cost of fabricating it, of putting it through; therefore, the farmer gets more.

*By Mr. Young:*

Q. And your profit per pound decreases?—A. No. Before the merger operations all the companies taken together were making a loss. There is a loss converted into a profit. The loss per pound is given there.

*By Mr. Ilsley:*

Q. If your theory about the price paid the farmer in Canada being fixed by the price paid in the British market for the finished product is correct, then you must have reduced the spread?—A. Yes.

Q. Between those two by reason of this merger; is that correct? You must have done that. You must have reduced the spread between what you paid the farmer and what you got from the British market by reason of the merger?—A. By reason of reduced expenses.

Q. Is that correct?—A. Yes.

Q. Your competitors must have done the same?—A. The competitors, perhaps, did not make a profit.

Q. You think you have put them in a position where they are making larger losses?—A. Well—

Q. You do not know?—A. I do not just follow that thing through. If the competitors are making a profit, they must be operating as cheaply as I was.

Q. The thought that comes to me is, would still further combination be of any advantage to the pork producers, the farmers of Canada? If you can effect such economies as that by the merging of four companies, why should not all the companies be merged?—A. If you could depend upon getting adequate management—permanent adequate management—it would be a great advantage to the farmers to merger all the operating companies.

Q. What proportion of the business does your company do in Canada?—

A. Oh, it is a pretty small proportion of the total business.

Q. I see, according to this statement, you have a profit of 5 per cent since the merger on the shareholders' investment?—A. Yes.

Q. Owing to the carrying of the plants at their old value?—A. At their old value less depreciation. At the depreciated value at the time of the merger, less the depreciation that has been written off since.

Q. I see there is an item in your consolidated balance sheet of land, buildings, plant, equipment and so on based on appraisal 1919 to 1927, \$18,870,909.40, and you are only using five out of nine plants?—A. That is reduced by the depreciation item.

*By Mr. Sommerville:*

Q. That is reserve?—A. No, it is not reserve.

*By Mr. Ilsley:*

Q. Your five per cent is based on a lot of useless plant?—A. Oh, yes, because we bought those plants, and it is a good deal better to close a plant that is not needed than to keep operating it.

*By Mr. Sommerville:*

Q. But your overhead does include a large quantity of useless plant at the present time?—A. Well, one useless plant.

Q. And it also covers other operations of the plants that are not needed at the present time?—A. Well, that is true in every business.

Q. And that, of course, adds to the permanent overhead that you must meet, and that must necessarily enter into your costs?—A. Yes.

Q. And must necessarily affect the return that you make to the farmer for the commodity?—A. Exactly.

Q. In other words, I presume if you were building a model plant to-day for doing the volume of business that you are doing for handling this British bacon, you could put up a plant that would cost probably a quarter of your present plant cost, or your present equipment, or a third?—A. Yes, it would not be that much.

Q. It would not be that much. I said it would be a third.—A. It would not reduce the plants a third.

Q. Well, you answered it would not be that much.—A. I mean the reduction would not be a third.

Q. It would be a reduction to one-third I said; on the volume of business you are doing, with a model plant, the cut would probably be one-third the cost of the plants that are now on your books.—A. It is purely hypothetical. That is not a fair question to ask me without giving me a week to figure it out.

Q. At any rate it would be substantial?—A. Yes.

*By Mr. Ilsley:*

Q. But you think this spread between what the farmer actually gets and what you get in England could be reduced very materially by a further degree of merger?—A. Yes. Remember, I am just speaking of it now as a purely operating problem, and I am not speaking of the difficulties of management because management is developed by competition, but if you eliminate those factors, if you do not consider them, you could probably operate the packing industry of Canada on 60 per cent of the plants that are now operating.

*By Mr. Sommerville:*

Q. And that would mean that 60 per cent of the overhead and expenses would be saved?—A. No, no, it would not mean that.

Q. 40 per cent?—A. No, no, because you still have to carry your plants, but you would not have the unnecessary expenses that are entailed to operate an unnecessary number of plants.

*By Mr. Senn:*

Q. What about the problem of distribution in that case?—A. Well, if you were doing this, if you were planning a packing industry for Canada, you would keep one plant in Edmonton where now there are three; and you would have a plant in Calgary, and you would still have a plant in Moose Jaw and Regina; you would still have plants at all the places where your plants exist now.

*By Mr. Sommerville:*

Q. Now, Mr. McLean, one of the questions asked by a member of the committee is, who fixes the price of hogs each day, the price that you will pay each day?—A. My answer to that would be 10,000, and I don't know who they all are.

Q. Well, who instructs your buyers each day as to the price they will pay?—A. Our General Manager and our Provision Manager have a discussion every day, perhaps three or four times a day with the hog buyer.

Q. The chief hog buyer?—A. The chief hog buyer, and they discuss the situation and what the price is, and so on.

Q. And they fix then the price that they will pay for hogs that day?—A. Oh, no, it is not quite so simple as that; but they decide what price they think they should pay for the hogs under the existing conditions.

Q. And then that is subject to the competition they meet on the open market?—A. Yes.

Q. The only place that they come into contact with open competition on the Union Stock Yards we will say at Toronto is where there are similar buyers from Swift's and Whyte's?—A. Yes.

Q. Now then, at the conference before the buyer goes on the market is there a limit set within which he shall buy or pay?—A. Oh, there might be. If we have a very firm view that we do not want hogs at a certain price the buyer might be told "don't buy a hog for that price," but ordinarily all the factors are discussed and he is told to buy them at so and so if he can, or as near to that as he can.

Q. Yes. Then is there any conference held at any time with the buyers or representatives of Swift's or the other packers, as to the price to be paid?—A. Well, of course, these men are on the yards all the time buying the same animals, or buying hogs, and I haven't any doubt they discuss the markets every day. As to a conference or an agreement in regard to price there is no such thing and never has been in Canada.

*By Mr. Factor:*

Q. What about the Packers' Council, do they discuss the price?—A. Never. I would like to have the opportunity, Mr. Chairman, before I finish up of telling you just what the Packers' Council does, because I have a note of it here.

*By Mr. Sommerville:*

Q. Alright, we will be glad to have that, but just dealing with this question for the moment you say your buyer and Swift's buyer—and they are the largest buyers on the Toronto market are they not?—A. Yes.

Q. And those two buyers meet and they discuss several times a day.—A. Oh, no, I did not say that at all. I said they meet each other in the yards a dozen times a day, and I haven't any doubt they discuss, they talk about the

price of hogs; they are doing the same job exactly. What I am saying is, that in regard to any combined action as to either buying or selling packing house products there is none and never has been.

Q. Just let us deal with livestock for the moment. The suggestion has been made time and again, Mr. McLean,—A. Ever since I have been in the business—it used to be the beef trust; that is not just the phrase now; but there is a very general impression that there is a combination either intimate or less intimate and an understanding as to livestock prices. There is none.

Q. Then did you ever sit in at a conference, or do you know of any conference at which any of your buyers were instructed to pay just a certain price and to see Swift's buyers with respect to that price?—A. You see, you can ask me a lot of questions here, and it is difficult for me to answer meticulously. I am telling you, I am not going to go behind this general statement; if you give me the particular thing you have in mind I will give you the frankest comment I can make on it.

Q. We want to be ultra fair to you, Mr. McLean, we do not want to have you misunderstood in your answer, or in any way misinterpreted.—A. Alright. My answer is this, that there is no combination, or that there is no agreement in regard to buying with buyers in the packing house industry.

Q. Well then, may I ask you this: Do you know whether or not or have you heard that your buyers compare figures with Swift's buyers on the Union Stock Yards and settle on the price from time to time during the day?—A. No, I would say that they do not.

Q. You would say that they do not?—A. Yes.

Q. We want to be fair with you, Mr. McLean, as I say.—A. I am more anxious than you are in this. I want to be absolutely definite, because if you are seeking for a method of improving the livestock industry it does not lie along that line because there is no such thing as a combination in regard to buying.

Q. Well, you know the problem and you know the question that has been raised?—A. Yes.

Q. And we want in fairness to you to give you every opportunity to answer it. Then, Mr. McLean, does this thing happen, that sometimes there are a great many livestock on the market and that your buyers go on the market up and down the alleys looking at the stock and then just withdraw and don't bid?—A. It frequently happens.

Q. It frequently happens?—A. That sounds like a rather damaging thing, but that happens in regard to every buyer of every commodity. If we do not want livestock we do not buy them; if we do want livestock we do buy them.

Q. Does it happen that your buyers withhold buying in the morning and wait until the afternoon to buy when the market may become draggy? and when they may get them at a lower price?—A. Well, if our buyers are anxious to buy cattle they go out and buy them; if they are not anxious to buy cattle they do not go out. They just take their time.

Q. Why wouldn't they be anxious to buy cattle? Your packing plant is running and you require a large quantity every week. Why wouldn't they be anxious to acquire those cattle?—A. Now, let me explain that to you; we try to run our beef business so that we always have fresh beef, and so that our beef does not get stale—I cannot think of the exact word, but that is how you avoid losses—that is a sovereign way to avoid losses in the beef trade, by not having stale beef in your coolers.

*By Mr. Young:*

Q. You do not buy cattle and keep them until it is time to kill them?—A. We do that in a way too, but we try to adjust our killing to our trade. You see we have to kill in advance of our selling, and every Monday morning, and every

morning for that matter, we try to estimate what our outlet for beef is going to be, and we adjust our buying to that, you see, and we adjust our killing to that. Now, we try as near as we can to finish up with a certain minimum of beef in our coolers on Saturday. We frequently finish up with a lot of beef in the coolers on Saturday, and probably, as it almost invariably happens when you have a big carry over of beef, you are liable to have a big run of cattle the next Monday morning, and then you can't expect the beef buyers to be very eager for cattle. One thing happens just as quickly as the other, when we have made a good clean up we often find that the following Monday morning there is a light run of cattle and every one of the buyers is out in the alleys just as soon as the gong sounds. That is the whole story; that is what happens, and that is all that happens.

*By Mr. Sommerville:*

Q. So that when the suggestion is made that your buyers deliberately withhold from buying until late in the day, that is not for the purpose of affecting the price of the market?—A. That is not a fair statement, or a fair résumé of what I have been saying at all.

Q. I was not attempting to make a resumé?—A. This statement has been made a million times, ever since I have been in the business, that the packers adopt tactics that seem to be unfair tactics. Now, these tactics are not unfair. All these buyers don't want cattle, are not eager to get cattle, and that is exactly what they will do, they will wait until—there is nothing iniquitous, there is nothing dishonorable about that—when they want cattle they go after them, when they don't want cattle they don't go after them.

Q. And that change may take place between ten o'clock in the morning and three o'clock in the afternoon?—A. What do you mean, what change?

Q. From the time they don't want cattle to the time when they do want cattle; they may not want them at ten o'clock and they may want them very badly at three o'clock?—A. It might happen, that would be unusual. Sometimes we are loaded with beef in our coolers, and that is what determines whether we are eager buyers, or not.

Q. It is sometimes said, for instance, that your buyers agree with Swift's buyers, or the buyers for other packers; that they will only buy a certain percentage of their requirements on Monday, the opening day of the market? What do you say as to that?—A. I do not think that has ever occurred. That is one thing that there is no foundation for.

Q. No foundation for?—A. No.

Q. I am mentioning these various subjects that have been brought to our attention so that you may have the opportunity of giving us your statement with reference to them. Then, from your statement, there is therefore nothing in the suggestion that your buyers ever meet with your competitors' buyers to fix prices; and there is nothing in the suggestion that they ever meet for the purpose of fixing the percentage you buy each day?—A. No.

Q. And that your buyers and the Swift buyer act independently all the time?—A. Absolutely.

Q. And there is open and direct competition all the time between them?—A. Yes.

Q. Without any fixing?—A. Yes.

Q. Now, Mr. McLean, may I ask you, is there ever any arrangement among your buyers, or among the trade, that the hogs from a certain district shall go to Swifts and that Canada Packers will get the hogs from another district; in other words, that the Canada Packers will stay out of the field at certain stations, and Swifts will stay out of the field in other stations, so that there will not be competition for the hogs?—A. There is no arrangement whatever.

What happens in practice, of course, is that we have drovers who have shipped their hogs for many years; perhaps a year, perhaps two years, perhaps twenty, to Swifts, the same drovers, they are just established connections that have proved mutually satisfactory; and the same drovers ship hogs week after week. That applies to every packing house that is in business.

Q. Then, has it ever come to your knowledge that any of your officers have intimated that if Swift's buyers will stay out of the territory where your drovers are shipping, your buyers will stay out of the territory where Swift's drovers are shipping to them; nothing of that kind, there is no allocation of territory then one to the other?—A. No, absolutely.

*By Mr. Senn:*

Q. Just a moment please, Mr. Sommerville, I have one question which might amplify that. Have you any knowledge of your buyers collaborating with Swift's buyers, or the buyers of any other packing concern, to stay out of certain alleys in the stock market?—A. Oh, no, the competition is to get into the alleys; of course they get turns; that is arranged between the commission men and the buyers. So far as any arrangement between the buyers goes, there is none.

Q. Then, they do at certain times take their turns going down certain alleys and staying out of certain alleys?—A. That is done by the decision of the commission men who own the alleys.

*By the Chairman:*

Q. You mean to say that the commission men invite the buyer to stay out of an alley?—A. No, but commission men may arrange in advance with the buyer of our firm or Swift's, that he will have the first look over his alley in the morning.

*By Mr. Sommerville:*

Q. A commission man may give preference to Canada Packers or he may give preference to Swift's?—A. Yes.

Q. On the cattle in his alley?—A. There may be an arrangement in advance.

*By Mr. Senn:*

Q. I have heard a great deal of criticism of that practice?—A. I have heard plenty of criticism of all these things. I have heard thousands of times, ten thousand of times, but the point is there is absolutely no basis in fact for that.

Q. You would say that it does not work to the injury of the producer?—A. No.

Q. Or consignor?—A. I do not think there is as competitive business in Canada as the packing house business; I do not think there is any other business as competitive as the packing house business.

*By Mr. Sommerville:*

Q. Have you heard of this practice, that your buyer goes up an alley—say he is given the preference, and he goes up an alley and makes certain bids for the cattle, looks over the alley, and makes a certain bid, and then he waits until Swift's buyer has gone up the alley and has made certain bids and the two of them compare the bids they have made in the cattle in the alley?—A. That is absurd.

Q. That is absurd?—A. Yes.

Q. The statement is made?—A. I am not saying you are absurd in making it. It carries an absurdity—

Q. That information has been given to me, and that is why I am making it?—A. It carries this absurdity on the face of it, because Swift's buyers and our buyers are in competition for these cattle, and they are trying to outpoint each other in their buying.

Q. Is it a fact, Mr. McLean, that both of you might keep your buyers from buying until after the market report has gone out from the union stockyards to the other stockyards in Canada, intimating that there is a substantial supply of cattle at Toronto; that the market is draggy; that there is no bidding and leaving it to the other markets to be affected by that?—A. I do not think any packing house man ever thought of that in his life. That is something somebody has thought up for him.

Q. At any rate, you do not know of that?—A. No.

Q. With reference to the question of beef, I understand that 90 to 95 per cent of the beef produced in Canada is consumed in Canada?—A. Oh, more than that.

Q. More than that?—A. Yes.

Q. Ninety-eight per cent?—A. Yes, ninety-eight per cent, I guess.

The CHAIRMAN: Sometimes.

*By Mr. Sommerville:*

Q. At any rate, it is practically all consumed?—A. For the last four years.

Q. And that being so, it is not affected by the export market?—A. No.

Q. In the same way as the pork situation?—A. No.

Q. It is affected more by the domestic competition?—A. Yes.

Q. And it is more largely, then, in the hands of the packers, unaffected by foreign competition or foreign export prices?—A. All right. I do not know just what you mean by placing it that way, but it is the packers who sell it.

Q. And packers who buy it?—A. Of the 98 per cent I do not suppose packers sell more than 25.

Q. They are the largest buyers?—A. The largest buyers but their total retail for cattle, the total retail of that naturally, of all the beef used in Canada, would not be more than 25 per cent.

Q. That is to say, on the markets, that are sold on the markets?—A. No, that much sold in Canada.

Q. Well then, what proportion of the cattle sold on the market is handled by the packers?—A. Oh, about—I do not know, but I can get you the figures.

Q. Would it be more than that proportion?—A. Yes.

Q. Fifty per cent or 60 per cent?—A. Probably, yes. I would rather you would ask me to get you those figures.

The CHAIRMAN: We will get them, precisely.

*By Mr. Sommerville:*

Q. At any rate, you form the largest buyers on the open market in the stockyards?—A. Yes.

Q. And your competition fixes the price generally of cattle in Canada upon the open market, and upon the stockyards?—A. Yes.

Q. And that stockyards price is the price that is used usually for settling the price paid for cattle bought in the market?—A. Well, it is hardly so clear-cut as that. I should think on the whole the cattle that are sold on the market have a higher price than the same grade of cattle that are sold in the villages and towns. They do, too, because there is more expense on them.

Q. And more competition, likely, to bring about a better price?—A. Yes.

Q. Now, Mr. McLean, it has been brought to the attention of the committee, and we have scores of resolutions from different parts of the country, saying that if all the cattle were sold on the public market instead of being sold in the farmers' yards, there would be more competitive bidding, and therefore a better price paid for cattle. What do you say as to that?—A. Well, I think I would go back to the principle that I have been citing so many times. I do not think that the particular method of buying has much to do with the price. I think it is determined—I do not know just how. I cannot follow out all the details—but it is determined by the price that can be obtained from the public for the beef.

Q. If that is so, how do you account for the very low price to which cattle went in Alberta and the west during this spring and summer?—A. Very simple.

Q. It went away down to something like \$2.00 a cwt?—A. Yes.

Q. Perhaps you can help us on that, Mr. Kennedy?—A. I think it is very simple. Many members of the committee know just as well as I do the reason. It is because there is a surplus of cattle. There are more cattle than this country will absorb, more cattle, in the country than the country will absorb as a beef product, except by very low price, and the price has to be put lower and lower, and naturally the consumption picks it up. It is the same thing exactly as existed in the hogs a year ago now, in January and February last years.

*By Mr. Kennedy (Peace River):*

Q. Mr. McLean, you said something about what we ought to be doing to improve the quality and standard?—A. Yes.

Q. Don't you think that the Dominion department of Agriculture is doing pretty well along that line now? Have you any suggestions to make?—A. Yes, I think I have, and I would like to make suggestions. You are speaking of hogs?

Q. Yes?—A. Yes. I think I have. There is more co-operation between the federal and the provincial departments of agriculture now than there has ever been before, largely by reason of the good price of hogs; but we have been 15 years at it, Mr. Kennedy, and the job might have been done long ago. There is no question of that. It is not a six month's job, or a one year job, but the job might have been done long ago, and I am convinced—you see, this is what I was particularly anxious to give this committee—I am convinced that the chief deterrent factor which holds us back now is the lack of confidence between the packer and the farmer.

Q. Largely due to the drop in prices?—A. Well, it is largely due—I will express it this way; it is largely due to the farmers not thoroughly understanding the drop in prices. You see, he thinks that the packer has trimmed him.

Q. Yes?—A. I know.

*By Mr. Sommerville:*

Q. Mr. McLean, you have an interest in the subject of livestock marketing? Have you any suggestions to make to the committee in addition to what you have already said about improving the quality of hogs? Have you any suggestions to make to the committee that will help the committee in its researches for the improvement in the marketing of livestock?—A. Yes, I think I have.

Q. What is that?—A. Well, it is difficult to improvise things or speak offhand, and be very fundamental; but this is a job that I spent my life on, and if I have not got suggestions on that, I have not got them on anything. I think the fundamental disability that we suffer from in the livestock industry, and I include myself in the livestock industry—I think of the livestock industry chiefly as being composed of two branches, the producer and the packer. Now, it is quite true there are important links, such as the transportation companies

and the stockyards company and the drover, and all of those. These are very important, but there should be collaboration and co-operation of action between all the factors that enter into it. But the main thing and the main cause for the fact that Canada has not realized on her livestock possibility hinges on this fundamental thing, that the farmer and the packer have never succeeded in Canada in reaching a basis of mutual confidence and co-operation. I am not saying it is the farmers' fault. I am not trying to assess the amount of responsibility for it. All that I am trying to do is to say that it is costing Canada in hogs alone \$12,000,000 a year, which the farmers of Canada are losing. If I were on this committee, I think I would look upon that as being the chief problem of the committee, and the most constructive thing that could be done. If you decide that there is a weakness in the packing industry, let the packing industry be changed. If anybody else wants to own the packing industry, it is a very easy thing to acquire the shares that are in the packing industry, because the shareholders in the packing industry as a whole would be quite willing to sell. I do not believe that, when you thoroughly investigate this thing, you will find that the solution of the problem does lie with changing either the practices or personnel of the packing industry. I am inclined to think that it lies along the line of extending more clearly to the farmer those fundamental things that I have been talking to you about to-day, particularly the fact which the farmer realizes in an indefinite sort of way—the farmer knows in an indefinite sort of way that if he improves his livestock, somehow or other it will give him a better price, but he does not know that he is losing \$12,000,000 a year.

*By the Chairman:*

Q. There is not much encouragement to the farmer when he ships 300 or 400 of the finest steers to the market and gets  $1\frac{1}{2}$  or 2 cents a pound for them?—A. Of course it is discouraging when prices are low; but it does not do a bit of good when those prices are low to say, "Well the packer is responsible for those low prices," if the fact is that the packer is not responsible, does it? You must remember that a year ago the packer was being blamed for the price of hogs. The packer was not responsible for the low price that hogs were selling at any more than he was responsible for the advance in prices. The packer did nothing to raise the price of hogs from  $3\frac{1}{4}$  cents to  $9\frac{1}{4}$  cents, nothing whatever. I am inclined to think that no sufficiently serious effort has ever been made in Canada to expose those things and put the facts about livestock in a way that the farmers cannot misunderstand. You see, it is a very much simpler thing for anybody who has contacts with the farmer, and particularly for the man who wants the farmer's vote—it is a very much easier thing to encourage the farmer to believe that there is some violation in the conditions, and that somebody is giving him a deal that is not a square deal; but we have been on that track for thirty years and it has got us nowhere. I would like to be a member of a committee like this myself, and I would hope that it would be possible, somehow or other, to devise a plan for getting these fundamental facts about the livestock industry to the farmer, because the welfare of the farmer and the welfare of the country depend upon it.

*By Mr. Ilsley:*

Q. The only co-operation that you have advocated is educating the farmer?—A. Yes.

Q. That is all you have said?—A. Yes.

Q. That is not co-operation; I thought you were going to give us some means of co-operation or some form of co-operation?—A. Let me answer your question, Mr. Ilsley; who can improve these hogs and get this \$12,000,000 a year? How can it be done?

*By Mr. Sommerville:*

Q. When they are improved—let us assume they are improved—the improvement will improve the getting of prices for them?—A. The price will come automatically; it has come all this year.

*By Mr. Young:*

Q. Without any improvement in the hogs?—A. There has been a slight improvement going on all the time; but whatever our hogs were worth, it comes automatically.

*By the Chairman:*

Q. Will you apply that to cattle, though?—A. Yes, absolutely.

Q. Because the hog market is confused?—A. No, the hog market is not confused at all. The hog market is clarified. A year ago everything that you are saying for cattle now, would have been said about hogs. I want to make it perfectly clear that the packer had nothing to do with advancing the price of hogs. He was the instrument through which that advance was recorded, because he was the man who killed the hogs and sold the bacon. Now, in regard to cattle, we all know perfectly well what the explanation is for the low price of cattle. Canada has a surplus production of cattle of about 250,000 a year; and every year, up until 1929, Canada shipped either to the United States or to England—principally to the United States—250,000 cattle. The Fordney-McCumber tariff cut off—at first partially cut off and finally entirely cut off—our outlet of cattle to the United States; and the only outlet for cattle that we have got at the present time is a very limited outlet to England, very useful so far as it goes. If we could ship another 100,000 cattle a year to England, our cattle would be 3 or 4 cents a pound higher.

*By Mr. Sommerville:*

Q. That is taking away five or ten more of the tops?—A. Yes, the surplus.

Q. That would raise the whole?—A. Would raise the whole.

Q. Would raise the price of the whole market?—A. What we have to do is find some way to clear our surplus. The United States has always been looked upon, and has always been geographically the natural outlet for our surplus cattle; but that market is unfortunately cut off. I don't know—Mr. Stevens would know much better than I do—but I am sure that the government have been working hard on this and negotiations are probably in progress now with the United States. If we had an outlet there for 100,000 cattle a year, which would be a flea bite in the United States, it would make all the difference in the world in our cattle prices.

*By the Chairman:*

Q. In the absence of that, your theory is that the law of supply and demand must control?—A. The law of supply and demand does operate. Now, it might be possible to do something else in regard to that, to adopt some other plan to get rid of that surplus. That is something that must be done by the government and not by the packers. I am not suggesting that I know of any plan. There have been a good many plans tried in the United States to lift livestock prices but they have not been very successful, quite recently. I am not saying that it would not be possible to do something, because the surplus is not large; 100,000 cattle would do the trick for Canada.

*By Mr. Senn:*

Q. This morning you said that the export price was the basis of the domestic price for hogs?—A. Yes.

Q. In consideration of the fact that at the present time the market in the United States is lower for cattle than it is in Canada, how would that raise the domestic price?—A. It would not, if that is the case. I doubt if it is. But it is not enough higher to be a very useful outlet. If we simply get 100,000 cattle out of the way, just as we got butter out of the way last fall at a loss to the owners of the butter,—the fact that the butter was out of the way made a short supply of butter in Canada and has resulted in a price of 29½ cents for butter to-day.

*By the Chairman:*

Q. Now, are you through? Have you finished your statement?—A. Well, if you will just bear with me—you have been very patient with me, and I hope you will not have many days as dull as this—I would like to say one word about the packers' council; that is an organization that Mr. Factor spoke of, and I said I would speak of it. The packers' council is called the Industrial and Development Council of Canadian Meat Packers. The secretary of it is Mr. Todd. It was formed immediately after the war. Mr. Todd throughout the war was secretary of the food board or whatever they called that organization. The packers came in very close contact with them through that, and after the war, chiefly on account of the very matters we are discussing to-day—on account of the suspicion and the abuse, I was going to say, of the packer, the packers decided to form a council, an organization which was called the council, to put the facts of the livestock trade before the farmers. The council has been operating ever since, that is fifteen years; and it has been endeavouring ever since to put these facts before the farmer, and that is the sole function of the packers' council. It has nothing whatever to do with the associations of any other plant or of all of the plants. Its sole purpose is to convey, or to distribute to the farmers what they consider is essential information regarding the livestock industry.

Q. Educational?—A. Yes.

*By Mr. Ilsley:*

Q. Has it tried to influence legislation at all?—A. No, it has never made an effort to influence legislation in any way. I would like to say this, that Mr. Todd, the secretary of the council, is a farmer. He was born on a farm. He is a graduate of the O.A.C.; he was later in the Department of Agriculture at Ottawa. Mr. Todd could not be paid enough money to do anything except in the interest of the farmer. Mr. Todd is a farmer, he is not a packer, and the only thing that the packers ask of him is to advance the interests of the livestock industry generally in Canada.

*By Mr. Young:*

Q. Could you furnish us with a chart showing a steer and what you would pay for it, how you cut it up, what you get for each part after the disposal?—A. We do not cut it up. We sell the carcass, but I can easily give you that.

The CHAIRMAN: You mean break it down?

Mr. YOUNG: Yes, break it down.

The WITNESS: We do cut up the hogs. We cut the hogs and we put them into belly and back and the hams and the shoulder and so on. We put all these things in cure, but we sell the beef as a carcass. That goes to the butcher. He cuts it up. It is easy enough to get the cuts and the proportions and what prices they sell at.

*By Mr. Young:*

Q. The farmer would be interested to know what the consumer ultimately pays for every part of the hog he sells.

*By Mr. Sommerville:*

Q. But you could break it down to show the exact record of a purchase of a load of hogs, their prices and their sale in England?—A. Oh, yes; I can give you that in half a day.

Q. You identify these loads?—A. No, most loads are not identified, but it is not necessary. You know what percentage the hogs dress out, and you know the price. It is a simple thing.

*By Mr. Senn:*

Q. Just along that line: when hogs were \$3.50 and shop hogs and light hogs were being paid for at a considerable decrease under the bacon price, could you give us the price realized by you for those hogs?—A. Oh, yes.

Q. Could you give us examples of that?

*By the Chairman:*

Q. You mean typical examples of each grade?—A. It would be better to give you our average price for all the products of that kind. We can easily give you that.

Q. Could you break down each grade for us?—A. Yes. We can easily give you that. I will undertake to give you that information. I think I know what you are looking for and I will undertake to give you all of that.

*By Mr. Factor:*

Q. Have you any suggestion to offer the committee how to dispose of the surplus capital, the \$100,000 that you said would help the market?—A. I am not a statesman; I am just a packer. That is something for the government.

*By Mr. Sommerville:*

Q. Mr. McLean, I just want to ask you this: You spoke to-day of the hog that you bought being sold in England two months hence.—A. About that.

Q. Does it take that long to process and to get pickled, cured and shipped?—A. It is not two months, it is about six weeks.

Q. Is it that much, Mr. McLean?—A. Oh, yes.

Q. You buy to-day?—A. Yes.

Q. You kill to-morrow?—A. Yes.

Q. How long from the time of the kill till the time of the cure, how long is that process?—A. You will have it in your coolers about two days; it is chilled, then it is cut and trimmed and then goes into the curing vats; it is cured for about ten days, then it is taken out and is drained for two or three days; then it is loaded on the car and it takes it about a week to get down to Saint John.

Q. Just let us get that. Two days in the cooler; how many days in cure?—A. Ten.

Q. Then you take it out of the cure?—A. Two days draining.

Q. That is fourteen days, and after cooling it is ready for shipment?—A. Yes.

Q. And then the time taken to ship from here to England?—A. Would be about seventeen days.

Q. That is thirty-one days?—A. Yes.

Q. And you ship on consignment?—A. On consignment, yes. It is all shipped on consignment.

Q. And it is sold on day of arrival?—A. It would be sold within perhaps a week or three or four days after arrival.

Q. So that would be thirty-four or thirty-five days, or thirty-one days from the date of the kill to the date of arrival in England?—A. Well, it is about six weeks.

Q. About thirty-four days; that would run about five weeks.—A. Well, I made a mistake—

Q. I mean, you get your money back in approximately five weeks?—A. No, you would probably have another three weeks before you get your money.

Q. Well then, the sale takes place five weeks after— —A. Your profit or loss is recorded.

Q. Within five weeks?—A. Yes.

Q. That is the process?—A. Yes.

The CHAIRMAN: Gentlemen, we have given Mr. McLean a very long day, and I want to thank him for his attendance here and for the time he has spent.

The WITNESS: Mr. Stevens, I would like to thank you for the opportunity you have given me to do something that I have been very anxious to do. In regard to the opening, to the discussion about wages, I still say that I do not think that we are agreed on that. I think the statements made by Mr. Laver were entirely inaccurate and very unfair to us.

The CHAIRMAN: We won't open that again to-night.

The WITNESS: I do feel very grateful, however, for the opportunity you have given me, the unqualified opportunity you have given me to explain what is very much in my heart with regard to the livestock industry.

The CHAIRMAN: The Committee will stand adjourned until to-morrow morning, and the first witness will be Mr. Cook, President of the Canadian Association of Garment Manufacturers, and he will be followed by a representative of the Retail Merchants Association.

The Committee adjourned at 6.30 P.M. to meet again Thursday, March 8, at 11 o'clock A.M.

HOUSE OF COMMONS, ROOM 368,

March 8, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. I have the minutes of the last meeting, showing certain exhibits and referring to the witness present. They will stand approved unless there is some objection.

A letter has been received from the Deputy Minister of Labour regarding the question of the fair wage clause in contracts, which was asked for the other day, and will be referred to the counsel for study, with the other material on that subject.

This morning we have Mr. Cook.

WARREN K. COOK, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Cook, what is your position in the clothing industry?—A. I am president of the Canadian Association of Garment Manufacturers.

Q. And what branch of the industry does that cover?—A. That covers all the needle trade industry, both men's and women's wear, boy's wear, all branches.

Q. How broad is your membership?—A. We have a very comprehensive membership, I think, including probably 75 per cent of the production of the industry; not in members, but in production.

Q. And it is a national association?—A. Yes, it is a national association.

Q. With members from coast to coast?—A. Yes.

Q. You desire to present some facts to the committee on behalf of your association?—A. I think, Mr. Sommerville, that it might be safer for me to state that in appearing before the committee here I also represent the National Fair Trade Council. There are reasons for which I will explain later. The National Fair Trade Council is an organization which is now in the process of formation by those who believe that the independent retailer is the most important factor in our system of distribution, and who regards the growth of large department store organizations, mail order houses and chain stores as detrimental to the general interest of the country, including the interests of the consumer. This organization is being supported not only by independent retailers, but by manufacturers, wholesalers and others who regard the large organizations to which I have referred as economically unsound and socially undesirable.

In referring to department stores, we have no criticism to offer of the single unit department stores, but have particular reference to organizations who not only operate huge department stores under one management, but also operate a mail order system extending from coast to coast, with a large number of order-taking depots. One such organization owns and operates another chain of

department stores located in the principal cities of Ontario. They also operate a chain of grocery stores or rather groceterias, and still another group of small stores located in the smaller towns; and have in addition salesmen canvassing throughout the length and breadth of Canada. They also own and operate their own factories, producing many lines of goods. I think it can be safely said that in no other country of the world is the merchandising of consumer goods so dominated by one organization as in Canada. The operations of this and similar organizations affect, directly or indirectly, the interest of every man, woman and child in Canada.

The largest of such companies, operated as it is as a private organization, little is known of the volume of business it transacts or the extent of its profits in the past or present. We are convinced however that investigation will show that its influence on Canadian industry and trade since it has attained semi-monopolistic proportions, has been disastrous; and that its operation, particularly during the past years of depression, has been one of the chief contributing factors towards the degradation of labour in practically all lines of the production of consumer goods, and the ruination of manufacturers and independent traders.

The other great organization of similar character may be subject to the same criticism, only in a lesser degree due to its smaller size. The predatory price-cutting carried on by these firms wherever they came in contact has resulted in suffering and loss to tens of thousands of other producers and distributors.

Last week you heard the sordid story of the condition into which workers have been brought, a condition which was attributed by practically every witness to the operations of these companies, together with the operations of chain stores. You will hear this week from representatives of the retail trade, the effect which these organizations have had on independent retailers from one end of the country to the other. It appears appropriate, therefore, that some general statement should be made at this time as to the effect of their operations on manufacturers who are entirely dependent on the various methods of distribution from the outlet of their product.

Before giving a few examples, I might say that during the past few months I have discussed this subject with hundreds of manufacturers. Most of them tell the same story of unfair and unethical treatment. When, however, during the past few days, I have asked these manufacturers to furnish me with more detailed information which I could lay before this committee I have found that in every single instance the greatest reluctance, and in most cases alarm, at even the possibility of facts in regard to their particular ill-treatment being brought to the attention of this committee. They have been so dominated by fear of these great organizations that they have begged me to refrain from mentioning the facts which they have already given me. They have good reason to fear the ill-will of these organizations, and their domination of retail merchandising in Canada is so great that it is practically impossible for any manufacturer making consumer goods to build up a substantial business without their favour. This in itself is evidence of an unhealthy state of affairs. This fear, I might say, is similar to that referred to by witnesses last week, which prevented workers from complaining of their ill treatment by their employers for fear of losing their jobs.

It is a fact, however, that manufacturers, particularly those in the needle trade industry, are definitely in sympathy with some plan of control which will eliminate the unfair, unethical and disastrous results of mass buying. This is indicated by the replies to a questionnaire sent out to the needle trade industry in July, 1933. Exhibit No. 33.)

Q. July, did you say?—A. July of 1933. This was sent out by the Canadian Association of Garment Manufacturers. I have a copy of this questionnaire and

a summary of the replies with me, and I will file it with the committee with a few comments. This information, of course, was given in confidence, and it has been tabulated with a code indicating the class of manufacturer; and we are also submitting the names of the manufacturers, but it is distinctly understood that these names are not for publication.

This evidence I submit as proof that the manufacturers in the needle trade industry are most desirous of eliminating all these sweat shop conditions, and further as proof that such conditions have been forced upon them by the unsound method of mass distribution.

As further evidence of the fact that the manufacturers in this industry are wholeheartedly in favour of some legislation as referred to in the questionnaire to improve the present conditions, I submit a copy of a letter sent out by this association in November, 1933, to which I received 279 replies unanimously in favour of endeavouring to secure legislation as before mentioned.

I am also convinced by the statements made to me and from the letters I have received from manufacturers of other lines such as furniture, rubber goods, hardware, that in practically all classes of consumer goods the same conditions prevail. They are very reluctant to give anything, but this letter might be used as an example:

We certainly appreciate what you have done on behalf of the furniture industry so far, and we want to let you know that we will do anything in our power to assist you with this matter. Of course, we are very delighted to learn that there is to be a wide-open investigation and trust that it will be successful. We also hope that it will include the furniture business which trained observers tell us is one of the worst, if not the worst in the country.

We trust that it will be possible to appoint a special commissioner for our own industry, and you can rest assured that he will have our fullest co-operation. We will go to any length or trouble to give him data and also to supply him with any evidence which is in our power to collect. Due to our very close connection with the large retailers, we feel that we will be in a position to procure information which other manufacturers might not be able to obtain for you. On the other hand, it is, of course, absolutely necessary that everything be done in the strictest confidence and that our name be divulged in no way whatsoever for obvious reasons.

That is the substance of that letter. This questionnaire which I would like to file with you is something I would like to make a few comments on. This was sent to the needle trade industry throughout Canada.

Q. In July, 1933?—A. In July, 1933. That was before this committee was thought of, so the answers were given without any fear and without any thought that they might be used at this time, of course.

#### *By Mr. Factor:*

Q. Sent by whom?—A. The Canadian Association of Garment Manufacturers, to the needle trade industry.

The first question was: Are you in favour of the needle trade industry in Canada sponsoring and promoting an industrial recovery bill similar to that recently enacted as legislation in the United States? The replies to that were 89 per cent in favour, and only three said no.

#### *By Mr. Ilsley:*

Q. What is meant by the an industrial recovery bill?—A. You will appreciate that at the time the Industrial Recovery Bill of the United States was very prominent in the minds of the manufacturers, and we were merely using that to get the idea before the manufactures. They were in favour of some measure that would help.

*By Mr. Sommerville:*

Q. That was sent out in July?—A. Yes.

Q. And the recovery bill, the N.R.A., came into effect on the first of July, in the United States?—A. Yes.

Q. In this particular industry?—A. Yes. The second question was: Will you support the efforts of the Canadian Association of Garment Manufacturers in endeavouring to have an industrial recovery act made effective in Canada? In reply to that, 93 per cent were in favour, and only two said no. The third question was: Are you in favour of a code of ethics drafted by the traders of your group and made effective by act of parliament? To that question 95 per cent reported in favour, and only one said no. The next question was: Are you in favour of standardization of hours and wages throughout the industry. To that, 95 per cent were in favour, and two said no.

Q. 95 per cent?—A. 95 per cent were in favour.

Q. Just to get it down on the record, 95 per cent were in favour, and 2 per cent—A. Two out of the whole group said they were not.

Q. Two or 2 per cent?—A. Two persons. The next question was: Are you in favour of collective bargaining and co-operation with organized labour in promoting an industrial recovery bill? To that 80 per cent reported they were in favour of so doing and 12 manufacturers said no. Then there were some questions that were not particularly important. Another question was: What do you consider the most outstanding evils in the industry? That is important, of course, but I think it can be dealt with more fully in some of the other questions. Another question was: What are your suggestions as effective means for curing or lessening them (the evils)? Who is most responsible for the conditions, manufacturer or distributor? Why? Then this most important question with which we are dealing is: Are the large buying organizations such as departmental or chain departmental stores injurious or beneficial to the success of the needle trade industry, and why? I will just read a few of these replies. I would say I have not tabulated them, but I think there are about 98 per cent saying that they are injurious. I will just read a few of the illustrations:—

The large buying organizations are a menace to the trade by being able to undersell the small retailer by being in a position to dictate prices to the manufacturers; also legislation should be passed that no retail organization should be allowed to operate their own factory in competition again the legitimate manufacturers.

Then, another from a manufacturer of ladies' coats, I presume:

Departmental or chain departmental stores always expect to buy goods cheaper than the specialty stores which are their strongest competitors. They find a way out, "cut the manufacturer's throat." One of our largest retail distributors practices different methods by which to squeeze the manufacturer and also forces him, indirectly, to sell his product to them without a profit, if not below cost. It is a well known fact that a group of buyers from this firm is going around from one showroom to another, looking at the market, and if the product cannot be purchased at their price, they sample out the line and no sooner it has reached their respective departments than it is immediately forwarded to their factory for copying purposes. This is a case which would be worth while investigating. In our estimation they are the greatest illegitimate competitors we have in Canada. They also had a "whip" for the manufacturers as well as for their own competitors.

Q. While you are dealing with that question of samples, what does that mean, that expression of sampling out?—A. It means that they will go—you

probably do not realize that there is no other trade probably in the world, I don't know of any, in which an organization can go about, say to the 10 best manufacturers in Canada making, we will say, ladies' dresses or suits, and by looking over their line select ten of their best styles, buy ten if you will—sample out, that is the expression—take them to their own place and call for their own manufacturers and say, "Boys, there they are, look them over, help yourself."

*By Mr. Young:*

Q. Take their style or pattern?—A. Take their patterns, take their designs, have them made in their factories, and they may be independent manufacturers.

*By Mr. Sommerville:*

Q. Does it cost the manufacturer much to get these designs and evolve these styles?—A. Yes, a great deal. It is in ladies wear manufacturers particularly. They visit the American market.

*By Mr. Young:*

Q. What do they do there?—A. The same thing; they buy models, garments; they have certain manufacturers in New York with whom they have arrangements for buying their styles.

Q. Buy the model garment and copy it?—A. Yes.

Q. This firm buys one from you and copies it?

Mr. SOMMERVILLE: No.

*By the Chairman:*

Q. As I understand it, the manufacturer goes to certain places where he buys them as models?—A. That is it.

Q. And he pays a price as a model?—A. Yes.

Q. And he buys it for the purpose of producing it in his own factory, that model?—A. That is right.

Q. And the prices are very large prices, I am told?—A. Yes; price does not make any difference; buying for models, it does not matter what price he pays.

Q. Perhaps you could give us an illustration of how he does it?—A. That depends on the merchandise; it may be a dress or underwear or a lady's coat.

*By Mr. Young:*

Q. Take the case of a lady's dress and give us a concrete example of how you get the model for the dress, what you paid for it, what you did with it, what you sold for to the department store and what they paid; follow one case right through?—A. I am not in the dress business.

Q. Take a man's suit?—A. A man's suit—we don't do that, not men's suits. The policy of the dress, and the cloak and suit houses is simply as I have stated, that they have an arrangement with the manufacturers in the same line in New York; they will go over to New York and go through their line and select dresses they think would sell in Canada.

Q. Models?—A. Yes, models, just one of each kind. That is the arrangement on which they largely work. Then they bring these model garments into Canada and sometimes they are re-exported, but that is not material here.

*By Mr. Sommerville:*

Q. I presume an investigator could get that?—A. The investigator can get that, take one model dress and follow it through.

*By Mr. Young:*

Q. We want to know exactly what is the difference between a thing you do in New York, and the thing this departmental store does with them?—A. By the men going to New York—that is another country—they are not in competition. They buy this with that definite understanding that they are models. They do not conflict with the institution which is making them. They are not selling their styles. They are buying them for a definite purpose, for the purpose of copying them. That is recognized and known.

*By Mr. Edwards:*

Q. Paying a certain amount for the cost of designing?—A. Yes, that includes cost of designing.

*By Mr. Sommerville:*

Q. Do these models run into hundreds of dollars?—A. Yes.

*By Mr. Young:*

Q. But they buy before they do go into the retail store and buy one of these dresses and bring it home?—A. Well, you see, they buy them before they are even in the retail stores; they have an advance showing of the retail garments before they are even shown in the New York market.

Q. This department store that buys them from you gets them as sort of second hand—they are not a new style then?—A. Well, they are pretty hot.

Mr. FACTOR: Mr. Chairman, do you intend to appoint an investigator? Mr. Sommerville said something about an investigator.

The CHAIRMAN: We will decide that. Of course we have got auditors at work, and we can add an investigator to their staff if it is desired.

Mr. YOUNG: Is an auditor in a position to investigate a thing like that?

The CHAIRMAN: No. We can add an investigator to the staff; we have not at the present time.

*By Mr. Kennedy (Peace River):*

Q. I understand the point you have made is that in the one case the model is bought, and it is perfectly understood between the buyer and seller that it is a model?—A. Yes.

Q. And the other case it is not?—A. In the other case it is just bought.

*By the Chairman:*

Q. And appropriated?—A. Yes.

*By Mr. Factor:*

Q. Do you know of any more cases where the departmental store would go to a manufacturer, buy their dresses and then copy them and give them to its own plant to manufacture?—A. The manufacturers in both the suit and dress business tell me in meetings, group meetings, that this is a common practice. Since I am not in that business, I must accept their word for that, on their statements.

*By Mr. Young:*

Q. That being the case they must be prepared to come here?—A. They will be prepared to give you the names. We have the names of these men. If I might just indicate this by a personal experience of recent date. A manufacturer of ladies' underwear had made up a new style—this was within the last six weeks—he had spent a good deal of time planning and preparing this,

and he took it to a department store and submitted a sample. He was asked if he would leave them for a few days, and when he came back a few days later, he was told, we cannot buy any of these just now. About a week later he found these new styles on sale in that store, and one of the employees in the department casually remarked to him that she had seen his own garments in their factory. This gentleman decided that he was going out of business, the phrase he used was, going back to the farm—I don't know how he was going to make any money there.

*By Mr. Factor:*

Q. Do you know that of your own experience?—A. Not only that, but I will give you the name of the manufacturer.

*By Mr. Young:*

Q. We will bring him here with proof?—A. You can bring him here, sir.

*By the Chairman:*

Q. Do the same conditions obtain in the furniture industry, do you know?—A. I am told by a furniture manufacturer that the same condition does exist. For instance, they will take an article that is made of solid walnut—a book case, it may be—and take it to a smaller manufacturer, or another manufacturer, and get it copied in gum wood or some other wood, and make it look the same.

*By Mr. Young:*

Q. And put it on sale as solid walnut?—A. I would not say solid walnut, but in pictures they look just the same, you know.

*By Mr. Sommerville:*

Q. I interrupted you that time when you were reading the answers from the manufacturing firms, Mr. Cook, to these questions. Now, will you just continue the presentation of typical answers which you received from manufacturers to these questions as to the effect of mass buyers?—A. Here is a manufacturer who says: "It is injurious in piracy of styles taking from one manufacturer and going to other manufacturers to get cheaper prices."

Here is another one: "Injurious. With dresses if they have to pay a fair price for a dress, they give the repeat business to another manufacturer who makes it for less, or else make some in their own factory."

*By Mr. Factor:*

Q. In a case where a manufacturer does that he is practically guilty of certain unethical practices, where he knows that the style comes from another manufacturer and he goes ahead and manufactures for a departmental store?—A. Unfortunately, Mr. Factor, the conditions of the dress business force many manufacturers to do things that are very unethical and unsound, which they would not stoop to do if they were not driven into a corner.

*By Mr. Young:*

Q. Are styles protected in any way by copyright or patent?—A. No sir.

Q. Could they be?—A. I doubt it very much. Now, here is another answer:

They are the real causes of all the horrible conditions in the industry through their methods of buying. Group buying has forced wages down and has put more manufacturers out of business than any other thing.

Q. "Group buying," will you explain that term, please?—A. That is a very fundamental term, and it means a large number of stores, or a group of stores, who get together and buy in one unit, thereby having a very large buying power and dangling large quantity orders before the manufacturers.

MR. SOMMERVILLE: That is what you refer to as mass buying?

*By Mr. Heaps:*

Q. It is not the mass buying that put them out of business; is it not rather the price?—A. Price is the result of mass buying, Mr. Heaps; it is that which brings about the result—the price.

*By Mr. Factor:*

Q. Mr. Heaps means it is not the quantity buying that is doing that, but rather the price at which the business is placed?—A. There is a great misconception of the various advantages of mass buying. It is not the quantity that makes any great difference, it is the club of mass buying that flattens the prices down.

*By Mr. Senn:*

Q. When you say mass buying do you mean small independent retailers grouping together and buying in large quantities?—A. Fortunately in this country we have been spared that terrible experience up to the present time. Some of them have endeavoured to get the smaller manufacturers together and it has been done in the grocery business.

Q. With the small retailers?—A. It has been done in the grocery business to a considerable extent, but in other lines I would not say it has developed appreciably in Canada. In the United States it is becoming a most vicious system. It has enabled some of the smaller manufacturers to compete with these large manufacturers, but it has been disastrous on the producer and on the worker.

*By Mr. Young:*

Q. Do you mean to intimate that the operations of a voluntary group buyer is injurious?—A. I think the voluntary group buyer injures the worker and the producer, and it does not benefit the independent retailer; so far as the manufacturer is concerned we agree it is just as bad, but that is a secondary, a lesser evil, inasmuch as it does help somebody.

Injurious as setting sale prices—

*By the Chairman:*

Q. From what are you quoting?—A. I am still quoting from that questionnaire.

Q. That is all right, go ahead; I just want to get clear on the record that these are quotations.—A. "Injurious as setting sale prices by heavy sacrifice purchases which the average merchant must compete with. Thus forces the producer to lower his price below the safety level."

*By Mr. Sommerville:*

Q. You say they are demanding one hundred per cent mark-up; does that they were all from one person; this is another answer?—A. Yes. "Injurious. They make it impossible for the small retailer who is the backbone of the country to exist under present conditions." Of course, there is the odd one who says they are O.K.; and if you will look in the other comments you will find they are not O.K. I will file this with the committee.

Here is another one:

Mostly injurious under present conditions. They are demanding fifty to one hundred per cent mark-up—on staples this is unfair. Quality is secondary (mostly buying prices).

*By Mr. Young:*

Q. You say they are demanding one hundred per cent mark-up; does that mean that they cut the price?—A. They cut the manufacturer's price.

Q. What do you mean by fifty per cent mark-up?—A. I mean this, that they will go to the manufacturer and insist on buying goods on prices that will enable them to get a one hundred per cent mark-up, and still sell at less than their competitor.

*By Mr. Factor:*

Q. Did you get any favourable opinions there in your questionnaire; does it show any favourable opinions say from a minority?—A. Oh yes, there are a few.

Q. Let us have one or two samples?—A. This is being filed.

*By Mr. Sommerville:*

Q. We will have them all?—A. You will have them all, yes. This man says: "They are beneficial, prompt payments, intelligent buyers, reliable and dependable" at the same time he says: "The difficulty in the industry is that there is no control of wages or hours, unfair returns to the stores, unfair competition, sweat shops, bedroom shops, lack of sanitary control by the government." At one time he is trying to believe that they are lovely men—

*By Mr. Young:*

Q. Do you say he is complaining there of sanitary conditions, and lack of government control?—A. Yes. One of the questions is, "What do you consider the most outstanding evils in the industry?"; and his answer to that statement is, "No control of wages or hours, unfair returns from the stores, unfair competition, sweat shops, bedroom shops, lack of sanitary control by government." Then he says that those most responsible are the manufacturers because they are an unorganized body—not very complimentary to our organization, but nevertheless he states it. Then he says they are beneficial.

Q. Who does he mean are beneficial?—A. The large stores, the department stores.

*By Mr. Factor:*

Q. Is this an answer to another question?—A. Yes, another question, "Are either detrimental or beneficial."

*By Mr. Young:*

Q. Read what he says into the record?—A. He says, "They are beneficial, prompt payments, independent buyers, reliable and dependable;" and on the other side he says "unfair competition, sweat shops, and what-not." Another one says, "They are injurious to the trade unless they manufacture themselves."

*By Mr. Factor:*

Q. What is that last one?—A. "Unless they manufacture themselves."

Q. In other words, the evil is two-faced; because they manufacture themselves?—A. Those who do not manufacture themselves he does not consider very injurious; those who have their own manufacturing plants are considered very injurious.

Mr. YOUNG: Why are they injurious?

Mr. FACTOR: You heard Mr. Cook give examples as to that when he referred to pirating models and making them in their own plant.

*By Mr. Young:*

Q. This man does not make that complaint though?—A. It has been found that when it is possible for them to make them for less in their own factory, they will take the new styles and save themselves the trouble.

Q. Is that the way these firms get their styles, or do they maintain offices in New York, Paris and at other places?—A. I fancy they maintain their own offices in New York, Paris and other places.

Q. And in spite of that they find it pays to pirate models?—A. Unquestionably. This is another illustration of the effect of large buying power, "Injurious because of price slashing."

*By Mr. Sommerville:*

Q. Yes. At any rate large buying power is what has been referred to as beneficial?—A. He considers it beneficial.

Q. Beneficial in one sense, perhaps?—A. Usually you will find, Mr. Sommerville, that those who are so favourably inclined are so probably for three years, until they go out of business. It is pretty generally accepted that those confining their business to such outlets usually last about three years.

Q. Confining their business to large buying outlets?—A. Yes.

Q. At any rate, you have all the answers there; will you let me have them?—A. Yes.

*By Mr. Young:*

Q. How long do those last who do not sell to the large buyers?—A. The mortality at the present time is very severe, they have been having a very difficult time the last few years.

*By Mr. Ilsley:*

Q. How long has this high mortality rate existed, has it been in existence longer than the period of depression; of these last three years?—A. It has been aggravated only by the depression, Mr. Ilsley.

Q. So from 1920 to 1930, would you say that this applied?—A. At that time there were a large number of independent outlets to which the men could sell their merchandise; but these outlets are dried up and it is not now possible to find outlets in the ordinary way as it was a few years ago.

Q. Then, conditions during recent years have been worse because of the practice of department stores who are manufacturers and of other manufacturers pirating from each other?—A. I would not be surprised, if that were the case; but I would not like to accuse them of that. I would not like to admit that they would.

*By Mr. Factor:*

Q. Well, it is a well known principle that the millinery designer will go to a window where a hat is displayed and by looking at the hat, will copy it?—A. That I am afraid you cannot stop, or consider in that way.

*By Mr. Sommerville:*

Q. From how many manufacturers did you receive replies to this questionnaire, approximately?—A. I think there are somewhat over one hundred there.

Q. So that gives us a pretty fair cross section of conditions?—A. I think an analysis of that questionnaire will show that it represents about 75 per cent of the entire production of the industry.

*By Mr. Factor:*

Q. I thought you told me you sent out 247?—A. I said we received 279 replies to a later letter.

*By Mr. Sommerville:*

Q. Yes. Now, will you please proceed with your statement?—A. Now, Mr. Chairman, there is another aspect of this problem that is fully as important as mass buying, that is mass advertising. As evidence of the way in which they use the millions of dollars at their command, may I illustrate the tremendous power of their advertising by quoting the following extracts from the magazine known as "The Editor and Publisher"—reprinted in the Ottawa Evening Journal of February 26th, last:—

A newspaper advertisement of more than 18 pages, inserted in the Toronto Daily Star and the Toronto Evening Telegram by the Robert Simpson Company, Limited, department store, on January 31, was acclaimed in Toronto as establishing a new record for the United States and Canada.

The article then gives some further details, and proceeds:—

And speaking of advertising records, it may be of further interest that no other one store in the entire world is so large a user of the daily newspaper space as either one of Toronto's two great department stores, the T. Eaton Co. Ltd., and the Robt. Simpson Co. Ltd. This has been the fact for many years.

In justification of this claim, and indicative of the huge amount of space they consistently use, measurements show that during the 12 months of 1933, the T. Eaton Co. Ltd. used in the Daily Star and the Evening Telegram a total of 5,463,283 lines; and the Robert Simpson Co. Ltd., a total of 5,065,246 lines in these two papers.

This figures out at an average of about  $3\frac{1}{2}$  pages for each store in each of the two evening newspapers every publication day in the year. And besides this large linage in the two evening newspapers, these two stores combined, used about 950,000 lines in each of the two morning newspapers during the year, a total linage in all four papers of 12,428,529 lines.

in Toronto alone. (Exhibit No. 34.)

*By Mr. Young:*

Q. Does your association object to that?—A. I am quoting these statements, Mr. Young, I am not questioning the right or even the judgment of these stores in spending this money in advertising, if they wish to do so. In fact, I am very much in favour of newspaper advertising, and appreciate very much the benefits of newspaper advertising. I refer to this only as showing their policy of endeavouring, by sheer weight of propaganda, to over-reach and submerge their competitors.

Q. Is there anything to stop competitors from taking more space in the newspapers?—A. I fancy not. You may be interested in seeing—for instance here is that issue that was referred to, and considered the largest single advertisement ever issued by any one organization in the history of the world. That is possibly rather a large statement to make, but it is nevertheless interesting on that account. The committee might be interested in studying some of the features of that particular advertisement.

*By Mr. Factor:*

Q. What is that, the Simpson's day advertisement?—A. This is one of the special Simpson day advertisements.

*By Mr. Sommierville:*

Q. You mean to tell me, Mr. Cook, that the article from which you are quoting states that the linage taken by these two stores in Toronto in the evening papers was equivalent to  $3\frac{1}{2}$  full pages of each of the evening papers for the entire year; was that correct?—A. The statement reads, Mr. Sommierville, I am quoting the particulars of the article, "This figures out an average of about  $3\frac{1}{2}$  pages for each store in each of the two evening newspapers every publication day in the year."

Q. That was all concentrated in the month of January?—A. No, no sir.

Q. I thought you were referring to the publication day?—A. I am just referring to these special feature ads that are brought out.

*By Mr. Young:*

Q. Why do people read that stuff, Mr. Cook?—A. God only knows; I don't know Mr. Young.

Q. They must have a motive?

The CHAIRMAN: It is a habit.

The WITNESS: These are rather interesting issues because it so happens they came out on the evening of January 15, and if you will remember, Mr. Stevens was in Toronto on that day and made rather a memorable speech. In looking on the inside of this page, I find a four star advertisement, and I find a nine piece walnut dining room suite advertised as regular \$165 for \$95.95. About two or three weeks later I noticed in the *Mail and Empire* a heading, "Stratford workers reduced to slavery before strike. Department stores, not manufacturer, to blame, MacArthur charges." I wonder if there is any connection with the two; I think possibly there is. I leave it for your perusal.

The statements referred to above apply to Toronto only. The use of this tremendous volume of advertising space together with the space used by their other stores throughout Canada, enabled them to break the price of any commodity, whether it be a product of the farm or the factory,—

*By Mr. Factor:*

Q. Did you say Toronto only? Do they not advertise as extensively in Montreal?—A. That is what I am stating, Mr. Factor; that this advertising that has been quoted is in Toronto only, and if you will multiply that by the various stores throughout Canada, you will appreciate the tremendous power of the advertiser, which enables them to break the price of any commodity, whether it be a product of the farm or the factory.

*By the Chairman:*

Q. Are you speaking of the large departmental organizations, store organizations?—A. The same principle applies very largely to chain stores through mass advertising. By this method they establish price levels which force down wages, turn profits into losses for manufacturers and independent distributors, and reduce the standard of living of the whole community. It is obvious these high expenses are for one object—that is, to make profits for themselves.

Q. Before you leave that, Mr. Cook, I should like to make this observation. Certainly, these samples of advertising you have handed to us are almost staggering. For instance, in one issue of the *Toronto Star* one departmental store, Simpson's, have 18 full pages of advertising. Is it your suggestion that because of this terrific amount of advertising space in the public press there would be a reluctance on the part of the press to give publicity, shall we say—

Mr. FACTOR: I do not think, Mr. Chairman, that that is a fair way of putting a question.

Mr. YOUNG: It is a leading question.

The CHAIRMAN: It is intended to be leading.

Mr. FACTOR: I do not think it is a fair way of putting it.

*By the Chairman:*

Q. Give us your opinion about that? Give us your opinion on this mass advertising.

Mr. FACTOR: I suppose he can give an opinion now.

The CHAIRMAN: What is the objection to the question?

Mr. FACTOR: There is no objection to the question; the objection is to the way you put the question. There is only one answer to it.

The CHAIRMAN: Of course there is only one answer to it. That is exactly why I asked it.

Mr. FACTOR: I do not think it is a fair way to put it. You might ask the witness his opinion without putting a leading question.

The CHAIRMAN: The chairman has not much chance of passing his own opinion, and sometimes he has to put it in that way.

Mr. YOUNG: The chairman is not supposed to have an opinion.

The WITNESS: If I may answer the question, if there is a question—

The CHAIRMAN: Go on, never mind. Some people are a little thin-skinned about this question.

Mr. FACTOR: Mr. Chairman, there is nobody ashamed of getting an answer to this question. I objected to the form in which you put the question.

The CHAIRMAN: Now, Mr. Factor, ever since I have been in parliament, which has been for 25 years, every member of every committee that I ever sat on, and I myself have always asked leading questions. Every member of this committee has asked leading questions. To talk about leading questions in a parliamentary committee is utter nonsense; however, I am not going to press it. Let it go.

Mr. FACTOR: I would like Mr. Cook to answer that question.

The CHAIRMAN: You objected to the question, and now you are asking him to answer it.

Mr. FACTOR: I objected to the form.

The CHAIRMAN: Don't answer it, Mr. Cook.

Mr. YOUNG: We want an answer.

Mr. FACTOR: I want his opinion on this.

The CHAIRMAN: I do not know which side of the problem you are on, Mr. Factor. One minute you object to the question and say I am not fair in asking it, and the next you insist upon the question being answered.

*By Mr. Factor:*

Q. What is your opinion on what you call mass advertising? Is it beneficial or injurious to the community?—A. That is rather a large question. I think it is very disastrous on the manufacturer and on the producer through the results that are produced by that advertising. As to its influence on the newspapers, I think it is very generally accepted—I do not think I need to make any comment.

*By Mr. Young:*

Q. What are your views?—A. It is very generally accepted that anything that is objectionable that refers to the departmental stores does not appear in the public press, in those large dailies.

*By Mr. Factor:*

Q. You make that statement, do you Mr. Cook?—A. I have had it made to me so often that I am merely making the statement that has been made, assuming at times there must be some justification, I suppose.

*By Mr. Young:*

Q. You refer to the practice of this firm in breaking retail prices all over the country?—A. Yes, sir.

Q. If that has gone on, then, retail prices must be down, very much down?—A. Unquestionably.

Q. Now, the Dominion Statistician was here the other day and from his index figures he told us retail prices have not gone down anything like primary products or even wholesale prices. Retail prices, he says, have declined less than anything.—A. I am rather afraid that the statistics, as I have noticed them, are taken very largely from department store returns. I think they are most incomplete and do not give a true picture of the situation.

Q. You mean to say the other firms do not report to the bureau?—A. No; the smaller concerns throughout the country that are selling merchandise cheaper do not report to the bureau. The last statement I saw—

Q. You are sure the reports come largely from figures supplied by the department stores?—A. The last report I saw in the daily press, Mr. Young, was quoting a report from department stores; it mentioned it specifically.

Q. Mr. Coats was giving us the general figure from the different firms. You say they have taken their reports?

Mr. SOMMERVILLE: I suppose you would have to have the reports before you before you would be able to give an opinion?

The WITNESS: I suggest you get that from him.

*By Mr. Edwards:*

Q. In the large advertisements that you have shown here, have you any knowledge, for instance, of the space occupied by furniture and clothing that was charged back against the manufacturer for the payment of this space?—A. I would not say that in so far as these large stores are concerned, it is applied. I think more particularly the other types of advertising or other types of stores—chain stores, we know that that does apply, but I will not be prepared to say that they charge advertising.

Q. Some of us know they do?—A. That is not to my knowledge.

The CHAIRMAN: We will get that, Mr. Edwards, when we break down the distribution of costs in the department stores. That is now being done in the audit that is carried on. Go on with your statement, Mr. Cook.

The WITNESS: Last week you heard from Professor Cassidy as to the conditions which now exist in the men's clothing industry. I would like to give an illustration, the facts of which are within my own personal knowledge, as to the events which led up to what has practically amounted to the ruination of the men's clothing in Canada. I would like to explain, Mr. Chairman, that I am merely using this as an illustration. I mean, that that applies only to the clothing industry, since I happen to be in that industry, I have more knowledge and can speak with more authority. While in England in the spring of 1931, I met the buyer for Macklin and Dyner, a Montreal woollen jobbing house, and learned through the trade that this particular firm were making exceptionally large purchases of woollens and worsteds. In the fall of the same year, probably a little later, the large department stores put on a tremendous advertising campaign for men's two trousers suits at \$20.50.

*By Mr. Young:*

Q. What month was that?—A. 1931.

Q. What month?—A. March.

Q. They were buying extensively of woollen goods?—A. Yes. In the fall of the same year, rather, about the fall, the large department stores put on a tremendous advertising campaign for men's two trousers suits for \$20.50, which, for the quality offered, was an extremely low price at that time, or extraordinarily low.

Mr. HEAPS: Made-to-measure?

The WITNESS: Ready-to-wear suits, there. I personally examined some of the suits, and knowing something of values, at least, I concluded it was utterly impossible for these suits to be made legitimately and sold at this price. I was assured by the manager of the department that they were making a substantial gross profit.

Mr. YOUNG: Can you tell us when the duty on woollen goods was raised?

The CHAIRMAN: Excuse me, Mr. Young. Let us allow Mr. Cook to make his statement. You can ask him your questions afterwards. He is in the midst of a specific case.

Mr. YOUNG: Thank you.

The WITNESS: Immediately retailers throughout Canada commenced demanding from manufacturers suits at prices which would enable them to compete. Manufacturers in desperation were willing to sacrifice their profits, cutting their overhead charges wherever they could cut, but this was not enough. Wages had to be cut, and were cut to the extent of about 20 per cent at that time in order to meet this competition. Some of the very largest and heretofore most successful manufacturers in Canada gave up the struggle and closed their doors.

It ultimately transpired that the hundreds of thousands of dollars worth of goods purchased by these jobbers had been transferred to manufacturers at a price far less than the original cost of the goods. I am not prepared to say exactly the price. At any rate, far less than the original cost of the goods. These were the materials used in the production of the \$20.50 suits referred to above. The matter came before the court. The jobbers were involved and arrested on charges of fraud. One of the manufacturers who put these goods on the market agreed to indemnify the creditors of the woollen house to the extent of about \$100,000, being a part of the amount out of which the creditors had been defrauded.

*By Mr. Ilsley:*

Q. In what did the fraud consist?—A. These goods came in the front door at one price, and went out the back door at a very much lower price than the cost of the goods.

*By the Chairman:*

Q. Before the original vendor had been paid?—A. Before the original vendor had been paid and during the immediate season.

Q. Then they went into bankruptcy?—A. Then they went into bankruptcy and were arrested.

*By Mr. Sommerville:*

Q. And the case was then one of fraud and was brought up in court?—A. It is a matter of court record, and I would suggest the committee investigate that particular subject and find out the disposition of the case. It is not here

suggested that the department stores who purchased the goods were aware of these frauds, but I am only mentioning these facts to lead up to another alleged bargain in men's suits, and to point out that the sale of these suits at \$20.50 resulted in a heavy reduction in wages to thousands of workers.

*By Mr. Ilsley:*

Q. In factories of competitors?—A. In factories of competitors throughout the country.

Q. Because they bought the goods so cheaply?—A. Yes, that is it. This special sale of men's suits was followed by another, when in the spring of 1933 a tremendous advertising campaign of made-to-measure suits at \$16.50 was promoted by one of the Toronto stores, and their stores throughout the country. (Exhibit 35.) The sale of these suits was not confined to their department stores and order offices, but special agents went through Canada soliciting orders, in many towns and cities. I have here some of the advertisements appearing at that time. I might mention that these suits at \$16.50 were made in part by one of the same manufacturers in Montreal who had contributed to the downfall of the clothing business by the sale of goods fraudulently obtained, and were partly made by other factories of the sweat shop variety outside Montreal. I have here a paper which is one illustration of the power of this advertising in forcing these suits on the public, page after page after page of advertisements. These are most interesting to read, and to me, at least, they are amusing.

*By Mr. Sommerville:*

Q. To what do you refer?—A. These (exhibiting).

*By the Chairman:*

Q. Give us an instance of them?—A. Here, is one case, for instance: famous woollens from famous makers, including thousands of yards of Canadian Woollens, Harris tweeds, Kynocks, Garnetts, Leigh, Salts, James Shires, Wode and Clyde, Fox Flannels. These are all mills that are recognized as being of a very high class, outstanding makers.

*By Mr. Ilsley:*

Q. Were these statements false?—A. I am not saying the statements were false; I am saying they are misleading. Harris tweeds, by the way, seem to have a great deal of prominence. In this particular advertisement, they are mentioning Harris tweeds. These Harris tweeds are quoted as being sold for \$16.50. Harris tweeds, and so on; they are mentioned three times in this particular advertisement. There is a little history back of it that I won't take time to tell.

Q. Were they Harris tweeds?—A. Just a little later I will give you something. I am not questioning the Harris tweeds.

Mr. YOUNG: What is misleading?

The WITNESS: I suppose there will be probably six Harris tweed suits in the lot.

*By the Chairman:*

Q. Mr. Cook, I think the members would like to know this: this advertisement which features Harris tweeds prominently implies that these \$16.50 suits are made from Harris tweeds. Is it possible to make Harris tweed suits and sell them at \$16.50?—A. No, sir. The amusing thing of this, sir, or extraordinary thing, is that a man came in to buy one of these suits there. There

was a suit hanging on the rack and he asked to try it on. He tried it on and he said, It is all right, why not let me take this one. The reply was, we cannot let you take that one, that is a \$27.50 suit; we will make one for you at \$16.50.

*By Mr. Factor:*

Q. Just about half this?—A. Just about half this.

*By Mr. Sommerville:*

Q. These are not made-to-order suits, made-to-measure, but ready made suits?—A. Made-to-order, not ready made.

Q. The orders were taken by the stores throughout Canada and then made up by this firm in Montreal?—A. Yes. My understanding of it is that a manufacturer submitting this to the stores would say, we will give you six Harris tweed suits, five Kynocks, four Garnetts, and so on, and the rest of it is catch what you can.

Mr. FACTOR: It is made in a sweat shop in Montreal, you say?

The WITNESS: I would prefer that the committee trace these back, trace the conditions and find sweat shops.

*By Mr. Kennedy (Winnipeg):*

Q. Do you know the conditions under which they were made?—A. I think they were well detailed last week by Mr. Francq.

Q. Have you investigated and do you know?—A. I know the manufacturers who make these goods; I know the conditions under which they are working, and I would definitely say they are made by people who are not earning a decent living or getting paid a decent wage.

*By Mr. Ilsley:*

Q. How are they made; are they made by contract; are those the sweat shop conditions to which you refer? Does this company let out the work by contract to contractors who operate sweat shops?—A. One of the number of companies who made many of these suits cut the suits in Montreal, and they are sent to Victoriaville to be made.

Mr. SOMMERVILLE: By the contract system?

The WITNESS: Contract system.

*By Mr. Ilsley:*

Q. I thought the company that put the advertisement in is a manufacturer itself; is not that so?—A. I doubt that they could make it in their own shops.

Mr. FACTOR: Not to sell at that price.

Mr. SOMMERVILLE: For instance, they could not make them in Toronto?

The WITNESS: I fancy not, sir.

*By Mr. Factor:*

Q. In this connection there is a two-fold objection. First of all, there is the misleading advertisement and secondly the suits are manufactured under sweat shop conditions?—A. Thirdly, they have established a price through unsound, we will say, conditions and arrangements of \$16.50, for which orders were taken all over Canada, which legitimate manufacturers could not meet and pay decent wages.

*By Mr. Sommerville:*

Q. That affected the whole range of manufacture throughout Canada?—A. That affected the whole range throughout Canada.

Q. And did it affect retailers as well?—A. Retailers were driven to desperation. They were not able to buy goods that would sell at this price. We will follow through with the examination to get that suit broken down.

*By Mr. Factor:*

Q. Before you go on with this advertisement of the \$16.50, let me ask this question: was there ever a retailer in Toronto that sold a made-to-measure suit at that price?—A. No.

*By the Chairman:*

Q. Is this break in the price due to that incident, the cloth being got under fraudulent conditions?—A. No, this is a different situation, sir.

*By Mr. Sommerville:*

Q. But this price of \$22.50 was the first break in the price?—A. Yes, sir.

Q. And that break was made by reason of what happened in Montreal in connection with this fraudulent transaction?—A. Absolutely.

Q. And then this \$16.50 suit was made, at least some of them, by the same firm, involving the other case?—A. Yes. And you will notice in every one of these advertisements, sir, that the Harris tweed is made a feature. I think probably I can tell you the reason Harris tweed is made such a feature. In the exhibition at Toronto only two years ago I was instrumental in bringing some crofters out with their handlooms from Scotland and the Island of Lewis, and they put on an exhibition with their handlooms which attracted a great deal of attention, and all the advertising since that time has always featured Harris tweeds as a particularly important factor.

*By Mr. Young:*

Q. Do you know of any particular case where they presumed to sell a Harris tweed which was not a Harris tweed?—A. Here is an advertisement of one of the stores in Toronto, comparatively recent, one of these feature sales of Harris tweeds. I might tell you that Harris tweeds are made only in 27-inch widths because they are made on hand looms. In the display in this company's store there was a Harris tweed, featuring Harris tweed, and it was 54 inches wide, so the Retail Merchants' Association of Canada called the attention of this particular firm to the fact and I will read quotations from a letter from the Retail Merchants' Association:

On Saturday morning we received a visit from the personal representative of a departmental firm, and in the interview which followed he stated that investigation had proved that our complaint was justified.

By way of explanation, however, he stated that the label designating the particular bolt of cloth as "Harris tweed" had been sewn on by the manufacturer in Quebec and not by the departmental firm. He stated further that investigation disclosed that the term "Harris tweed" was not protected in any way and that while, in the trade, it was well understood that this cloth was the product of the Scottish crofters, there was nothing to prevent a mill in any part of the world making a tweed and designating it by that name.

He claimed that the display man, upon interrogation, stated that the term "Harris tweed" seemed to him to have a selling value and consequently he gave it prominence.

*By Mr. Young:*

Q. Then have you made an effort to trace it up to the manufacturer in Quebec who put that label on.—A. No, sir, we have not the facilities for tracing it back to the manufacturer. I don't know who the manufacturer was, sir, I have no idea. I think the committee might be better able to find that out.

*By Mr. Factor:*

Q. What would the cost of Harris tweed material be in making up that suit?—A. I think that is going rather into detail, but I will be glad to furnish you the cost of the material.

*By Mr. Sommerville:*

Q. Take this \$16.50 suit, the retail store did not own the material; that material and workmanship was all supplied by some other firm.—A. Yes, sir.

Q. The retail store just took the orders?—A. Yes, they just took the orders.

Q. And they measured the men for the suits?—A. That is right, sir.

Q. And they sent the measurements to the Quebec firm?—A. That is right, sir.

Q. And they had no risk whatever in connection with the transaction?—A. I would not say they hadn't any risk.

Q. I mean, they had no material on hand?—A. They had no investment.

Q. They transmitted the order to the manufacturer who made them, in the Province of Quebec?—A. Right, sir.

Q. That is what you are complaining of?—A. Yes, sir.

Q. Particularly at this price?—A. Yes.

*By Mr. Young:*

Q. If the suit does not fit them who is the loser?—A. That is a matter of arrangement, Mr. Young. In some cases the retailer is asked to assume all the responsibility, in the case of the majority of legitimate manufacturers we assume the responsibility; if it isn't satisfactory we take it back.

*By Mr. Factor:*

Q. In that case what do you think happened?—A. I think an arrangement was made that probably they would not send them back, sir, from what I have understood. The predatory price-cutting war required that the other stores should meet this price, which they did.

*By Mr. Isley:*

Q. The predatory price-cutting war?—A. I said the predatory price-cutting war between the two large stores in Toronto required that the other stores should meet this price.

Q. You did not tell us about any war.—A. I am saying now that this condition prevails. A large Toronto manufacturer, whose plant was forced into idleness by this sales promotion all over Canada of these \$16.50 suits, agreed to supply the other companies with suits which could be sold at the same price. To do so it was necessary that wages should be cut an additional 10 per cent. This cut was later made general through all union shops in Toronto, and indirectly affected the Montreal market as well. It not only affected manufacturers making this class of merchandise, but the manufacturers who had been making lower priced goods were compelled to reduce their prices and, to do so, to cut wages, that is, establish a price standard where it was impossible to pay legitimate wages.

I believe, if necessary, I could substantiate the statement now made that these two alleged bargains meant a reduction in wages to at least ten thousand people. As a result of these two special sales, the standard of living of everybody engaged in the clothing business—whether as employers, employees, or distributors, was definitely lowered, and their purchasing power reduced. I would suggest that the committee might make some inquiry into the facts herein stated and obtain information, as outlined above.

This is an advertisement of the other company that followed suit. This, of course, is only an example. At one time it is mens' clothing; and another time womens' wear; at another time furniture; at another time automobile tires, or radios, in fact, almost every line of consumers' goods is put on in these feature sales from time to time. I am convinced that if the committee will make a sufficiently thorough inquiry it will be convinced that this vicious

system of special cut price sales has been the chief factor in reducing the purchasing power of the industrial classes in Canada. That it has reacted disastrously to farmers, professional classes, and others who are dependent upon the purchasing power of those engaged in trade and industry, will, I think, not be denied.

This special sale has progressed into the present year and we submit copies of advertising dated January 16, in Toronto, offering made-to-measure suits at \$19.50. The price, of course, has gone up in the meantime. And, at the same time, we submit an advertisement—

*By the Chairman:*

Q. January, 1934?—A. January, 1934, sir. And at the same time we submit an advertisement of the same firm in Regina offering what we are advised are the same garments at \$22.50, showing that the western consumer must pay \$3 more than those living in the east. (Exhibit No. 35.)

We further submit current advertising of February 28, sent to us by merchants in Saskatoon, showing that war is still on and that they are still featuring Harris tweeds and other special features. (Exhibit No. 35.)

*By Mr. Young:*

Q. Have these companies got stores in Saskatoon?—A. No, this happens to be another combination. But you will notice here “genuine Harris tweed tailored-to-measure suits or top coats \$25.” And turning over the page, in the same paper, you find another company “men’s spring coats made-to-measure” including Harris tweeds, Donegal weaves, and so on, \$15 to \$25. And then you turn over the next page and you find the headlines “paltry wages for Montreal workers.” And then, on the same page “girls paid as low as \$2 and \$3 per week in needle trade.” That is the explanation, I think, as to those wages. This, you see, goes all over the country, this system of advertising.

As further indication of the disastrous results of mass advertising, may I illustrate by submitting a copy of an advertising feature, as mentioned in the evidence submitted to you last week. Here is an advertisement (Exhibit No. 35), showing overcoats featuring Montagnacs, Carr’s Elysians, Crombies and English coats at \$21. That is just one single illustration, but these advertisements were spread all over the country, from one end of Canada to another.

In case members of the committee are not familiar with the particular fabrics described, I might tell you that “Montagnac” in an overcoating fabric, considered one of the finest qualities of overcoating fabric made in the world, being made by Montagnac in Sedan, France. They built this reputation after many years of intensive effort and the expenditure of much good money in advertising. Coats made from this fabric, if well made would, or should, sell ordinarily at from \$75 to \$100.

Q. And they were selling for \$21.00?—A. \$21, sir. The material alone at to-day’s price would cost the manufacturer over \$40 for each coat. This is without lining or any labour whatever in making, yet this advertisement offers them at \$21. The other fabrics mentioned are also well known makes of the highest quality, with years of reputation back of them.

*By Mr. Factor:*

Q. Is that a genuine Montagnac?—A. Oh, yes, I have no doubt it is.

Q. Offered at \$21?—A. Yes, offered at \$21. You see, there are seventy-two coats. They specify that there are 500 coats, 72 of them being Montagnacs. Carr’s Elysians, and Crombies. As to the Montagnac, I do not know how many, three or four probably, which sold regularly at \$35 to \$65.

Q. That is, they throw in a few Montagnacs?—A. Yes, that is the idea, sir. And, as I say, that is a fabric with a reputation behind it. It is made in the west of England and is recognized as a very fine high class quality. This reputation has been built up by maintaining that quality throughout the years. They are very jealous of their reputation. And, I might say, that the managing director of that company came over to Canada last year protesting against this sort of thing.

*By Mr. Sommerville:*

Q. What would be the effect upon Carr's Elysians and Crombies, and Montagnacs?—A. You will appreciate, sir, that if we have, for instance, Carr's Elysians or Montagnacs on our shelves we just cannot ask the retailer for the price; the retailer cannot possibly ask the consumer for the price that he should get for them when these stores are selling them for \$21.00, and the result is that the retailers are left with these high class goods on their hands and are forced into liquidation very often by such methods.

*By Mr. Factor:*

Q. It is the method of advertising that you are complaining of?—A. Absolutely.

*By Mr. Young:*

Q. The price cutting in this case was confined to a very few coats?—A. 72 out of 500.

Q. 72 out of 500 were sold below the regular price?—A. I will try and outline that to you here, sir. What is the object of selling these coats at this price? Obviously it is to attract men to the department to buy the other 428 coats on which they make a handsome profit, coats bought no doubt at a special price for this sale and made under conditions outlined to you last week. The plan is to fool the purchasers by offering a bait to a few so that they may catch the many. They give 72 bargains and the department piles up profits on the balance. Thus in one feature sale they ruin the reputation of high grade makers, reputations that have taken years to build; they destroy the good will of the makers and destroy the market in Canada for this type of fabric in the hands of the independent retail merchant.

*By Mr. Kennedy (Peace River):*

Q. Does the individual buyer ever get a \$75 coat for \$21, knowing at the same time that he is getting such a bargain, or possibly get a \$25 coat for \$16; does he know the difference?—A. Unfortunately, Mr. Kennedy, that is the sad part of it, so few of them do know; so few of the consumers do know when they are getting a bargain; that is the reason they can get them in and fool the public.

Q. Do they make the material to look alike?—A. I would not say that, Mr. Kennedy, that they make the material to look alike; but it is so difficult for the average consumer to know value exactly because there are so many angles that enter into it. Such unfair advertising leaves the makers of these fabrics, and the manufacturers as well as the independent retailers, helpless to protect their businesses in which they put their money, their name and their labour. Thus through one mass advertising appearing from one end of the country to the other the whole quality standard is reduced, resulting in many cases in forcing manufacturers and retailers into liquidation.

As a further example of this mass advertising we submit for your consideration some of recent date, showing the tremendous power of this advertising. (Exhibit No 35.) It is interesting to note that they are still featuring Harris tweeds as one of the great drawing cards. These are two-trouser suits at \$20.00,

and you will notice that this one is sent from Montreal this week. How can it be done? They feature Harris tweeds, West of England's, Ballantynes, Salts, and Leigh Mills, and many others, at \$20.00, suits that cannot possibly be legitimately produced and sold at this price. That is simply ruining the reputation of those mills.

*By Mr. Sommerville:*

Q. What is this, Mr. Cook?—A. Just further illustrations of advertising This only applies to clothing. Here is a group that was sent in from Winnipeg. The same condition applies to radios. It has absolutely ruined the radio business in that particular City.

*By Mr. Young:*

Q. How has it ruined the radio business,—by selling radios too cheap?—A. Mr. Young, in the radio business there are other ways and means, I understand, of doing things, for instance, by offering large amounts for old machines, and where prices are restricted they do all sorts of funny things. However, you can probably get better information on that from the radio men.

The CHAIRMAN: I think Mr. Cook had better stick to clothing.

The WITNESS: Mr. Chairman, I am going to divert only for a moment just to prove definitely that this sort of thing is not confined to clothing. I am submitting an advertisement featuring a special sale of Selby's shoes at \$6.45, that advertisement appearing the same day, by the way, that Mr. Stevens made his address in Toronto, January 15, advertising these shoes at \$6.45, and they are advertised as having usual values of from \$9.50 to \$11. (Exhibit No. 36). Our information is that these were not regular stock or regular quality, that they were made specially for this sale at about \$4.50 by the manufacturer, and that they were not the spring styles as advertised. However, that is for this committee to find out. I have here samples of those shoes. Those shoes, Mr. Chairman, were purchased after the sale; evidently the shoes were put back into stock. The bill is here with those shoes, one slip at \$8.50 and the other at \$9.50 which had previously been in the sale.

*By Mr. Young:*

Q. Are those inferior quality also?—A. I am given to understand that they are not the regular quality of Selby shoes that are advertised at \$9.50 and \$11 qualities.

Q. Those shoes were not the shoes that were sold at this sale?—A. Those shoes have the sale mark inside, and the party who gave them to me said they were the exact shoes that had been in the sale but had been left over.

*By Mr. Sommerville:*

Q. And these are internationally advertised shoes, are they not?—A. Yes.

Q. Selby is a well known name throughout the shoe industry?—A. Yes, sir.

*By Mr. Factor:*

Q. Where are they made?—A. They are made in Quebec some place, Mr. Factor, Montreal I think.

Q. Not in a factory where they pay a girl \$1.50 a week?—A. I hope not. I think that the Retail Merchants' Association can give you further evidence on this particular transaction. Now, Mr. Chairman, I will go back to the clothing business again, which is more in my own line.

I would like to submit another advertisement showing other forms of merchandising that are unsound, unethical and fraudulent. This is an adver-

tisement of a chain clothing store which operates stores throughout eastern Canada. Their plan of operation is to open stores, specially advertising suits and overcoats at \$12.50 and \$12.75. When the customer is enticed into the store by these low prices the merchandise offered at this price is such that few would buy it, but they sell them other goods at a higher price. (Exhibit No. 37).

*By Mr. Young:*

Q. The man does not come out in distress at all?—A. He should but he does not. In regard to the particular advertisement submitted I personally visited this store in company with a merchant of Montreal and inquired for one of the Carr's Elysian coats. You will notice they are also advertising Carr's Elysian's and Kynochs, and when we asked about these particular qualities they explained that they were sold out, but they offered us overcoats that were made from a shoddy material or material that included shoddy; and the price was not \$12.50 but \$17.50. This Bond Street Clothes Shop has stores all over Ontario doing that sort of business and we think it is not only unethical but that is is fraudulent.

*By Mr. Factor:*

Q. I understand they have opened twelve stores in Toronto?—A. I am not sure as to the number, but almost any vacant store they will take it for a month; they generally take them on a monthly basis.

Q. And, Mr. Cook, do you know whether it is correct that these Bond shops employ salesmen and pay them \$1 a day?—A. Judging from the salesman that was trying to sell me a coat I think that they were overpaying him probably.

Q. I understand they get paid \$1 a day and 10 cents commission on the sale of a suit or overcoat?—A. I think they would be more inclined to be paid a commission, Mr. Factor. That is the usual procedure in these kind of places.

*By the Chairman:*

Q. Mr. Cook, in regard to this particular advertisement I notice that it specifies tailored to measure overcoats Isaac Carr's, Elysians and Kynochs?—A. Yes, sir.

Q. Now, will you tell me, are these all three different trade names?—A. Carr's Elysian is one and the same thing. That is the cloth I explained a few minutes ago that is made in the west of England, and it has a 75 year reputation behind it.

*By Mr. Sommerville:*

Q. A Carr's Elysian's overcoat would cost how much?—A. The cost of Carr's Elysian would be approximately \$9 to \$10 a yard at to-day's price.

*By the Chairman:*

Q. How much in an overcoat?—A. Three yards and a quarter approximately.

Q. About \$30?—A. Somewhere thereabouts.

Q. What about the Kynochs?—A. Kynochs are a Scottish mill making very nice quality fabrics. It is a fabric that is advertised from one end of Canada to another and has a very fine reputation. I might say that they did have a Kynoch piece of clothing in the place but I do not think even an Indian would buy it because it is of such a loud pattern, in fact I am certain that they are sure nobody would purchase it.

Q. In this advertisement no other class is mentioned, merely Carr's Elysians and Kynochs?—A. That is all.

Q. The inference, therefore, is that they are offering for sale exclusively overcoats made from those two cloths at \$12.50?—A. A great many people would draw that inference.

*By Mr. Factor:*

Q. An absolutely fraudulent representation, according to this advertisement?—A. I would consider it such.

The CHAIRMAN: It certainly is because no other is mentioned. The other people had at least the saving quality when they said "and others."

*By Mr. Factor:*

Q. Where were these manufactured, Mr. Cook?—A. I think the committee should investigate as to where they were manufactured. I am not prepared to make the statement. I think the committee should have an investigator go into the matter. He would have access to their pay sheets and to their manufacturing costs.

Q. I am informed that they are manufactured in the Province of Quebec?—A. They are manufactured in the Province of Quebec.

Q. Do you know that?—A. Oh, yes, they are manufactured in Quebec.

Q. That is what I mean, all these garments were manufactured in Quebec?—A. They were manufactured in Quebec, yes.

*By Mr. Sommerville:*

Q. Then, in turn, any retailer who is selling goods at that price must necessarily buy them at a very low cost?—A. Well, this manufacturer happens to be, I believe, making his own.

Q. And at those prices it must all come out of the wages of the workers?—A. Absolutely, sir. I would like to submit to the committee a copy of a catalogue issued by a mail order house in Regina (Exhibit No. 38). I have had this catalogue very closely examined by competent merchandising men who are thoroughly familiar with the Canadian market, and I have asked them to identify as well as they can the standard lines advertised in this catalogue. It is their statement that this is just a deliberate racket.

Q. A deliberate what?—A. Racket.

Q. That is a new word to the committee.

Mr. FACTOR: There are some vituperative terms being used this morning.

The WITNESS: Well, it is their statement that this is just a deliberate racket, that much of the merchandise advertised is misrepresented, and in order that we may establish this fact we have arranged to have certain items forwarded for your inspection. In the meantime, these merchandise men have picked out a few items on which they have made comments. One item advertised on which they claim the value is \$2, the manufacturer's price on that is .96½ cents, so that if it were sold at the regular value that they claim there would be 107 per cent profit on this item. They are, however, advertising at a special selling price of \$1.45.

*By Mr. Sommerville:*

Q. And the cost is?—A. .96½ cents. Here is another item, moleskin pants. The manufacturing price is \$1.20. They claim that this is \$2.50 value or a mark-up of 108.33 per cent. They are advertising it, however, or selling it at \$1.69.

*By the Chairman:*

Q. A mark-up of what?—A. 40 per cent on the cost, on the manufacturer's cost.

*By Mr. Young:*

Q. Do other dealers sell the same article?—A. That is the sad part of it. Other dealers have these things in stock. For instance, here is a \$2 garment being sold for \$1.45. The public go into their local merchant; they see a \$2 garment in the picture, it looks the same, and they say the local merchant is a robber and all sort of things. This is what I would call a racketeering mail order business. They advertise Turnbull's silk and wool underwear, and I am given to understand by the manufacturers that they have not bought any of this underwear in four years. Then there is another shirt, rugged chambray, that costs 62 cents. They advertise it at \$1.75 regular value, over 180 per cent mark-up.

*By Mr. Ilsley:*

Q. Take that instance of Turnbull's underwear. You intimated that they have not any. Are they selling other manufacturers as Turnbull's underwear?—A. I know when they get an order for Turnbull's underwear they are all probably very fresh out of those and they get something else. This shirt was advertised at \$1.75. The manufacturer's price is estimated at 62½ cents. If they were to sell it at the regular price which they intimate as the regular price it would be a 180 per cent mark-up. They are, however, selling it at \$1 which gives them a 60 per cent mark-up. These are only illustrations of these items. We have sent for some of the principal items to be produced, and we will submit them to the committee when they arrive.

*By Mr. Young:*

Q. Is it customary on most of the goods to mark them up 40 or 60 per cent?—A. Not at all, sir. There is a legitimate mark-up. It is recognized by the trade generally. The cost of doing business requires a certain mark-up, but not 60, 70 and 80 per cent.

Q. Just these big firms that mark up for advertising?—A. No, I would not say that. These were not regular prices in these particular instances I am giving. These are not regular prices for anybody; they are just a camouflage and a certain kind of sale that I think should not be permitted. Now, I suggest when we have finished with this catalogue you might submit it to the postal department for their ruling as to whether or not the use of the mails to send out this type of advertising does not come under the provision which forbids the use of the mails for fraudulent purposes.

Mr. FACTOR: Where does this particular catalogue go to? All over western Canada?

Mr. YOUNG: And where is the firm located?

The WITNESS: In Regina.

Mr. EDWARDS: Is there any object in using that firm name Army and Navy "Mabee"; are they taking advantage of the well known distributors in England?

The WITNESS: I would think it is a very splendid name and is a recognized name in England of a very reputable concern in that country.

Mr. SOMMERVILLE: And in the west where there are a lot of old country folks?

The WITNESS: The inference is that it has some connection. Mr. Chairman, I mentioned all these things to illustrate the disastrous effects on the manufacturers as well as on the retailers. Of course, it must be—

Mr. FACTOR: And on the workmen too.

The WITNESS: On the workmen, of course, obviously. It will be said, of course, that the manufacturer is not compelled to sell his goods at cost or less,

nor the worker to sell his labour below an amount which will sustain himself and his family in decent circumstances. The manufacturer with a plant wholly or partially idle, or the worker with a hungry family, is ill-equipped to match his strength against the pressure which can be exerted by the buyer with tens of millions of dollars behind him. Huge orders are dangled before the manufacturer; the fact that cash will be paid is stressed; manufacturer is played against manufacturer. Ultimately the order is accepted by someone, and the process which you have heard described of reduced profits and reduced wages is the result. It is a vicious circle; one man accepts it and that breaks down the rest of the industry through the whole industry. During my twenty-five years in business I have had many contacts with individual buyers for these great organizations. Some of these buyers have expressed to me their regret at the methods they are compelled to adopt in order to make profits for their employers. They know that their jobs are secure only so long as their departments are profitable. They have seen their predecessors or buyers from other departments dismissed time after time, not through any lack of knowledge of their business, but simply because they were not sufficiently hard-boiled to go into the market and obtain goods at low prices even if trickery had to be resorted to.

They have stated that due to the extraordinary heavy overhead charges against their departments they are forced to chisel the manufacturer in order that they may maintain the large profit demanded and still undersell their competitor.

As an example of the experience of many department store buyers—just last week a buyer who lost his position told me of how he went into the market, pitting one manufacturer against the other for several thousand suits and by not stating all the facts he eventually succeeded in getting most of his requirements from a manufacturer at \$10.50 per suit, a price only possible by using sweatshop labour, and then re-selling these suits at over \$20. I can give the committee the name of this buyer so that your investigators may get his evidence at first hand should you desire.

Again there is the case of a manufacturer of another line of goods who was asked for a price on 12,000 units—

Mr. SOMMERVILLE: 12,000 units?

The WITNESS: Of another commodity. I am not stating the commodity. I will give you the particulars.

Mr. FACTOR: It was not clothing?

The WITNESS: No. 12,000 units of his commodity to be delivered over a period of some months. The department store took delivery of the first two months' specifications and then requested the manufacturer to hold up deliveries for a time as business had fallen off. During the next two months the manufacturer kept pressing the buyer to take delivery, as he had the goods manufactured and ready for shipment. After several months' negotiations the department store stated they could not use the balance. When the manufacturer protested he was told if he was not prepared to cancel this order he could do no more business with this firm. He was, however, given the option of accepting a price about twenty-five per cent below the contract price for the balance. He had a firm contract and could have insisted on making delivery, but knew that that would end his business relationship with this particular firm, and as a consequence accepted the cancellation.

Mr. YOUNG: Is that a practice of the department stores to cancel orders like that when the market goes against them?

The WITNESS: I have heard many complaints along that line, Mr. Young. The manufacturer then being forced to job these goods did so at a heavy loss. If your investigators wish to investigate this particular illustration we can give you the names and particulars.

The CHAIRMAN: We will take that.

The WITNESS: There was the price of a certain standard article or furniture which had been brought down to unprofitable, yes, loss levels by the buyer for a large department store. There were a number of manufacturers making this article and they were all losing money. An interested party who knew the group suggested that they should agree to raise the price, which they did. The next time the buyer of this article was in the market he found himself faced with higher prices, which he refused to pay. He then realized that he had a few of these articles still coming to him on an old contract. These he had delivered, and taking the invoice with him, visited one of the competing plants and when the manufacturer told him that those making this article had agreed at a slightly increased price, he produced the invoice covering the goods of the old contract, suggesting that the other manufacturer had broken the agreement, as the invoice was dated several months later than the arrangement had been entered into, the second manufacturer, believing that his competitor had not lived up to the bargain, accepted a new contract at the old price. Thus by a dishonest trick he put the price of this article again below the cost of production.

These are but illustrations of the unethical and unsound buying practices of these large department stores. You get stories by the hundred, but these are only indicative of what is going on.

It is not my intention to go into the operation of the mail order or chain store organization. I am sure you will hear much about their operations from the retail merchants. I would make this clear, however, that their mass buying methods are just as disastrous to the manufacturer and labour as are the operations of the large department stores.

The question of chain stores is a tremendous problem, on which a mass of evidence can be accumulated, and which no doubt this committee will fully investigate. I might just make this broad statement, however, that in my judgment, absentee ownership is fundamentally wrong in principle, and I am quite sure it will be fully demonstrated in this investigation that it is not only detrimental to the independent merchants, manufacturers and labour, but that it is, as a system, a serious menace to the whole commercial and social structure of Canada, and as such should be controlled.

*By Mr. Factor:*

Q. What do you mean by absentee ownership?—A. I mean stores that are owned by central organizations. Absentee ownership means chain stores that are so owned by a central organization or department stores that are so owned—any store in which the proprietor is not actively engaged in the business.

*By Mr. Young:*

Q. Would you apply that to other industries as well, say manufacturing?—A. Mr. Young, you must differentiate between manufacturing or production of goods and the distribution. The same principle does not, in any case, apply; there is an entirely different principle involved.

Q. Will you just explain how the community suffers from absentee ownership of a store and not of a factory?—A. I might tell you it is almost impossible to enter into a lengthy discussion of this, because there is a very great problem of economics involved. I have discussed it for hours, and almost days, with economists who will not agree—many of them—on the principle; so it would be utterly impossible to enter into any clear cut, definite statement about this problem in the short space of time that we have at our disposal. It can be very clearly defined, however, that as far as the store absentee ownership is concerned, that in place of the tradesmen in the town—who is the backbone of the community—getting the profits from the transactions that are

carried on, these profits are transferred to a large central organization; and in place of having a man earning a living, a decent living, and keeping up a family, they are managed by rubber-stamp managers who are paid a very low price. It kills the initiative or opportunities for the younger generation who may want to enter into business and develop personalities. There is no opportunity at the present time, or very little opportunity for the young men coming up in these smaller towns and communities, of developing their personality and ever having an opportunity of becoming business men, or other than just clerks in stores.

Q. Would the same thing not apply to a factory that is absentee owned?—

A. No, the same thing does not apply; although I think that branch factories are very disastrous too; I would say to a certain extent it would apply.

*By Mr. Heaps:*

Q. If I may ask a question, do you find in your particular industry, which may be termed a secondary industry, that you have to buy your supplies from the factories of large manufacturers, particularly in the textile trade?—A. Mr. Heaps, there is another very difficult problem involved there of efficiency and of production, which makes it possible for manufacturers to produce things more cheaply and more efficiently, so that more people may have them.

Q. What I am getting at—perhaps I didn't put myself on record as I should have—were you compelled to buy your cloth for the manufacture of suits from certain manufacturers in this country?—A. Oh, no, we are not compelled to buy from them.

Q. Do you find any difficulty in obtaining goods from the manufacturers?

—A. No.

*By Mr. Edwards:*

Q. Is it not true that the textiles are produced not in large centres but principally in small centres and towns?—A. Very largely.

Q. So that the distribution of these manufacturers throughout these different communities is very vital to the community?—A. That is right.

*By Mr. Heaps:*

Q. Have you any difficulty in obtaining goods for manufacture in the industry which you represent?—A. No, not very much.

Q. Would you be able to get what you want?—A. Yes.

Q. In sufficient quantities?—A. Yes.

Q. And at a price that is satisfactory?—A. Well, I would hate to admit that, because we are always—

*By Mr. Sommerville:*

Q. —trying to meet competition?—A. Trying to meet competition.

*By Mr. Edwards:*

Q. One other matter; you referred to the fact that the sales of articles at special prices, below cost has affected the retailers; does the source of supply of those articles frequently originate from bankruptcies?—A. Not to any great degree.

Q. Not to any appreciable degree?—A. No. There are a number of retail bankruptcies that are used—I can give you one illustration as far as fake advertising is concerned and the disastrous results of it. We had a case in Toronto where a retail merchant made an assignment and he had two suits of clothes—this was a clothing business—two suits of clothes, \$34, when he made the assignment; yet that firm carried on a bankruptcy sale for months and months, with a tremendous amount of advertising, and that I think is very unsound.

*By Mr. Kennedy (Winnipeg):*

Q. You made reference to a case in the courts of a fraud charge; was not the source of supply there in preparation for bankruptcy?—A. That was a definite case of that.

Q. You do not find that practice widespread?—A. Not widespread, no; but the disastrous results of one case of that is very great.

Q. In the matter of bankruptcies it has quite frequently come to my notice, practising law?—A. You mean in distributing, in retailing or in manufacturing?

Q. Well, where a man goes bankrupt and you find that there has been a very heavy disposition of his goods prior to the bankruptcy?—A. Yes.

Q. Within a few months prior to the bankruptcy, that would not be accounted for by his ordinary retail sales; you have not come across that?—A. Except in a retail way; not in the manufacturing to the same extent.

*By Mr. Factor:*

Q. What are the remedies, Mr. Cook? You have given us some unethical practices; what do you suggest?—A. Well, Mr. Factor, I suggest that at this time, while we have made very intensive studies and are trying to find a way out and are trying to find some solution, I submit that they are not sufficiently developed and it would not be practical for us to make suggestions at this time as to ways out. We would rather consult further with the group with whom we are working, and with economists and others, to try and find a conclusive answer.

*By Mr. Sommerville:*

Q. I understand, Mr. Cook, that you are making your preliminary statement as to conditions at this time?—A. That is all.

Q. And that your Fair Trade Council purposes further examination of the details of the conditions and desires to submit later a detailed statement with facts, figures and evidence?—A. That is right.

Q. Of these practices in general throughout Canada?—A. That is right.

Q. And at that time you propose to submit certain definite suggestions for improvement?—A. That is right.

*By Mr. Factor:*

Q. You are not prepared to discuss it now, for example in your particular industry; you prefer to leave that for later on?—A. I would much prefer to leave that for later on, because it would only be a very superficial sort of thing now.

*By Mr. Young:*

Q. Mr. Cook, can you give us the volume of business that the clothing manufacturers did, we will say five years ago, and the volume they did last year?—A. Mr. Young, there is a report by Professor Cassidy, which has been filed, which gives the complete history of the clothing business, with the capital and the shrinkage in capital.

Q. I want the volume in dollars and also in bulk. I want to know how much your market has shrunk in this time, how much less the consumer is buying, not in dollars but in bulk; I want to know where the market has gone?—A. I know that we are only getting about  $2\frac{1}{2}$  per cent of the consumer's money where three or four years ago we were getting  $3\frac{1}{2}$  per cent of the consumers' money, but that does not answer the question.

Q. No, that does not answer what I want to know. I want to know if people are buying as much goods as they used to; if they are not buying as much, I want to know why?

Mr. SOMMERVILLE: That would follow, from the wages we have been hearing about.

Mr. YOUNG: I am not talking about wages in any industry; I am talking about the whole of Canada, and I want to know what has happened to the consumer.

The WITNESS: We will be able to get the figures.

*By Mr. Young:*

Q. You will give us those?—A. Yes.

*By Mr. Baribeau:*

Q. What is the proportion of the clothing business made by independent retail merchants?—A. The proportion of business—?

Q. Made by the independent clothing business?—A. Made or sold?

Q. Sold?—A. Sold by the retail merchant?

Q. Yes?—A. I am not sure if we have those figures with us or not; I have a statement, but I don't think we have those complete.

*By Mr. Sommerville:*

Q. You will be able to furnish that?—A. Yes, but I think I had better not take the time now.

Q. That will include the sales of boys' and ready-made clothes by retail merchants as well as the sale of made-to-measure suits by retail dealers?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. In regard to these unethical practices, fraudulent enterprises and the squeezing down of prices by mass buyers or other buyers; is the situation much worse since 1929?—A. It has been aggravated very much since that time.

Q. But it was in existence before?—A. Definitely so, it was growing and developing before and it has only been aggravated during the past few years.

*By Mr. Young:*

Q. Now Mr. Cook, I have here figures issued by the Dominion Bureau of Statistics which shows that since September, 1930, and up to September, 1933, the price of farm products declined 24.1 per cent; the price of fish declined 27.2 per cent; the price of newsprint declined 37.2 per cent; copper 18.6 per cent; and raw or partly-manufactured products 19.5 per cent. Now these represent a very striking decline in the purchasing power of the people of this country. consequently unless the things they buy came down in like manner, they would only be able to buy a smaller quantity; but in looking at these figures I find that the price of woollen clothing has increased in that time by one tenth of one per cent?—A. That is not correct.

Q. That is not correct?—A. I would not say so.

Mr. EDWARDS: What is the increase in the price of raw wool?

Mr. YOUNG: I do not know.

Mr. EDWARDS: It has gone from 5 cents a year ago to 16 cents per pound.

*By Mr. Young:*

Q. This is the price of woollen clothing and as it is shown here, I think it has increased by a fraction of one per cent?—A. Since when?

Q. From September of 1930 to September of 1933?—A. That is not the case, sir.

Q. These figures are from the Dominion Bureau of Statistics, do you dispute the Bureau's figures?—A. I say I am buying cloth much cheaper during the past few years; very much cheaper.

Q. The same quality of cloth?—A. Yes.

Q. And do you mean woollen cloth?—A. Yes.

Q. Are you willing to furnish proof of that?—A. Absolutely.

Q. Mr. Edwards has just told us that the price of raw wool has gone up to 16 cents a pound from 5 cents a pound?—A. Of course over the past six months they have gone up very considerably, in the latter part of 1933 there was a very definite decline in the price of wool cloth.

Mr. YOUNG: I think that is something we should look into because the Bureau state definitely that they have gone up.

Mr. SOMMERVILLE: We will have these figures, Mr. Young.

*By Mr. Kennedy (Peace River):*

Q. There is another side to it, Mr. Cook; what is your opinion about the retail price, has it gone down during the last few years?—A. Oh tremendously.

Q. How much do you estimate?—A. I would not estimate it without going into very definite figures. Clothing is almost impossible to estimate, on account of the variations. Your manufacturers in the clothing business—I would say that for like quality of cloth and tailoring, the price has gone down very very considerably.

*By Mr. Sommerville:*

Q. The Garment Manufacturers' Association, which you represent, cover those industries in which the unions are organized generally?—A. The unions are not as strong in certain branches of it. They are quite well organized in the men's fine clothing; in the work clothing they are not organized.

*By Mr. Factor:*

Q. Professor Cassidy in his evidence the other day stated 85 per cent?—A. That is in Toronto in fine clothing.

*By Mr. Sommerville:*

Q. But there are large numbers unorganized?—A. Oh yes.

Q. And there are a large number who are not organized among the manufacturers of the cheaper grades of cloth?—A. Yes.

Q. And you have heard Professor Cassidy's report; what do you say as to the conditions in the unorganized trade as compared with the conditions which he described in the organized trade?—A. Well, the unorganized trade—

Q. When I speak of the unorganized trade, I mean those trades in which there is no union organization?—A. The conditions are deplorable, there is no question about that.

Q. Wage conditions?—A. Wage conditions. The effect of the organized union has tended to stabilize the industry very much more, particularly with respect to labour.

Q. Have you found that non-union shops have been used by the large buyers as a means of getting goods at low cost?—A. I think it can be safely said, Mr. Sommerville, that 75 per cent or more of the purchases of these large buyers come from the Province of Quebec, which until last September in Montreal was really not organized at all.

Q. Yes, and that then would have an effect upon the entire industry, whether it was organized, or unorganized?—A. Unquestionably.

Q. We have had evidence from Professor Cassidy that the unions have been obliged to recognize that condition to the lowering of wages?—A. Oh yes.

Q. And that is so generally throughout Union shops, is it?—A. Quite definitely.

Q. So it has had a tendency to bring down conditions where unions have existed because of the conditions that you describe?—A. The unions have recognized that.

*By Mr. Factor:*

Q. You mean the unions would make the best possible agreement under the circumstances?—A. Yes.

*By Mr. Sommerville:*

Q. And the unions have been permitting a variation of these agreements because of the conditions which existed?—A. Yes. In Toronto we received a ten per cent reduction in March of last year, when we had a definite agreement with them that there would be no reduction until May.

Q. Yes, because of the conditions?—A. Because of the conditions, and the things that I have described.

*By Mr. Young:*

Q. Can you tell us about what percentage of decline there has been in the price the manufacturer receives in the last few years?—A. I would not say that off-hand, I will look it up for you.

Q. And also the decline in retail prices; also the change in the cost of raw material; also the percentage of variation in wages?—A. Yes.

The ACTING CHAIRMAN: It is just about one o'clock and as I understand we are to sit again this afternoon, perhaps we had better adjourn.

Mr. KENNEDY (*Peace River*): There is just one question I would like to ask the witness before we adjourn.

*By Mr. Kennedy:*

Q. You said a moment ago that you had been discussing conditions in the clothing industry; that is, your conference. I am making rather a general question, which it may be possible for you to answer, and which it may not: What would have been the effect on the clothing industry in Canada if the price of clothing had been kept up; would you think if the price had been kept up during the last few years, that the sales would have kept up, or would the sales have gone down?—A. Mr. Kennedy, I would only answer that by saying that it is unreasonable that the clothing prices should be maintained and all other prices reduced. It is a vicious circle that is in operation, one forcing the other. It is unreasonable to expect that the men making men's clothing could buy shoes being made at a high price if their wages were reduced; so that when you buy a pair of shoes at the reduced price, the shoe-man eventually has to settle the score; and it is just a vicious circle.

Q. If wages are reduced in the clothing industry, those men must find cheaper material?—A. I make this statement, Mr. Sommerville: I have tried to emphasize it to my own wife as I tell her that every time she buys one of those bargains, she is making it that much more difficult for me to bring home a pay envelope, and if it is persisted in, I will be joining the unemployed, because it is a vicious circle that keeps working.

*By Mr. Young:*

Q. Where would you start to break this vicious circle? Give us your views on the point at which to start?

Mr. SOMMERVILLE: That will be given in his suggested remedy.

The WITNESS: That, I think, will come in the suggested remedy.

Mr. YOUNG: We would like to have the suggested remedy while Mr. Cook is here, so that it will be all continuous in the record.

Mr. SOMMERVILLE: Mr. Cook will be back again with a more complete statement.

Mr. YOUNG: How soon?

Mr. SOMMERVILLE: That is a matter of arrangement.

*By Mr. Kennedy (Peace River):*

Q. I am particularly interested in the attempt of Mr. Cook to give us the causes of this decline in retail prices and wages, and so on. First of all, is the decline due to general economic factors or is it due to the unethical practices—it may be impossible to segregate those, but there are two factors which govern, and if this committee is going to find a remedy, we will have to try to deal with both of them?—A. In my judgment, these conditions in the needle trade industry, at any rate, would have developed to practically the conditions at the present time, regardless of depression, because, if there is an increase in volume at the present time, if business gets better, we will all profit to some extent; but we will be just taking the left-overs, so to speak, and the next depression or slight falling off in business will make the casualty list just as great in each of these 1, 2, 3, or 4 stores. It works out that way, I think.

Committee adjourned at one o'clock, to meet again at 3.30 this day.

---

#### AFTERNOON SESSION

GEORGE S. HOUGHAM, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Hougham, you are the secretary of the Ontario Retail Merchants' Association?—A. Yes.

Q. And have been for some years?—A. Yes, sir.

Q. And prior to that you occupied a similar position with the Saskatchewan —A. Alberta.

Q. With the Alberta Retail Merchants' Association?—A. Yes sir.

Q. And prior to that?—A. With the British Columbia Retail Merchants' Association.

Q. So that you have had a good deal of experience in the Retail Merchants' Association in Canada?—A. About twenty years.

Q. Now, on behalf of the retail merchants of Ontario you desire to make certain representations to this committee?—A. Yes.

Q. Will you just proceed then?—A. I would like to say, Mr. Chairman, that had I known that the witness this morning was going to make certain statements I would have economized the time of the committee because some of what I have here is repetition, and I must ask you for your indulgence on that account.

Mr. Chairman and gentlemen, in accepting the invitation to appear before this committee to-day on behalf of the Ontario Provincial Board of the Retail Merchants' Association of Canada, we desire to express our gratification that at last the whole question of modern merchandizing is to be opened up for fearless and impartial investigation, and information which has hitherto been more or less confined to those immediately engaged in distribution, is to become public property through the medium of this committee of investigation and the Dominion parliament.

The association which I have the privilege of representing here to-day is the Ontario division of a dominion-wide organization of retail merchants deriving its powers from a charter granted by the Dominion parliament in 1905, and representing, broadly, every classification of retail trade and serving primarily the interests of individual or family owned retail establishments in two general fields of activity, legislative and merchandizing.

Recognizing that the contribution to this discussion which should be made by retailers and their association representatives is specifically described in clause A of the terms of the resolution under which this committee was created, may I now proceed directly to a discussion of that subject, that is, the effect of massed buying by department and chain store organizations upon the regular retail trade of the country.

In introducing this subject to this committee may I make it clear that my principal purpose at the moment is to describe for you a certain set of conditions in general terms illustrated by some specific instances.

My colleagues from other provinces will submit to this committee evidences of the unfair practices in their communities, statistics as to mail order house penetration, and other data peculiar to their respective territories.

Necessarily statements made here and in the form of this memorandum must be rather general in outline, but these statements will be capable of verification. May I state then at the outset that in our opinion the dominating influence exercised by the department store and its subsidiaries as well as the chain store and its units is a social menace, for the following reasons:—

1. The system has displaced thousands of individually and family owned retail establishments right across Canada. The result has been (a) concentration of buying power in certain large cities at the expense of the smaller communities; (b) a similar concentration of buying power in fewer hands and in the same large centres; (c) the concentration of capital in exactly the same manner; (d) the concentration of profits sucked from the entire country through the feeders established by the large organizations in the country towns through their branches and units.
2. It has placed definite limitations upon the expansion of those who survive.
3. Store hours have been lengthened among the survivors, and wage scales have been forced down.
4. The system operates against the development of sturdy independence of character, reducing the status of employees within these huge organizations to mere cogs in a vast economic machine and closing the field of opportunity for those desiring to enter into business for themselves, thereby arresting community expansion.

Supplementing these reasons, however, it should also be stated that the system of massed distribution has also broken down the purchasing power of the primary producer and the wage earner in factories.

Q. When you speak of mass distribution, do you mean mass merchandizing?—A. Yes.

Q. You are referring to the method of sales and distribution?—A. Yes. Evidence as to the latter has already been presented to this committee; evidence as to the former will be submitted as part of this memorandum.

Even the most casual observer of the happenings of the past ten years must be aware of the passing out of the picture of a very large number of individual or family owned stores in our various cities and towns. No statistical data is available in support of this statement because it was not until 1930 that the first steps were taken by the Dominion Bureau of Statistics to survey the field of

retail merchandizing, and even the information that has been uncovered by the retail census of that year is but preliminary and general.

As examples, however, of this displacement, may I quote from figures supplied to me from representatives of our association. This information has been obtained from responsible retailers in a number of communities.

London says that about thirty six independent downtown retailers have been displaced by chain store units in five years. They are evenly divided among shoes, drugs, groceries, ladies' wear, dry goods and men's wear stores.

Guelph says that thirteen independent stores have been displaced, that there are no independent groceries left on their main street to-day, and the store hours have been lengthened amongst the survivors in the struggle to remain in the picture.

Barrie says that eighteen independent stores have been displaced in that community in the same length of time with the same results to the survivors and the community.

St. Catharines says that seventeen groceries have been forced out of business and that 40 per cent of those still left are on a c.o.d. basis.

Q. What do you mean by that?—A. Cash on delivery. They have no credit facilities. They buy from hand to mouth and they have to pay day by day for what they buy from their wholesalers.

Four bakeries have passed out and the remaining stores are compelled to stay open to all hours in the struggle to remain in business.

These cases are fairly typical, I think, and it would be quite easy for this committee to amplify the evidence if they so desire.

May I make clear to this committee if I can what is meant by the department and chain store domination. The average citizen thinking of the department store in his community can have no conception of the ramifications of its province and dominion-wide activities sucking the very life blood of communities a thousand miles away in its insatiable greed for volume and net profits. The mail order house, twin brother of the department store, sends out its hundreds of thousands of catalogues into every community reached by the mails. These catalogues go out by the earloads; their effect is to act as a drawing magnet attracting more and more business to the central headquarters without contributing a cent to local revenue. The individual retailer, assuming his community obligations,—I mean in the form of taxes and so forth—has protested for years against this unfair competition. In recent years a further gigantic effort has been made to crush the individual retailer by the establishment of branch stores as subsidiary companies, all paying tribute, however, to the one great Caesar and if a community is not large enough to sustain a store then an order office is established as another contact point to magnetize the consumer.

The whole vast distributing machine is linked up by a trucking system reaching out into every city, town, village and hamlet of the province. An examination into this system justifies the statement that there is not a civilized country in the world whose retail distribution system is comparable to that obtaining in Canada. Department store magnates coming to Canada from other countries stand amazed at the dominance which has been built up in a country of less than ten million people by practically one large concern establishing an ever-growing monopoly unparalleled anywhere else in the world.

The inevitable outcome of the growth and power of department and chain store penetration has meant the narrowing of the consumer market for those independent retailers still surviving. The insistence by the sales directors of these large organizations upon ever-increasing volume, sales quotas, etc., exerts a continuous pressure upon department and branch managers, who must strain every nerve to excel their previous performances.

There can, in the very nature of things, be no relaxation of this intense drive for volume. Watch the advertising pages of the great stores in our metropolitan dailies, not as a bargain hunter but as a student of current commercial development, and you must become conscious of an almost shrieking hysteria, transferring to the printed page and clothed in the language of the advertising copyist, the pandemonium of barkers on a circus midway.

Mr. FACTOR: A classic.

The WITNESS: In such a pandemonium of "bargain specials," spring openings, "fall clearances," etc., what hope is there for the voice of the modest individual retailer to be heard with any degree of effectiveness? Retail distribution under such conditions ceases to be a dignified service to humanity and becomes a mad scramble for an ever-increasing share of the consumer's dollar, aided by all the modern witch-doctors skilled in the art of appealing to mob psychology.

True, there are some businesses left in our towns and cities that radiate the personality of the founder or of the present proprietor. They are local institutions built around the family; there is an atmosphere subtle and refreshing which characterizes the relationship between the proprietor and his sales people, and between the store and its patrons. These, however, are an ever-diminishing quantity, and the proprietors of these establishments will tell you that they fear that when they die the store will die with them. There are unfortunately too many instances in which this has happened, and the community is the poorer when that type of retail establishment is replaced by a mere cog in the distributing machine whose one absorbing passion must be to grind out dividends for absentee owners whom he has never seen.

As a further illustration of the limitation of opportunity for expansion available to the individual retailer consequent upon the dominance of distribution by the huge department store, may I quote from the preliminary report published by the Dominion Bureau of Statistics covering the census of retail merchandising establishments in Toronto for 1930, which shows that in the general merchandise group which includes department stores, the volume of business was \$114,984,600 which was divided among 206 stores. An analysis of these figures further on in the same report states that department and general stores doing a volume of over \$100,000 did a total of \$112,599,400. This business was done by 28 stores, which included the variety, five-and-ten, and to dollar stores. For the information of the committee, I am thinking of such organizations as Metropolitan stores, Kresge's and Woolworths.

Mr. FACTOR: Is that Toronto?

The WITNESS: In Toronto I am speaking of now, Mr. Factor. This means that 28 stores out of the 206 referred to did approximately 98 per cent of the business in that field of merchandising. I think an analysis of the statistics available will reveal a similar condition proportionate in the other industries.

Mr. FACTOR: Have you got the Ontario statistics?

The WITNESS: I have not, but they are available in the statistical department. I have them, but not here.

Lengthening of store hours. Here again accurate statistical data is not readily available, but quoting from information supplied me from various branches of the association, I am informed that store hours have been invariably increased since the advent of chain store units in these communities.

Toronto, however, is the worst example. Perhaps, however, the most outstanding illustration of what has happened in this connection can be found in the city of Toronto which, from experience gained in living elsewhere in Canada, I would say unhesitatingly provides the worst example of retail slavery of any community within my personal knowledge.

I am not suggesting that this lengthening of store hours is necessarily within the department store and chain store units themselves, but the real effect of their insistent appeal for patronage during what should be the legitimate working hours for retail stores, forces the individual retailer elsewhere in the city, and particularly in the suburbs, to keep his store open unreasonably long hours in order that he may catch some of the crumbs that have been inadvertently spilled from the big operator's table.

In 1919 the Toronto retail grocers sponsored a petition to the city council asking for the enactment of an early closing by-law, which was passed but which has, as a matter of fact, become very largely something of a dead letter. In recent months attempts were made to enforce the provisions of the by-law, but the retail grocers are now the people who are asking for its repeal because, they say, their only means of obtaining a livelihood is to pick up the business that comes to them after seven o'clock. The retail shoe men tell the same story, as do also other lines of business.

Mr. SOMMERVILLE: They were the ones who asked for the early closing by-law in 1919?

The WITNESS: Yes. I have so far excluded the chain stores generally from this charge, but the drug chain can certainly not be so excluded. Information furnished me just before leaving Toronto states that junior clerks are required to put in from eight o'clock a.m. to ten o'clock p.m. four days of the week, with afternoons off on two days and one evening, and working all day every third Sunday, for \$18 a week.

I am also informed that delivery boys are called upon to work from 57 to 73 hours per week, every alternate Sunday and every alternate public holiday. The particular case brought to my attention was that of an intelligent lad working these hours at the commencing salary of \$8.25, which was subsequently cut to \$7. This boy says that his principal quarrel with the system was not the actual hours worked but their inconvenient arrangement which made it necessary for him to abandon night school because he could not plan his evenings during the winter in such a way as to avail himself of continuation class studies. From the same source of information I am told that \$10 per week is allowed to the store manager for delivery purposes—if you can get one, two, or three boys, why, this is clear. Delivery service must be available from the opening of the store to its closing. An order may be phoned in a few minutes before closing time which may mean that the boy will work for half an hour or forty-five minutes after the store is closed. No over-time or special service is recognized under these circumstances.

This instance is cited merely as an illustration of the tremendous pressure exercised upon human endurance by massed retailing methods in its ruthless competition. What is the inevitable result? Low wages, long hours, stifled ambitions and community impoverishment.

Mr. YOUNG: In the drug trade?

The WITNESS: Yes, Mr. Young. I would like at this stage, Mr. Chairman, to give a citation from a letter sent to me confidentially by an ex-buyer of one of the department store organizations.

The CHAIRMAN: You say it was given to you confidentially?

The WITNESS: Yes.

The CHAIRMAN: You will give the name of the buyer to the committee?

The WITNESS: I think this particular person would be a suitable witness for you to examine privately or to investigate. I would be glad to give you the details. This particular person says the method of setting the pace is as follows: the method of setting the pace of a department of that organization is that of increasing each day's sales by a percentage over the sales of the same day of the previous year. If the department goes down on the day, it makes up on the week.

At least, this was the way it was done prior to the depression period. Whatever the arrangement, the buyer has a definite goal, and it is up to him, no matter how he does it, to produce results. Let us take a typical week in which he has to meet the figures of the year previous on which there was a particularly large sale, and the description goes on to say if I must do it, I will do it. The buyer must meet those figures plus the increase set by the sales office. He manages to make a purchase at a special price that will permit him to advertise a big sale. On top of this, the sales office may inform him that during that particular week they are featuring specials throughout the store and he will be required to prepare enough merchandise at a special price for a week's selling. He has, as well, his Friday bargains that must be put on, and he may be informed by another section of the sales office that they would like an early special for Tuesday morning with selling for one hour until 9.30. This is not an exaggerated case, I assure you. What is the buyer to do? He must find the merchandise. He does not wish to add to the stock any more than is necessary. If he does stock control will get after him. Some of the specials might be got by putting through reductions on slow moving stock. Then, he must get into the market to find the manufacturers who can be persuaded to meet his price. Added to the difficulty of the situation might be the difficulty that an expected foreign shipment which could have been used as part of the sale merchandise will arrive too late, and will increase the stock. Meanwhile, the regular lines suffer from lack of display space, advertising and attention on the part of the selling staff. That line becomes old stock after three months, and this adds to the burden, because while old stock, it may be at the same time saleable and wanted merchandise. I recall the oft-expressed sentiments of a buyer of some thirty years' experience. She used to say that she had never asked anyone for a reduction in price on what she had purchased for her own house, but that she was more often than not ashamed that she had to resort to the methods she used to obtain for the company the prices that made her department one of the most successful in the store. This, I think, is the attitude of many buyers; certainly, it was my own, and was one reason why I felt I could not continue as a buyer.

It is respectfully submitted that the mechanization of retailing exemplified by department and chain store methods produces precisely the same deteriorating results in morale that have been already produced by the mechanization of production and industry.

There is no intention in this discussion to parade executives as inhuman monsters; they themselves are victims sometimes of their own ambition but essentially of the cruelties of a system which by its very nature demands volume and still more volume, devastating in its destruction of human values and merciless in its competitive relationships. "Crush your competitor" is its subconscious text; shove him down where possible, but always, everywhere, invariably, show him in an unfavourable light to the consuming public.

Thus with the aid of concentrated wealth, commanding the largest amount of advertising space, has been built up during the past years a dominating propaganda appealing solely to the cupidity of the purchasing public, with clever word pictures that finally persuade Mr. and Mrs. Consumer that massed buying is a virtue and that its high Priests are public benefactors.

It will be appreciated by this committee that the association which I represent is limited in its facilities for investigation into chain store practices. Much of what we believe to be going on comes to us by way of general information, because even a chain store manager may talk to his friends. In support of the statement, however, that this system, in its drive for the elimination of the retailer, robs men of their independence, I submit as part of this memorandum, some typical clauses from a contract entered into as between a chain store organization and one of its managers. For obvious reasons I cannot reveal the identity of the organization or of the individual but I respectfully submit that

further investigation into such contracts by representatives of this committee would be justified. The extracts read as follows:—

I shall be personally responsible to you for all merchandise and cash at any time contained in the store I may be placed in charge of, as well as for all shortages whether of cash or merchandise, as may be established by you after each stocktaking.

The term of my employment may be terminated by you at any time without notice and I hereby expressly waive all claims in damages which I may have against you, as and arising from my said dismissal from your employment.

A copy of the full contract from which these extracts have been taken is available and can be filed with the committee if desired. (Exhibit No. 41). I as filing this contract with you in the same confidential manner, and the extracts that I have just read are from these contracts. He may not be in the store; he may be ill. No matter what the circumstances, he is still personally responsible. The striking thing in the foregoing clauses is that the store manager is exclusively responsible for the shortages either in cash or merchandise from any cause whatsoever. Not an infinitesimal fraction of one per cent is permitted for leakage, loss in transit, shrinkage or any of the ordinary unavoidable losses which must be sustained in the handling of groceries, particularly in bulk.

Mr. YOUNG: That is in the contract.

The WITNESS: Yes.

Mr. SOMMERVILLE: He must weigh 100 individual pounds out of a 100 pound bag of sugar.

The WITNESS: I had something to say about that. Perhaps the much vaunted efficiency of chain store methods of distribution have discovered how to get ten 10 pound packages of sugar out of a 100 pound sack or twelve good bananas when two of them are decayed. All we know is that the contract with the store manager makes him responsible for losses, and says there mustn't be any.

Now note the paragraph in which it is within the rights of the company to dismiss this man without notice or compensation, removing him as relentlessly as a piece taken in a game of checkers.

The CHAIRMAN: Is it possible?

The WITNESS: I say efficiency does remarkable things, Mr. Chairman. All we know is that the contract with the store manager makes him responsible for losses, and says there mustn't be any.

Does the consumer benefit from all this? Not while the inexorable law of compensation works, and how does it work in such cases as these? I submit that the inevitable result is that after exhausting every possible alternative, men and women who are the victims of this sort of thing frequently resign themselves either sullenly or complacently to letting the taxpayer take care of them and their families, with the result that in Canada, the land of opportunity, you have a permanent army of unemployed, the problem of municipalities, provincial and dominion governments alike.

*By Mr. Young:*

Q. Did I get you right?—A. Did you say that 16 buyers have gone on relief? —A. Mr. Young, since this memorandum was dictated, I have been given to understand, that in the city of Stratford, two chain store managers who had left the employment of the chain stores, found themselves compelled to go on relief because of not having money, and not having any savings for the proverbial rainy day.

*By Mr. Senn:*

Q. Is that the result of short weights?—A. That is a specific question. I think no question about it, it is the opinion. I think the subject is one that should be very carefully investigated.

Mr. YOUNG: I did not get your answer. I do not know if I understood what you said. Did I understand that these men had to go on relief because they could not save money?—A. No; perhaps I spoke too quickly. They lost their jobs, Mr. Young; they were dismissed. I may say in that connection, Mr. Young, that the labour turnover is so tremendous, they lose their jobs so repeatedly, because they cannot measure up to the demands of the contract of that kind—it is inhuman, it cannot be done, and one after another find themselves out of a job, and finally they give up in despair, because once they are dismissed, they are dismissed with the stigma of dismissal.

*By Mr. Sommerville:*

Q. They then find it difficult to get employment in other chain stores, unless they can show a good record in the last store?—A. My information is that there is a record established as between the chain stores of the number of managers, their names and dismissals; so if they are dismissed from one place, they cannot get into another.

*By Mr. Factor:*

Q. Do you know why the two men in Stratford were dismissed?—A. I do not know. In this particular case it came to me in the past 24 hours, and I have had no means of checking up the details.

Does the farmer benefit from these methods of merchandising? I am not an expert in that field, but this committee had before it a witness from Alberta, a few days ago. His evidence must be fresh in your minds, and is now available in printed form. Surely it is eloquent, and since he appeared before this committee, I understand that a bill is being introduced by the Honourable the Minister of Agriculture for Ontario, designed to control the milk situation in this province. If free and unbridled competition and low prices to the consumer are good things, what is the purpose behind the co-operative marketing experiments of the governments of to-day? Why is it that recently, the following letter, the original of which I desire to file with the committee, was sent from the provincial parliament buildings at Queens Park to chain store executives. (Exhibit No. 39.). I would like the indulgence of the committee to follow this letter very carefully. There are some very interesting inferences to be drawn from it. It is dated November 20, 1933.

Mr. SOMMERVILLE: Sent out by whom?

The WITNESS: The Ontario Department of Agriculture Statistics and Publications, and over the signature of Mr. S. H. H. Symons, executive secretary of the Ontario Agricultural Council.

Mr. FACTOR: Is that a government department?

The WITNESS: It will explain what it is in the letter.

The Ontario Agricultural Council which was organized two years ago at the request of the Hon. T. L. Kennedy, Minister of Agriculture, and is composed of a prominent farmer from each county, appointed by the County Council, has passed the following resolution: "That in view of the serious condition of the agricultural industry in Ontario to-day and whereas it is generally conceded that better prices for farm products would improve conditions throughout the province generally by increasing the purchasing power of the farmer, thereby benefiting indirectly

labour conditions in the towns and cities, that this council seek the co-operation of large retail organizations in an effort to have them keep such prices as stable as possible and to consider the advisability of using such commodities as leaders that will not have a detrimental effect on the price of the products of Ontario farms."

Anybody else's products but ours; other peoples' products for loss leaders, but not ours.

The dairy industry in Ontario has grown to very large proportions, until to-day the revenue from the dairy cow amounts to approximately 35 per cent of the total income of all farmers in the province of Ontario, and is the most important branch of agricultural production. The production of dairy products in Ontario amounts to 58 million dollars annually.

It has been the custom of large retail organizations to feature dairy products as drawing cards in their weekly specials; this practice, while not intentionally aimed at driving down the prices of dairy products has, nevertheless, produced this result. Agricultural purchasing power has suffered immensely and consequently a return to more normal and prosperous times has been delayed.

Approximately 40 per cent of the population of Ontario is rural, and industrial conditions fluctuate directly in accordance with agricultural purchasing power. Our council feels, therefore, that great loss is being inflicted not only on farmers but upon everyone through large retail organizations featuring butter and other dairy products at cut-rate prices. We, therefore, respectfully request that you consider this problem and co-operate in checking this practice.

Yours very truly,

(Signed) S. H. H. SYMONS,  
*Executive Secretary, Ontario Agr'l Council.*

The CHAIRMAN: That is a quotation from what?

The WITNESS: The Ontario Agricultural Council, and that is the letter.

Mr. SOMMERVILLE: The entire letter?

The WITNESS: The entire letter.

Mr. FACTOR: What is the date?

The WITNESS: November 20, 1933.

*By Mr. Young:*

Q. They do not give any figures to show that the domestic price was below the world price at the time?—A. No, Mr. Young.

Q. No supporting proof at all?—A. No statement there, sir. This was merely a letter, as I understand it, to the large organizations to desist from using agricultural products as loss leaders.

Mr. SOMMERVILLE: Sent out under the auspices of the Department of Agriculture of Ontario?

The WITNESS: Yes, sir.

Mr. FACTOR: No, a private body.

The WITNESS: Semi-official.

Mr. EDWARDS: I do not think so.

Mr. YOUNG: You were not given any evidence that their statements were correct?

The WITNESS: No.

Mr. SOMMERVILLE: It was sent out by the department of agriculture of Ontario.

The WITNESS: Yes.

Mr. SOMMERVILLE: And from the parliament buildings.

The WITNESS: That is it.

*By Mr. Factor:*

Q. Is it a government body?—A. It would be—it may be semi-official, really evidently sponsored by the department of agriculture. For the benefit of the reporter I would like to say here is something he had better take down, because it is not included in the official memorandum.

The CHAIRMAN: Just a minute. I am afraid we are a little wrong about this. The second paragraph in this letter is a quotation from the council of agriculture. Then, the other three paragraphs, apparently, are the utterances of Mr. Symons, the executive secretary.

Mr. FACTOR: Secretary of what body?

The CHAIRMAN: The Ontario Agricultural Council. The second paragraph is a quotation from a resolution. The first paragraph is the introductory paragraph. Apparently it emanates from the same council. You had better pass it around.

The WITNESS: I take it it could not be written without authority. It is at the request of the Ontario Agricultural council. Butter is still being treated as a loss leader every week. I submit copies of three advertisements from Toronto papers of last Thursday, March 1, in which it would be noted that pasteurized creamery butter is offered at 29 cents per pound (Exhibit No. 40). In an effort to meet this competition, one of their most representative retail grocers in Toronto complained to the Bowes Butter supply house, the Bowes Company, that it seemed to him there must be two different prices of butter to two different kinds of retailers. The Bowes Company replied as follows. The letter is dated March 1, 1934.

As we advised you to-day, we are unable to give you a price which will permit you to meet the advertised price of 29 cents in to-day's newspapers.

The car lot market on No. 1 butter in solids is 29½ cents a pound, and on No. 2, 28¾ cents, as evidenced by sales made to-day by us. To these prices must be added the cost of cutting, printing and wrapping.

The stores which are selling butter this week at 29 cents in prints or pieces, are selling at below the car lot price of solids.

We regret that we are unable to put you in line to meet this competition.

*By Mr. Senn:*

Q. Do we understand that these advertisements were for No. 1 butter?—A. The words "pasteurized creamery" are used.

Q. As a matter of fact it is not advertised as being No. 1 butter?—A. That makes it all the more reprehensible in my opinion. We should have proper descriptions for merchandise, or for any other thing.

Q. I have information to the effect that it is not No. 1 butter.

*By Mr. Sommerville:*

Q. Then it will be No. 2 butter quoted at 28¾ cents a pound in carload lots in solids?—A. Yes, sir.

The CHAIRMAN: Go ahead with your statement please.

The WITNESS: The turkey situation: as a further evidence of the cunning with which the large operator breaks down the market for the producer, may I submit an interesting advertisement which is typical of what happens every year without fail. I am sorry, Mr. Chairman, I have to ask the committee to secure this copy. I can have it identified; it is dated November 30th and appeared in the evening papers, the Toronto Telegram and the Toronto Star.

*By the Chairman:*

Q. What is that date?—A. November 30th, sir. I would be glad to co-operate in identifying the particular ad.

The advertisement is dated Thursday, November 30, 1933, and features "Guaranteed Fresh Killed Turkeys, Government Grades, at 15 cents per pound, weights from 7 to 15 pounds." I am informed by the most competent authorities that this kind of advertisement appears every year immediately after the opening of the turkey market.

These turkeys come from the first Canadian Christmas market which opens at Napanee and which is looked upon as the barometer by which the turkey market is governed for that season.

Now then, what happens? The large operator sells the Napanee turkeys at cost or less, advertising spectacularly, and then his buyers take those advertisements around the country as evidence of low prevailing retail prices.

Incidentally, this device is also used to break down the prices of turkeys coming onto the market from western Canada, which usually happens within a week or ten days from the date of the advertisement.

This practice is so well understood by meat dealers and others catering to the poultry consumer as to be common gossip, but this Committee can ascertain for itself by reference to Government records just what has been the opening Napanee price for the past several years and can compare these prices with the advertisement submitted, and others which can be obtained.

Q. By the way, how are we going to identify that advertisement?—A. I will be glad to co-operate.

Q. Might I ask that you give us full particulars?—A. I will be glad fully to accept that responsibility.

*By Mr. Young:*

Q. That advertisement you said speaks of individual grades; what grades are they?—A. That is not classified in the advertisement.

Q. And the price might be quoted on the lowest government grade?—A. It might be anything.

Mr. YOUNG: The advertisement does not say.

Mr. KENNEDY (*Peace River*): In all the turkeys I have ever purchased, the top grade is featured; the top grade is always the one on which the price is advertised.

*By Mr. Young:*

Q. This is to the retail trade and they advertise government grades, what is the figure?—A. 15 cents per pound for No. 1 turkeys, and there again you see is the question of what the consumer will take.

Q. Have you any idea how that Napanee price is arrived at?—A. I am not competent to answer that question.

Q. Has that anything to do with the British market?—A. I am sorry I cannot say, we have a gentleman here available for cross examination, who is an expert in that field.

*By Mr. Sommerville:*

Q. I think we had better proceed with your statement?—A. Low prices mean low living standards. The defendants of the chain store system argue with elaborate statistics that their system of merchandizing has brought down the cost of living. The Agricultural Council says that it has decreased the farmer's purchasing power, and asks for relief.

*By Mr. Ilsley:*

Q. What is the Agricultural Council?—A. The one that I referred to.

*By Mr. Young:*

Q. Is that the letter in which they stated that?—A. Yes, I am referring back to the letter.

It has also brought down the standard of living, because if it is true that "we sell for less," it must also be true that "we buy for less," which means that the primary producer has less to spend.

*By Mr. Factor:*

Q. You are not elaborating this phase of it, about the cost of living being brought down?—A. Not in any statistical way, Mr. Factor.

*By Mr. Sommerville:*

Q. You are dealing with their argument that it is brought down, and you are presenting an argument in reply?—A. That is it, sir.

*By Mr. Ilsley:*

Q. You see, if they do buy goods for less, they sell for less?—A. That seems to be supported by the evidence.

Q. Not necessarily, because they might handle them for less?—A. Yes, that is possible; but there again I think investigation might disclose some very interesting comparisons.

Then we come to further illustration; here is another case in point. This illustration comes from the Owen Sound district. It says that during a certain season potatoes were selling retail locally at about 85 cents per bag, the stores paying the farmer 65 cents. The local chain store branch got a farmer who had about 300 bags to sell, to sell them all to them at 50 cents per bag, and then offered them retail at 59 cents per bag.

*By Mr. Boulanger:*

Q. What would be the weight of a bag?—A. 90 pounds to the bag is the Ontario basis.

The result was that all local prices had to come down to this level, and the farmers all took 15 cents per bag less because the retailers had to meet the price. There might have been a temporary gain to the consumer in that locality, but it was at the expense of the producer.

*By Mr. Sommerville:*

Q. Your reference there is that there was a loss to all the farmers in the community because of the action of one mass buyer?—A. Yes, sir. Now with respect to loss leaders; this device is, of course, clearly understood—but I wonder sometimes since I wrote this whether it is or not—and is the modern exemplification of the old-time proverb, "Set a sprat to catch a mackerel." I submit for the inspection of the committee a number of recent examples of these leaders (Exhibit No. 42). They are furnished me by executives of the grocer's division of our association who are available for cross examination.

Here are some of them, Mr. Chairman, this is the Evening Telegram of March 1st, and features among other things glacier sardines, advertised at 5 cents per tin, the wholesale cost is  $5\frac{1}{2}$  cents per tin; evaporated milk, this advertisement is dated February 14th, advertised at 3 cents per tin, three tins to a customer—wholesale cost 3.69 cents per tin; sugar—of course nobody ever takes notice of sugar because that is one of the commodities that you are not supposed to make a profit on.

*By the Chairman:*

Q. What does it say?—A. 6 cents per pound, wholesale cost 6.57 cents per pound. You will note the combination for compelling the purchase of other articles, upon which presumably the loss on sugar is made up.

*By Mr. Ilsley:*

Q. Is that for the purpose of compelling purchases?—A. The customer must buy other articles, compelling the purchase of other articles; in other words, the article will not be sold by itself.

Campbell's pork and beans, 4 cents per 16 oz. tin—wholesale cost  $4\frac{3}{4}$  cents. Saturday, February 17: Lux flakes advertised, small package 5 cents, three to a customer, conditional upon another purchase—wholesale cost  $7\frac{3}{4}$  cents per package.

*By Mr. Factor:*

Q. Are all these from the departmental store?—A. These are particularly, sir, yes; there are some others that we will have a little later, Mr. Factor. Aylmer jam advertised at 29 cents per jar—wholesale cost 33 cents per jar.

Q. What do you mean by that "wholesale cost", is that the cost to the departmental store, or is it a general wholesale price?—A. Our understanding is that it is the wholesale cost, what they paid for it.

*By Mr. Sommerville:*

Q. That is the bottom price for quantity purchases?—A. That is our understanding, because afterwards we got prices from other quantity purchasers.

Jam—since this is not specified and it is not described by name—we presume it is possibly a compound—advertised at 29 cents per 4 pound tin; regular wholesale cost 48 cents.

*By Mr. Ilsley:*

Q. Was that conditional on another purchase?—A. Not in that case. February 16th, sockeye salmon advertised at 2 for 25 cents; the wholesale cost is  $15\frac{3}{4}$  cents per tin. Lifebuoy soap advertised at 5 cents a cake; wholesale cost 6.57 cents. Butter—you were asking Mr. Factor whether these were all department stores, this happens to be an Atlantic and Pacific advertisement.

*By the Chairman:*

Q. Those that you have put in all relate to department stores, do they?—A. So far, yes.

*By Mr. Sommerville:*

Q. And when you have referred to "wholesale prices" you mean the bottom price for large quantity purchases?—A. Yes.

*By Mr. Factor:*

Q. Did your executive ever approach the heads of department stores to discuss this matter of prices with them?—A. Our experience is that these heads of

department stores are not approachable at all. They maintain an attitude of isolation in connection with these methods. There are some matters in which they are approachable, but in this particular matter they are not.

Q. But they admit that they are loss leaders; I mean in any discussions of this matter that you have had with them, they admit that?—A. I am not prepared to discuss that with you at the moment.

*By Mr. Young:*

Q. Are you sure that they buy from the same source as the wholesaler buys from; that they buy from the wholesaler at say 7 cents? Can he not buy direct from the manufacturer?—A. You can buy from the manufacturer, Mr. Young, but under modern conditions the wholesaler has also been compelled to realign his methods, and that again is another phase of the situation.

*By the Chairman:*

Q. Finish your loss leader situation?—A. Yes, Mr. Chairman. Butter, this is dated March 1st, "Silverbrook" advertised at 30 cents; solid cost 30 cents, additional cost for cutting and wrapping  $\frac{3}{4}$  cents per pound.

This, Mr. Chairman, is something that has been given to me in Ottawa this week, and it is very interesting. Apparently it is cheaper for some of the Ottawa retailers to buy from the chain store competitors than from wholesale houses. Here is an invoice in which it seems that this particular individual bought from the Stop and Shop, one of his nearby chain units, a bag of granulated sugar for \$6.30 according to this invoice; and on the same day the wholesale price, F.O.B. Ottawa was \$6.57 $\frac{1}{2}$ .

Here is another evidence of the same thing, or of the same principle, I should say; shredded wheat advertised in these two advertisements (they can be identified Mr. Chairman) at 2 for 19 cents. Two invoices which I show, one from the National Grocers Company and the other from Freedman & Sons indicate that the price will be 2 for 21 cents.

*By Mr. Sommerville:*

Q. By the way, is not shredded wheat a product that had a protected price for years?—A. There has been something I believe in the nature of an agreed price, Mr. Chairman, yes.

Q. And it has been recognized as the standard price for years and years—2 for 21 is a low price?—A. Two for 23.

Mr. FACTOR: An agreement by whom?

Mr. SOMMERVILLE: Between the Shredded Wheat people and the jobbers. The charge now is breaking down that price on shredded wheat to 2 for 19 cents.

*By Mr. Young:*

Q. How long did the 23 cent price prevail, have you any idea?—A. Two or three years, I think.

Q. Three years?—A. Yes.

Q. Has the price of shredded wheat any relation to the price of wheat?—A. That would be a question you would be better able to answer than I am, sir.

*By the Chairman:*

Q. Is this used as a loss leader?—A. That is the principal reason. I am submitting the advertising to you. I would like to follow the terms of this: On January 9th General Foods Corporation offered a deal, one of these special arrangements made for a temporary period.

*By Mr. Sommerville:*

Q. Perhaps you would explain the meaning of "deal" that is another word that the committee should have elucidated?—A. Perhaps the best way to illustrate the meaning of the word would be for me to continue.

Q. This meant, as I understand the language, in the parlance of the trade, a deal?—A. That is it.

Q. It is not a regular practice, it is something that is special?—A. For a special purpose.

Q. And for a definite period, and to be made use only during that period?—A. Yes.

Q. And that is the "deal"?—A. Yes. On January 9th General Foods Corporation offered this deal to wholesalers—please note, the large buyers—of Maxwell House coffee 1 pound tins at 34½ cents net delivered at the warehouse, that would be the warehouse either of the chains or of the wholesalers. This is listed from January 9, until February 15; the cost from that date and to-day to these same purchasers, that is to these wholesalers, is 38 cents per pound tin. On March 1, the Stop and Shop Company—

*By Mr. Sommerville:*

Q. Wait a minute now. From the 15th January— —A. No, the 9th of January.

Q. From the 9th of January until the 15th of February these large buyers could secure Maxwell House Coffee at 34½ cents a tin.—A. That is right.

Q. Delivered at their warehouse door?—A. Yes, sir,

Mr. FACTOR: From the wholesaler?

Mr. SOMMERVILLE: No, from the manufacturer or the producer.

The WITNESS: May I correct something there. General Foods are not manufacturers. They are a group of manufacturers associated together; they are a number of lines grouped together under that general category.

*By Mr. Sommerville:*

Q. But they are the sole distributors?—A. They are the sole distributors of this product.

*By Mr. Factor:*

Q. They are an American concern?—A. Yes, that is right. The cost from February 15th and now to those same purchasers is 38 cents per pound tin. That is, the deal is off now and the price to those people is 38 cents.

*By Mr. Young:*

Q. What was the price to the outside world while the deal was on?—A. Now, on March 1st the Stop and Shop Company offered this coffee to the public at 34 cents per pound or half a cent less than the special price offered to wholesalers under the terms of the deal. Is that clear.

The CHAIRMAN: Yes.

*By Mr. Sommerville:*

Q. That is, two weeks after the deal was over they offered it to the public at less than the price they paid under the deal, that is, under the deal they paid 34½ cents for it and then sold it two weeks after the deal at less than the deal price and four cents less than the regular price.—A. That is it.

*By Mr. Ilsley:*

Q. It is the practice you are attacking?—A. Yes, Mr. Ilsley.

*By Mr. Sommerville:*

Q. Can you tell us if there is a discount on that deal price, or is that the bottom price.—A. No, that is the bottom price, and this list is a wholesale list showing the current price to the retailer—

*By Mr. Ilsley:*

Q. Who would be given the opportunity to buy at that deal price?—A. The big operators, chain store executives.

Q. The big ones that are selected by the sellers.—A. Yes.

*By Mr. Factor:*

Q. I suppose it is also optional on the part of a buyer, is it not, in these deals; is it not optional upon quantity buying?—A. Quite frequently it is. I do not know that it is in this case.

*By Mr. Young:*

Q. Do they ever do it on sentiment?—A. Sentiment! That is a word I am not conscious of. Here is another, Mr. Chairman, that is even more recent, and concerns vegetables that are now coming on to the market, that is fresh fruits and vegetables, and this particular exhibit covers cauliflowers being offered this date, 1st March, extra good value at 15 cents each in 10's, 11's and 12's; that means that the case containing the cauliflower may contain 10, 11 or 12.

*By Mr. Sommerville:*

Q. It is a question of size?—A. Yes, it is a question of size. This very week the Dominion Stores advertised these cauliflower at 15 cents each. The best wholesale cost was \$1.75 per case. What is the exact figure here for cauliflower.

Q. \$1.80 a dozen.—A. Yes, just about \$1.80 a dozen.

*By Mr. Senn:*

Q. Are those imported goods?—A. Oh, yes, because cauliflowers are not growing around Ottawa just now.

*By Mr. Sommerville:*

Q. But the same practice prevails when they do grow in season?—A. Unquestionably. This is a highly perishable commodity, and very often a merchant finds himself in the position of having to take a loss, he having brought them in anticipation of a consumer demand but finds that consumer demand shattered by this kind of advertising.

Q. And then that reacts upon the producer.—A. Unquestionably.

*By Mr. Senn:*

Q. It cannot react on the producer at this season of the year very well.—A. No, I grant you that.

*By Mr. Young:*

Q. You say that by selling these cauliflowers at less than cost it ruins the demand. Does that mean that the total number of cauliflowers consumed in Canada will be less.—A. No, I do not mean to convey that, Mr. Young. What I meant was that they shattered confidence in the ordinary price—

Q. Yes, but supposing there are a given number of cauliflower produced in Canada that is the number that the producer will sell or attempt to sell.—A. Yes.

Q. And if some of these are sold cheaper than the regular price will that prevent him from selling the rest at all.—A. No, but it means if he does not sell them at cut rate prices he cannot get rid of them and consequently there is a loss because they are highly perishable.

Q. Supposing they are down in price does it not tempt people to buy more of them?—A. There would be a demand in those stores where that price was available, but everybody else's price would have to come down or they could not sell them.

Q. With the price coming down it would create a greater demand for the product?—A. Temporarily.

Mr. SENN: I do not suppose we are very anxious to look after the interests of the foreign producer anyway.

The WITNESS: I only cite that because it illustrates a condition which is just as apt to prevail later on when the domestic produce comes on to the market.

*By Mr. Ilsley:*

P. Are you leaving the subject of loss leaders now?—A. Almost, I will be through in a moment.

Q. Because I would like to ask two or three general questions on the subject. What is your objection to it?—A. Well, we feel it is an unethical method of merchandising.

Q. What difference is there from offering it as a gift? Suppose these stores said that certain things would be given away providing they bought other articles on that day, what is there that would be unethical in that?—A. Well, we think it is unethical.

Q. There is a difference if you offer it at a low price, discrediting the competitors of the store to a certain extent. I should think that would be your objection, but what objection would there be to giving away certain merchandise provided people bought other merchandise.—A. That leads me a little out of my field, Mr. Ilsley, but one of the most objectionable practices in modern merchandising is what is known as the premium system under which one merchant decides to give away another merchant's merchandise, not his merchandise but somebody else's merchandise.

*By Mr. Young:*

Q. You mean gives it away?—A. Not exactly but he says that a premium is being given to trade at his store.

Q. How does he get them?—A. He buys them, I suppose.

Q. Through the regular channels.—A. I don't know where he buys them; he probably gets them under special circumstances.

Q. Just like a newspaper giving away a pair of scissors for a subscription?—A. I understand that the druggists will be examined and I think that they will have an interesting story to tell about that.

*By Mr. Ilsley:*

Q. What is the objection to the premium system?—A. We feel that that is not a fair system of merchandising, that merchandise should be sold; what is it there for, otherwise we might just as well give all of it away.

*By Mr. Factor:*

Q. It is the form of advertising that you object to, is it?—A. Yes.

*By Mr. Ilsley:*

Q. You object to heavy advertising apparently?—A. No, Mr. Ilsley, I think that our objection is not to advertising as such, but it has grown to such a dominating position, and I will suggest that subconsciously at any rate it influences price sentiment.

*By Mr. Young:*

Q. Price sentiment?—A. Yes, I think it is inevitable, Mr. Young.

Mr. SOMMERVILLE: If you will proceed, please. You are going to complete your reference to loss leaders.

The WITNESS: I would like to say a word about cut-rate meats and their effect upon the producer. As further evidence of the demoralizing effect of cut-rate competition I want to submit a dodger circulated in the various neighbourhoods in Toronto and posted on the various branches of the chain organization referred to. You will note the sensational prices advertised for choice cuts such as round, sirloin or wing steaks, prime and short rib roasts at 8 cents per pound. From the front quarter of the animal, chucks and shoulders are offered at 5 cents per pound. What could the producer have received after the packing house had obtained its profit and what is the inference? There are two alternative conclusions, one is that the merchandise was sold at less than cost, and the other is that these meats were unfit for human consumption and should never have been permitted to find their way on to the market at all.

It will, of course, be immediately stated that all meat is government inspected. To which the reply is that they are from a health point of view; but this government inspection does not imply that the cattle are edible, and so we have the curious spectacle of the government, through its Department of Agriculture spending hundreds of thousands of dollars to build up a grading system to encourage the consumption of graded meats while the cut-rater consistently throws on to the market inferior merchandise, nullifying the government's efforts and consistently reflecting unfavourably upon his competitors who are selling honest merchandise at honest prices.

*By Mr. Sommerville:*

Q. You say that has an effect upon the producer?—A. Absolutely. Some people might think that a certain kind of steak was edible but I would find some difficulty in masticating it.

*By the Chairman:*

Q. Before you leave this beef business—because this seems to me to strike to the very root of what this committee is trying to get at; we won't go into at this time the question of what it cost to produce and dress the beef; we all know that it must be sold at a very much higher rate than the beef on the hoof, we have sufficient knowledge of that, but here we have choice young steer beef—we will assume that it is—round steak or roast, 8 cents; sirloin steak or roast, 8 cents; prime rib roast 8 cents; short rib roast, 8 cents; choice rump roast, 8 cents. I would like to put a leading question, because I happen to have a little knowledge.

Mr. YOUNG: I am glad you say it is going to be a leading question.

The CHAIRMAN: Well, I am warning you that it is going to be a leading question. An abattoir will find itself—as was mentioned by the way in evidence yesterday by Mr. McLean—towards the end of the week or at some time in the week in possession of an unusual quantity of hind quarters or front quarters as the case may be. For instance they might have ten thousand of them in their coolers, or thousands of them. Is it the practice for the abattoir then to go to a chain store and offer at a very low price this over-plus of beef that they have in their coolers?

The WITNESS: I am informed that such is the case, Mr. Chairman.

*By the Chairman:*

Q. Now then, the next question is not a leading question but it is hypothetical. Obviously then if that were a practice the price that they would

be able to pay for beef on the hoof would be affected by the low price at which they would have to sacrifice a certain quantity of the dressed beef?—A. That seems to be a reasonable inference.

Q. And the reason, of course, is that obviously a loss leader of this character affects the price of beef on the market.—A. Yes, sir, I think that is quite right.

*By Mr. Boulanger:*

Q. Would that be good meat?

The CHAIRMAN: It might or might not be that the advertisement is false. I am, however, taking it for once as being honest; I am assuming it is an honest advertisement.

Mr. BOULANGER: Would that surplus meat be good meat?

The CHAIRMAN: Mr. McLean told us yesterday.

*By Mr. Young:*

Q. Take the alternative, suppose the abattoir does not go to a chain store and offer this meat cheap in order to get rid of it, the only other thing they can do is to keep it in their cooler, then what happens?—A. The particular thing that I am trying to clarify is that that sort of thing should not be done. The point I am making here is that that type of merchandizing should not be permitted to go on to the market at all.

Q. That is not the chairman's point.—A. I know his point but you asked me another question.

Q. I am following up Mr. Stevens' question. An abattoir on Saturday night or some time during the week finds itself in possession of a large quantity of meat for which apparently there is no demand, and in order to get rid of that meat he says they offer it cheap to some large distributing firm and that firm takes it at that cheap price and sells it at a cut price.

The CHAIRMAN: And destroys the market.

*By Mr. Young:*

Q. And destroys the market, yes. But suppose the abattoir does not do that. Suppose they keep the meat in their coolers then what happens?—A. Well, I am like Mr. McLean, I don't understand the packing business.

Q. But you do understand merchandizing, you understand handling perishable products, and I want to ask you what would happen; if you were handling any perishable product and you found there was no demand for it what would you do with it?—A. I should have answered that question more seriously, Mr. Chairman, but it would seem to me that the packing house has facilities for retaining that meat until the market has loosened up. In the meanwhile, Mr. Chairman, I think this is so interesting that I want to ask you at your convenience and the convenience of this committee to examine the chairman of our Meat Dealers' Association because he has some very interesting information and will be able to throw some additional light upon the evidence submitted here yesterday.

The CHAIRMAN: I think that is a very reasonable suggestion.

*By Mr. Sommerville:*

Q. And if they do throw this meat upon the market it has a tendency to affect the price of all other meat upon the market, has it not?—A. That is quite right, sir.

Q. In other words, the good butchers endeavour to compete with the price of this chain store beef, and their customers insist on getting good meat at lower prices.

Mr. YOUNG: If we are going to have that evidence, Mr. Chairman, we must have the other side of it.

Q. Suppose the packer keeps that meat in his cooler and cannot sell it, and the coolers are full, how many cattle can he buy on the Monday morning? We have had the statement made that selling that meat will depress the price. Will not retaining the meat in the cooler have the same effect?

Mr. EDWARDS: Did not Mr. McLean say yesterday that they did not go in to the market to buy cattle if they had plenty on hand?

*By Mr. Factor:*

Q. Is this chain store company a combination of meat and grocery?—A. It is a meat chain store exclusively, sir.

Q. What is your opinion of those combination stores of meat and grocery? Do you see any objection in that combination.—A. As a merchandizing experiment it is quite legitimate.

Q. There is no objection, from your standpoint, in having these chain stores handling meat and groceries?—A. Oh, the individual retailer does the same thing, and it has been found to be convenient to the consumer.

*By Mr. Sommerville:*

Q. Will you just proceed, please.—A. Massed buying pressure upon manufacturers.

Q. That is another phase of your presentation.—A. Yes. This phase of the subject under discussion is one that requires competent investigation by people clothed with governmental authority, because the grip that the giant operators in the retail field have upon the minds and policies of scores of our manufacturing friends is such that they are literally fear stricken. They will tell you in confidence all kinds of instances of undue pressure, but they are as terrified of loss of business if they come out into the open as is the factory worker terrified of losing his or her job if they inform as to conditions to minimum wage law officers. All this, of course, will be denied and the responsibility will invariably be thrown back upon the manufacturers. I think that has been very well explained by Mr. Warren Cook this morning. But what other results can be expected from a system which by its advertising policy consistently leads the public to believe that its prices are always and under every circumstance less than any of its competitors, and offers to back up its assurances by paying back to the consumer the cost of any merchandise purchased by him elsewhere on that day at less than the advertised price plus 7 per cent. I submit an actual quotation in which that phrase or sentiment is expressed. May I read it for you. (Exhibit No. 43.)

Mr. SOMMERVILLE: This appears on the bill This is the guarantee on the back of the sales ticket:

You can't lose if you shop at A. It costs less to sell for cash than on credit therefore A prices are generally lower. If it happens that the price elsewhere is less, the A customer has the protection of our guarantee, which reads as follows:

In any bona fide instance reported to our adjusting bureau of an article purchased here which could have been purchased elsewhere in Toronto for less on the same day and on the same basis, we guarantee to refund the difference plus 7 per cent of the lower price quoted elsewhere.

And that is signed by the firm, and then it further says:

Goods satisfactory or money refunded.

Mr. FACTOR: That was in connection with furniture, was it?

Mr. SOMMERVILLE: No.

Mr. YOUNG: That would knock their loss leader sky high. Anybody could enter their store after buying a loss leader and get an adjustment.

The CHAIRMAN: Under the same conditions, it says.

Mr. ILSLEY: That is not a guarantee at all. It would appear to me they are just advertising in the same way that other people have advertised almost from the beginning of time; they are merely offering more values than anyone else can.

Mr. SOMMERVILLE: If anyone else offers it at less than that then they will return your money plus 7 per cent.

Mr. ILSLEY: What is the objection to it; I may be dull.

*By Mr. Sommerville:*

Q. Then having that as a policy what do they do to prevent anybody else selling for less, is that what you were leading up to?—A. I did not expect to deal with it precisely that way, but this is the inference, this is the intention I submit, to steadily and persistently discredit the individual retail store type of operation, suggesting to the public that it is uneconomic and that, therefore, they should avail themselves of the power, the buying power of their establishment.

Mr. ILSLEY: They may do that, but I do not believe that that is the implication to be taken from that. The implication is that they are selling as cheaply as anyone else.

Mr. FACTOR: I think there is a legal term called puffing in that kind of advertising.

Mr. SOMMERVILLE: I think there is a little more than puffing there. However, the guarantee is there now.

The WITNESS: What is the intention of this inference but to steadily and persistently discredit the individual retail store type of operation, suggesting to the public that it is uneconomic and that, therefore, they should patronize the establishment which, through its mighty buying power, spreads before them a continual feast of bargains.

Buying power and sales cost. Are the costs of doing business less in the huge department store than they are in the individual store or the store of moderate proportions. Let competent research authorities in the merchandising field speak. Unfortunately we have no purely Canadian statistics to guide us in a study of this subject, and consequently we have to reply upon figures taken from American sources.

May I quote from the "1932 Departmental Merchandising and Operating Results of Department Stores," compiled by the National Retail Drygoods Association of New York. These percentages are the average of a great many American retail stores and the statistics released by this organization are accepted as authentic by merchandisers in Canada as well as the United States. One of the most efficient store proprietors in Ontario tells me that the figures although taken from American sources of information may nevertheless be taken as applicable to Canadian stores. I may say that very many large Canadian stores subscribe to this service:

Stores are divided into six classifications according to volume of sales, but the operating cost is approximately the same in each group. This operating cost was 38 per cent of selling, which is equal to 62 per cent on cost. In addition to the above there is an average markdown loss to be taken care of, which manufacturers call "scrap" or "seconds" and

retailers call "mark-downs". The average was 6 per cent on cost, consequently 68 per cent on cost must be provided for, having no regard to net profit.

*By Mr. Young:*

Q. What class of store is that?—A. That is in departmental stores, Mr. Young.

The National also and separately compiles what they term "goal figures" which is the operating results of the top 25 per cent of the best managed department stores. Their figures are as follows:—

Percentage operating cost on selling 33 per cent, equals 50 per cent on cost. Mark-downs  $5\frac{1}{2}$  per cent on cost.

You will see that the department stores looked upon as the best managed must have a mark-up on cost of  $55\frac{1}{2}$  per cent with no regard for any net profit.

It is not possible within the limitations of a casual cross-examination here and now to make a complete and conclusive analysis of all these merchandising figures, and it is, therefore, respectfully submitted that competent trained research workers should be appointed to obtain for this committee impartially gathered data, enabling the committee to judge for itself whether the so called economies of large scale buying and selling benefit the public as a whole or whether the benefits accrue to a minority of fortunately placed individuals whose wealth and opportunities for culture are purchased at the expense of their own employees, their retail competitors, and the manufacturers and producers from whom they buy their merchandise.

*By Mr. Young:*

Q. Do I get that right, that they must mark up their goods from 55 per cent to 68 per cent above cost and then add their profit to that?—A. Yes, sir. That is not me speaking though.

Q. Can you give us similar figures for the individual retailer?—A. I have some. I would suggest, Mr. Chairman, because of the necessity for accuracy in a thing of this kind, that your committee ought to secure the information through trained men, and consequently anything I have to say here is subject to that reservation.

*By Mr. Young:*

Q. If the figures are not accurate I do not suppose there is much object in getting them.—A. They were rather hurriedly gathered.

Q. Do you mean those you have given us?—A. Those are authentic.

*By Mr. Ilsley:*

Q. Those are American figures.—A. Yes.

Q. To what merchandise do they apply?—A. All departmental store merchandise. It is an intensely interesting study.

*By Mr. Sommerville:*

Q. In other words, your figures indicate that the 25 best managed departmental stores have a mark-up of 55 per cent before their profit is added?—A. Yes, sir.

Q. On cost?—A. Yes.

Q. And those that on the whole are well managed, as well as those not so well managed, have an entire mark-up of 68 per cent?—A. Yes, sir.

Q. Before profit is added?—A. Yes, sir.

Q. On cost?—A. Yes.

*By Mr. Ilsley:*

Q. Is that chain stores?—A. I am speaking of departmental stores, Mr. Ilsley.

*By Mr. Young:*

Q. Are there any figures available for Canadian departmental stores, similar to this?—A. No.

*By Mr. Ilsley:*

Q. Were there any comparative figures from independent retail stores in the United States?—A. Yes.

Q. How do they compare?—A. I have not got them here; I was not able to get them. I had to assemble this material very hurriedly.

MR. SOMMERVILLE: The figures with respect to the Canadian situation will be ascertained by the investigators appointed by the committee last week, so that you will have the Canadian figures.

MR. YOUNG: We did appoint an investigator?

MR. SOMMERVILLE: The auditor and the investigator together.

*By Mr. Ilsley:*

Q. Have you formed any opinion as to whether or not the overhead is greater for department stores and chain stores operating in Canada than it is for independent retailers?—A. I will say in the department store field it is higher.

Q. That is your opinion?—A. Yes.

Q. You could not give any figures?—A. No, but I would be glad to assist in procuring such figures. It is so complicated, the study is so technical, that we should not be hasty.

Meanwhile there are some curious by-products of the system that are worth noting in passing. Here is one:

In February of this year a Toronto retailer purchased some Japanese spun silk crepe at a cost of 87½ cents, plus tax. He understood that a department store also purchased a supply of these same goods.

The individual retailer marked the goods and placed it in his window at \$1.35 per yard, which he considered was a very fair margin of profit.

Three or four days afterwards the department store came out with a big sale of the same silk, regular \$1.79 for \$1.49.

About two days after this, the representative of the manufacturer called on the individual retailer. He was very disturbed because, according to his statement, the department store had planned to sell these goods regularly for \$1.75 per yard. The manufacturers' representative requested the individual retailer to take the goods out of his window and raise his price to \$1.49. This he refused to do.

The salesman then indicated that the department store would be prepared to buy his goods back. This offer also was refused.

The individual retailer is finding it very difficult to secure an additional supply of these goods. He could not obtain any for immediate delivery and has placed an order for delivery which cannot be made until April. While this is very late for his season, yet he wants to find out just whether or not he is going to be absolutely prohibited from buying this line because of the action of the department store.

*By Mr. Young:*

Q. That is a new kind of complaint; the complaint hitherto has been that they are selling too cheap. Now they are forcing the price up; is that their practice?—A. I think merchandising practice is a matter of expediency to serve

a purpose, and in this particular case it so happened that the competition of this individual retailer was a disturbing factor, and therefore it must be removed. We must not have any disturbing factors.

*By Mr. Factor:*

Q. He was underselling the departmental store?—A. Yes, in this particular case, and making as he says, a fair margin of profit.

*By Mr. Sommerville:*

Q. Therefore reflecting on the guarantee of the return of the money and 7 per cent?—A. In fairness to them I must say that it was not that departmental store.

Q. Not that one?—A. No, not that particular departmental store.

Q. Will you continue?—A. What is the purpose of describing this incident? I submit that it demonstrates that under fair conditions of competition the individual retailer does not, as is popularly supposed, have to demand a higher mark-up upon his merchandise than his department store competitor. Where the large operator buys in tremendous quantities, obtaining quantity discounts, he of course enjoys an economic advantage, but it does not necessarily follow that this advantage is always passed on to the consumer. An investigation of other lines by competent auditors would probably reveal that the mark-up which the large department store is compelled to get on much of its merchandise does not support the theory that its large scale operation benefits the community as a whole.

Profits from sources other than merchandising: A further analysis might reveal that the profits that are made are in transactions entirely outside the field of actual merchandise selling, involving such items as the rent of window display space and the re-sale of advertising space. Certainly this practice is true of the chain stores, one instance of this having been brought to our attention in which the manufacturer of a well-known food product claims he had to pay \$2,000 to the chain store buyer for the mere privilege of getting the merchandise into the store. The question of quantity discount came after that, together with the amount for advertising appropriation.

*By Mr. Sommerville:*

Q. That is, they paid \$2,000 before the goods would be introduced into the store at all?—A. Yes, that was his entrance fee.

Q. That was his entrance fee?—A. Yes.

Q. On top of that they required the manufacturer to allow the chain store an advertising allowance?—A. Yes.

Q. To pay for the chain store advertising in the newspapers?—A. Yes.

Q. And then on top of that there would be a quantity discount required from the manufacturer?—A. Yes.

Q. Those are conditions that do prevail?—A. As reported to me.

*By Mr. Young:*

Q. Is this a new commodity on the market?—A. No, it is rather a well-known commodity.

Q. Why was that necessary? Why not leave it to force its own way into the stores?—A. If the chain store says they won't have it, he won't force his way in.

Q. Won't they lose custom by not having it?—A. They take that chance.

*By Mr. Factor:*

Q. The manufacturer is anxious to get the chain stores to sell his article, is that the idea?—A. He wants that distribution because it is a spectacular system.

*By Mr. Young:*

Q. We had evidence this morning that any manufacturer who puts himself in the hands of these people only loses. Surely you would not give \$2,000 for that privilege.

Mr. SOMMERVILLE: That was in the clothing industry, this morning.

The WITNESS: This is in the fruit industry.

*By Mr. Young:*

Q. These people do not suffer the same way; they do not get put out of business?—A. The large food manufacturers, of course, are not only national but international.

*By Mr. Factor:*

Q. Mr. Young means that it must be a profitable venture for that manufacturer if he is willing to pay \$2,000 for the privilege of having his merchandise distributed through the chain stores?—A. That is a fair inference.

*By Mr. Young:*

Q. Does he do his own newspaper advertising? Some manufacturers advertise their own goods in the paper and say they can be bought in any store?—A. He does his own advertising on top of this.

*By Mr. Sommerville:*

Q. National advertising?—A. Yes.

Q. That is sometimes required by some chain stores for admission into that store?—A. Yes.

*By Mr. Factor:*

Q. Do you know what profit there is to the manufacturer in this particular article of food?—A. No, I don't.

Q. I think it is also a fair inference that it must be a substantial profit?—A. Yes. That is something that the committee would be entitled to investigate.

Q. I think it would be well if the committee would attack that end of it too?—A. Yes.

Q. To see what profit the manufacturer obtains from the sale of these articles?—A. That is quite a fair statement.

*By Mr. Sommerville:*

Q. That is entirely within the purview of the spread in prices?—A. Yes, that comes under the description of the spread in prices.

Q. Will you continue?—A. Yes. Is this merchandising or is it extortion? It is not competition as such of which the individual retailer complains; it is the unethical practices employed by the power of big money to exclude him from the competitive arena. In a case such as this the chain had an advantage over the individual retailer before the goods ever reached the store shelves.

*By Mr. Young:*

Q. What that meant in reality was this, that the manufacturer was giving these people a discount, was it not?—A. Yes.

Q. Selling to them cheaper—a roundabout way of cutting prices?—A. Yes, that is what he is doing.

*By the Chairman:*

Q. Would this not be a fair inference to draw—again a leading question—that recognizing that a chain store organization had such a hold upon the distributing system of a country, that it really paid this individual, or he had to pay \$2,000 in order to get his goods into this widely distributing agency?—A. Yes.

Q. But your point is that that is an unethical practice?—A. I submit, Mr. Chairman, that the answer is this, that what has happened has been that instead of the manufacturers selling to the retailers upon terms that are reasonable, the retailer—this large scale operator—dictates the terms upon which he will advertise and sell merchandise.

Q. Upon which he will handle the goods?—A. Yes.

*By Mr. Young:*

Q. You think it is not wise that anybody should be in that position?—A. I think it is an unhealthy position.

Q. Whether that person be an individual or a group of individuals?—A. Yes, I think it is unhealthy socially.

Collective action among retailers as weapon of self-defence: It is urged by many that since large scale operation is most definitely here to stay, the only alternative left to the individual operator is to combine with others in his field in co-operative merchandising activities. As a matter of fact this has actually been done to quite a large extent, but where it has been a success, it would seem to be fair to say that such success has been at the expense of using precisely the same weapons of offence and defence, with the same destructive economic results.

It is interesting to note at this stage that the early history of such combination is that they have been actively discouraged by the manufacturers. An illustration of this can be furnished.

Within the past three years a group of approximately 300 shoe retailers in the province of Ontario and the maritimes organized for co-operative buying purposes with particular reference to rubber footwear. The purpose behind this effort was to secure the most favourable discounts available for quantity purchasing and to even up the spread as between the small and the large operators. This action was taken as the result of repeated statements by the rubber manufacturers that if the retailer wished to obtain the same discount as his larger competitors he must buy in similar quantities. The group to which reference is made met this challenge and for one year—or approximately a year; I think it was a little more than a year, as a matter of fact—did business with two rubber companies, of approximately half a million dollars volume. The discounts which they obtained were not the same as those enjoyed by department stores, but were considerably better than had been hitherto enjoyed. What happened at the end of that time? Simply this, that when the negotiators for this group attempted to renew their contract they were unable to do so, and now find themselves at precisely the same disadvantage as they were before they organized.

*By Mr. Sommerville:*

Q. In other words, \$500,000 volume of business had no influence whatever on discounts that are being allowed?—A. No, not now; it did in the first year.

Q. It did in the first year, but they are not being given any more discounts now than the individual rubber retailer who buys a case or two cases of rubbers?—A. I would not say that, sir.

Q. Well, is that the fact?—A. I think I understood you to say "than the individual"?

Q. Yes?—A. They have an opportunity to negotiate for better terms, and they are now in process of negotiating again to see if they can get something better.

Q. But they were refused the same terms?—A. Yes.

Q. The renewal of those terms?—A. Yes.

*By Mr. Ilsley:*

Q. Why, because they were not heavy enough; because they were not buyers in sufficient volume? Is that the reason?—A. We have never been able to find the answer.

*By Mr. Sommerville:*

Q. You have bought half a million worth and paid for them?—A. Yes.

*By Mr. Ilsley:*

Q. Are discounts continued to the department stores?—A. Yes.

*By the Chairman:*

Q. But now refused to this co-operative group?—A. Yes.

Q. You had better give us the name of that group and the manufacturers; you can give it to us?—A. Confidentially?

Q. Yes; you can take a note of it and give it to us.

*By Mr. Ilsley:*

Q. It must be because they have this great buying weight, in some way?—A. Half a million dollars is no small amount, is it?

Q. No, but I am just trying to suggest a reason; you can't. I have asked you what your reason is?—A. I will tell you what I think is the reason. It is a matter of opinion. My opinion is that the departmental stores have said to the rubber companies, "They must go."

Q. Because of their greater buying weight?—A. Yes.

Q. That is the answer?—A. Yes.

*By Mr. Sommerville:*

Q. In other words, do you mean that they said, "We must maintain the same discount"?—A. Yes.

Q. "But you must not allow these other large buyers to come within— —A. Shooting distance.

Q. —shooting distance"?—A. Yes.

*By Mr. Ilsley:*

Q. If this other large buyer became sufficiently powerful, he would have the whip hand instead of the department stores?—A. You would think so; that is the natural inference.

Q. Is that not correct?—A. No, it is not. I submit that the half-million dollar buying power is not comparable to the buying power of the department stores.

Q. Why does the manufacturer cater to the department stores instead of the half-million dollar buying power represented by the co-operative?—A. I have been told that one of the reasons is that the department store has threatened to set up a rubber factory of its own.

*By Mr. Factor:*

Q. Mr. Coats gave us statistics that in the shoe trade the large concerns do only 18·29 per cent of the trade?—A. Yes.

Q. Is that correct?—A. Mr. Coats would be an authority; I could not dispute it.

Q. If they do only 18·29 per cent of the trade, how can they control it and dictate to the manufacturers?—A. Well, we can't answer the question as to how they do. We only know they do. I must mention, Mr. Chairman, at this stage, that this is one of the most aggravated conditions in the shoe business, and has been for ten years. It is a continual, powerful irritant that has been exercised in this business for many, many years, and this effort on the part of these 300 was to find a constructive way out of the difficulty.

*By Mr. Young:*

Q. Now, let me get that right; these makers of rubbers have been in the habit of distributing to wholesalers, have they, to retailers through the wholesalers?—

A. No, there are no wholesalers.

Q. There are not any now?—A. No, it is direct to the retailer.

Q. What does the merchant do who does not belong to the voluntary chain, who is not in with these 300? How does he get his supplies?—A. He is in a worse position yet.

Q. Where does he go for his supply?—A. He has to go direct to the manufacturer, the little manufacturer.

Q. And pay more, you mean?—A. Yes. The terms under which rubbers are sold—

*By Mr. Sommerville:*

Q. Perhaps you will just tell us the terms under which they are sold?—A. Yes; they are sold direct to the retailer through the travelling salesmen of the rubber companies.

*By Mr. Young:*

Q. So a travelling salesman goes to an individual store and takes an order?—A. Yes.

Q. For whatever they think they might need?—A. Yes.

Q. And 300 of these individual stores have got together?—A. Yes.

Q. And instead of having travelling salesmen go to them, they have sent men to the factory?—A. Well, they established a purchasing office, and representatives have to go to one office instead of twenty or thirty people.

Q. In doing that they eliminated some superficial expenses of the industry, the expenses of these travellers?—A. In so far as those sales were concerned.

Q. And they were entitled to a discount on that?—A. Yes; that is quite plain.

Q. And you say they got that for one year?—A. Yes.

Q. Then the department store stepped in and said they must not have it any longer?—A. That is the inference.

Q. For some reason or other it was withdrawn?—A. Yes.

Q. Did the manufacturers from whom they were buying also supply those big stores?—A. Yes.

Q. Or did the big stores buy from some other manufacturer?—A. No, I understand it was the same, because they sell the same merchandise.

Q. You have information on file, with the figures in connection with that?—A. I have the most complete exhibit on that, perhaps, of anything in my file.

*By Mr. Sommerville:*

Q. In other words, you are now dealing with the argument that the retailer does not complain of competition?—A. He wants fair practice.

Q. He wants fair practice?—A. That is all.

Q. He wants to compete on at least reasonable terms?—A. Yes.

Q. And he does not want the lowest purchaser to use his power to prevent that competition, use those tactics?—A. That is my point.

*By Mr. Factor:*

Q. Before you come to the next point, have you any figures of the number employed in the retail services in Ontario or Toronto?—A. They are all available in Mr. Coats' very ample report. I have them all, but there is a very complete statement about that. You mean about the number of employees and salary?

Q. Yes?—A. That is all contained in the merchandising census.

*By Mr. Young:*

Q. Those figures are quite authentic, I suppose?—A. Well, as authentic as any statistics that are gathered in a voluntary manner, maybe. Mr. Coats has to rely upon the voluntary co-operation of the people from whom he seeks information.

*By Mr. Sommerville:*

Q. Will you continue?—A. Whether department store pressure was the immediate cause for this attitude on the part of the rubber manufacturers might perhaps be a fit subject for investigation. Whatever the cause, the fact remains that after putting their money into a co-operative purchasing enterprise, using the credit and facilities of an established wholesale house to merchandise for them, and paying for all the merchandise supplied, their experiment in co-operation brings them back to the point from which they started, so far as their attempts to overcome their competitive handicap in this field are concerned.

*By Mr. Young:*

Q. Is that a common experience?—A. No. It is an isolated experience. It is a very interesting study about the rubber business that is not, perhaps, applicable to a great many other things.

Mr. SOMMERVILLE: A chain of independently owned stores?

The WITNESS: Yes.

Mr. KENNEDY (*Peace River*): There is no other source of supply?

The WITNESS: Exactly. Importations, of course.

*By Mr. Young:*

Q. You cannot get them in on account of the tariff?—A. Oh, that is another interesting phase. Did you ever hear of Singapore rubbers, Mr. Young?

Q. No.—A. May I tell you what has happened. I am not quite clear on the figures and there again there is a possibility of variation. Our oriental friends used to make rubbers out of disused American automobile tires, and then some tariffs happened and dumping duties and other mechanistic devices, and as a result of that the orientals moved over into Singapore to take advantage of the Empire pacts, and the result is that they are able to lay down rubbers in Canada in spite of every device that can be thought of at very ruinous prices. Now, then, what does it mean? It means that Canadian standards of living have to compete with the oriental standards of living, and we understand—again I say this is my own opinion subject to verification—that one of the weapons or one of the threats at least held over the heads of the rubber manufacturers by the large operators is that if they do not give them the discount they want they will bring in imported goods.

*By Mr. Factor:*

Q. Yes, but we have also heard some interesting factors in regard to our own standard of living in the last couple of weeks?—A. Yes. And the rubber manufacturers—I give them this credit—they have tried to sustain the Canadian standards of living by organization and that sort of thing and this is what they are up against from all sides.

Q. What about the shoe factory that paid a girl \$1.50 a week for fifty-five hours?—A. That is not rubbers. I don't know. I hope it is not true that such things happen in the rubber factories. I do not know.

Q. Where are most of the rubber factories located?—A. Mostly in Quebec and in this province.

Q. Quebec and Ontario. Do you know anything about the rate of pay by the rubber manufacturers?—A. I do not, sir.

Q. You do not have that information?—A. I think you would have to investigate. I do not know where you would obtain it from the public source.

Q. I think it would be very interesting if Mr. Sommerville would make a note to investigate it too.

*By Mr. Young:*

Q. May I ask one more question in regard to rubber goods. With regard to these 300 co-operators that went in together to buy collectively, what kind of organization did they set up; did one man pay for them all?—A. Yes. One company paid the entire bill and collected from each individual.

Q. They took advantage of the cash discount?—A. Yes, taking advantage of every cash discount available. They were well financed. Summary—I think there will be a sigh of relief at this stage—the situation which I have tried to describe as applicable to Ontario has been reproduced from coast to coast and its effects will be further described by my colleagues. Our charge is that this system, eliminating the retail competitor, pressing upon the manufacturer and producer, lowering wage scales and forcing down the prices paid for primary products with further resultant restricted purchasing power, longer hours and lower standards of living has now completed its vicious circle and has demonstrated that it has built its volume and its machine, benefiting a few at the expense of Canada as a whole.

There is not a community, a business nor an individual in the province of Ontario not directly or indirectly affected by this merchandising monster. Its expansion has created an overhead based upon a capital structure, the product of unlimited and optimistic ambitions. That overhead can only be sustained by an ever-increasing volume which exerts its colossal pressure upon department managers, manufacturers, producers and wage earners, in a relentless squeezing-out process.

We ask that this mechanism be restricted in its predatory career. For reasons of self preservation? Yes, but also in the interests of the greatest good of the greatest number. We submit that we are all bound together by bonds of economic steel, the producer, the manufacturer, the wage earner, the professional man, the taxpaying landlord. In essence, what we have to decide is whether we shall all work for the merchandising syndicates or whether opportunity shall be restored to the individual.

It was the individual business man who very largely built our communities. Around him and through him grew up standards of living and contentment which made Canada the envy of the world. He sowed but another reaps. Does the chain store pioneer? It does not. Pioneering is not done by machines. The chain store, mail order house, the giant department store organization with its far-flung tentacles is a soulless distributing machine geared for volume, screaming for net profits.

The Retail Merchants' Association welcomes this investigation and in conclusion respectfully offers the following suggestions.

Before possible remedies can be discussed, it seems to us that certain machinery will have to be established which is not now in existence. In previous years the Retail Merchants' Association of Canada pressed upon successive governments the desirability of the establishment of a department of domestic distribution within the department of Trade and Commerce.

In principle our position has not changed in that regard and our present recommendations would therefore be that something in the nature of an economic council should be set up truly representative of the various interests in the economic structure, with observers from the Department of Trade and Commerce sitting in upon the deliberations of such a council or its committees as occasion might require from time to time.

Such a body should be something more than merely a fact finding commission. In it should be vested powers of control through the adoption of fair trade practice regulations and where these needed to be reinforced by legislation, constructive recommendations along this line could be passed on to the government of the day.

*By Mr. Factor:*

Q. That would be rather a provincial matter than a federal matter. Do you suggest that it be a Federation National Economic council?—A. I think for purposes of control, Mr. Factor, it would have to be. There would be provincial units that could function in provincial matters.

Q. That everlasting constitutional difficulty always creeps into these matters?—A. Yes; but the government is always well supplied with lawyers.

Q. You think the lawyers could get over that difficulty?

*By Mr. Kennedy (Winnipeg):*

Q. Mr. Hougham, apart from the government being well supplied with lawyers, isn't it a practical possibility?—A. Yes. I did not intend to be—

Q. It really comes under provincial jurisdiction; that is generally recognized, is it not?—A. I would think, Mr. Kennedy, that in such matters, for instance, as minimum wage it would be my opinion you would have to have it controlled in a Dominion way, or else by co-operation among the provinces.

Q. I think it is recognized by business men as well as by lawyers that that is a matter of provincial control?—A. Well, it has been; is it to remain that way?

Q. There is no general dispute about it at all; it is not a question for argument; it is generally conceded?—A. Is it not possible to change that?

Q. You would have to change the British North America Act.—A. Well, a good many antiquated things have been changed in the past.

Q. Quite true; but I am speaking of dealing practically with things as they are. I think the situation is generally recognized that matters of wages are under provincial jurisdiction?—A. They have been, sir; but if we prove—if we have discovered that the provincial system of control is not effective, then it would seem to me a matter of common sense to find something that is effective.

Q. Yes, true.

*By Mr. Sommerville:*

Q. If trade has developed into interprovincial channels?—A. That is my point, yes.

Q. Then you may even mean federal legal control of interprovincial trade?—A. That is the thought I have in mind.

The CHAIRMAN: In any case, that is your suggestion, constitutional or otherwise.

The WITNESS: Exactly. The setting up of such an organization implies the principle of social control of business enterprise through organization within industry, which is in line, I believe, with the best thinking of impartial observers of current business trends.

*By Mr. Young:*

Q. Social control of business enterprise through internal organization?—A. Yes, sir.

Q. That is to say, the state would control our drygoods business?—A. No. Don't misunderstand me. The word "social" does not necessarily mean government.

Mr. SOMMERVILLE: Social as opposed to state.

*By Mr. Young:*

Q. The drygoods industry would be controlled by a group of men in that industry, is that it?—A. Yes, elected within the industry.

Q. It will do what—regulate prices?—A. It will go right into this whole business set-up—I do not like the word because it has been overworked—but codes, if you like, or trade practices, or exchange of merchandise and a lot of other things of that sort.

Mr. FACTOR: There will have to be some legislation to give effect to this.

The WITNESS: Yes. Probably so.

*By Mr. Young:*

Q. I want to find out what they are going to do. They are going to determine the quantity of goods produced, the condition under which they are produced, the price that will be paid for the raw material, the wages paid, the salaries that will be paid, the returns; all this is to be controlled by your council?—A. It is my opinion merely as a student. Perhaps in this connection I may not be stating the views of the retail merchants as a class, but I will say we are inevitably heading in the direction of some such control as I have outlined specifically.

Q. That is what you advocate?—A. Yes.

Q. Your association advocates that, or are you speaking personally?—A. I say I will have to dissociate myself from that particular reference. That may not be the official view of the association as such.

The CHAIRMAN: What you are reading is the official view?

The WITNESS: Yes.

The CHAIRMAN: Read it again, and we will know what you mean.

The WITNESS: May I explain what I mean by social control? I mean the principle, not the mechanism. I mean that we have passed from the stage where business, any kind of business, could say, we will do this, like this, no matter who is hurt. The people to whom they supply their merchandise have the right to have some share in the shaping of the policy. That is what I mean.

*By Mr. Sommerville:*

Q. Anything else is social, against this rugged individualism?—A. Yes, sir, that is my point.

*By Mr. Young:*

Q. Have I got it right? Control of each industry is to be placed in the hands of those who were engaged in the industry?—A. Because they are most

competent to do so, but the government would have the right to oversee his agreements and arrangements so that they would not be against the interests of the consumers. That is the thought I have in mind.

Q. You think the government is quite qualified to take care of the consumer in every case?—A. Let me say paramountly.

*By Mr. Factor:*

Q. That is practically along the lines of the Code system in the United States, in which industry summarizes a code, and then the government, after conference with the leaders of industry, approve of it?—A. Yes. We would have to proceed by the method of trial and error.

Mr. FACTOR: You will have to amend the constitution.

*By Mr. Sommerville:*

Q. I presume you are not qualified to speak on the codes of the United States?—A. No.

Q. You are speaking of the principle involved?—A. The principle. To such a council, representatives should come from accredited organizations of manufacturers, wholesalers, retailers, farmers, labour and consumer organizations.

*By Mr. Young:*

Q. Would you mind intimating what consumer organizations you would invite to join?—A. Well, broadly speaking, at the moment, consumer organizations possibly are best represented by farmers and labourers. It should be within the scope of such a body to explore all the possibilities of collective action among its constituent groups. Trade agreements, including the fixation of a resale price, could be investigated, reported upon, and where such agreements were not considered inconsistent with consumer interests, should be encouraged.

Complaints by any person or group of persons claiming to be subject to unfair or unethical competitive methods could be ventilated before such a council. Investigations should follow, and where necessary, remedies enforced. Any commercial legislation which is now on the statute books, and which either operates unfairly or has become inoperative, or by reason of a changed merchandising conditions has become obsolete, should be considered by such a council, and where circumstances justify, the council could make recommendations to the government to bring such legislation down to date.

Such matters, for instance, as fraudulent or fake bankruptcy, misrepresentation in advertising, factory and store hours, wages and conditions of employment should come within the purview of such a council. All these things enter into the warp and woof of our economic fabric and cannot be dissociated from each other.

Mr. FACTOR: Where did I hear that expression before, "warp and woof?"

Mr. SOMMERVILLE: You are in the carpet business. That is what happens when you are on the mat.

The WITNESS: In the matter of fraudulent advertising, for instance, while the law itself has been strengthened in recent years, the onus of prosecution still rests upon private parties, and as an association, we have experienced great difficulty and expense in making the law effective.

The CHAIRMAN: That is something you recommended some years ago?

The WITNESS: And I am very much concerned about it, Mr. Chairman. Police courts, in our opinion, are unsuited for commercial cases. The very atmosphere of the court in which cases are heard with reference to misrepresentation in advertising, is unsuited to the purpose.

*By Mr. Boulanger:*

Q. Would you advocate the creation of commercial courts?—A. Yes.

Q. As they have in France?—A. Yes.

Q. As the Tribunal de Commerce of France?—A. Yes that sort of thing.

The average police court magistrate, whose back-ground and experience does not usually include commercial or business training of any kind, is called upon to adjudicate upon technical questions outside the range of his knowledge. Naturally he hesitates to convict alleged offenders because such conviction comes under the Criminal Code, and he does not want to make criminals of people who in his judgment have merely been guilty of technical violations of that code. We have actual evidence available proving this statement.

There needs to be a new approach to this and associated questions, and the economic council could conscript the thinking of the best minds in the business world with the result that such legislation as might be finally drafted would reflect the practical experience and practical recommendations of practical business men.

In no field of retail distribution is it so vital to exercise effective control than in the disposal of bankrupt stocks. In that field the unscrupulous operator reigns almost supreme, with demoralizing results to legitimate retailing, together with wholesale deception practised on the consumer. The clothing business has been particularly the victim of this type of exploitation and it should not be beyond the power of such a council as is here suggested to effectively control that situation either internally or through legislation.

Finally, a more practical training should be made available for the rising generation in the science and mechanics of distribution.

In listing the five great intellectual professions that have hitherto existed in every civilized nation, John Ruskin places the merchant second in order of importance to the economy of the state. He calls merchandising a profession. What is a profession? A profession is that in which the good of the whole receives first consideration, in which competition is a matter of service, not to the exclusion of profit but to the distribution of it in terms of human welfare. The qualifications for entrance to a profession imply training, and this has been conspicuously absent in our educational curricula in so far as merchandising is concerned.

An economic council could give serious study to this phase of the question and out of their combined deliberations and with the collaboration of progressive educational authorities, a new dignity, with higher standards, could be given to this whole business of the distribution of the physical needs of the people.

The introduction of ethical standards in the legal and medical professions has raised the status of the individuals in those professions. We choose our doctor or our legal adviser for their knowledge, skill and integrity. Why should we not choose our merchant for the same reason, and if, through training, we can qualify him to render a more efficient service, meanwhile controlling his predatory competitor, then the individual retailer may yet lift his head in self respect knowing that the test that will be applied to his service will not be on the low ground of cheapness but upon the high ground of service. I respectfully submit this memorandum. (Exhibit No. 44.)

The CHAIRMAN: Well now, Mr. Hougham, we have had you on the stand for a long time. You have certainly presented a very excellent brief. I do not think we shall question you any longer. Does any member wish to question Mr. Hougham any longer?

Mr. YOUNG: Yes. I should like to ask a question.

The CHAIRMAN: See that it is not a leading question.

*By Mr. Young:*

Q. You frequently hear it said that we have solved the problem of production, but have not solved the problem of distribution. Forget about the first part of the statement for the moment. Do you agree with the second part?—A. Yes.

Q. Do you mind telling us now what you mean by not having solved the problem of distribution? What is the problem of distribution?—A. Well, Mr. Chairman, we are going to invade the realm now of political economy and philosophy. But with that reservation, I would say that I would simply quote from what I have said, here, distribution in terms of human welfare.

Q. What is the problem?—A. This, as I say, is a realm into which I do not think we can go this afternoon. I would be glad to spend an evening with you, if you would give me the courtesy.

Mr. SOMMERVILLE: Come up and see me some time.

*By Mr. Young:*

Q. Under the terms of its reference this committee is instructed to inquire into the spread between the price the consumer pays and the price the producer receives for goods?—A. Yes, sir.

Q. That is involved in the problem, is it not?—A. Yes, undoubtedly.

Q. Is not the problem to get the goods from the producer to the consumer at the lowest possible cost?—A. Not necessarily, sir.

Q. No, what then?—A. Not necessarily, I suggest the cost separated from all the other factors is an unwise way of dealing with the question. I have tried to bring out the fact that mere cheapness is not necessarily expressed in terms of human welfare, that it may have a demoralizing effect. That is the problem, and I submit that I am nothing more than a student of that problem.

*By Mr. Somerville:*

Q. If cheapness demoralizes wages, then it is not a good gauge, that is your point?—A. That is the point.

*By Mr. Young:*

Q. Our task here is to investigate that spread?—A. Among other things.

Q. And my impression is that it is too wide in this matter of cost?—A. Yes.

Q. The general impression is that the spread is too wide. We are here to find if it is too wide, and where it can be narrowed. Now, have you any suggestion to make as to how that spread can be narrowed?—A. I have not, sir.

Q. Can you tell us whether goods can be carried from the producer to the consumer at any less cost by the department store, or the chain store, or the individual store, or by any other method that you know of?—A. I do not think I am in a position to answer that.

The CHAIRMAN: It is now 6 o'clock, gentlemen, and the committee will adjourn to meet to-morrow morning at 11.

The committee adjourned at 6 p.m. to meet again Friday, March 9, at 11 o'clock a.m.

HOUSE OF COMMONS, Room 368,

March 9, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Honourable H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto; Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of yesterday record the filing of a series of exhibits, and the names of two witnesses who have been heard. If there is no objection or questioning on those minutes, I declare the minutes approved.

(The clerk read and filed a reply to the questionnaire forwarded to the Minimum Wage Law Board of the Province of Alberta).

GEORGE H. HOUGHAM recalled.

*By the Chairman:*

Q. I understand you request to be heard in reference to one matter that was mentioned yesterday. What was that?—A. Just one item, Mr. Chairman. Some reference was made several times, as a matter of fact, to the possible influence of advertising on the press; and I would just like to file with the committee here, copies of some communications which have come into my possession, and which are apparently being circulated by the chain store organizations, which I think the committee ought to have (Exhibit No. 46.)

*By Mr. Sommerville:*

Q. This is a letter and correspondence from the Canadian Chain Store Association?—A. Yes.

Q. 1606 Northern Ontario Building, Toronto?—A. Yes.

Q. The letter is dated February 24, 1934, and is marked "confidential."

GENTLEMEN:

The suggestion has come to us that we should write to you to tell you of the organization of the Canadian Chain Store Association. The purpose of this Association is set forth in detail in the constitution and by-laws, copy of which is enclosed, but may be summarized by stating that the objective over a term of years is to win public goodwill for the chain store principle and on specific occasions to combat unfair and unreasonable legislative proposals.

The letter then goes on to give the purpose for which the association was formed, and the annual fee, etc.

One of the first things confronting the association was the address of the Hon. H. H. Stevens as to mass buying and the subsequent announcement of the parliamentary inquiry. There will be no formal presentation of the chain store case by the association as such but a legal firm has been retained to watch our interests and advise members.

I may say that my duties as secretary-treasurer are not confined to the keeping of records and the carrying on of the routine business of the association. My function will be primarily to get before the public, in

the news and editorial columns of Canadian newspapers, the merits of the chain-store idea. The objective is the ultimate acceptance by the public of the fact that chain stores perform a useful economic service.

Attached to the letter is bulletin No. 2.

**Attitude of Newspapers.** Canadian newspapers undoubtedly will give a great deal of space to the mass-buying inquiry and there is a danger that facts as adduced by the committee will be inadvertently twisted so as to show up the chains in an unfavourable and erroneous light. The newspapers undoubtedly as a class are friendly to the chain store idea but it cannot be expected that this will prevent their printing the news as it develops from day to day.

The secretary-treasurer has interviewed a number of editors on this subject. The purpose of this is not to suggest that the chains be given special consideration in the treatment of the news. Neither has any editor been asked to say anything which he does not believe to be true and right.

But it is hoped that, as a result of these conversations the editors in their comments will continually make the point that the chain-store principle is economically sound and its development in the public interest; that any evils which may possibly be revealed as applied to any one, or more, chains, do not condemn the system and that correctives—if the inquiry indicates that any are feasible—should be not be so drastic as to rob the public of the advantages in retailing which have resulted from chain-store development in Canada.

With the approval of the executive, it is planned to see many other editors in the course of the next few weeks."

The bulletin contains a list of members as follows:—

"New Member." Piggly Wiggly Canadian Limited, Winnipeg, has become a member of the association. Complete list of members is

Dominion Stores, Ltd., Woolworth Co., Ltd., United Cigar Stores, Ltd., Owl Drug Stores, Ltd., Evangeline Shops Ltd., Stop and Shop Ltd., Honey Dew Ltd., Loblaw Groceries Ltd., Agnew-Surpass Shoe Stores, Ltd., Zellers, Ltd., Laura Secord Candy Shops, Ltd., S. S. Kresge Co. Ltd., Hunt's Ltd., L. K. Liggett Co., Ltd., Beatty Bros. Ltd., Murray's Lunch Ltd., G. Tamblin Ltd., M. & P. Stores Ltd., Carrolls Ltd., Metropolitan Stores, Ltd., Piggly Wiggly Canadian Limited.

*By Mr. Ilsley:*

Q. This is a confidential letter from whom to whom?—A. From the Canadian Chain Store Association to its members.

Mr. SOMMERVILLE: Canadian Chain Store Association, signed by J. G. Johnston, Secretary-Treasurer.

*By Mr. Ilsley:*

Q. It ceased at some point to become confidential?—A. Apparently it did.

Q. That includes the bulletin?—A. Yes; that is a copy of the bulletin. There are several others that are being circulated at this time by the recently formed association.

Q. Of chain stores?—A. Yes.

Mr. FACTOR: You obtained a copy from one of the chain stores?

WITNESS: I obtained a copy.

Mr. SOMMERVILLE: I understand the Manitoba Retail Association desires to present its case.

Mr. A. E. GRASSBY called and sworn.

*By Mr. Sommerville:*

Q. Mr. Grassby, whom do you represent?—A. The individual retailers of Manitoba.

Q. Is there a Manitoba branch of the Canadian Retail Merchants Association?—A. Of the Retail Merchants Association of Canada.

Q. Are you engaged in that branch or in that position?—A. I have no position in the branch; I am a member of it, and they have asked me to help present their case.

Q. You are in business in Winnipeg?—A. In the piano and radio business.

Q. Will you just present your views to the committee?—A. Hon. H. H. Stevens, Chairman of Parliamentary Committee for investigating unfair competition, etc. Representing the individual retailers of Manitoba in connection with the above investigation, we attach memoranda from the different trade sections of the R.M.A. in Manitoba, which my colleague Mr. Falconer will present in detail, covering a small proportion of flagrant cases. And I will first give a general view of the disastrous situation so created in our province. We desire first to record our firm protest against the unfair and destructive trade practices of a rapidly growing business section, the department stores and chain stores, also of many manufacturers who give these institutions excessive and illegitimate discounts, to the direct and serious disadvantage of the individual retailer. We consider that where a manufacturer supplies approximately 50 or 60 per cent of his output to department stores and 50 per cent or 40 per cent to individual retailers, there is obviously no difference in the cost of manufacturing each unit. The cost of collecting from the individual retailers may be a fraction of one per cent higher than on the other portion, but a discount of 2 per cent for cash should be ample, instead of the all too common 5 per cent, 10 per cent, 20 per cent, 25 per cent and more. Selling costs should be spread over each unit equally, because the 40 per cent output, the 60 per cent would cost more to manufacture.

*By Mr. Hsley:*

Q. How do you arrive at the 2 per cent which you say is ample? Is that 2 per cent just an estimate?—A. The usual cash discount which is supposed to represent the difference between 30 days or 60 days, as the case may be, and a cash sale. It is a very heavy percentage per annum, 24 per cent, sometimes more.

*By Mr. Kennedy (Winnipeg):*

Q. The 2 per cent represents the cash that they would count on getting from the department store?—A. Not necessarily, anybody that pays cash.

Q. Would not the hazard on the general retailer be greater than that in the case of the department store?—A. Not without the menace of cutthroat competition.

Q. As things are?—A. As things are. And even then, not necessarily if they have a credit department to choose their credits.

*By Mr. Edwards:*

Q. What would you say about selling to 100 retailers as against one department store?—A. It depends on the trade, I suppose. In my trade, it does not cost a thousandth part of one per cent.

Q. Not even with travellers going into each town calling on the trade; that is an expensive proposition?—A. In some cases.

Mr. SOMMERVILLE: The travellers call, in any event. In these industries, they are calling on both the departmental and retail stores.

WITNESS: Naturally in the general interest of all.

*By Mr. Ilsley:*

Q. There has been always a large number of failures in retail stores?—A. Recently.

Q. And many years ago as well. It seems to me I remember reading figures of failures 20 years ago, and these figures showed a large percentage of failures in the retail store business?—A. You probably refer to the period since the advent of mechanized merchandise.

Q. I do not know just when that mechanization came into effect. What I am asking is, has that not always been the case?—A. I cannot say that; up to a certain point.

Q. Do you know whether any such figures would be available?—A. Dun's and Bradstreet's, I presume.

Q. They would not be tabulated in a concise form?—A. No doubt the committee can get data on that point.

Q. I was suggesting that as a reason for Mr. Kennedy's point?—A. We contend the hazard should not be large with ethical merchandising. Shall I continue?

The CHAIRMAN: Yes.

WITNESS: In no case should any retailer be given a discount as great as, let alone more than a wholesaler receives, as the latter supplies the trade and fills a long established and necessary niche in commerce. Manufacturers should be required to file their rates of discount.

An adjustment of the above mentioned evil would result in the government receiving larger sales tax receipts. Such preferential discounts results in these stores underselling the individual retailer who is placed in the position of actually paying part of the department store invoice price which is thus used against him to cut the price, discredit and despoil him, in addition to which the individual retailer with his ordinary margin and ethical observance of the manufacturer's rules and prices constitutes a wide open target for the department store to automatically score against in many ways.

The business and realty tax assessments on the Eaton building are not consistent with their real or comparative value so that in effect, the individual retailer is paying part of Eaton's taxes.

*By Mr. Factor:*

Q. What do you mean by the last statement, that they are not consistent with the real value? Do you mean it is under-assessed?—A. Absolutely. They have 150 stores the size of mine in that building and more than 150 times my volume. I think they could pay that proportion of taxes.

Q. That is a matter for the assessment department in the city of Winnipeg, is it not?—A. Probably. Also a matter of habit.

Q. A matter of what?—A. Habit.

Q. What do you mean by that?—A. Some districts are terribly department store conscious.

Q. You mean it extends so far as the municipal government is concerned; is that what you are implying?—A. They are composed of human factors and human interests, and I suppose they get the department store obsession in some cases.

*By Mr. Ilsley:*

Q. They desire to foster it; is that the idea? Do they cater to it?—A. I think they actually invited them and gave them a special assistance to come and cut the throats of retailers.

*By Mr. Sommerville:*

Q. The assessment you refer to is the result of an arranged assessment, or a fixed assessment some time ago?—A. It used to be, and since that I am told on good authority that their assessment is still low—much lower than it should be.

Q. Your point is that the assessment is relatively lower than it is for the retail merchandiser?—A. Exactly. I am paying part of it.

*By Mr. Young:*

Q. Have you any figures?—A. No. I have not. In addition he pays part of the department store advertising costs because their advertisements cost just as much to set and print per line as any other but their rate is much less. The hackneyed claim that the department store advertisement has greater news value is misleading because its news value is mostly if not entirely due to the above mentioned illegitimate or illegal means. The system of loss leaders, whether to attract as a bait or to discredit ethical competitors, is unsound and vicious. It is forbidden elsewhere and should not be allowed.

Q. Where else is it forbidden?—A. In certain European countries and in the United States.

Q. Is it forbidden in the United States?—A. So I understand.

Q. Is that practice dying out in this country?—A. Not up to the discovery of the forgotten retailer in a recent speech.

Mr. FACTOR: A pretty lively baby yet.

WITNESS: Unfortunately the offering of half a dozen or even twenty or fifty units to a population of 300,000 gives a totally unfair impression regarding price levels besides destroying the confidence of the buying public. The other day Eatons put on radios at \$9, radio combinations at \$12.75. During the day we had eight or ten inquiries for \$9 radios that they could not supply. One lady said, "Eatons must be a funny crowd. I was up there a quarter of an hour before the store opened and when I asked for the \$12.75 combination I was told it was sold, and nobody else there ahead of me." To the trade it does serious damage and besides giving this significant advantage to a handful of people, the effect if not the intention, is to definitely harm and discredit the individual retailer, and integral part of the business building, community building and tax paying body. Under these conditions and the quickly developed dislocation of business, personnel, ethics, confidence, etc., the apparent bargain is more an economic blunder or crime.

Frequent special sales made possible by department store massed buying and price dictation, and repeated cut-price offers on all brands but their own, accentuate the mistaken policy of excessive thrift at a time when normal spending by all possessing buying power is vitally necessary. The preaching and practising of thrift are better reserved for prosperous times.

The extremely long hours of the chain stores and the low wage levels and buying power of the chain stores and department store employees are too well known to enlarge on here. There should be satisfactory methods of more closely checking up so-called bankrupt sales. Bankrupt and surplus stocks should not be allowed to disrupt the trade but should be distributed in an orderly fashion through the trade association. The inevitable and early result of these low prices, enforced sweatshop factory wages, shattered buying power, destroyed community centres, low scale of department store wages, large department store profits and unjustifiably destroyed competition, will be a growing and dangerous monopoly unless arrested.

*By Mr. Sommerville:*

Q. What do you mean when you refer to cut prices on all brands but their own?—A. They religiously regard their own brands in all lines, and in others too, and the better known standard brands that they can get hold of and cut. It affects the individual retailer and presumably helps themselves.

Q. You mean the nationally advertised brands?—A. Exactly.

*By Mr. Young:*

Q. You mean if they make an article themselves and also sell the same article made by somebody else they will cut the price on the other fellows and keep the price up on their own article?—A. Exactly, lower the articles made by other people for themselves.

Q. What effect would that have on their own factory?

*By Mr. Sommerville:*

Q. I suppose they could not use their own brands as a loss leader?—A. They never do. They have not the reputation.

Q. They are not nationally advertised?—A. Exactly.

*By Mr. Edwards:*

Q. Is not the idea that no one could procure those brands—you could not buy one of those brands?—A. You say I could not or I would not?

Q. You could not buy one from the factory at the factory price for retailing?—A. I do not know about that.

*By Mr. Sommerville:*

Q. Not with their brand on it?—A. No, not with their brand on it. You could not get back on them that way.

Q. You could not advertise their brand as a loss leader in their store?—A. Oh, no.

*By Mr. Kennedy (Winnipeg).*

Q. When you refer to their own brand, you do not refer to articles manufactured in their own factories?—A. Not necessarily. Including those articles made in their own factories.

Q. On their own specification?—A. I understand that is quite a work of art in some cases.

Q. With their trade mark on it?—A. And with their trade mark on it—such as "The Eatonia." I forget the radio stencil at the moment. It is not much of a factory anyway. One effect of this unethical merchandising in practically all trades is clearly illustrated by the small number of furniture merchants left in Winnipeg—one only of any size outside of the two department stores. In recent years, large firms including Leslie, Scott, Jerry Robinson, Banfield, Crescent, Overland, Sterling, Lewis, etc., good community conscious citizen merchandisers have all been forced out of the picture commercially and their premises are vacant or soon will be.

*By Mr. Young:*

Q. In what period of time did this happen?—A. Oh, I should say the last ten or fifteen years. Another evidence of this vicious and unwarranted transference of commercial activity is the diminishing number and value of income tax returns—the depreciated value of prominently located real estate, the type of insignificant one-story metallic buildings on a fine thoroughfare like Portage avenue—supposed to be one of the finest streets in the world—the poor tax collections and considerable arrears of rent of practically all the independent retailers. As a comparison it might be mentioned that the Vancouver retail district is more than twice the area of that in Winnipeg.

*By Mr. Sommerville:*

Q. You mean the Vancouver retail district?—A. Yes, sir. They are not so much a two-store town as Winnipeg.

*By Mr. Factor:*

Q. How many departmental stores are there in Vancouver?—A. I could not say. I think probably two or three, but they are not huge affairs.

*By Mr. Sommerville:*

Q. They are Spencers, the Hudson Bay and Woodwards, are they not?—A. I believe so, yes. A little story here might point a moral. I was talking to a trade colleague one day who was out collecting for the Federated budget as they usually did, and the subject of department store competition crept up, as it frequently does, and he made the remark—this was some months before he was forced out of business and still trying to avoid the fate I suppose—he said, “I am doubtful so far as ‘up-the-street’ being on the Federated budget; their buyer is down east and grinding some manufacturer to give them a special to cut the daylights out of me.” That is the way he looked at it. In a comparatively short time he was out of the picture. The effect on community life is extremely harmful, the community conscious citizen’s efforts being obviously circumscribed while the department store community efforts and subscriptions compare very unfavourably with those of the individual retailer in normal times. This added to the well-known difficulty in securing subscriptions and support from western branches of eastern concerns creates a very unsatisfactory community spirit and situation.

*By Mr. Factor:*

Q. You mean they do not operate for philanthropic purposes?—A. No. Many of them find it necessary, or say so, to refer to head office, and that is usually the end of it. Another serious result is seen in frequent strikes and labour troubles caused by the department store low price dictation, which troubles the department store conveniently escapes—but not so the people who are depending on the buying power of the wage earner so affected. We would all be better off if we paid a fixed price for everything we need.

*By Mr. Kennedy (Peace River):*

Q. Do you advocate a fixed price on all articles of commerce?—A. Yes, more or less.

*By Mr. Edwards:*

Q. You mean a resale price fixed by the manufacturer on his particular produce?—A. Yes. I contend that that kind of arrangement can be more closely censured and controlled in the interest of the consumer than the present arrangement or disarrangement we have.

*By the Chairman:*

Q. Is that not what we call a maintained price?—A. Yes, Mr. Stevens.

*By Mr. Sommerville:*

Q. You have this price fixing controlled in some way?—A. Yes. I will give you some data on that in one second. We would all be better off if we paid a fixed price for everything we need if back-door wholesaling and chiseling were done away with, if the importance of the system of distribution established for so many generations—retailer and wholesaler or commission agent between the producer and the consumer were respected and maintained. Wages would then correspond, also buying power and continuity of circulation. Any danger of fixed excessive prices could be avoided by a consumers’ price control board or by some such method. It is becoming evident to the consumer that in paying a fair price he is protecting the community, the economic structure and his own income.

*By Mr. Factor:*

Q. What do you mean by a consumer's price control board?—A. I understand that is either intended or in operation in the United States.

Q. How does it work, do you know?—A. I could not say, except my impression is that in many large cities and in a large number of the large cities they have some organization to tabulate the prices of commodities practically every day to see that no district is taking advantage of too great increases.

*By Mr. Sommerville:*

Q. When you refer to that I suppose you mean there those code authorities?—A. Yes.

Mr. FACTOR: That is not a consumers price.

*By Mr. Sommerville:*

Q. The code authority in the United States is made up of representatives of the consumers, representatives of the manufacturers, and representatives of the distributors, and they hold their open sessions.

Mr. FACTOR: That is not what the witness is referring to. He says the Consumers Price Control Board. I thought perhaps he could give us a little more detailed information.

The WITNESS: I think it can be easily ascertained.

*By Mr. Factor:*

Q. What State is it in operation in, where could we get the information on that?—A. My good friend Gen. Hugh Johnston I guess would oblige.

*By Mr. Sommerville:*

Q. That is the man in charge of the N.R.A.?—A. Yes, Mr. Sommerville. Recently one of the largest departmental stores in London was compelled to publish a large advertisement apologizing for having unwarrantably reduced the price of a comparatively unknown make of radio. It might here be noted that doctors, lawyers, accountants, etc., have each observed uniform charges over a considerable period with great success.

*By Mr. Young:*

Q. Is that London, Ontario?—A. London, England.

*By Mr. Sommerville:*

Q. What are you referring to there is the fact, that in England such agreements are made?—A. Yes.

Q. And maintained?—A. Maintained.

Q. And you are giving us an illustration, and that there they are not contrary to the law?—A. Exactly.

Q. And apparently on this occasion one big firm had to apologize for having disrupted this maintained price?—A. Exactly, Mr. Sommerville.

Q. It is just an illustration?—A. Yes.

*By Mr. Ilsley:*

Q. An agreement between manufacturers to keep the price at a certain level, is that what it is?—A. Yes, largely.

Q. That is contrary to the law in this country, is it not?—A. I don't know about that. I am not sufficiently acquainted with the law.

Mr. BOULANGER: It is not a matter of law; it is a matter of agreement.

The WITNESS: All those with experience of the enormous advantage and security of the old Victor, Edison and Columbia phonograph and record price maintenance agreement, cheerfully testify to its enormous contribution to ethical

merchandising, price complex, buying confidence, trade stability, fair return, wage levels, buying power and standard of living, grade and prestige of merchandiser and staff, pride of ownership, intrinsic value, and general economic stability. While this system was in force, under the protection of their patents and before all and sundry jumped into manufacture chisel and disrupt there was no such thing as a free record or a one dollar cut permitted under pain of losing the agency. Everybody benefited. We need this arrangement under trade codes and government protection in every line of trade as well as moderation in the number of trade outlets.

*By Mr. Ilsley:*

Q. Possibly we are not all acquainted with that. What do you mean by a dollar cut and the losing of the agency?—A. If under the agreement at that time, which was part of their patent rights I believe, you reduced the price of a one hundred dollar radio or a victrola to \$99, you would be liable to lose the agency.

Q. That is the Victor, Edison or Columbia?—A. The Victor, Edison and Columbia phonograph and record price maintenance agreement.

*By Mr. Factor:*

Q. And you say you are in favour of the principal of such price fixing arrangements?—A. Absolutely and unequivocally. There is nothing like it. With an easily controlled ethical combine of this kind, the trade, economic structure and consumer can be much more adequately controlled. There is a great difference between a government in business and a trade organization regulating business with the sanction and protection of the government.

*By Mr. Kennedy (Winnipeg):*

Q. If there is no competition on price on a given commodity then there would be no competition at all?—A. Excuse me, there is competition in service, personality, reputation, and service and fair dealing.

Q. But when they got the machine home, whether they got it from one retailer or another, the results would be the same?—A. It depends. The question of service enters into it.

Q. You mean service afterwards?—A. Yes.

*By Mr. Ilsley:*

Q. You would have it so that you could not dispose of surplus stocks at all?—A. Surplus stocks should be handled through the trade organization; they should not be allowed to disrupt the market and upset the price complex of the public.

Q. What trade organization?—A. Practically every trade has an organization, or an association.

Q. For instance, the retailers of the country are stocked up with a lot of a particular commodity and they cannot sell it at the price that is fixed; what would you do, would you get together and fix a lower price to try and dispose of it at that figure?—A. That might be allowed in some cases. In other cases the trade organization might take hold of it and distribute it.

*By Mr. Edwards:*

Q. Does not that come under the head of selling obsolete articles, for instance, a victrola that has improvements I presume supersedes the original victrola and then you have to get rid of the old article?—A. That is done in some cases, that has been frequently done.

*By Mr. Young:*

Q. How then would you adjust this price to market conditions, I mean fix a price at which things cannot be sold above or below that price, taken in con-

junction with the price of wheat, the price of livestock, so that the purchasing power of our people is materially altered? Would you adjust your price to meet that changed condition?—A. That is a matter for your trade organization to recognize and take hold of.

*By Mr. Sommerville:*

Q. Through this price fixing or control board that you speak of?—A. Partly.

*By Mr. Young:*

Q. Each board would make its own adjustment when it felt the need?—A. Each trade.

Q. No individual merchant could take the lead?—A. Exactly.

Q. And the man who found his stock was not moving because his customers' purchasing power was practically gone would have to call in the trade organization before he could make a move—A. That would be the idea.

Q. And, of course, that concerns the retailers, the manufacturers, and so on.

*By Mr. Senn:*

Q. Just along that line. Your organization extends to the rural districts and the smaller towns as well, does it?—A. Yes, sir.

Q. I noticed yesterday and to-day that most of the examples given are examples from the larger towns. Do you think that the same disruption of business occurs in the smaller towns all through your section as it does in the larger sections?—A. Yes, sir, and a great deal more. It appears to save the money with the one hand and is depressing commodity prices with the other.

Q. Well, are retail merchants in the smaller towns as seriously affected as the retail merchants in the larger centres?—A. As much if not more. The departmental store huge mail order business has half ruined every business and community centre by its unfair competition, their mail order prices being considerably lower than the local merchant, against which it is impossible for the country merchant to compete and pay the taxes which his unfair competitor escapes.

Bad as it is to cut or even apparently cut the prices of ordinary merchandise, it is far worse when farm and dairy product prices are deliberately depressed by the departmental stores and chain stores and others, because these commodities are the start and regulator of all business turnover. Buying does not commence with automobiles, diamonds, books or theatres but with farm products, which start the revolving trade snowball at a respectable size, or otherwise, according to the price level observed.

The average farmer now sees that just as the alluring picture in the mail order catalogue gives a wrong impression of the mutilated and abbreviated article eventually received in return for twice the normal quantities of farm produce, so is it a sham and a snare to apparently save him a dollar on the shoes and snatch with the other hand 30 to 50 per cent of his farm produce cost, not his price, by the effects of mechanised merchandising, to say nothing of the corner store club and community spirit. As he laces those shoes, even if exactly as pictured and expected, he is apt to mutter cut cut cut with each lace hole negotiated as he now realizes that any cut prices in evidence are at the direct expense of the individual retailer, his own commodities, and all standards.

As to the question sometimes asked as to the cost of distribution, this entails another question, which cost of the two? Do they refer to a normal civilized distribution, or to that type of mechanised distribution with all factors reckoned in terms of relief costs, morale, self-respect, standards of wages, buying power, living, confidence, ambition, ethics and all the advantages of ethical merchandising and sanity? We must not obscure the vision of the golden coin of future and standards by placing the nickel or cent too near the eye. To voice the question with anything like detail is to answer it. The

cheap distribution becomes dear and nasty, and the apparent dear becomes inexpensive and preferable. In other words, there is no such animal as an isolated or unrelated act.

Thanks to an awakened consciousness of the vital importance of our established economic structure and proven methods of merchandising, many are commencing to think differently about these apparently unimportant and routine details, and see that a far more sacred principle is involved, in fact none other than the maintenance and safe-guarding of the human welfare of the many rather than the selfish and inhuman advantage of the few.

In Germany and Italy, and other countries in Europe, department stores and chain stores are specially taxed and controlled.

Business should honour and be honoured; it should not be considered or made a "racket"; all in business should be registered or licensed and proved to be what they appear or pretend to be. If any person or institution desires to be identified with any trade, they should be first of all suitable for it, realize the honour and responsibility of it, be well equipped for it, and willing or compelled to observe its rules; he should play the game and not chisel or even risk damaging the rest of the trade, because it is now only too plain that the results are more far reaching and serious than we used to realize.

To disregard this rule is to endanger the vitally serious matter of the employment, buying power and standard of living of the many human beings that each member of that trade is supporting as the most important part of his business and community, and the most delicate and integral part of the economic structure.

Each trade should have its trade organization to regulate ethics and competition, which is a policy that is growing and succeeding elsewhere. Trade codes may affect, and justifiably so, a small vocal minority but will help the great majority of each trade, enormously strengthen the economic structure and increase general prosperity and confidence.

There is a great difference between a government in business and a trade organization regulating business with the sanction and protection of the government.

No matter how well our economic structure is rehabilitated with increased buying power and price level, unfair competition will soon destroy it by means of cut prices, lowered wages, buying power and morals, selfishness, buyers' lack of confidence and eventually a dangerous monopoly.

Up to the discovery of a government or minister that actually remembered the forgotten retailer, I had thought that our shattered farm produce price level was due 51 per cent to cut-throat competition and the price depressing accomplishments of the unscrupulous, and 49 per cent to the slavish adherence to export price levels even when below the cost of production of the primary products that regulate the volume of all business and services, but now I see that no matter how the economic structure and price level might be rehabilitated, the price depresser and cut-throat competition factor would wreck anything and everything and, therefore, I am compelled to the conclusion that the cut-throat competition and the price depresser are responsible for about 75 or 80 per cent of our trouble, and the other 20 or 25 per cent to the wheat export situation, probably.

We wish to make it clear that we are simply objecting to the unfair and disreputable practices of the departmental and chain stores and not necessarily to their entire set-up.

We trust that suitable and adequate measures will be adopted early by way of trade associations and codes under government authority to eliminate the abuses complained of.

We would point out, without over-stressing the necessity of a more christian spirit in business, that just as it is a serious mistake to overemphasize "price" in merchandising, so has it proved a greivous and costly error to have concentrated too much on budget balancing and the financial factor rather than the human, in our attempts at general recovery. If we concentrate on the human factor we shall automatically benefit both it and the financial.

This brief would not be complete without urgent reference to the necessity of immediately reviving buying power and confidence by means of sound and valuable public works which for interest and amortization charges will cost but a fraction of the relief costs, with none of the demoralizing influences inevitably associated with the latter, and will improve our natural resources, morale and prosperity. This new and frictionless buying power of public works plus synchronized agricultural prices, and ethical competition will ensure the end of this mechanized merchandising tragedy.

*By Mr. Sommerville:*

Q. Who is presenting the brief along with you?—A. With your permission, I will present the troubles of the radio trade. Mr. Falconer will present some cases referring to other trades.

MR. FACTOR: Now we are getting down to business instead of listening to a very nice lecture.

THE WITNESS: Thank you very much, Mr. Factor. Speaking for my own trade—the radio trade—obviously the greatest loss of all is the repeated slaughter sale. Time after time has the individual retail dealer been subjected to department store radio slaughter sales to the disruption of all semblance of orderly distribution and confidence. The sweat shop conditions in certain factories have enabled department stores to offer stencils and specials at huge discounts in unfair competition. Superfluous radio manufacturers—

*By Mr. Young:*

Q. Superfluous radio manufacturers, explain that to us? You mean there are too many of them?—A. There were about twenty-five instead of the five necessary

Q. Do you mean to say we have five times as many radio manufacturers as were needed?—A. No, but we had.

*By Mr. Edwards:*

Q. You would not suggest that could not be controlled, would you? It is anyone's right, for instance, to start into business, as many men do? That refers to price.—A. No, it refers to trade policies.

Q. If you have a properly fixed retail price with a fair spread, that is what I mean, then it is up to competition to regulate.—A. But why have twenty-five instead of five.

Q. Well why have twenty-five stores instead of five.—A. Exactly. We are getting down to that; we are getting down to the point where it is recognized that is a much more serious factor than appears on the surface.

*By Mr. Kennedy (Winnipeg):*

Q. Would you limit the number of factories in certain lines in this country?—A. Yes.

Q. Let us get that; are you recommending that if it were possible to do so, you would actually limit these manufacturers in certain lines in this country?—A. Yes.

Q. The same as is done in Italy?—A. I am not familiar with the Italian practice.

Q. That is the Italian practice, I understand; if you want to start manufacturing an article there you must receive a permit from the authorities?—I will say that the Italian brand of common sense is very good.

Q. That requires a Mussolini or a Hitler or somebody like that, does it not?—A. I don't know what is needed, but it is good.

Q. The practice that you are recommending already obtains in the matter of licensing hotels?—A. Certainly.

Q. You would recommend the carrying of that through to all lines of business?—A. Certainly; I think it is necessary for the prosperity of the people and the safety of the economic structure.

*By Mr. Senn:*

Q. Would you carry that into the retail trade?—A. Absolutely.

Mr. ILSLEY: That they should be licensed.

*By Mr. Edwards:*

Q. If you would carry it through, how many farmers would carry on business?—A. Now we are rather far afield, but certainly the question of production would undoubtedly enter in.

Mr. FACTOR: As far as the farmers are concerned, you are trying now to control the production of the farmers; it is the same thing.

*By Mr. Sommerville:*

Q. Will you proceed?—A. Superfluous radio manufacturers have lead to overproduction and the necessity of raising funds have often forced them to sell well known brands at ridiculous prices to the department store to be sold on the bargain counter, often at 33 per cent to 55 per cent off regular prices.

*By Mr. Young:*

Q. Just there, Mr. Grassby, what is the usual mark-up on radios?—A. The discount is around 40 per cent off the retail, sometimes more.

Q. I don't know exactly what that means; that is to say when the retail price is \$100—A. The consumer's price is \$100 and the retailer's is \$60.

Q. These people are taking off from 33 per cent to 50 per cent of that?—A. More than half the retail price; they are selling at less than half the retail price in some cases.

*By Mr. Factor:*

Q. Because the manufacturer sold the surplus product at a ridiculously low price?—A. Exactly.

*By Mr. Edwards:*

Q. That means a 60 per cent gross mark-up, does it?—A. Sixty-six—40 off 60—off the regular price; regardless of the interests of the manufacturers main trade and support. The effect on instalment sales on the individual dealer's books with unpaid balances greatly exceeding the bargain prices, the effect on the confidence of the buying public, price complex, trade stability, fair return, wage levels, buying power and standard of living, grade of merchandiser and staff, pride of ownership, intrinsic value and general economic stability and on the morale of individual dealers' sales staff, the public opinion of the individual retailer, may be more easily imagined than described. In the light of recent exposure the real cause of the famous or infamous Stratford furniture strike becomes clearer; also the inevitable result of such conditions in commerce, or shall we say in civilization?

In the Regina *Leader Post*, January 4, this year, a department store advertised trade-in allowances, on any old kind of instrument taken in in part pay-

ment, of \$25, \$35, \$42.50, \$50 and \$60 off regular prices. This was advertised by Eaton's.

*By Mr. Young:*

Q. Did they say that, that they would give these allowances on any old kind of thing?—A. For a one dollar phonograph, yes; and at a time when it was not authorized by the manufacturers. That has been done as Mr. Senn I think, mentioned a short time back with regard to obsolete models, but this is an up-to-date model.

Q. I am not clear on that; they are offering an up-to-date model, and if you buy this up-to-date model they will give you this price; did they say any old kind of thing?—A. Not in those words, but they do it. In fact, I have been told that if you are labouring under the disability of not owning an old, obsolete one dollar phonograph, they will take you over to a corner of the store and give you one—sell you one, so that you can turn it in at \$50.

*By Mr. Factor:*

Q. They have done it in Toronto the same way, allowed a certain amount for an old phonograph or an old radio?—A. Sometimes it is authorized by the manufacturer for certain reasons, and then everybody is on the same footing. But this is a case where they cut purely on their own, to the disadvantage of everybody else concerned.

Q. Does the manufacturer forbid them to do it?—A. In this case?

Q. Yes?—A. Absolutely against their instructions.

Q. You, as a private dealer, could not do it; the manufacturer would not let you do it?—A. No, under pain of unpleasantness, losing the agency perhaps. We also hold a letter of January 17, written to a western dealer—and the original can be inspected—saying that these trade-in allowances or discounts were absolutely unauthorized. The manufacturer therefore took back from Eaton's all of the radios of this make on their floor and cancelled their sales franchise.

In Winnipeg, where a \$25 trade-in allowance was similarly advertised by Eaton's, the same people took back forty-two radios to prevent further price cutting of this kind. They also advised Eaton's general merchandising manager that further breaks of this nature would result in cancellation of their franchise, as they are prepared to see that prices are maintained in fairness to all their other representatives.

Everyone in the radio trade here is willing to respect the manufacturers' wishes regarding sale price and to observe a sane and reliable trade-in allowance schedule except Eaton's who, apparently, are a law unto themselves. Contrary to the manufacturers' and local dealers' wishes, they consistently and heavily over-value goods taken in trade as part payment.

This year the radio manufacturers have come to their senses regarding prices and control of production; so that they no longer have a surplus to be compelled to sell on the department store bargain counter at prices disastrous to the trade and manufacturers, and ruinous to the local dealers who paid regular prices for their stock and were caught in the wine press time after time without rebates.

Hence the extreme department store is annoyed to now find an uncomfortable dearth of "specials," so, like the fire and smoke hat sale specialist who continues singeing more hats as required, they apparently are supplying the special by marking down or offering new current models very substantially less as "demonstrators," which term is ridiculous, to say the least. This practice is distinctly against the manufacturers' wishes.

A trade competitor tells me that they repeatedly find their prospective customers told by Eaton's that the model offered by the former at \$89 special was regularly sold by Eaton's for \$72.50, but they were just "out of stock"

I have a paragraph there on the advantages of price maintenance that I have already read to you. I have another paragraph on sheet music. Sheet music comes under the hammer. I have samples here.

*By Mr. Edwards:*

Q. Sheet music becomes obsolete very fast, does it not?—A. Yes, but not in twenty-four hours.

Q. It depends on the tune.

The CHAIRMAN: Who's afraid of the big bad wolf?

The WITNESS: Well, I won't take up your time by reading that. That is a general thing, cutting prices on sheet music, against the wishes of the distributor.

*By Mr. Sommerville:*

Q. Will you continue?—A. In another case we delivered a radio to a lady, and she was quite favourably impressed with it. When visiting Eaton's radio department she asked for a set specially advertised at \$49.50 but was told that this had been disposed of. As there was nothing else suitable at about that price, the salesman directed her attention to the latest model Victor R-31, price \$79.50, which was tagged at \$55 only, the former price having been crossed through. She was told that it was reduced on account of being shop soiled, and that it had never been off the floor.

This method of doing business is quite against the wishes and understanding of the manufacturer, especially with so recent a product which could not have been in Eaton's possession all told for more than ten or twelve weeks.

After comparing this radio with ours and the price, she decided to return ours and keep the Victor radio supplied by Eaton's at the cut price, not being interested in the mate of it offered by us at the manufacturers price, \$79.50.

The Victor Company's local distributor investigated the matter at our request, and was informed by Eatons that the reason for the reduction was that the radio had been "previously sold and repossessed," and was so sold to the customer mentioned,—which it was not. Neither could they very well have sold and repossessed within ten or twelve weeks in view of Eatons comparatively stiff terms of payment and stiffer credit department.

Had the radio really been sold and repossessed in the short time it was out of the factory, it was against the manufacturer's rules to do this.

*By Mr. Edwards:*

Q. You mentioned one department store there all the time; would the same apply to the other large department stores there?—A. Not so much. At times, yes, but the general consensus of opinion in Winnipeg is that the Hudson's Bay Company have been forced into this kind of merchandising in self-defence. For years and years they have been doing business in Winnipeg and had the reputation of being—well, I don't want to advertise the Hudson's Bay Company particularly, but they have the reputation, or had the reputation of ethical merchandising and so on. I am quite convinced in my own mind that they would be only too glad to play the game, and as a matter of fact, in my own mind they are very much better competition.

The same thing applies to pianos. The same store recently advertised good second-hand pianos from \$50 to \$90, the latter apparently modern and unusual value. This is a ruinous price, and may be on very few instruments as bait for a much larger market or done to depress the price of pianos taken in trade on radios and refrigerators. They are also said to have bought some pianos privately. I won't give any more of that, except to say that you can judge for yourselves of the results of this price, price policy, when the people will come into our store and as common occurrence ask, "What have you got in the \$75 pianos?" Imagine that.

*By Mr. Sommerville:*

Q. Your point is that, by advertising at a certain price, you fix a certain amount in the public mind?—A. Exactly.

Q. And that affects that business?—A. Exactly, public confidence.

*By Mr. Young:*

Q. Before you go, Mr. Grassby, I would like to ask you a few questions how many members have you in your association?—A. I really could not say.

Q. Approximately how many, in the Manitoba branch?—A. I could not say. Frankly, not so many as there will be in the next sixty days; because like everything else, it has suffered from the inroads of the mechanized merchandiser. The retailers lost heart.

Q. Have you any voluntary chain stores in your organization?—A. That I could not say; we would accept individually owned chain stores.

Q. Individually owned chain stores?—A. Yes.

Q. Who are the Merchants Consolidated of Winnipeg?—A. I could not say. I have heard of them. I presume it is a co-operative buying concern, is it not?

Q. I would gather that from this letter which I have here, you say that you have some voluntary chains in your organization. Do these voluntary chains have any difficulty in getting supplies from the manufacturer?—A. I could not say as to that. I am not an official of the association, you know, and we have just changed our secretary. He will be the one to answer that.

Q. I will reserve this question, then. We will probably have the secretary.

*By Mr. Senn:*

Q. May I ask a question along the line of the department store, or at least of the mail order company; you criticized that quite severely. Would you eliminate the mail order company entirely? Is that your attitude?—A. Not entirely. I presume in some cases it would be necessary.

Q. For instance, there are two large stores in Ontario which issue a spring and fall catalogue. I know something of the hold they have in the rural districts. Have you any objection to that system of mail order service?—A. A spring and fall catalogue?

Q. Yes, of reputable firms like Eaton's and Simpson's?—A. I don't suppose one could object to that, if it is conducted on ethical lines.

Q. Perhaps you have not had an opportunity of examining these catalogues to know whether there are objections to the prices quoted there or not?—A. My impression, understanding and information is that the illustrations in these mail order catalogues are very misleading.

Q. I do not suppose seeing when these prices are quoted for six months ahead that there could be any changes in the prices during that time; what would become of the price maintenance scheme that might be involved there?—A. They are taking that risk. They would have to safeguard themselves against that.

Q. In other words, it could not be done?—A. They could not do this too far ahead.

Q. They do over a period of six months—practically so?—A. On general lines, perhaps, but not on specific products.

*By Mr. Young:*

Q. I suppose Mr. Grassby you could not give us any figures on the percentage of decline of business in the retail trade, and the corresponding increase in the business of mail order houses and department stores?—A. No, I have not those figures; except they are very large.

MR. SOMMERVILLE: We can get that Mr. Young.

*By Mr. Kennedy (Winnipeg):*

Q. You refer to individually owned chain stores, what do you mean by that?—A. A group of stores individually owned and combined together for better buying facilities.

The CHAIRMAN: Thank you, Mr. Grassby.

The witness was discharged.

Mr. C. C. FALCONER, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Falconer, you represent the retail merchants of Manitoba?—A. Yes.

Q. What is your particular business?—A. I am in the hardware business.

Q. Will you proceed, please?—A. I will present my statement.

Honourable Mr. Stevens and Gentlemen of this Committee: our presence here to-day, those of us from Winnipeg and Manitoba particularly, is somewhat hurried, due in part to a misunderstanding we had—we had the feeling or understanding that the committee were to send commissioners or inspectors out west; and as a result we are not as well prepared as we should be. The "Good Book" must have been consulted, because it is said in the "Good Book," "Come, let us reason together"; so here we are to-day. Yesterday, Mr. Stevens mentioned something about sentiment. I would like to maintain the human touch here, because of my relationships to my fellow men.

I am a retailer, neither a lawyer nor a secretary, and I would ask you to be as charitable as possible with me. It has been my privilege to meet my fellow men for a good many years in consultation with them, regardless of business or classification they may represent, and they are all good fellows, every one of them. Up until these last few years they were all happy, contented, prosperous, and quite good citizens.

*By Mr. Kennedy (Winnipeg):*

Q. How long have you been in the retail business?—A. Mr. Kennedy, I started 28 years ago. I happened to start the same time the T. Eaton Company were digging their hole in Winnipeg.

Q. What has been your line?—A. Hardware. It happens that I represent a cross-section of business in Winnipeg which includes practically a majority of the retail business or classification in Winnipeg.

I would like to paint a picture, if possible, it will only take a moment, of conditions as I saw them, meeting the men in business in Winnipeg for the last four or five years—and when I say the last four or five years I stress on that, because it has been more noticeable during these last four or five years; and meeting business men generally their reply to the salutation "How's business"—this is noticeable in this last year—it is becoming ever more diminished and fainter; just as business has been diminishing so their courage and hope has gone down with it. And recently something happened. Our retailers reminded me of a picture I once saw where many men were lost in a dark tunnel and the water was getting deeper all the time, rising and rising. They could not see how they were going to get out, and then all at once a light was seen in the distance; and just as all good light comes from the East, so this light was the voice of the Hon. Mr. Stevens when he spoke in Toronto, and made that memorable address to the shoe retailers on the night of January 15, 1934. I continued my visitations, I was not at that time in Toronto, but the appreciation of those attending the convention that time was sincere, was long, and was sustained. I wish the Hon. the Minister of Trade and Commerce could have seen the faces and heard the voices of the people of Winnipeg and of Manitoba, when the news came on the morning of January 16 and our papers

brought us this momentous news, that the government, or Mr. Stevens, had the courage to come out and speak as they did.

Mr. FACTOR: You are making the Chairman blush, Mr. Falconer.

The WITNESS: Well, that morning, as was my continued custom I visited my friends—I do not see them all every day—but that particular morning I made it my business to call on a good many of my friends. You would hardly have recognized them as the same men, there was a renewed courage and hope as a result of that. From now on they are feeling that there is somebody with them. They knew conditions were bad but they felt that when the government recognized that conditions were bad there was some hope for them. When actual affairs were disclosed in the East we in the West felt like saying to the East “Naughty East, shame on you”; but then we forgot the parable about the mote in our own eye being removed—something about the mote and the beam—Mr. Kennedy, you know that better than I do.

Mr. KENNEDY: If you want it on the record, I think Mr. Stevens really is the man who is best qualified to give it to you.

The WITNESS: This caused us to look around our own back yard before we started to blame the East, and right here and now I heartily apologize for any evil thoughts that we had against the East—as a result of the investigation we had in our own back yard, we found that probably there is no place in Canada where conditions have been any worse than they are in Winnipeg. Probably no other place in Caada has suffered the complete domination from the big interests that exist in Winnipeg and Manitoba.

Now I think Mr. Factor and the rest will appreciate it if after that I get right down to facts.

Mr. FACTOR: I appreciate the fact that you made a nice speech of introduction.

The WITNESS: Thank you, Mr. Factor. Much has been heard these last few days about butchers, and the first one I have here is from butchers who recently congregated and the result was that they had something to say, and here is what they say:

That the smaller retail butchers have no means of ascertaining the price paid to meat packers for large purchases of meat, but that in purchasing hams and bacons, the smaller retailer cannot purchase these unwrapped, whereas the large retail purchaser is allowed to do this. That in purchasing wrapped ham and bacon, the retailer is charged for approximately six ounces of paper which is weighed as meat, increasing his cost to an average of 10 cents per ham or bacon.

*By Mr. Young:*

Q. Does he sell that paper when he sells that ham or bacon?—A. I think he has to. The small retailers have protested against this practice to the packing houses, without avail. They are of the opinion that the large commercial organizations buy meats in large quantities at a lower price than they can buy the same meats, as these organizations frequently advertise meat for sale at a price below the cost price to the retailer. That is the large commercial organizations do not pay a lower price for meats, they either falsely advertise the quality of their meats, or offer same for sale at a loss.

We will pick up another staff of life, we will step over to the bakers. Just the Sunday before we left the Secretary called a meeting of the bakers, and didn't they respond. You would think that Mr. Stevens himself had sent his special investigators, because they were all there. This is what they say: that certain stores in the city of Winnipeg have been baking their own bread and selling same at three sixteen-ounce loaves for ten cents; that the bakers as a whole in this city claim that it is impossible to manufacture a 16-ounce loaf

of bread and sell the same at this price without suffering a loss, and that the chain stores are using this as what is known as a "loss leader."

*By Mr. Young:*

Q. Can you give us any figures as to the cost of making this 16 ounce loaf?—A. I understand that the cost is around  $2\frac{3}{4}$  cents to  $3\frac{1}{4}$  cents, and that it varies to some extent.

Q. That is a pound loaf?—A. A pound—a 16-ounce loaf; and they are not able to sell it at that. They say that as a result of this, delivery wagons of bakers are now making deliveries of 2,000 loaves per week, whereas heretofore they delivered 4,000 loaves per week. One large bakery had 85 wagons delivering bread, they have now only 67 wagons, each wagon delivering about half as much as it did heretofore. The weekly consumption of bread in the city of Winnipeg is 900,000 pounds, and of this 175,000 pounds is sold by the chain stores as "loss leaders." Then as a result of this table, men employed by the bakers are now receiving from \$12 to \$14 a week in wages, whereas heretofore they were paid \$25 a week, which the owners of bakeries state is a fair wage for competent men.

Stepping along to the clothing stores—that the large commercial organizations offer to purchase goods at their own price and many manufacturers, because of large loans owing to the bank, are compelled to accept these at either a loss to themselves, or by the employment of labour that can only be termed as sweat-shop work. That the T. Eaton Company of this city—

Mr. YOUNG: Would you mind talking a little slower, please; you are going too fast for us to follow you.

The WITNESS: I was thinking about you when I looked at the clock, Mr. Young.

That the T. Eaton Company of this city recently placed an order for a large quantity of men's overcoats, with a company of this city. They had the coats made in this company's factory at a price of \$11.95 per garment. That a tailor of this city who is reputed to be a competent and experienced tailor was offered employment and worked with two other workmen in this factory, making the said coats as piece work. That he was paid for his work by these two workmen and received therefor between \$5 and \$6 per week, working ten hours per day.

I would check this next one, because I think it is a real tragedy.

*By Mr. Ilsley:*

Q. I was going to say, how much of this is your personal knowledge, and where do you get your information; and are you sure this information is authentic? It strikes me that both yesterday and today we had a lot of hear-say evidence here?—A. I have no affidavit, but all this information was got together very hurriedly. So far as I know these people are prepared to give affidavits, and I believe this to be true.

*By Mr. Sommerville:*

Q. This was prepared by your association?—A. This was prepared by our association.

Mr. FACTOR: We are not doubting your veracity, Mr. Falconer.

Mr. ILSLEY: I think the experience of court practice over a period of long time does not put much weight in what is known as hear-say evidence, but unfortunately this evidence goes in just as if it were all true by people who do not know whether it is or not, and I think Mr. Chairman, we should guard against that as much as we can.

The WITNESS: You can quite appreciate the hardship that would be worked on some if you were to present his name; they come to you and say, please don't use my name—but it can be sworn to. You can see that that would make the hardship that much worse for him.

Mr. ILSLEY: There is a hardship on the people making a statement to you if the statement is not true. They may be every one true, and I am sure that you are not intimating for a moment that we do not believe they are true; but there is a great chance for error in statements if they are made by people who do not have personal knowledge of them.

Mr. FACTOR: May I add in that connection that I am not at all disputing Mr. Falconer's statement, or any other statement made by witnesses; but the turn of events that have taken place in this investigation are certainly a surprise to me. I never for a moment thought we would have witnesses presenting more or less propaganda, and reading speeches to us. I certainly thought that this investigation would be more or less of a judicial probe with witnesses being examined by counsel, and matters being produced in a proper and orderly way, etc. I did not think we would have men reading speeches.

The CHAIRMAN: Well now, there has without doubt been a certain amount of latitude given to this witness to-day, and in a lesser sense, yesterday; but it must be borne in mind that representatives of associations such as the Retail Merchants Association are entitled to have access to this committee to present the views of their associations. Necessarily witnesses presenting such views must speak in a broad, general way, in much that they will say. I think as far as possible the specific case should be supported by some accurate knowledge. For instance, it will be recalled that yesterday both Mr. Cook and Mr. Hougham in filing advertisements gave evidence that was capable of verification or otherwise and I think it was very sound. I am inclined to give these gentlemen who have come from western provinces, representing the retail merchants of their province, considerable latitude. I think the committee will bear with that because, after all, they are speaking for a large number, and unless they have themselves conducted investigations, they cannot very well give specific evidence on each case. But I would ask Mr. Falconer to, as far as possible, be as specific as he can when he mentions a case. If he cannot be specific, I would ask him to make that point clear, and state why the case is cited. I should like to ask you in regard to the evidence that you just referred to, this question: was the man working on this particular order to which you refer?

WITNESS: Yes.

The CHAIRMAN: It may be just as well not to use names, but probably you could use department store or chain store organization, and then give to us definite information that would enable us to run the case down, if it is considered necessary so to do.

Mr. FACTOR: I agree with you in that particular statement. I also agree with you that a certain amount of latitude should be allowed those associations to make representations; but I hope this committee will not consider that it is evidence upon which to judge. In other words, I hope that you, Mr. Chairman, will see that the investigation will broaden out and that investigators will be appointed.

The CHAIRMAN: I must remind you, Mr. Factor, as I did yesterday, that at the moment investigators and auditors are at work on the detailed material and we expect to have some of that material in a few days, or in the matter of a couple of weeks.

Mr. ILSLEY: Speaking for myself, I do not have any objection at all to these views. The more colourful they are, the better I enjoy them. But in the interests of ordinary justice, when we have a specific instance, it should be clearly understood what it is.

The CHAIRMAN: Yes, as far as it is reasonably possible, Mr. Falconer, if you are giving any general illustrations, mention them as illustrations of what you think is the practice, or what you find to be the practice, and leave the name of the firm out, unless you are prepared to give specific instances in support of the allegation.

WITNESS: All right.

Mr. KENNEDY (Winnipeg): In accordance with the past practice, the name of the firm would be confidentially given to the committee, and then it could be investigated to see if the facts can be sustained.

Mr. ILSLEY: Yes.

WITNESS: As a matter of fact, we welcome the opportunity to prove these allegations. We admit they are only allegations at the present time. We have no way of proving them ourselves. Here is one. I certainly did strike out the name, and it can be received from my letter.

That the home of a correctional institution in this city of Winnipeg has contracted to make and has made ladies' waists and mattresses for a department store—I nearly slipped there—the materials being supplied by the said company. That this work was performed by the wards of this institution for whose maintenance the various cities and municipalities of the province pay. That these wards did not receive any remuneration therefor.

*By Mr. Kennedy (Winnipeg):*

Q. You refer to that as a correctional institution. Is it a male or a female institution?—A. Female.

Q. Do you know whether the minimum wage law was enforced there?—A. No wage at all. It was a correctional institution, wards of this city.

Q. Nothing was paid?—A. Nothing paid, nothing paid. I have the name of the company.

The CHAIRMAN: You will give the name of this case to the committee?

WITNESS: Yes, I have it here.

*By Mr. Factor:*

Q. Who would receive the price of the commodities, the government?—A. No, the government would not receive anything for it. The government helped to pay for the cost of these things.

Q. You say these were made by the wards of this institution, and sold to a department store. Now, the department store pays for these commodities.

*By Mr. Sommerville:*

Q. It was a correctional home?—A. They may have paid something to the correctional home. They supplied the material and it was made there. Those who worked on this material did not receive anything.

Mr. BELL: What were the articles?

Mr. SOMMERVILLE: Ladies' waists and mattresses.

WITNESS: Yes.

The CHAIRMAN: Mattresses and ladies' clothing.

Mr. BOULANGER: What was the quantity?

WITNESS: I do not know the quantity.

Mr. FACTOR: That is something that should be investigated. It is a very shocking thing, if correct.

Mr. KENNEDY (Winnipeg): Is that correctional institution located in Manitoba?

WITNESS: Yes, Mr. Kennedy; you know it very well.

*By Mr. Kennedy:*

Q. You are not implying that I was in the home?—A. I apologize, Mr. Kennedy. I do not mean that you know the facts at all. If I told you the place I mean, you would know the location of it.

Q. You will give it to the committee?—A. Yes, certainly. Here is another one, clothing. This man, a good living, honest, property owning citizen with a family, two of whom are university graduates, one is a lawyer and another an electrical engineer, not doing anything to contribute towards the home. He was unable to make any money. This man has 46 years' experience, by the way, a good man, 46 years' experience in this trade, and he went into this firm to get a job. They offered him work on making those camel pile coats. Now, I had this out personally with him. I had a sort of cross examination with him, and this is what took place. In the first place, to complete this coat required ten hours' of very hard work, and he received only one dollar. He did everything on it except the electrical cutting out and the seaming, and he worked ten long hours, for which he received one dollar.

Q. For whom was it done?—A. A department store.

Q. Is that a common practice or an individual case?—A. Well, it is only in this case. I cannot speak for that. Let me interject right here, this man—

*By Mr. Sommerville:*

Q. He worked on the coat?—A. Yes.

Q. The making of those camel pile coats?—A. Yes.

Q. He was one of the employees of this firm?—A. Yes.

Q. And for the making of this coat he got one dollar?—A. Yes.

Q. And he took ten hours?—A. Yes—later reduced to 80 cents.

*By Mr. Young:*

Q. Was this the firm that sold the coat, the merchandising firm?—A. Yes; sold it to a department store.

Q. It was not the department store that he made the coat for?—A. No, working for this firm. So I questioned him just like a lawyer would. I said:

Why did they only pay one dollar?—A. Because they could get relief men to do the same work for 50 cents. And this man had to have bread.

When you complained that one dollar was not a fair wage, what was the answer?—A. If I wanted to earn more, I could also work all night and earn \$1.50.

If you are an experienced man, only received \$1 per day, how about the inexperienced?—A. Their piece work was cut down so much that they also earned only ten cents per hour.

Q. They earned a dollar on it?—A. Yes.

Q. They earned as much as the experienced man. The experience was of no value to him?—A. No.

Who were these coats being made for?—A. One of the large departmental stores (name on request).

Now groceries. Here is a comment made in all sincerity by a wholesale man just a day before I left.

That because of large purchases made by large commercial organizations, certain lines of groceries, notably canned goods, prepared soups, soaps and condensed milk are offered for sale by retail by these organizations at a price below that at which the wholesalers of this city can purchase.

Q. You cannot give us any figures?—A. That is all available. We would be very glad, indeed, to prepare it for you. The reason why I am talking so fast is that I want to get through as quickly as possible. There is a short brief prepared by the Independent retail grocers and butchers of Winnipeg and Manitoba.

The General views of the independent retailer would be embodied in the following suggestions:—

1. The classification of manufacturer, wholesaler and retailer should be clearly defined and each class should have a control over them which should eliminate any advantage such as we have at present on account of mass or quantity buying.

A suggestion would be that an equalization tax on sales for corporations with a capitalization of \$50,000 or over, the larger the capitalization the greater the tax.

By this method it would give the individual merchant some chance of staying in the picture. In suggesting this we sincerely believe that the greatest good to the greatest number would prevail.

No doubt the one object of big business such as exists today is mass buying and monopoly of supply, thereby giving them the power to dictate not only to the small manufacturer but discriminating against the independent retailer.

We know that the chain stores and department stores have been the primary cause of business today being a "racket" and we believe the racketeering should be controlled, and we might here mention a few evils or rackets carried on which should be outlawed:—

Loss Leaders—indefinite weights.

*By Mr. Young:*

Q. Indefinite weights. Explain that?—A. It is current gossip that the weights are not 100 per cent.

Q. That is to say that these big stores do not give you 16 ounces to the pound?—A. I will not specify big stores—these chain stores. That is the current belief.

The CHAIRMAN: Perhaps, Mr. Young, you would allow me to put the same question to Mr. Falconer that was put yesterday on the same point and we might elicit a reply. Is it possible, for instance, to get 100 pounds of sugar weighed out of a 100 pound sack of sugar?

WITNESS: Mr. Stevens, I could answer best by speaking of a keg of nails. There is 100 pounds of nails—I am more familiar with that—and I never get 100 pounds out a keg of nails.

The CHAIRMAN: In practice it is found not possible to do it?

Mr. BARIBEAU: What about dried foods?

WITNESS: It is the same thing. It is the principle I mention.

Mr. KENNEDY (Winnipeg): When weighed out in small lots you can get 100 pounds when you sell the whole keg?

The CHAIRMAN: Anyone who knows the retail business is so familiar with this that it is almost unnecessary to say it; but the fact is that where you receive goods in bulk and weigh them out to the customer over the counter you never can get out of the bulk weight in detail what you are supposed to sell out. But the point is this, if I might ask one more question: is it the complaint of the independent retailer that in the chain store, for instance—the employer being held responsible for the stock and the inventory—there must be some other way of making up for the loss or shrinkage in the weighing out of bulk goods?

WITNESS: Mr. Stevens, I would like to tell you—and I think probably this is familiar to everybody here—of one method of selling 50 or 100 pounds of sugar. They are put up in two bags, and one is—supposing out of 50 pounds one has 48 and the other has two, and they are in the same place—it is self service. Complaints have been made and they say, “you did not take the other; that 2 pounds belongs to it.” They only got 48 pounds out of the 50, and there is 2 pounds, because the bag was full and the other bag was there and they could take it if they knew enough, but they did not, and they went away with 48 pounds of sugar.

Mr. YOUNG: That is going on, is it?

WITNESS: That is supposed to be going on.

*By Mr. Kennedy (Winnipeg):*

Q. In Winnipeg, as in any other city, I presume inspectors of weights are checking up from time to time?—A. I think they only check the scales.

Q. No. They do, as a matter of fact. For instance they will stop a bread wagon or they will stop a grocery delivery and that sort of thing and check them?—A. In my twenty-five years' experience the only contact I have had with scale people is when they come in by order of the government and spend a few minutes and charge us \$1.50 for testing our scale.

Q. In view of this reference to underweight in commodities with reference to chain stores I was wondering what your knowledge on that point is?—A. I have nothing definite on that, Mr. Kennedy; this is hearsay, and I have had no personal experience.

Q. It would be possible, of course, to get a record, say, as to prosecutions in respect of short weights?—A. I think it would.

Q. You have not looked into that?—A. No, I have not.

*By Mr. Young:*

Q. A moment ago you said something about indefinite weights. Now, what I want to get at is this: is the practice of giving indefinite weights, or short weights to put it plainly, more prevalent in these chain and department stores than it is in other stores?—A. Absolutely.

Q. It is? The individual storekeeper gives honest weights?—A. Yes.

Q. And the chain and department stores do not?—A. That is the inference. That is the statement made by the independent men themselves.

Q. They have proof of that?—A. They have proof of that.

*By Mr. Kennedy (Winnipeg):*

Q. It is not that I have any desire to make a good case for the chain stores, but we want to be fair, and I think it should be clearly understood that what you say about short weight is purely hearsay?—A. It is, Mr. Kennedy.

Mr. LLSLEY: He says he has proof.

Mr. FACTOR: In any event it is very refreshing that some of these practices are found in Winnipeg and are not all in Toronto.

Mr. KENNEDY (Winnipeg): We would like to have it cleared up.

*By Mr. Bell:*

Q. Are you under obligation when you sell a keg of nails to give 100 pounds?—A. Are we under obligation? If a man comes in for 10 pounds of nails—

Q. I am asking you about nails in the bulk: if a keg of nails is supposed to contain 100 pounds. Is it?—A. Yes.

Q. Are you supposed to give 100 pounds of content, or the weight of the packages?—A. Oh, 100 pounds of nails. Suppose it was weighed out on the scale, a bare scale, and dumped into a bag. We should do like they do with the hams—put it into bags and get the price of the bags as well.

The CHAIRMAN: You do not do that?

WITNESS: No, we do not.

*By Mr. Bell:*

Q. Maybe the bags would cost more than the nails?—A. No.

Q. As a matter of fact, does a keg of nails contain 100 pounds?—A. Yes. That is the net. The keg would weight 6 or 7 pounds.

*By Mr. Ilsley:*

Q. With regard to this short weight charge, what is your proof?—A. I did not say I had proof; I said it was current.

Mr. YOUNG: I asked you if you could prove it, and you said yes.

WITNESS: Not of the weight conditions.

*By Mr. Young:*

Q. I asked you if you had proof that the chain stores and department stores are worse offenders than the individual traders and you said you had?—A. I did not mean that. I did not get your question.

*By Mr. Ilsley:*

Q. You have not any proof?—A. No, Mr. Ilsley.

*By Mr. Factor:*

Q. Do you think it is advisable to give this committee a lot of gossip of that kind; it is a serious charge?—A. Well, Mr. Factor—

Q. I would like to investigate it if there is any charge in it. Let us investigate it?—A. We cannot do that. This is the honest belief of a lot of men sitting around the table seriously considering these matters and they come out and say that this is so.

Mr. ISLEY: You do not accuse people of theft unless you have some facts to go on.

WITNESS: I grant you.

Mr. ISLEY: You are accusing them of a criminal offence—short-weighting their customers.

Mr. KENNEDY (Winnipeg): I presume that we can obtain a list of prosecutions and convictions from the Weights and Measures branch.

*By Mr. Kennedy (Winnipeg):*

Q. If a man suspects he has got low weight he can go and have it tested, can he not?—A. I think he has that privilege, yes.

Q. And a prosecution follows.

*By Mr. Young:*

Q. Is not this true that these 48-pound or 50-pound or 100-pound or 25-pound packages are all put up in the factories and not by the stores?—A. No. I think the custom in the chain stores is to buy it in bulk and bag it there.

The CHAIRMAN: Such things as sugar, rice, dried fruits and articles of that kind.

Mr. YOUNG: In our country sugar is sold in bags put up by the factory.

Mr. EDWARDS: Is sugar sold that way?

Mr. YOUNG: Yes. That is the way in the west—10 pounds or 20 pounds.

Mr. BELL: Is it not weighed out on a small scale?

Mr. YOUNG: Some of the merchants have been switching back to that because they thought they could get a little more that way. I am not making any insinuations. They said they could save the price of the cotton sack; it was cheaper to put it into a paper sack; but up to the last six months it was practically all sold in cotton bags sewed up at the factory.

WITNESS: Standard or quality not clearly stated in untruthful advertising and secret rebates or discounts.

We believe and suggest that the part time labour employed should be taken into consideration and investigated and the low standard of wages paid by the chain stores for long hours, even after business hours is a detriment to the good of any community.

The CHAIRMAN: Well, let us proceed.

The WITNESS: This is just about finished. A city, town or country is prosperous only when all classes are considered, and the mass buying and high pressure advertising that has been going on for the past few years has had a very detrimental effect not only on the independent retailers but also on the producers, who in many cases have taken a very small price for their commodities on account of the product being advertised at a bargain price by these chain and big store corporations.

This brief sent with our delegate from Manitoba covers only a few of the evils prevailing to-day, but we feel that more will come from your investigation which we wish every success, to the end that trading in Canada may be put on a higher standard.

The next one is with reference to the drug trade, and I am just citing one instance. I could have got a great many more. I found from interviewing druggists that many of their goods have a standard selling price fixed and that because of this they are protected to a certain extent, but that on goods for which there is no fixed selling price they are frequently underpriced by the large commercial institutions owing to the fact that the list price to the retailer decreases in proportion to the amount purchased by the retailer. That a large retail organization in buying large quantities pay a price equivalent to that paid by a wholesaler; and that in the case of articles the selling price for each is fixed, the profit to the large retailer is much larger than to the small retailer, and in the case of goods for which there is no fixed price the large retailer frequently sells at a price below the cost price of the retailer.

I have been informed by druggists of the city of Winnipeg that the A drug company of this city recently refused to sign an agreement to the effect that they would not sell ovaltine at a cut price, and that the distributors refused to supply them with their product.

That the A drug company of Winnipeg had been selling ovaltine at from 79 to 89 cents per can, and upon their inability to secure this product from the distributor they made purchases through other jobbers and through retail organizations all over the city of Winnipeg and then put it in at 79 to 89 cents per can.

The CHAIRMAN: I wish you would give the particulars in connection with that. That is a practice that has been alleged and we will have to look into that.

The WITNESS: I will, Mr. Chairman. Stepping over to the furniture department for a moment, I found upon investigation that the retail upholsterers in this city were unable to compete in price with the large commercial organizations and were being forced out of business. That whereas upholsterers two years ago were earning \$32.50 per week as wages at their trade, they were now being

forced to work at \$15.50 a week, and that the main reason for this decrease in wages was that certain large commercial organizations are purchasing upholstered furniture from manufacturers at a price for which it is impossible to pay a living wage to the workers engaged in its manufacture.

I found that the smaller independent retail upholsterer paying a living wage to his employees has no market for his goods, owing to the fact that the same goods are being sold in competition to him at a price much below his cost of manufacture. About a dozen independent furniture dealers have been wiped out.

*By Mr. Sommerville:*

Q. Can you tell us how many furniture places there are in Winnipeg outside of the departmental stores?—A. That is just what I was coming to; it is a tragic thing.

*By Mr. Factor:*

Q. We have been told that there is only one outside of the departmental stores, only one left.—A. That is true, Mr. Factor; right now there is only one. I think in the last twelve or fifteen years there has probably been about one a year go out, and there remains only one.

*By Mr. Sommerville:*

Q. One furniture dealer outside of the two large stores?—A. Yes, just one furniture dealer outside of the two large stores.

Q. And what is the population of Winnipeg?—A. Greater Winnipeg 300,000.

*By Mr. Kennedy (Winnipeg):*

Q. And some of those who have gone out of business were long established?—A. Yes, quite long established, Mr. Kennedy.

Q. Some of them had been established for over a quarter of a century or more?—A. Some of them going back as long as forty-five years ago.

*By Mr. Young:*

Q. Did they all go bankrupt?—A. Yes, sir.

*By Mr. Factor:*

Q. They could not meet the competition?—A. That is right. The last one, I think, is sick right now.

*By Mr. Kennedy (Winnipeg):*

Q. And most of these buildings now stand vacant?—A. Yes, the most of them are.

*By Mr. Sommerville:*

Q. I think you intimated that you had the figures on the assessment of the one remaining building?—A. Yes, I have that. I have not got it with me now.

Shoes—unfair practices of department stores. The department stores make a concentrated effort to destroy the value of all nationally advertised goods with a trade mark. They will procure the goods by any means and slash the price, with the result that merchants doing an orderly business are discredited in their own commodity. The only trade mark or branded goods free from this practice are those controlled in their own organization.

Unfair practice of manufacturer—In the rubber footwear trade, the spread between the small store and the department store is so great that the department store can sell at the cost to the small store. This is the greatest evil of all and

applies to almost every line of merchandise. In lines like rubber footwear where styles and qualities are uniform from season to season, and in each factory, small stores are forced to meet the lowest price quoted by the big store.

*By Mr. Young:*

Q. Right there, in the shoe trade I met a man one time who told me that he had been selling boots and shoes right opposite Eatons in Winnipeg for twenty years, and he said if he could get any closer to Eatons he would do so.—A. I would like to meet him.

Q. He said he had a very decided advantage over the big store in the fact that he could give his customers personal service, something that the big store could not give, is that correct?—A. Is that recent, Mr. Young?

Q. Three or four years ago.—A. Well, I think probably the personal service up to three or four years ago was a different factor than it is today. Price has been a dominant factor in the last four years. Do you know if that man is in business today.

Q. I don't know, I have not seen him since. You think there is no advantage then in personal service in the boot and shoe business any more?—A. Oh, yes, I do. Personal service is bound to be a factor, but price is a very big factor nowadays. Merchandise of this particular nature are used as leaders and it has a better chance to discredit the small dealer if he does not meet the price, and put him out of business if he does.

Manufacturers who have established a trade mark line, for instance, "Hurlbut shoes for children" and then make up a large quantity of shoes for a semi-annual sale in lower quality material and use the same trade mark, advertise the shoes as regular Hurlbut shoes when they are not.

*By Mr. Kennedy (Winnipeg):*

Q. I think you ought to give that before you leave.—A. I will, yes. This has happened for three years with the result that the regular trade in Hurlbut shoes has been destroyed.

*By Mr. Factor:*

Q. What kind of shoes are they?—A. Shoes for children.

Q. You said they were not regular Hurlbut shoes. What kind were they, a special line?—A. Special line cheaper grade, but allowed to put the trade mark on.

Q. The Hurlbut trade mark?—A. Yes, the Hurlbut trade mark. The same practice has recently been employed by Selby arch-preserver shoes, Mont-real. The goods sold as regular quality goods were not regular quality but carried the trade mark.

*By Mr. Kennedy (Winnipeg):*

Q. Do you say that they will take a well known trade mark and permit another manufacturer to put that trade mark on?—A. No, no, the same company will.

Mr. SOMMERVILLE: The same company will make them for special sales, will make shoes of lower quality but carry the name.

*By Mr. Ilsley:*

Q. The whole objection is in their being represented as the regular quality?—A. Yes, I would say so. The Hurlbut shoe by virtue of a long established business, and high business ethics, made good shoes and spent a pile of money creating a public acceptance for these shoes. Then the big stores come in and say we want that shoe but want it in a cheaper grade, and they use that name that the company had built up over a term of years and now it is destroyed.

*By Mr. Ilsley:*

Q. With the permission and consent of the Hurlbut Company?—A. Yes.

*By Mr. Edwards:*

Q. Are you aware that there are two companies?—A. I did not know about that.

Q. The original Hurlbut is in Preston, and Hurlbut, the principal of this shoe company, has now opened a factory in Toronto?—A. Well, one is not a succession of the other as a result of this condition.

Mr. EDWARDS: No, I am just giving you this information. This recent one is about four or five months old.

*By Mr. Ilsley:*

Q. Did the department store represent them to be the regular type or the original type of shoe, or original product?—A. Well, that is the inference; they advertised them as Hurlbut.

Q. Then if they do they keep within the law, I suppose?—A. Oh, yes.

*By Mr. Edwards:*

Q. It is a special children's shoe, is it not?—A. Yes, special children's shoes.

Q. In other words, the factory starts putting out a cheaper product and they sell it?—A. Yes, they sell the trade mark too. They prostitute the name by putting it on there.

*By Mr. Sommerville:*

Q. They do not put out the cheaper shoe for general distribution?—A. No.

Q. They put it out as a special line for customers very much cheaper?—A. Yes.

*By Mr. Young:*

Q. Many of the iniquities practiced in the trade are within the law?—A. Oh, yes, just within the law. They know pretty well what they are doing, just the fine edge.

*By Mr. Factor:*

Q. The general public know that the Hurlbut children's shoes is a brand that they have been getting for years?—A. Yes, sir.

Q. And when they buy the inferior quality are they in a position to judge if it is inferior or not?—A. No, they are not.

Q. So it is really putting it over the public, is it not?—A. Absolutely putting it over them.

*By Mr. Young:*

Q. Is Hurlbut selling his good name for a mess of pottage, so to speak?—A. It looks like it, Mr. Young. One responsible man told me that he had sold Hurlbut shoes for years and years but that the trade in Hurlbut shoes is now destroyed. Others have told me the same thing. They cannot sell them, therefore, they do not buy them. That is why I would like to know if it was a succession of the firm.

Mr. EDWARDS: No, Hurlbut is not connected with the firm now.

The WITNESS: The next one is something new. It is headed "Winnipeg Graphic Arts Council." It reads:—

Noting your contemplated presentation of facts regarding unethical trade practices in the West, and that you are having a hearing before

the Stevens Committee at Ottawa in the near future, our Council beg to submit a brief outline for the printing and allied trades of greater Winnipeg.

Conditions here for the past few years have grown steadily worse until it came to a point where the idea of profit was an unknown quantity, with a result that printing offices and book-binderies were merely existing with scarcely any credit standing in the community. The depression was blamed for a lot of the bad times, but things would not have been so bad if certain practices outside of the printers themselves had not accompanied the general slump in orders.

Some of these evils were the ease with which almost anyone could secure a plant comprising type, printing and book-binding machinery. There also seemed to have been an elasticity of credit so far as paper and supplies were concerned. In every case new competition was set up with little, if any, business experience behind it, with resulting disaster to countless plants who were paying their bills regularly. Pirating reached great heights, while decency and common sense banished entirely, and price cutting became rampant.

Another feature which proves a menace to the trade is the practice of privately owned plants entering the commercial field. These privately owned plants operate as a rule on their own work during short seasons. By entering the commercial field they hope to cut down overhead charges, and by their actions created a new competition which was disastrous.

Mr. FACTOR: Mr. Ilsley does not understand that, will you just explain it to him.

Mr. ILSLEY: I do not want to hold the committee up.

Mr. FACTOR: I am not sure that I understand it myself.

The WITNESS: In a word, a department store that has a printing plant, in order to keep down the overhead in a quiet season, goes out into the market for work, taking it away from the legitimate printers, and they do it at a loss to keep their plants going.

*By Mr. Factor:*

Q. What do they use their plant for?—A. For setting up their advertisements and printing their own catalogues.

*By Mr. Young:*

Q. Do they print the catalogues in Winnipeg?—A. Oh, yes, they have an immense plant there. I will just finish reading this:

The result of the whole thing is that fair wages cannot be maintained nor anything like profit secured in the trade until some changes are made in the methods. The whole community is affected by the demoralized conditions of the 100 to 115 plants in Winnipeg.

The Winnipeg Graphic Arts Council (just organized) is an organization to try to improve matters. It would strengthen the hands of ours and all similar organizations if some code of ethics or improved methods of operation could be set up with sufficient power to make it effective. We are a new body as yet, but if we can in any way help to bring about better business conditions in our whole community life we will gladly do our bit.

*By Mr. Edwards:*

Q. Are those trades unionized, the printers?—A. The majority of them are. Those people I spoke of in this particular trade, printing, have asked relief. Those are the conditions I spoke of, regardless of unions or anything else. They simply made conditions worse.

*By Mr. Kennedy (Winnipeg):*

Q. Before you go on, the printing trade in Winnipeg is pretty well unionized, I understand?—A. It was, Mr. Kennedy, but I do not think it is now.

Q. Do you know whether or not, without referring to them by name, the printing plants of these department stores that you spoke of are closed or open shops?—A. Well, I think—

Q. You don't know?—A. I don't know; I would not want to go on record as to that. The inference there is that they are doing work at less than what the union companies can. Here is one from the brotherhood—

*By Mr. Young:*

Q. Because of the size of their plant, can they operate more cheaply than the others?—A. No. I think that was drawn to your attention.

*By Mr. Kennedy (Winnipeg):*

Q. I think your suggestion is that in slack times they do it?—A. In slack times they will do it for anything.

*By Mr. Young:*

Q. It is not a matter of printing their own work; they go out and take other work from other people in these slack periods?—A. Yes.

Q. At ridiculous figures?—A. Yes.

Q. Demoralizing the printing industry?—A. Yes.

Q. For the other 115 plants approximately?—A. Yes. Here is a letter which is addressed to Hon. Mr. Stevens. It is a short one, and it is very important that it should be read to you. It is from the Brotherhood of Painters, Decorators and Paperhangers of America. It reads:—

At a meeting of the above local union your statements and replies by Mr. R. Eaton—

I think this is in order.

—re fair wages and conditions were brought to our notice. It may be of interest to you to know of the "fair wages and conditions" as prevail in the decorating department of the T. Eaton store in Winnipeg. They have the January sales going on just now, and one of the items is wall-paper. To boost the sale of wall-paper, they offer to do the labour of hanging the wall-paper for \$2.95 a room, for rooms up to 12 by 16. We know that the labour cannot be done for that price, and pay wages as laid down by the Fair Wage Board which is 70 cents per hour. I have interviewed master painters and some employees, who state that the work cannot be done at that price and pay fair wages. The average time for doing a room and doing the class of work which the T. Eaton Company require, is from 7 to 8 hours, which works out at from 30 to 40 cents per hour. This affects the master painters of their city, as they cannot compete with the T. Eaton Company and pay fair wages.

*By Mr. Young:*

Q. Did you say the Fair Wage Board fixed the rate at 70 cents an hour?—A. No.

Q. That is what you just read?—A. Yes, the provincial fair wage is 70 cents an hour.

Q. That is fixed by the provincial Fair Wage Board?—A. Yes.

Q. Seventy cents an hour for paperhanging?—A. Yes. I didn't have them separated; they have two departmental stores mixed, and if I make any slip—

*By Mr. Sommerville:*

Q. Don't make any slip; just refer to them as "a departmental store"?—

A. All right.

Another department store have also had a sale on. They offered to do rooms for \$6.25, including paper.

There are two of them there acting like two bad boys.

The Eaton company came back at them—

Pardon me—

Q. It is a little late in the day to say that?—A. I am sorry.

The other company came back at them by offering to do the same sized room and same quality paper for \$5.25.

Q. Including papering?—A. Yes.

Q. And paper?—A. Yes.

*By Mr. Young:*

Q. What is the value of the paper by itself, and apart from the labour?—

A. I don't know.

Mr. SOMMERVILLE: That will be ascertained later, one of the items that the investigator will be asked to ascertain.

Mr. FACTOR: I know I am charged \$5 for papering a room, without paper.

Mr. YOUNG: There are so many things that are going to be ascertained later on that I am afraid that we will find it hard to place them and connect them up with this evidence.

The WITNESS: This is not half enough.

The other department store also had an advertisement offering to do rooms for nothing, if the paper cost 75 cents to \$1 per roll. That may be fine for the customer but where does the worker get off at? This matter has been taken up by the Building Trades Council who arranged to have a meeting with the manager of one of the department stores, but he being away, were met by another man who believes it is better for the worker to receive a dollar or two a day than to go on relief. After further attempts to see the manager, a reply was received from the other man, who said the men were on a basis of sub-contractors. This applied mostly to men on the painting, calcimining and other jobs of decorating who were allotted a certain number of hours to do the job. I presume the company took the cost of material and their profit off before dividing the remainder amongst the men.

Q. By sub-contractors you mean that the departmental store does not employ the men to do the work, but contracts the work out at so much?—A. Yes, that is it.

Any time worked after the allotted time was not paid for. On some jobs, the time for this overtime amounted to from 10 to 40 per cent more time than was allotted. Some men demanded their pay for the whole time worked but they do not work there any more.

In the words of the song, "Annie doesn't live here any more." They do not work there any more. They were fired.

Q. You mean if a man works two or three hours overtime, he does not get anything at all, or does not get the excess rate?—A. That is right; he does not get anything.

Q. He does not get anything at all?—A. No. There are a certain number of hours allotted for the work, and if it takes him twice as long to do the work, that is just too bad for him.

Hoping this may be of interest to you and that something can be done to alleviate these conditions which we believe to be rotten and harmful to the trade.

It is signed by their president of the local union.

The ACTING CHAIRMAN: It is the custom of the committee to rise at 1 o'clock. We do not want to hurry you. Were you nearly through?

The WITNESS: Just whatever the committee wishes.

Mr. YOUNG: After dinner.

Mr. SOMMERVILLE: We have other provinces to be heard.

The ACTING CHAIRMAN: Then, Mr. Grassby, if you will come back at 3.30, the committee will sit again.

The committee adjourned until 3.30 o'clock.

---

#### AFTERNOON SESSION

The committee resumed at 3.30 p.m.

The CHAIRMAN: We will finish with Mr. Falconer, and we shall, if possible, hear from Alberta and Saskatchewan this afternoon.

The WITNESS: Mr. Chairman and gentlemen, in order to comply with a request of the Chairman, I am omitting considerable of this brief, but I am asking the privilege of filing it as an exhibit (Exhibit No. 47).

The department store problem in Winnipeg is abnormal. Probably nowhere in Canada is the merchant as subject to such a departmental and chain store complex as in this city. Independent merchants are continually finding it more difficult to stay in business, and are being driven out one by one, although they are men of ability, heavy experience and have had sufficient capital to merchandise in the proper manner,—

Mr. SOMMERVILLE: This brief is from what association?

The WITNESS: From the Manitoba Electrical Association.

Mr. FACTOR: We had a similar statement about Toronto. It was said that the competition in Toronto was worse than anywhere else; that Toronto was the worst place.

The WITNESS: We think ours is the worst. Although they are men of ability, have the experience, and have had sufficient capital to merchandise in the proper manner, they are gradually being eliminated so that to-day many lines of goods can only be purchased at department stores, merchandise such as dress goods, dry goods, furniture, draperies, carpets, linoleums, leather goods, luggage, and many other items.

The radio business has practically been ruined by department stores and manufacturers. The department store with its mass buying, is able to hammer down the manufacturer to prices that they will not extend to us.

Refrigerators are being sold on a 25 cent a day rental charge. This is in many cases mere bait to the customer, the customer being sold outright after getting tired of putting 25 cents per day in the meter, and cheap refrigerators are advertised to get customers in the store, but are of such inferior quality that they will buy a better one.

Washing machines sold at prices that no dealer can purchase. Trade marking quality merchandise sold with department store stencils at lower than the dealers can buy. Fixtures, fittings and lamps are sold at such prices that either the department or chain stores make no money and are sold as loss leaders or the manufacturer cuts the quality and reduces the wage of his employees, until he can no longer subsist in a decent and respectable manner.

Time payments. Much merchandise is sold in many cases without interest, on time payments. Trade-in values are given far in excess of the actual value of the article, thus cutting the prices and special free servicing is given as further attraction. The habit of free servicing of radios with the hope of selling tubes is also very objectionable for whenever reception conditions are bad, merchants are being continually called out to service radios with which nothing is the matter, and the public expect this service free because it is so advertised.

This investigation has been long delayed and now it has begun, should be probed to the bottom and all the appalling abuses exposed, and means taken to rectify the present conditions. Unless this is done, labour, manufacturers, jobbers, merchants, and landlords will all be ruined. This disintegration is going on at a fast pace, as the inquiry is already revealing. Quick action on the part of the government is strongly urged, and if Mr. Stevens' courageous action so far is carried further, and acted upon immediately, it will save a lot of disaster and suffering. We wish every success for the work of the commission. That is signed by the proper authorities.

Mr. SOMMERVILLE: It is signed by A. E. Godsmark, secretary of the Manitoba chapter, Association of Electragists, international.

The WITNESS: There is one point I would like to bring out here, and that is the difficulty we had in getting some of the information. Here is a large stationery store, one of the largest in the west, doing a tremendous business, which had repeatedly complained of the conditions under which they are working, and are doing business. So when I went to get the information from them, at the last moment they didn't have any, everything was all right. Now, you men of the east probably call that intestinal fortitude; we have another word for it in the west. They did not have the guts to give that information, admitting before they had it, but they did not do it at the last moment. It did not come through. That is one of the difficulties. A committee of investigators would probably have more influence. On the way to the train, a restaurant man came to me and he offered this, hearing that we were coming down to Ottawa, as a condition that was taking place every day in the department stores, where they have a lunch, and the price was 15 cents providing you got there before 12 o'clock. I asked him why they stopped at twelve o'clock, and he said so that they could have the other half hour or three quarters of an hour to spend whatever money they had left in the department store. I asked him why they could not do the same thing, and he said they could not do it, nor could any other restaurant in Winnipeg supply a meal for anything like 15 cents. I have here in my hand a telegram which I received this morning, and which I shall read to you: "Theatres giving free glassware unfair to merchants." (Exhibit No. 49.) This has been going on for some time. So far as Manitoba is concerned, or Winnipeg is concerned, everybody in the crockery business is in as bad a condition as my business because of the free distribution of crockery ware in the theatres.

The CHAIRMAN: That is premiums?

The WITNESS: Premiums; it is sold with the ticket. Now they think they have filled the demand they are going into another line, which is nevertheless

just as harmful, sir; the glassware business is now going to be hit in the same way. We claim it is very unfair.

Mr. FACTOR: On the part of the theatres?

The WITNESS: Theatres, yes. I just interject that because I had a telegram, and they asked me to please read it here. Now, I am just about through, but I want to use a biblical quotation, if you might say that, where the mills of the gods grind slowly, they grind exceedingly fine. I have here in my hand, a large battery of advertising by one firm. We come along with another one the next day that has been used. Here we are, here are two cases. They are coming closer and closer to the time when, as a result of this—and it will be a short time—there will be nobody but themselves.

*By Mr. Factor:*

Q. What is in there?—A. Everything, every business is hit. It may be best illustrated by a conversation I overheard just before leaving. Where the department manager went to his boss and said, I think we have reached the saturation point. What, says the man overhearing him? Is not so and so in business down the street? He replied, yes, and the manager said, what do you mean, we have reached the saturation point, so long as there is another man left in the business? I humbly submit this as the best I can do for you just now.

*By Mr. Kennedy (Peace River):*

Q. Do they not drive people into the stores?—A. They may not drive them in, but they lead them in. One department store has three buses going out into the communities.

Q. How far out?—A. About three or four miles out in another community. They have a very nice set-up of different stores, small stores, you know, making a nice comfortable living, trying to at least, and this bus business goes on for about six weeks, bringing the load down direct to this department store free of charge.

Q. Do they get the buses free of charge?—A. They hire them from the street car people.

Q. They pay the street car people?—A. They pay the street car people for the rent of these buses.

*By Mr. Sommerville:*

Q. You are filing newspapers to show the advertising of the two stores in Winnipeg?—A. Yes.

Mr. FACTOR: Is that a newspaper?

The WITNESS: No, what they call flyers.

Mr. FACTOR: What is that?

The WITNESS: A special ad with a special purpose. One gets out one on one day, and the other one, one the next day. As I already said, I do not think there is even a date, because they never know the moment they are going to put it out.

Mr. SOMMERVILLE: This says Thursday, March 1st.

Mr. KENNEDY (*Peace River*): They are not published in the newspapers at all, they are delivered from door to door.

The WITNESS: Delivered from door to door, from 40,000 to 50,000. They go right through and blanket the city.

Witness retired.

Mr. W. L. McQuarrie called and sworn.

*By Mr. Sommerville:*

Q. You are the secretary of the Saskatchewan division of the Retail Merchants' Association?—A. Yes.

Q. And you have been associated with the Retail Merchants' Association for many years?—A. For many years.

Q. Prior to that you were in business yourself?—A. I am still in business.

Q. Now, you desire on behalf of your association to make a presentation to this committee on matters that are relevant to the inquiry? You will be good enough to present your case, Mr. McQuarrie.—A. I will be glad to try, and I hope that the committee will feel that it is relevant to the case. I have figured it out as best we could, in the short time at my disposal.

The CHAIRMAN: You may sit down, if you wish.

The WITNESS: I will be glad to sit part of the time, but just for the first few minutes, if it is all right, I will stand.

The CHAIRMAN: Till you get into your stride, as it were.

The WITNESS: Yes. Now Mr. Chairman, I am not going to be forgetful; I am not going to attempt to make a speech here this afternoon—I could not if I tried, but there are just some preliminaries before I get down to real facts of the case and the proof I want to give. I will try not to be too long. This is addressed to the Hon. H. H. Stevens, committee investigating the distribution of commodities.

Effect of mass buying by department and chain store organizations upon the independent retail trade, as well as its affect upon the community life.

The independent retailers in our province of Saskatchewan are very grateful to the federal government for the appointment of this committee to investigate retail trading conditions throughout Canada and in our province, because we feel that the large departmental and corporation chain store organizations have certain advantages in buying that the smaller independent stores do not enjoy, and that through certain trade practices adopted by these large organizations they have an undue advantage and through these advantages and by unethical trade practices they are making it very difficult for the independent retailer in the different lines of trade to carry on and are slowly but surely eliminating the independent retailer.

At the outset I should say that I am the secretary of the Retail Merchants' Association of Canada, Incorporated, for Saskatchewan, where, according to the recent census, we have some 10,728 retailers engaged in the different lines of trade, of which some 1,745 are general merchants, 1,730 handling food supplies, 369 handling men's and women's wear, including boots and shoes, 1,602 engaged in the furniture, hardware, drugs and builders' supplies, 1,213 in the automotive business, and other retail establishments numbering 3,310, and in addition some 701 restaurants. From this number of 10,728, take the 701 engaged in the restaurant business, and the very small stores, there would probably be one half or about 5,000 substantial retail business places in the province. Our own mailing list consists of 3,794 retail dealers, while our membership rolls carry about 2,300 names, and although these are not all at any one time paid up they represent the best element of the retailers of Saskatchewan. I wanted to give you this, Mr. Chairman, because it had been questioned at different places as to whether our association could fairly well speak for retailers.

*By Mr. Factor:*

Q. Have you the number of employees engaged in retail services?—A. No, sir.

Q. You have not?—A. No, sir; it is easily gotten.

Q. You have a membership of 2,300 names?—A. Yes. We feel therefore that our association does represent fairly well the retail dealers of Saskatchewan, and from meetings held recently in Regina, Saskatoon, Moose Jaw, Swift Current, North Battleford, Prince Albert, Yorkton, Shaunavon, Unity, Windthorst, Lloydminster, and some other points, as well as recent correspondence from throughout the province, that we are fully authorized to speak for and represent them before your committee.

Since your committee has been appointed, Saskatchewan retailers have sent in to us much material which we believe will go to show the condition of retail merchandising in our province. That the advantage in buying which the departmental and chain stores enjoy over the independent retailer, which with methods and practices which they follow through "loss leaders" and other methods, probably unfairly create in the minds of the public an impression that all goods in such stores are of better value than that which the independent retailer has to offer, and which we are not prepared to admit. Therefore they draw much business to them by cause of such tactics.

We will endeavour to lay before you and place in your hands the situation as it is, with proof, where possible, of the spread in prices where such large organizations sell below independent retailers' cost, and probably in some cases below their own cost in order to attract the public to their places of business and which necessarily tend to break the confidence of the public in the ability of the independent retailer to equally serve them. For your convenience we will file with you this material, keeping each section of the trade separate from the other.

We understand that the spread between the price charged to consumer and the returns to the producer will come within the scope of this inquiry and in regard to this I wish to say that the evidence which we will submit to you will show conclusively that the independent retail trade of Saskatchewan, whom we are representing, are selling on so close a margin of profit that there are very few of them to-day who do more than cover their overhead expense. You will also see by the evidence we will submit that this is entirely brought about by the policy of some manufacturers and some jobbers giving mass buyers preferential prices which enable them to sell to the consumer at prices below the independent retailer's cost. The spread between retail cost and consumer cost to-day is frequently insufficient to cover operating expenses and the retailer frequently has to deliberately sell at a loss in order to meet the competition of the departmental and chain store. The evidence we will submit is proof of this.

As you all know, Saskatchewan is a young province and the independent dealer in Saskatchewan can, with the farmer settlers, claim much credit for the building up in Saskatchewan during the last 25 years, of our cities, towns and villages which places are a credit to the province. Those thriving business centres scattered throughout our vast province have done much to improve and make brighter the life of the farmer, his wife and family, who settled on these plains, and working with the merchant they made Saskatchewan a prosperous province and a happy place in which to live. There are some parts that are not so prosperous to-day, but we who live there and have lived there a long time believe it will only be a matter of a short time until it comes back.

We believe, however, that while farmers and merchants were building Saskatchewan that through the catalogues of the large mail order stores from the east, who paid no business tax in Saskatchewan, and later the corporation chain stores and departmental chain system, through their catalogues and cut price competition, have been gradually eating into the distribution in our province to the disadvantage of the independent retailer, and which adversely affected the farmer consumer because through loss of volume of trade those once prosperous trading centres have become less important. We think that this can be largely attributed to the trading practices of large departmental stores and corporation chain stores.

Therefore, in presenting our views, we have in mind not only the adverse affect to the volume and profit of the retailers' business but we have in mind the community life of the settlers throughout the province. These small trading centres were not only business centres but they were places where the farmer, his wife and family gathered weekly not only to do their shopping but for social enjoyments. In the matter of the building and maintaining of our churches it was the retail merchant who took the leading part as he also did in sports and entertainment, hockey teams, baseball teams, public library, swimming pool, skating rink, agricultural society, and practically every effort that goes to make up the social and recreational life of the community, contributing generously so that such might be enjoyed for the benefit and improvement of the people of the district. What have the departmental stores done along this line?

The independent retailer in Saskatchewan has been a great factor in the development of the province and their every dollar has been and is invested in Saskatchewan. Their capital has been used largely to finance the farmer and broadly speaking their entire capital is to-day in the hands of the agricultural community and represents loans, not of money, but of the necessities of life. Our merchants have become largely indebted to the wholesale trade as a result of this common practice of giving credit to the farmer, and many of these retailers will pass out of the commercial picture unless trading conditions can be made such, that the business of retail merchandising by the independent retailer can once more be placed on more of an equal footing with the departmental and chain store organizations who are moneyed corporations with large reserves of capital behind them, and their gigantic businesses operate at strategic trading points throughout the province. They advertise largely and the prices at which they sell, exercise a measure of control upon the prices at which the independent retail merchant must also sell if he is to secure any share of the public patronage. Obviously business will go, especially in times such as these, to those who can make the public believe that their prices are the lowest and the values they offer the best.

I had one of the directors of the wheat pool in to see me a few days before I left and he said to me—and I thought in a few terse words—this is what he said, "Remember, Mr. McQuarrie, the public set the price of any article at the lowest price that that article is advertised or can be bought." I thought it was just about right. Those concerns advertise standard goods at such prices that the ordinary retail trade cannot compete with them and this must be done in one of two ways:—

1. Either they receive special prices, rebates or discounts from the manufacturer or jobber, or
2. They deliberately sell certain lines of goods at cost or below cost in order to attract business patronage and induce the public to believe that all their goods are for sale at the same advantageous prices, as what are called, their "loss leaders".

In either case we submit to your committee that their methods are unethical and unfair. If they can use their enormous buying power to secure preferential prices, discounts or rebates from the manufacturer then the whole system of fair and honest merchandising is undermined. If, on the other hand, they deliberately sell a percentage of their goods at a loss in order to attract business, then we venture to say, that is a trade practice, which cannot but result in an equal disorganization of the retail trade, which disorganization is bound to effect both wholesaler and manufacturer.

We would venture to say that the mainstay of the retail business to-day, greatly as it has suffered in the past years, is still the independent retail merchandiser, and we cannot conceive how it can be to the interests of the

manufacturers who in many cases also supply the independent retail trade, to give secret preferential prices or if they prefer to call it quantity discounts to the large retail operators, the mass buyers. This, they know cannot but result in ultimately putting the independent retailer out of business by systematically underselling him.

We will submit to you a number of authentic instances which will show the effect upon the retail trade of the absence of any fair trade rules in the business of retail distribution. We in Saskatchewan know that the producer, who in some of the cases you are investigating, gentlemen, will probably be the manufacturer, is badly penalized by this system. We have no hesitation in describing the system of these large corporations as deliberately smashing down prices in order to attract the public attention—which system is largely responsible for present disorganization of business. Standard values have been destroyed. If a producer, whether he be a farmer or manufacturer, will not accept the price they offer, they can by reason of their great operations, sell that particular line at a loss and inside of a month the general price level has been lowered to a point where the manufacturer will be only too glad to accept their price.

Now, since I came here, Mr. Chairman and gentlemen, I had some information that I thought would be desirable and I sent a wire to our office in regard to the matter of potatoes that had been through there. I have the story, but I did not get the wire back that I thought definitely decided the question I had asked. The facts of the case were, as I remember them—about two years ago the price of potatoes in the fall of the year was 80 cents. The merchants of the city of Saskatchewan were paying 65 cents to the farmer. A short time after that one of the larger merchandising departmental stores reduced that price from 80 cents to the consuming public to 65 cents and immediately brought down the price to the farmer to 50 cents.

Mr. FACTOR: A chain store?

The WITNESS: This was a departmental store. And then the next step in a very few days was to bring the price to the consumer down to 50 cents which brought the price down to the farmer to 35 cents.

Mr. SOMMERVILLE: When the general merchant or retail merchant came down to compete then the price was reduced again by the large buyer?

The WITNESS: Yes. Pardon me. I would like to say that following that my impressions of that case were that latterly three cars of potatoes were brought in by this large departmental organization and shut our farmers out; but I came away without this definite information and I wired to my office, and this is the wire I have. I think you should have it.

Mr. YOUNG: Do you know where these three carloads of potatoes came from? Were they bought on the world market at the prevailing price?

The WITNESS: No, Winnipeg—very close. This is the wire that came back. I will leave it with you: "Mass buyers policy particularly harmful to farmers within Saskatoon district stop They can buy potatoes at less than price retailer pays local farmers and undersell retailer who is forced to continually cut down price to the farmer to compete stop Saskatoon consumes approximately 12,000 bushels each month and local farmers could raise all requirements if reasonable price was maintained—J. W. Harris." (Exhibit No. 50.)

I am going to leave that, but it does not confirm the price range I was trying to give you. That is to the best of my knowledge and I believe it is correct.

Distribution, we submit, is one of the greatest employers of labour in the Dominion—

*By Mr. Factor:*

Q. You said distribution was the greatest employer of labour?—A. No, I did not go quite so far, but very nearly. I said, "distribution, we submit, is one of the greatest." I believe if it was checked up—I believe you will find it probably is the greatest employer of labour. Distribution, we submit, is one of the greatest employers of labour in the Dominion, employs a great amount of capital and enjoys probably the greatest turnover, yet it is without any control whatever. This can only end, in our opinion, in the mass buyers securing a monopoly of that business and elimination of all independent competition. It is impossible for any merchant to remain in business, do what he may, if his competitor through certain means can buy for 80 cents or 90 cents the same goods for which that merchant has to pay one dollar, or thereabouts, and it is impossible for him to remain in business if there are one or two giant competitors who are continuously deliberately selling certain items at a loss and so dictate the prices at which their smaller competitors must sell to retain public confidence. Again referring to what a pool director said to me, the public set the price of any article as the lowest price at which that article can be bought.

Might I mention the disastrous effect that this system of distribution is having upon the community life in the Province of Saskatchewan. Before the advent of the mass buyers into Saskatchewan, our towns and villages were hives of prosperity. Truly, there was competition from the great catalogue houses in the east who paid no business tax in the villages, towns and cities in our Province, and although their business cut in, to a large extent, yet the independent dealer could sell his goods at a moderate profit because the mass buyers ten years ago were not able to buy at such preferential prices as they are to-day.

*By Mr. Young:*

Q. When did the change take place, Mr. McQuarrie?—A. Well, it took place I should think, perhaps gradually within the last ten years, possibly less than that, within the last five years. Mind you, I think I would like to say that I do not think this is all the result of depressed conditions; I think perhaps it has been going on for fully ten years.

*By Mr. Edwards:*

Q. The last four or five years.—A. I think it started even before that, in fact I know it did.

Before going on to specific cases, might we say that the independent merchant is being eliminated from the business picture on account of:—

1. Special discounts and the fact that the departmental and chain stores are classified as jobbers and enjoy jobbers discounts.

I want to speak about that again.

Q. Would you say special discounts or secret discounts, or both?—A. Well, I think I would like to say both.

Q. What I am getting at is this, Mr. McQuarrie: Supposing an article, is gotten out at a dollar and for certain quantity buying a buyer gets a discount ranging down the line according to the quantity, what objection have you against that?—A. Just let me get that again, please.

Q. Supposing a purchaser is a \$5,000 purchaser he would get a certain discount; another purchaser is a \$10,000 purchaser, or a \$20,000 purchaser, he would get a larger discount. I mean that that would be perfectly open; what do you think of that, or is it rather secret discounts that you don't know anything about?—A. This quantity buying and large buying is a big problem, and I do not know that I would like to set myself up as an expert to say what would be the right thing along that line.

Q. Just your opinion that is all.—A. I would like to say this about it, that we have in our own city a merchant who does quite a considerable business in

a certain line; I heard someone give evidence here yesterday and to-day, and they said that was the last word in discount, secret or otherwise. Now, this merchant said to me "Mr. McQuarrie, my greatest problem is, I am getting a certain price and you wonder why I would probably give evidence or give you information on this line when it might appear to be against myself, but the thing I would like to know is whether or not I am getting the last discount."

Q. In other words you think secret discount does prevail?—A. I think so. Then continuing:—

1. Special discounts and the fact that the departmental and chain stores are classified as jobbers and enjoy jobbers discounts.
2. On account of the low wages paid to their ordinary employees other than departmental heads and executives.

*By Mr. Factor:*

Q. Have you got the statistics and the wages paid in department stores and chain stores in those products?—A. We have, yes.

Q. You have not them with you?—A. No.

Q. Are they pretty low?—A. Well you know, Mr. Factor, I am not very very good on those statistics, carrying them in my head; but I have got general knowledge of these things, and I would say that from the information that we have here, and information that has been handed to me, that I believe that to be the case, that is, outside of the executives; I know that from personal knowledge just as a citizen of our Province, I know that fact.

Q. That is an accurate statement?—A. I think that is absolutely true.

*By Mr. Young:*

Q. They hire cheaper clerks, do they not? Do they not get an inferior clerk by paying less money? Would not a clerk employed in an individual store getting more salary be a better salesman than a smaller paid clerk?—A. Well, there is a very great difference in salesman, Mr. Young. I know some wonderful men to-day who would be very glad to work for less salary sooner than go on relief.

Mr. SOMMERVILLE: When there is a surplus of material you generally get what you want.

*By Mr. Young:*

Q. Well, here are two padlocks; I got them in an individually owned hardware store and there is quite a difference. The man where I got them told me all about them, the relative merits of each. However, I went into a big department store and I found a girl standing behind the counter. I picked up two padlocks, different apparently as those two, and she could not tell me anything about them; she did not know anything about them. Would she be as valuable a clerk as the man who knew all about them?—A. With the consent of the Chairman, if you will permit me, I will answer you that by quoting from a letter which I received from the merchants of Yorkton. They had a meeting in the City Hall there on March 1st of this year, and this is what they say about that (Exhibit No. 51), Yorkton is a very fine town:—

Therefore the man who keeps the community going is branded as much inferior to a highly advertised and highly capitalized corporation. They sell the "best sellers" of a jeweller, yet no one in the establishment is conversant with the article, or could even make a minor repair. They sell the "best sellers" of a drug store, and cut in price, but the community when sickness prevails is forced to rely on the chemist. The hardware merchant has to carry a heavy stock of shelf and heavy hardware necessary for repairs and operation of a community, yet sees his bread and butter lines sold and cut to influence his trade away from him.

I think, Mr. Young, that answers your question, that there is a great difference in salesmen. The owner of the individually owned store, as a rule, tries to train his salesmen to know all about that particular line of merchandise.

Q. There is a certain advantage thereto.—A. Absolutely.

*By Mr. Factor:*

Q. It is a practice that has seemingly grown up in the department stores. I have a letter here from a clerk in a Toronto department store, stating that the salesmen were called in to work about the middle of the day; they were on half time getting \$9 a week plus 30 cents per hour for overtime. Do you know of any similar conditions prevailing in your part of the country?—A. They work part time there to.

Mr. SOMMERVILLE: Instead of employing the clerk for the week and by the week they employ a clerk for the week but pay for so many hours a day.

The WITNESS: So many hours a day, yes.

Mr. FACTOR: In this case, this particular gentleman worked from 10.30 a.m. to 4 p.m. with half an hour for lunch.

Mr. SOMMERVILLE: Those are generally the busy hours of the day, from 11 to 4.

Mr. EDWARDS: The balance of the time he is simply standing by.

The WITNESS: I think I would like to specify those three points again:—

1. Special discounts and the fact that the departmental and chain stores are classified as jobbers and enjoy jobbers discounts.
2. On account of the low wages paid to their ordinary employees other than departmental heads and executives.
3. That they buy from certain manufacturers who in order to give them low prices pay their labour employees starvation wages.

May we also say before presenting to you specific cases in the different lines of trade, which will be supported by proof, that large departmental and corporation chain stores advertise and sell for less than the independent retailer's invoice cost; might we say that it is the universal opinion of Saskatchewan retailers that some measure of control by legislation should be enacted so that the unfair advantages now enjoyed by those concerns may cease. Our retailers feel that such corporations should not be permitted to sell to the consumer at or below the prevailing wholesale price to the independent retailer which they are enabled to do through discounts from quantity buying, advertising allowances, secret rebates, etc.

In our own Province we are informed it is the intention of our Provincial Government to enact legislation whereby all retail outlets will be licensed, which licence will be subject to suspension or cancellation for selling below net invoice delivered cost, or current market delivered cost plus a minimum percentage representing compensation to the merchant, including cost of operation; also for misrepresentation in advertising. And that again I want to speak about. A prosecution department will be installed and adequate penalties provided for in the event of infractions of the Act under which all licences are granted. And in saying this I believe that I am correctly informed that such legislation will be brought forward in our legislature this year. I would also like to say that this has been brought up to the point of a Bill in the adjoining Province of Alberta, and our association and the government there have worked on it, and I think that our government are going to follow along some of these lines so that we will work together.

We recognize that in order to make this proposed legislation effective in preventing mass buyers from selling below retailers costs, there must be federal legislation controlling discounts, rebates and allowances.

Let me go back to this message from the City of Yorkton. Yorkton is a really good western town.

*By Mr. Factor:*

Q. May I ask just one question before you leave that point. It is possible to eliminate the low wages and the low standards prevailing in the individual stores so that the department and chain stores are unable to buy at ridiculously low prices, would that help the situation?—A. It would help some.

Q. I mean, if the manufacturers were unable to sell to the departmental stores at a low price that in itself would cure the problem to a certain extent, to a great extent?—A. It would help some. But there is just this, in our Province, we have a pretty big Province there and if we did not have these villages and towns scattered all over—they are of great value to our people—we would have too many people in certain places in the Province; it is a good thing to have, it is a leavening.

Q. What I wanted to know is this, does not the practice start with the manufacturer who by reason of the low wages is able to sell at a cheap price to the departmental store?

Mr. SOMMERVILLE: It is the low price at which commodities are sold, the one as against the other which creates a large part of your problem.

The WITNESS: It is by those practices that I have enumerated here, Mr. Factor, whereby it is possible for a few concerns to step in and make the public think that all the goods that all other people have to sell are not right.

*By Mr. Young:*

Q. Do I understand that your answer is, that if the department store had to buy for the same price and under the same terms as the individual store this difficulty would disappear?—A. I think that if these secret rebates and discounts were done away with so that the merchants in your town, and the merchants in your town, could go to their supply houses and know that they were buying these goods at the same price as other people were buying them, I think a lot of the trouble would be eliminated.

*By Mr. Sommerville:*

Q. In other words, you do not object to competition, it is unfair competition?—A. Yes, it has got to be unfair competition.

*By Mr. Factor:*

Q. Take a small retailer buying a small quantity from the manufacturer and a large department store buying a large quantity from the manufacturer, you would not put them on the same rate of discount, would you?—A. Well now, can you get along with the large departmental store in one place in the Province or two places, or must we have those small retailers there? There might be some little discount, but when it becomes so heavy or unreasonable—well, I think I had better leave it that way.

*By Mr. Sommerville:*

Q. When the discount exceeds the value of the service then it puts you in an unfair position in competition?—A. I would think so.

*By Mr. Young:*

Q. You spoke a moment ago of standard values, what did you mean by standard values? Standard values have disappeared, I think were your words.—A. I am just trying to connect it up, just where I was at there. What I was going to say was this: What are known as supply houses or wholesale houses, there is what is known as a standard recognized price.

Q. There is a recognized price then among the merchants?—A. Yes, of course there has to be.

Q. Does not that vary a lot? Take this padlock again. I priced it in three different towns in three different parts of the Province of Saskatchewan. In one town the article sold for 75 cents; in another for 50 cents; and in another for 45 cents, and they were all individually owned hardware stores. There is an enormous spread there in what you might call standard values.—A. The padlock looks alright, you know, but it is not what you would call a standard lock. I think I had better leave that. I do not pretend to know prices. I have got a pretty fair knowledge of merchandising but I just don't know the prices of different things like that.

*By Mr. Ilsley:*

Q. One of the witnesses said he would have it so that every merchant would be obliged to charge the same price.—A. I don't think I would be prepared to go that far, Mr. Ilsley.

*By Mr. Sommerville:*

Q. You suggest some measure of control?—A. Yes, I would suggest some measure of control. That is what we have stated in that preamble.

Q. O control in which the consumer, and the producer and the merchant would be represented?—A. Absolutely.

Q. Alright, Mr. McQuarrie.—A. I want to give you all the information I can and my time is your time, but I feel you must be tired. In regard to Yorkton, however, I feel that this would be desirable, and I think I had better read it:—

In response to your questionnaire, we, a representative group of the Independent Retail Merchants of the City of Yorkton, at a meeting held in the City Hall this first day of March, A.D., 1934, do hereby resolve that:

(1) We appreciate the opportunity of assisting in bringing to the attention of the Commission for Investigating Mass Buying, and its effect on the Independent Retail Trade, and any unfair practices.

(2) The members here assembled are of the unanimous opinion that the Local Retail Trade has and is suffering the consequences of being unable to compete with the existing method used by large mail order houses and chain departmental stores in buying and selling.

(3) Further, and finally, we cannot stress too much the extreme importance,—the cause which has given, merchants in towns and smaller cities, an absolutely unfair competitor. For many, many years, and of late years, growing to be a menace of huge proportion, viz. "Sale of best sellers."

In the case of chemists and druggists, jewellers, hardware merchants, electricians, radio experts, who operate depots, auto accessory dealers, clothiers, etc., in short men who specialize in a line of merchandise, requiring service in a community.

The actual supply of merchandise, we feel the commission will in time be able to cope with. Therefore will you put up the greatest fight you are capable of, to interest the commission in the fact that protection for these merchants is vital for them to survive, and that education of the consumer is also advised of that fact, and that we are independent. To see in the future at least a chance for decent remuneration for their work and apprenticeship, and for those they employ. We think this is the vital interest for Yorkton, and western Canada, west of Winnipeg, and as far as the coast, if not for the Dominion.

We are unanimous in feeling this is the greatest existing evil in modern merchandising, by 5, 10 and 15 cents stores, up to 25 cents stores or those operating with articles up to a dollar, and most of all chain department stores. They do not stay with general store merchandise, which store was always an essential store in a community. But when they see an opportunity for further profit or a means of bringing more people in their store, pose as chemists, optometrists, hardware merchants, jewellers, etc., etc., using only the "best sellers" of these places—their bread and butter lines, and cut in price to act as "bait." Draining the business from a whole community into their establishment under one roof. And thereby, by cutting the prices make that qualified person appear as an overcharging rogue, not to be trusted with other purchases, because he must be fleecing the public.

Therefore the man who keeps the community going is branded as a much inferior to a highly advertised and highly capitalized corporation. They sell the "best sellers" of a jeweller, yet no one in the establishment is conversant with the article, or could even make a minor repair. They sell the "best sellers" of a drug store, and cut in price, but the community when sickness prevails is forced to rely on the chemist. The hardware merchant has to carry a heavy stock of shelf and heavy hardware necessary for repairs and operation of a community, yet sees his bread and butter lines sold and cut to influence his trade away from him, etc., etc.

When vile and ridiculous mistakes have been made and the public has been made a victim of this procedure, they are often forced to spend large sums of money to regain that which they should have been advised in the first instance. They seldom realize they were fooled, and continue to patronize these institutions.

The highly trained merchandising expert, is able to fool a gullible public, who is not trained in true economy and thrift, and therefore get a major part of their earnings. The balance is tirelessly worked for by men trained to serve in their respective trades, and asking only (with exceptions of course) a reasonable remuneration, equitable with the cost of that service.

Therefore as voiced in your literature, it is just possible this may be the only opportunity to present itself in this century, wherein shopping can be returned to the location it belongs, thereby increasing true employment and a standard of living which is reasonable to employers and employees, justly earned.

We think this should be your great objective.

Could not the commission be brought to see these great institutions should be forced to qualify for any line they handle. Or else be forced to give it up. And not be allowed to have just "best sellers" to harass the proper store supplying this commodity.

In trade journals, no expert has been able to show why this could not be done. It appears that it will be the duty of the authorities of the Dominion, as the only persons who have the power to establish proper procedure.

Every man in your hearing must know his family has been subjected to articles finally proving useless, possibly health impaired, etc., etc., learning long afterwards, a specialist in any one of the lines could have sold him true knowledge with the articles sold, and an unestimable saving thereby.

The following is a list of the men and firms voicing these statements, and hoping to assist you thereby in this great effort.

*By Mr. Young:*

Q. Do you mean by that that we should take some steps to see that certain stores handle certain lines of goods and none other, and other stores handle certain other lines of goods and none other?—A. No, I don't know as we go that far—I don't know as we go that far.

Q. You say a big store looks over the drug field, and in a drug store they see what are the best sellers; they immediately stock them and grab off all the trade in these lines, and leave the unprofitable lines to the druggist?—A. That is about it.

Q. That is the thing?—A. One hates to do anything that would retard business, but if we could hold the clothier to the clothing business, and the grocer to groceries, and the hardware man to his own line, it would be desirable; but if these larger stores put them in and give full service in each of these different lines—which probably they could give—it just might be desirable. But I don't know that I am prepared to go so far as to say that we would have to do this. I think it would be an ideal condition.

Q. Would you do this: when the department store puts in a drug department, require them to handle everything that any other druggists handles?—A. Well, they would be handling a lot of stuff, if they did. I don't know as I would like to go that far.

*By Mr. Sommerville:*

Q. Your objection is that they take nationally well known goods, and by reducing the price of them reflect upon the regular trade handling those goods?—A. I think that is it.

Q. That is the whole object of that statement?—A. Now, Mr. Chairman, I have some valuable information here for you people. I am not going to read this part of it, but there are about twenty letters from maybe two or three hundred that I have, exemplifying a certain point.

Q. That is on the question of the loss leaders?—A. Yes, along that line.

Q. We will have this brief. It is a series of letters and advertisements? (Exhibit No. 52.)—Just a few advertisements exemplifying some points that they have raised. I think I will cover that all pretty well here.

*By Mr. Factor:*

Q. You mean complaints from individual retailers?—A. Yes.

*By Mr. Sommerville:*

Q. From all parts of the province?—A. I could have brought many more, but I did not want to burden you unduly. I think I had better just give you now some of the facts in connection with what has taken place in our merchandising problems out there. I have here the invoices from the different merchants, of the goods that they purchased, and I am going to take groceries and drygoods first. I will mention a few items, but I have got many items, and I am going to give you the invoices under which they bought these goods; and I am going to give you a copy of the advertisement that appeared in the paper of that vicinity at that same time. It will probably not be necessary for me to say anything further than that I am giving you the invoices—the actual invoices to the merchants—from the supply houses and a copy of the newspaper carrying the advertisement, showing that the departmental stores and chain stores actually did advertise and sell at the prices named there.

Q. Are those prices the same as or less than the invoice price to the merchant?—A. I will show that here.

Q. As you give the price of the thing, you will show the price it sold at?—A. Yes. Here is a case of choice pink salmon, and we sell Eatons, the depart-

mental and chain stores; the selling price is advertised as 3 tins for 25 cents. The independent retailers' cost price is  $27\frac{3}{4}$  cents.

Q. For the three?—A. Yes. Sugar crisp corn flakes, 5 cents as against  $7\frac{1}{2}$  cents.

*By the Chairman:*

Q. The invoice price?—A. The invoice price, and that invoice is right here. Pork and beans, 16 ounce, 5 cents, as against  $6\frac{3}{4}$  cents.

*By Mr. Young:*

Q. The same brand?—A. The same brand.

*By Mr. Factor:*

Q. The retailer buys from the wholesaler?—A. Yes, from the supply house.

Q. And the wholesaler's profit is included in that price?—A. He is having a rough time.

Q. And the wholesaler is having a rough time.—A. Carnation No. 1 talls, 3 tins for 25 cents as against 3 tins for  $27\text{-}3/16$  cents; Nabob tea, 45 cents, as against 45 cents to the retailer; Nabob coffee 39 cents, as against 41 cents. If he wants to compete he has got to lose two cents.

The CHAIRMAN: They both must get them, in that case, from the same institution. There is no intermediary in that.

Mr. FACTOR: In that particular item.

The CHAIRMAN: Nabob products are turned out by a large wholesale house in Vancouver.

Mr. FACTOR: Independent retailers get the other articles from the middlemen.

The CHAIRMAN: In some cases there is the wholesaler between the retailer and the manufacturer. In these last two articles there is not.

Mr. FACTOR: Then the question comes in whether there should be a middleman.

*By Mr. Sommerville:*

Q. Will you continue?—A. Ontario cheese, 12 cents as against 14 cents. I will mention sugar here. We pay at Prince Albert, \$7.70, as against \$8.02. I am going to leave that with you.

Q. That is a list, attached to which you have the advertisements of the chain or department stores?—A. Yes, to back up what we are saying.

Q. And you have the invoices to the retailer?—A. Yes. Here is another grocery list, with invoices, showing Campbell's tomato soup, nationally advertised 2 tins for 15 cents to the consumer;  $14\frac{1}{2}$  cents as the retailer's cost; Kellogg's corn flakes, 2 packages 15 cents, and the retailer's cost 2 packages 15 cents; P. & G. soap, 10 bars for 35 cents as against the retailer's cost of  $35\frac{1}{2}$  cents. You have got to get down to these fine percentages.

Q. That is all right?—A. Butter, No. 1, 3 pound block, Prince Albert creamery, 83 cents advertised by the department and chain stores as against the retailer's cost of 83 cents, butter manufactured right in Prince Albert.

*By Mr. Factor:*

Q. Are all those articles used by the stores as loss leaders, or are they bought at lower cost and therefore can be sold at a lower price?—A. I am going to give you that. I think on pretty fair numbers that there are advertising allowances made by certain manufacturers to retailers. I cannot prove that myself, but I believe it occurs, and I don't know that they always use that up in advertising.

*By Mr. Sommerville:*

Q. The prices you give us, in any event, are indicative of articles being used as what you call loss leaders?—A. Yes. Now, we will leave that and proceed. I have here a letter; I am going to leave it with you. It is from one of the

wholesale houses in Saskatoon that does a large volume of business. They are city merchants and country merchants. I am not going to read the whole of that letter, but I would like to be permitted to read these two paragraphs:—

Although to the best of our knowledge the above information is representative of buying practices of all wholesale grocers and chain organizations in this territory, we are not in a position to know buying practices of department stores, except that their retail prices, such as are offered weekly at intervals at much below wholesaler's replacement cost, point to unethical methods.

The effect of such department store loss leaders, as they are commonly known, upon other retail outlets is that, owing to the consumers' idea of fair value having been upset through such unethical advertising influence, they cannot obtain a fair share of business at equitable prices; and through this alone many are suffering losses, while periodically some are being forced out of business. We can say without fear of contradiction that all classes of retailers in this territory, aside from department stores, will welcome some sort of control code providing that minimum selling prices must show a definite percentage over replacement cost, with due provision for clearance of seasonal merchandise, sale of perishable or damaged goods or of discontinued lines at special lower prices. It is entirely and essentially in the interests of the retail trade in general that some such control be imposed in order to remove the unethical practices of department stores.

Q. The object of this exhibit is to indicate that these wholesale prices, even in carload lots, are above the prices that are offered by departmental and chain stores in their loss leaders?—A. Yes, that is right. Now, Mr. Chairman and gentlemen, I have here a copy of another letter from a wholesale house in Saskatchewan and I am going to leave it here. I cannot give you his name. He says he cannot give you his name, but if it is really necessary for you, I will get permission to use his name. I think it is rather unfortunate that a large wholesale house cannot express themselves for fear that they will be decapitated or lose business.

*By Mr. Young:*

Q. Will they be decapitated by these big department stores?—A. That was his idea. I was talking to this man, and his idea was that if I disclosed too much on this, he might lose business.

Q. Does he deal with them?—A. Apparently so. I had a long-distance conversation with this man and he wanted to help you people.

*By Mr. Sommerville:*

Q. He is just afraid?—A. He is just a little afraid.

Q. He is not the only one?—A. No, I think not.

*By Mr. Factor:*

Q. Just as the workman is afraid to complain of receiving the low wages that the manufacturer pays?—A. Yes.

*By Mr. Edwards:*

Q. Afraid of the big stick?—A. Yes.

*By Mr. Sommerville:*

Q. Is he a wholesaler who sells to Eaton's or large buyers?—A. He is an independent.

*By the Chairman:*

Q. Will you go on with your cases?—A. I think I would like to give you this, and I want you to pay particular attention to it—this is from our own city, the city of Saskatoon—that we have there what are known as United Stores, and I suppose there are twenty-four of them.

*By Mr. Young:*

Q. A chain?—A. A voluntary chain—call them a chain if you like. Each one owns his own store.

*By Mr. Sommerville:*

Q. They unite to buy?—A. They unite to buy. There are two points I want to mention here. Probably if I read part of this letter, it would answer the purpose:—

I am attaching a copy of an advertisement of one of our large department stores taken from one of our local papers last night, advertising Lux toilet soap 5 cents per cake, to which I have attached an invoice from one of our larger wholesalers showing our cost at  $6\frac{1}{4}$  cents on this same product.

Another departmental store advertises another very popular line of domestic shortening at three pounds for 25 cents. I am also attaching an invoice showing our cost for 3 pounds of domestic shortening at slightly over 30 cents.

This same store last night advertises plum jam, No. 4 tin, at 29 cents; and you will notice from my invoice attached that our cost of plum jam is 37 cents.

*By Mr. Young:*

Q. Is this a voluntary chain?—A. Yes.

Q. You say they deal with the wholesalers?—A. Oh no, these are just retailers.

Q. Twenty odd united for buying purposes?—A. Yes.

Q. From whom do they buy?—A. One of these wholesale houses is Campbell, Wilson & Miller; and here is another one, Canada Packers.

*By the Chairman:*

Q. That is, direct?—A. Yes.

Q. What is the next one?—A. Plum jam; Campbell, Wilson & Miller.

*By Mr. Factor:*

Q. What is that, a wholesale house?—A. Yes, a wholesale grocery; Canada Packers, they get that domestic shortening direct from them.

*By Mr. Young:*

Q. Do any other voluntary chains buy direct from the manufacturer?—A. There are some things they buy from the manufacturer direct; and no doubt they are shipped direct as it is cheaper, probably.

*By Mr. Sommerville:*

Q. I suppose they buy as cheaply as they can from the manufacturer?—A. They do the best they can.

Q. But even with this direct buying they are undersold?—A. I want you to know, gentlemen, that I know personally everyone of these men, and they are all bona fide good retailers who just have their home, their family and their store there, and that is their problem.

*By Mr. Young:*

Q. We don't doubt that; what we are trying to get at is why they are paying the extra profit to the wholesale when the department store does not have to pay?—A. Let me go on for a minute there, and I think I can clear that up. Some 19 or 20 years ago there was a company—and I believe it was you who asked this question this morning—known as the Merchants Consolidated. About 19 or 20 years ago the merchants felt that they were not able to buy from the regular supply houses as well as they should, and they decided they would form their own wholesale houses, so they got a charter and it was known as the Merchants Consolidated, and they sold stock in that. The lines they were to carry included hardware, groceries, drugs, and boots and shoes to start with. A lot of the stock was subscribed for in Manitoba, Saskatchewan and Alberta, and they were going to open up branch warehouses in Saskatchewan and Alberta as they were needed, and as the demand was there. However, Merchants Consolidated did not get away to a very good start; but however they struggled along, and they struggled along, and they seemed to improve conditions; and then for ten years back, and to-day they operate a wholesale supply house for groceries, clothes, drugs, boots and shoes, and staple lines of hardware, harness, and drugs.

Q. This is the letter. I have to read the letter, but I will leave out the name of the company that is mentioned?—A. Just one second further, and that will answer this complete; and as you say, for some time we had our own wholesale house. The merchants in our province having learned what was being done in British Columbia, in Ontario and Quebec, decided that an investigation should be made to see how they were doing this thing, and that investigation recommended them going into all this thing. The Committee that went down to investigate these things came back and they recommended on their return to Saskatchewan that this firm, Merchants Consolidated, was about the best thing to fit their need; but the difficulty was to raise enough money to start a wholesale grocery house, and that took about \$80,000, and it was pretty hard during the last year or two, and that didn't aid us. So the Merchants Consolidated made arrangements—they said, the wholesalers said, if you can't start your own wholesale houses, we will make arrangements with one of your own local wholesale houses there; and that was received with a good deal of satisfaction.

*By Mr. Sommerville:*

Q. By the way, Merchants Consolidated is a wholesale house?—A. It is a bona fide wholesale house formed 19 or 20 years ago, it is a joint stock company and the capital was subscribed by retail merchants.

Q. Retail merchants?—A. Yes. And when it came to be named, the supply house in Saskatoon which was to serve these merchants, it was a locally owned chain known as the O.K. Economy Stores; and we didn't have to think about that. These O.K. Economy Stores were big competition to these general merchants which I have just passed down there, but they were not to cut, and when the merchants found that out, it was quite a relief to them. And that brings us to the point that you are trying to get at, that unless the merchants have their own supply house—and in that case they did not own it, although they have one in Winnipeg which serves between 37 and 43 stores throughout Saskatchewan, and it is working out not badly.

*By Mr. Young:*

Q. A pretty good reliable firm?—A. Yes.

Q. Now I will read this letter. Its address is from Saskatchewan, and it reads: "Dear sir—The Blank Manufacturing Company refuses to extend to Merchants Consolidated, Winnipeg, a merchant-owned wholesale company, their

regular wholesale discount. Last year we shipped goods from Sweden, but tariffs forbid it this year, and the manufacturing company concerned control this line of goods in Canada. This being a merchant-owned wholesale, it is an unfair disadvantage to this company, and I would like you to use your influence on our behalf."

Q. Have you any experience of that kind of thing?—A. Yes, I have; a lot of experience on that. I have something on that right here.

The CHAIRMAN: Suppose we go on with this particular one thing.

Mr. FACTOR: Yes, let us dispose of that and Mr. Young will be satisfied.

*By the Chairman:*

Q. Quite so. Will you take that particular file, please.—A. This is the Blank Manufacturing Company, a Canadian company—and this, Mr. Stevens, as Chairman, I want to draw to your attention; this was one of the things I was asked to bring to your attention.

The CHAIRMAN: Quite so.

The WITNESS: The Blank Manufacturing Company (the name is right here) a Canadian company manufacturing hardware, refuses to extend their wholesale discount to Merchants Consolidated Limited of Winnipeg, the retailer-owned wholesale store, but they should not take such action as against a bona-fide wholesale house, operated by capital subscribed from the retailers. Now, that is exactly what you asked, and I think that is all that I need to say. I want to say that I have no brief from the Merchants Consolidated to speak on their behalf for this. I have no doubt they will do that for themselves, and I am interested in this because in their letter to that company—

*By Mr. Young:*

Q. This explains some of the difficulties of the retail merchants, and perhaps in part explains some of the wide spread?—A. Of course, they too have their particular problem.

*By the Chairman:*

Q. Let us finish this now. Perhaps we should have that?—A. No, I must keep that here; but that answers him.

*By Mr. Edwards:*

Q. Following up the question asked by Mr. Young; have you any knowledge of how many wholesale hardware places there were in Winnipeg say ten years ago and as at the present day?—A. No. I could give you an idea.

Q. Do you know that they have been absorbed by one of the large wholesale houses pretty well?—A. I did not know that they were absorbed by one; I don't think I could say that.

Does that make that clear, Mr. Young.

*By Mr. Young:*

Q. Not at all, because a similar thing happened?—A. This whole concern, I don't think it would have got started if it had not been for one of the ministers here who corrected this very thing here about ten or fifteen years ago—I don't know just how long ago.

Q. That is to say, all the manufacturers are treated in that way?—A. They were having a rough time.

*By Mr. Sommerville:*

Q. Now then, go ahead please?—A. Then we come here to a man—I am not going to read all of this here—but it comes from Lloyminster, the home of the Barr colonists, and just see what they have here; here it is, bread free.

*By the Chairman:*

Q. Bread advertised free; is that by a chain store offering bread free?—

A. Yes, a chain store—we will give absolutely free two loaves of wrapped bread with each one dollar purchase of groceries; limit two loaves to a customer. Now, you ought to read all of these. That (exhibiting) is another from Lloyd-minster.

Q. Just a moment, what effect does that have upon your local baker?—

A. It just about ruins him.

Now, there are two or three letters here and I will go to the last one; now this man here—and I think this worth while mentioning—speaks about some of the problems: in the first place, a chain store where there is competition, is known to sell as much as 20 per cent lower than at points where they have no competition. We have proof of this last summer, when produce was selling very low where there was competition like in our town they were paying 8 cents for eggs, and at another town, east of Assiniboia, the same concern on the same day was paying 4 cents, which goes to show that as they freeze out the independent retailer, they then make the consumer pay.

*By Mr. Young:*

Q. What date was it that price?—A. The date of this letter is the 28th February this year, and he speaks about the prices of last summer.

Let me give you just one more word here: as to the mail order system, the greatest wrong of all wrongs is being allowed to trade in the different small communities without paying a tax for this privilege. The second is the amount of people put out of work by this system clear through from the wholesales to the clerks in the different stores; this system, we claim, has already thrown thousands of people out of work besides draining all the rural districts of money.

*By Mr. Factor:*

Q. Does he advocate abolition of the mail order system entirely?—A. I don't think that is what they want. We don't want to put these people out of business, but we want to get them under control.

Now, here is another case at North Battleford, where Western Grocers Limited, one of the North Battleford's large wholesale houses sell the Rex Groceteria of North Battleford one case of Fels Naphtha soap for \$7.50; and here is an advertisement in the North Battleford News (or Optimist) which shows that Fels Naphtha soap in ten bar cartons is offered to the public at 73 cents per carton—they don't have to buy a case.

Mr. KENNEDY (*Winnipeg*): I would like to raise a point here. I realize the desirability of withholding the names of concerns where facts are stated that have yet to be verified, but in an instance such as that advertisement of "free bread," an actual advertisement which is produced as taken from the paper, I do not see that any good purpose is served in not publishing the name of the store; because after all I think publicity is probably one of the cures of some of these things. For instance, there is the advertisement produced by Mr. McQuarrie.

The CHAIRMAN: Everybody has seen that.

Mr. KENNEDY (*Winnipeg*): Is that the one advertising free bread? I would suggest in a case like that where it requires no further investigation that the name be given to the public to the committee.

The CHAIRMAN: We might charge them for the value of the advertising we would give to them.

Mr. KENNEDY: I do not think that would be the reaction.

The CHAIRMAN: Well gentlemen, I do not wish to be unjust to anyone, but where you have an advertisement widely published and already widely read, if there is anything to be ashamed about in it, of course the parties ought to have been ashamed when it was published. On the other hand, if there is nothing wrong with it, why should not the names be given.

Mr. ILSLEY: I do not see anything for it one way or the other myself, Mr. Chairman; I do not see any objection, or any advantage. The idea that we ought to punish these people by publishing their names is Mr. Kennedy's idea.

Mr. KENNEDY: It is not a question of punishing, it is a question of informing the public and letting the public get the facts.

The CHAIRMAN: Letting the public judge?

Mr. KENNEDY: I would ask who is the concern that advertised bread free?

Mr. FACTOR: The difficulty is that we have not been receiving all the facts so far in this investigation.

Mr. KENNEDY: I am only referring to a case where we have the facts.

Mr. FACTOR: There is no objection to that at all.

The CHAIRMAN: Proceed. Where you have the facts you may give the name if you wish.

*By Mr. Kennedy:*

Q. You might tell me what is the name in the advertisement?—A. If you wish to know the name of these people—I think it was "Safeways" of Lloydminster, Sask.

*By Mr. Young:*

Q. Are they a voluntary chain, or a controlled chain?—A. They are a corporation chain.

Mr. SOMMERVILLE: They are a very large chain throughout the West.

*By Mr. Kennedy:*

Q. That is the one to which you referred?—A. That is the one, their head office is in New York, they are American-owned.

Mr. FACTOR: The firm that gave bread away.

The WITNESS: Yes, that is right. I probably should have started here. You hear so much about clothing, and Mr. Cook has done so much that I did not want to say very much about it. Mr. Hill is a merchant tailor in our city, and he is a good merchant tailor. He gave me an invoice here of some goods bought from Lowe Donald and Company—it sounds pretty Scotch—from Peebles, Scotland. He gives an invoice here showing that for a  $3\frac{1}{4}$  yard suit length, the cost was \$18.80; the wages on the coat is \$11, the cost of making the coat \$11, the vest \$3 and the trousers \$3, a total of \$17. That is the cost of the suit, not counting the overhead, or \$35.80 without trimming, and he gave \$5 for trimming, making a total cost of \$40.80.

The CHAIRMAN: For the suit?

The WITNESS: For the suit. It is a clearance bill from the customs.

*By Mr. Factor:*

Q. That is a pretty dear suit for a workman to buy?—A. A Harris tweed? I am not perfectly sure, but at any rate he speaks about Harris tweeds. Here is an advertisement under date of February 28, where one of the large corporations are advertising a Harris tweed, genuine Harris tweed tailored-to-measure three piece suit, \$25.

The CHAIRMAN: Who is advertising?

The WITNESS: I do not know much about Harris tweeds, so I won't say much about that, but Mr. Hill is a good man and has been in our city a long time. He used to tailor in Toronto on one of those good streets. Now, let me come to another point here.

*By Mr. Factor:*

Q. Would you expect a workman to pay for a suit like that? What would that retail at, about \$50?—A. He says here a fair price on that would be \$55.

Q. How could any workman pay \$55 for a suit?—A. I do not think he would. Probably there are other suits there.

Mr. SOMMERVILLE: He would not be having made-to-measure suits.

The WITNESS: There are details here. If you and I could not, there are others that would.

Mr. SOMMERVILLE: The point you are making is this. Harris tweeds come from Scotland, and have a definitely recognized world-wide reputation?

The WITNESS: That is it.

Mr. SOMMERVILLE: They could not be made for anything like that money?

The WITNESS: That is it.

*By Mr. Factor:*

Q. That advertisement is either false or true. If it is not a Harris tweed, it is, then, false advertisement?—A. Exactly, sir.

Mr. SOMMERVILLE: Mr. Factor, I think Mr. Cook explained that yesterday. Mr. Cook explained that Harris tweed is a name that is not protected, but it has a reputation that is wonderful. Anybody can stick the name "Harris tweed" on their material and they are drawing on the reputation of a great old established Scottish industry.

*By Mr. Ilsley:*

Q. There may have been genuine Harris tweed there, you don't know. In my own personal inquiry, I have heard of Harris tweeds having been sold for those low prices. You do not know, or do you, that that is a false advertisement?—A. In speaking to him, I was just going to say that. Mr. Hill says that the department stores are either misrepresenting the goods, or they are buying much cheaper than he could buy and paying much less for labour. I will leave it at that.

Q. Or selling at less than cost?—A. Yes.

Mr. SOMMERVILLE: You are filing the file in that connection?

The WITNESS: If you want a folder for these, I will be glad to let that carry along. Now Mr. Chairman, I think somebody pretty well covered the butchers, but there are just one or two points here I would like to say. On the day before I left, I had a letter from a good butcher in our city and he said that he wanted me to take this invoice of the Canada Packers down; and he said, "I have bought 30 pounds of domestic shortening at a special price of 9½ cents, and they charged me \$2.45"; and he says that a department store on that day advertised domestic shortening not more than 3 pounds to a customer, 3 pounds for a quarter.

*By Mr. Sommerville:*

Q. Direct from the maker?—A. Direct from the Canada Packers. I guess it is their own stuff. Now, there are several other items on there that I do not think I had better go into.

Q. That has to do with the butcher industry?—A. Yes, and also there is an item from another firm, Swift Canadian, and one from Burns.

*By Mr. Factor:*

Q. Where would the store get the shortening; would they buy the shortening from Canada Packers also?—A. I would be inclined to think so, yes.

*By Mr. Young:*

Q. Have you any idea how these packers supply; do you know the method they have of furnishing their goods to the retail trade out west?—A. No, I do not think I do.

Q. Some years ago I happened to be in a general store talking to the proprietor, a car drove up and a man got out of it and went into the store, took a card off the wall, and went out, got into the car and drove away. The merchant said, "It is a great business. He represents a packing house." He said, "they furnish me with a card, and when I run out of their goods I write them down on the card, and he comes around there once a week, and picks up that card and goes on to the next town." It seems to me that is a very extravagant way of doing business?—A. I can tell you this: they have their travellers there calling on the stores; they are not expensive men.

Q. They cost much more than a postage stamp. He could have sent that card in with a postage stamp?—A. The traveller carries with him—the traveller is a good man, and in calling on these stores, keeps up to date. He has got a lot of information that the merchant would not get otherwise. I would not say that the traveller is not a valuable asset in the distribution of goods. If he is and up to date traveller, he is going to be informed about those things, and he is going to carry a message to every merchant.

The CHAIRMAN: You have not given us that last one.

The WITNESS: Yes. I want to give you this one, too. This has just come to me since I have come here; and I think one of our great problems in Saskatchewan is in connection with our advertising. I am going to be quite frank about it. I will be glad to mention the name of the Army and Navy store at Regina as being the concern that very very frequently has bad advertising. Their advertising is bad. We think it is misrepresenting the values, and on two or three occasions we checked them up on it and Mr. Cohen told me himself this: now, he said, I am going to see these, and I am going to pass on this advertising myself." Our attorney general's department is very busy, and it is pretty hard for them to prosecute those things as we think maybe, they should. We are not complaining about it, but we are hopeful in this new legislation, the licensing of stores, that there will be a prosecuting department in which such things can be taken care of. I am assured that this is one of them. This case is a case—this is a case of March 2, invoices from P. Burns and company, and the Swift Canadian company. Eatons ad, departmental store, advertises "blood and liver sausage at 10 cents per pound." On this same day... a reputable firm in Regina, operating two stores at 11 cents per pound—same being the regular list price. Also lard advertised in the store at 10 cents per pound, invoiced on the same day at 12 cents per pound.

The idea in submitting these is the fact that the mail order and chain stores are evidently able to sell these at less than the independent can buy them. I might say that I attended a meeting of the butchers last night at which there were about fifteen present, and they are all convinced that the three packing houses operating in this city of Regina operate under a price agreement which is checked up sometimes as often as twice a week. I do not know whether there is a law against price agreements or not, but I hope that the commission can look into this.

These are the invoices and the charges made.

Now, this is an affidavit from Harold Wright at Regina, and he gives an exhibit A—"A short time ago the Army and Navy department stores of this city bought the bankrupt stock of Mac & Mac Limited, which consisted of men's clothing and furnishings, and men's hats and caps.

Mac & Mac Limited never at any time handled boots and shoes, this I know personally and also Mr. Ross, former proprietor of this store told me that they had never at any time handled boots and shoes.

To-day I visited the Army and Navy stores and they had conspicuous signs distributed over their boot and shoe stock reading as follows: "Mac & Mac's Stock, bought at 50 cents on the dollar." Immediately beneath this on the same frame was the name and price of shoes. I might say that the above quoted words were printed in red on a strip of cardboard, I should say from 18 to 24 inches long and about 4 inches deep; then immediately below this with a different background and a much larger display was the name and price of the merchandise which presumably the sign was in the midst of or immediately back of the sign. These signs were displayed on tables containing shoes also on shelves which contained shoe boxes, presumably full. I am simply submitting this is an illustration of false advertising which has come to my personal notice and am attaching an affidavit of Harold Wright to this letter."

Now I think I would like you gentlemen to look into that case because it is bad. Now, here is another. This is from Mr. Layfield of Barrie's, Regina, and he gives here an advertisement as well—"Travellers samples men's shirts, \$1.39." I am going to try to set forth what is given. "Attached you will find page 10 of the Leader-Post, Regina, of Tuesday, February 20, 1934, containing advertisement of the Robert Simpson Western, Limited. On this page you will see advertised a sale of "Travellers-Samples Men's Shirts."

It is a well-known fact, which can be verified by any traveller for men's shirts, that travellers carry as samples only one size shirt, and that the number of shirts carried by even larger companies as samples, would not exceed possibly three dozen, augmented by swatches to show styles and qualities of materials.

It is my contention that in advertising these shirts in sizes 14 to 17½, they are misleading the public into believing that they are getting "sample" shirts at a big reduction, when in reality they are buying regular stock. I feel that this is a direct case of misrepresentation in advertising.

The CHAIRMAN: That is a good illustration. Next?

The WITNESS: On that advertising we could give you a tremendous lot, but I am not going—

Mr. SOMMERVILLE: You have given us some good material. Perhaps you could file these things with us and leave the matter for investigation.

The WITNESS: All right.

Mr. FACTOR: It is refreshing to have this witness give us facts instead of making speeches.

The CHAIRMAN: Yes. He has given a lot of good facts.

The WITNESS: Now, I would like to say something in regard to the boot and shoe industry. I have here a list of articles that were advertised in the Saskatoon papers at such and such prices, and I have the advertisements here with the date on them and the price at which real good stores are buying shoes. Well, now, the advertisers are the big departmental stores in Saskatchewan.

The CHAIRMAN: If their names are on the advertisements you are at liberty to use them.

The WITNESS: Men's cloth top rubbers, advertised price .99, retailers, wholesale invoices cost .95.

Mr. FACTOR: From the wholesaler?

The WITNESS: From the wholesaler.

*By the Chairman:*

Q. The boots and shoes are delivered from the factory direct to retailers, not through a jobber?—A. Yes, that is right.

Q. There is no jobber in the shoe business?—A. Yes. Rubber overshoes, advertised price \$1, our cost \$1.20; fur-trimmed goloshes, advertised at \$3.45, our cost \$2.89. Let me follow that through. After selling them for two weeks the departmental store reduced the price to \$3.29. After continuing another three weeks they were reduced to \$2.95, just 6 cents above our cost.

Mr. YOUNG: Was the quality the same as yours?

The WITNESS: The same quality.

The CHAIRMAN: Go on with some more of them.

The WITNESS: Men's two-buckle overshoes, advertised price \$2.19, our cost \$1.97; boy's two-buckle overshoes, advertised price \$1.69, our cost \$1.68; child's white rubbers, advertised price .59, our cost .65; jersey top overshoes, advertised price \$1.98, our cost \$1.87; men's plain rubbers, advertised price .79, our cost .82; men's 2-buckle overshoes, advertised price \$1.89, our cost \$1.87; men's zipper, advertised price \$3.29, our cost \$3.15; men's blizzard, advertised price .93, our cost .95; misses' 3-buckle, advertised price \$1.79, our cost \$1.54; child's 3-buckle, advertised price \$1.69, our wholesale \$1.41, boy's 2-buckle, advertised price \$1.69, our cost \$1.68; boy's 1-buckle, advertised price \$1.49, our cost \$1.31; women's 2-dome overshoes, advertised price \$1.98, our cost \$1.78; misses' 3-buckle, advertised price \$1.79, our cost \$1.54; child's 3-buckle, advertised price \$1.69, our cost \$1.41; men's 2-buckle, advertised price, \$1.89, our cost \$1.97; men's 1-buckle, advertised price, \$1.49, our cost \$1.47; men's plain rubbers advertised price .69, our price .68; women's 2-dome, advertised price \$1.69, our cost \$1.78; misses' 3-buckle, advertised price \$1.49, our price \$1.54; child's 3-buckle, advertised price \$1.49, our price \$1.41; men's blizzard advertised price .89, our cost .95; men's 1-buckle, advertised price \$1.39, our cost \$1.47.

*By Mr. Sommerville:*

Q. You have not much left in the field of rubbers?—A. Well, that is probably enough. Now, I would like to mention something about Hurlbut shoes being put on for semi-annual sales. I do not know the full facts about them but I have got these from all the shoe dealers of Saskatoon. On Tuesday, August 17, 1931, sizes 11 to 2, regular price \$4.50, sale price, departmental stores, \$2.98, our cost, strap, \$2.95, oxford \$3.20.

*By Mr. Factor:*

Q. The witness said the six departmental stores sell inferior quality goods made specially?—A. Yes. These men told me, and I think all the shoe men in Saskatoon talked about it. Probably that is sufficient.

*By Mr. Sommerville:*

Q. That is an indication that out there that thing is done?—A. Yes. I think I should say here that I would like to just read a letter from the Miner Rubber Company, one of the large rubber companies to one of our merchants where he wrote them asking if they could send him something—2 dozen pairs of boots similar to compete with Simpsons. He only wanted to compete. He was not seeking a profit. They wrote this reply:—

We have your letter of the 12th enclosing "Simpson's Flyer" illustrating a gum-rubber boot price \$1.79, and we are sorry that we haven't anything in our range which we could send to you to compete with this.

At the time of this writing we do not know just what brand of rubbers these are, but as we note they mention on the "Flyer" that the

quantity is limited we presume that this is an imported line from Singapore, India. If that is the case the Canadian Rubber Companies are unable to produce a shoe to meet this competition on account of labour conditions, and these foreign goods are made under Asiatic labour conditions, the rate of wages being very low, about 40 or 50 cents a day.

Possibly another reason why they state the quantity is limited and give the time up to March 15th is because they are unable to get deliveries, as goods brought in from a foreign country must be bought and taken delivery of six or eight months in advance.

As requested we are returning the "Flyer" herewith.

Our people think it would be desirable if you would investigate if that is the real cause.

Mr. FACTOR: I think it would be desirable also to investigate the labour conditions in those rubber factories, the Canadian labour conditions.

The CHAIRMAN: Very good.

The WITNESS: I brought another one here from A. D. McDonald, of Weyburn, Saskatchewan. Since Mr. Young is a member of this committee I thought I would bring it along. There are a number of items there, women's rubber overshoes; the wholesale cost is \$1.26, and in this newspaper of recent date they were advertised for \$1.25, 1 cent less.

*By Mr. Young:*

Q. What company is selling them?—A. This is the A Company of Regina.

Q. They are selling them in Regina, they have no store in Weyburn?—A. No, but this newspaper goes out to Weyburn. And here is another item, misses and childrens rubber boots, 8 to 10, the wholesale cost is \$1.31, and from 11 to 2 the wholesale cost is \$1.47, and they are advertising them here at \$1.29.

*By Mr. Sommerville:*

Q. That is in Weyburn?—A. In Weyburn, Saskatchewan.

*By Mr. Factor:*

Q. It seems to be the prevailing practice underselling the price of rubbers all over the continent?—A. Yes, sir, I think that is right. However, we understand that there is an investigation under way under the Combines Investigation Act into the rubber situation, and our people feel that notwithstanding that investigation the situation in rubbers should be very largely looked into by this body.

I will come along to the next trade that I want to speak about, the drug trade, and it is an important trade too. The Guernsey Drug Store, of Guernsey, Saskatchewan, have sent in some material here. It is very very clear and well set-up. There are the actual invoices from National Drugs Limited, and all this material here is just as clear as can be and it is in splendid shape.

*By Mr. Sommerville:*

Q. It indicates that nationally advertised lines are being sold at prices below their wholesale cost price?—A. Yes. Here for instance, Absorbine Junior advertised at 83 cents. Independent retailers' wholesale cost is 94 cents.

Q. Loss leaders?—A. Well, they are things that the farmer has to have.

Mr. ILSLEY: The two things these indicate are heavy discounts and loss leaders.

The WITNESS: Here are Dodds Kidney Pills advertised for sale at 28 cents and the retailers cost is 35½ cents. I will just pass that on.

*By Mr. Sommerville:*

Q. That whole file covers that same thing.—A. Well, no, there are some others here. Here is a case. We were talking about advertising allowances a little while ago. This man here—and he is, I think, one of the largest independent operators of drug stores in our Province and he says:—

Regarding unfair practices in connection with the drug business, I beg to call your attention to the following:—

It has been a general practice, which can be definitely proven, for some manufacturers (not all thank goodness) to give the departmental store and also the big chain drug stores special discounts, sometimes called advertising allowances which, of course, are never used for advertising, but which give them a chance to charge it against advertising. This type of merchandise is used, generally, as leads and is advertised and sold by the big stores at prices ranging from 10 to 15 per cent less than it is possible for the smaller individual firms to buy these goods. This is a very common practice, and there are a great many other ways of accomplishing this same thing.

I don't know whether you have ever considered this from the employment angle. The retail sales are down to the point beyond which they cannot go if the individual retailer is to stay in business, unless he resorts to the necessity of taking all his loss out of wages, which simply means this: He must cut his staff to the very minimum and those left working must also, out of necessity, have their salaries reduced till there is scarcely a living wage left to the employee in the retail business.

Eno's Fruit Salts have been sold in this city at approximately 5 cents per bottle less than they can be bought for in any quantity. This is only one of the many items that the departmental stores use to draw people to their stores with a hope of selling them something else to take up the loss and at the same time help to ruin the retail druggist. The Kotex Firm, in my opinion, is the worst offender in our line in Canada. It has on different occasions here set a minimum retail price and after so doing, to my knowledge it has gone to at least one departmental store here, through its representative, and immediately made arrangements with them, we presume through a special discount, to give them a much better buy than we, and in face of the very definite order to stabilize prices among the druggists have persuaded the departmental store to cut the price lower than we could possibly buy the merchandise."

*By Mr. Young:*

Q. Where is that stuff manufactured?—A. Kotex.

Q. Yes.—A. I don't know.

MR. SOMMERVILLE: It is manufactured in Canada.

THE WITNESS: I might say that this man here employs a staff of some 32 or 33 highly paid assistants and runs a good business. I can give you this here but he has asked me to keep his name confidential.

*By Mr. Factor:*

Q. Have you any information of the wages paid to the clerks and graduate druggists that are employed by those chain drug stores?—A. I have not got that but the census department have that information. Now, Mr. Chairman, here are some more, Phillips Milk of Magnesia which is advertised, but as they are all very very clear I will pass them along. Here is a case now of Eno's Fruit Salts; there is a letter here from Harold F. Ritchie, and I think you should read it, it is important.

*By Mr. Sommerville:*

Q. You mean from the Harold F. Ritchie Company?—A. Yes. If this is an honest letter how is it that Liggett's Chain Drug Stores advertised the same article to the consumer on the 19th October, 1933, in the "Star" of Saskatoon at 68 cents, 28 cents less than retailers cost. Either Liggett's dictate to the Eno Company or else a preferential price is freely given. At the same time the manufacturer's agent asks the thousands of independent druggists not to cut price below 89 cents.

I think I might mention this case; it really shows the situation in our Province. Here is a young man, 56 miles from Regina, at Lewvan. I might say, he has the idea of getting married but he is afraid to do so, he does not like to build a house because he does not know whether that part of the country will become worse in a few years time. However, he hopes that as the result of this investigation he will be able to get married.

The CHAIRMAN: We will try and make him happy.

Mr. FACTOR: If we succeed in that it will be one concrete result anyway.

The WITNESS: I have a letter here from North Battleford, from our President Mr. Abbott, and I will just pass this along.

*By Mr. Sommerville:*

Q. All along the same line of selling.—A. He says here:—

The retail merchants of this city feel that the wholesaling of drugs and patent medicines should be confined to the wholesale drug trade, as a means of controlling the sale of poisons, etc."

Here is another from Mr. Forsythe, at Unity, Saskatchewan, just along those lines.

Then I have something here from the jewellers.

The CHAIRMAN: Give us this drug bunch together.

The WITNESS: He just says, that everybody sells his line and he is having a hard time.

Now, in the music dealers, radios and all that stuff, it has been so thoroughly covered I am only going to mention one case, and I am going to file an exhibit. One is from a piano house, and he says in the year 1932 he took a loss of \$40,000, and he points out the loss itself to the Income Tax Department, and he also says in this letter that he attributes that to the departmental stores and their plan of operating. It is also stated here that one of these firms advertised Nordheimer Pianos as low as \$269 retail when his firm, which has been in business there for a quarter of a century, had to pay the wholesale price of \$290 for those same pianos f.o.b. Toronto, not including freight to Saskatoon or government sales tax. I think that is well worth while looking into, gentlemen.

Now, gentlemen, I am not going to say very much about the furniture business here, but I am going to file with you a letter from the Great Western Furniture Company, from Mr. J. W. Hair, who has been many times mayor of our city. His firm is a very responsible and reliable firm, and he says that there are a lot of things that they have to do, are forced to do, things that work hardship on the small retail store throughout the province, all because of the practices of these large corporations. Mr. Hair is a deep thinker and his letter would be well worth reading, if we had the time. But I am going to file it and leave it with you. I would like to mention, however, the practice of Simpsons in going to the different stores throughout our province and making arrangements with them whereby they will sell certain furniture and radios, and goods like that at a percentage. The percentages are here, gentlemen, and it is rather a tragedy. It shows what is going on, but what can these men do, they simply are not getting the business.

*By Mr. Young:*

Q. I don't quite get that, Mr. McQuarrie. Simpsons sell furniture and they appoint local merchants as their agents?—A. Simpsons supply stock for agents to sell on terms of 10 per cent cash and 10 monthly payments without interest or extra charges. The agent sends them the contract of sale and they collect from Regina. In some cases agents can take payments but receive no remuneration for doing so. The agent gets 10 per cent commission on bedding and stoves on the sale price; 15 per cent commission on furniture and washing machines; 20 per cent commission on radios. It averages out about 12½ per cent on sales, except at height of radio season when it will run about 15 per cent. The agent rents store and pays light, taxes, wages, delivery and all expenses incidental to operating a retail store out of his percentage, exclusive of interest on investment in stock or book accounts. If newspaper advertising is used Simpsons pay half.

Q. You say Simpsons does the collecting?—A. Yes.

Q. This man does not take a risk?—A. He just makes the sale.

Q. And Simpsons put in the stock without any payment?—A. Yes.

Q. The merchant has no investment then?—A. He has an investment in his store and business, he pays business tax and everything else like that.

*By Mr. Factor:*

Q. You mean he is Simpsons agent?

*By Mr. Young:*

Q. Simpsons agent, but he has to pay the rent, and so on, although he has no investment in the goods?—A. No.

Q. And has no risk in connection with them; Simpsons buy it, he gets his commission whether Simpson is ever paid for the goods or not?—A. Mr. Young, I don't think I have that information. I am doubtful if he would get all that commission right on the start. However, that shows the tragedy, Mr. Chairman.

Now, in connection with our problem in the automobile business, I am just going to mention two points, that is, batteries. For a 13 plate battery the mail order house sells at \$5.50 according to advertising, and the invoice from a reliable wholesale house is \$6.07.

The second illustration is; the mail order house sells a 4.40 x 21 tire at \$4.45, and the net wholesale price to the dealer is \$5.11.

*By Mr. Young:*

Q. The same quality tires?—A. I believe the same quality tires. It is all advertised here and the wholesale price.

*By Mr. Sommerville:*

Q. You have the advertising and the invoice prices there?—A. Yes, right here, Mr. Sommerville.

The CHAIRMAN: We have the question up from another angle.

The WITNESS: I would like to mention that I have a letter here from K. C. Leith. He is the President of the Saskatchewan Motor Dealers' Association which is part of our organization and he speaks there about the agreement that they have in regard to cars, and he speaks about the contract in so far as fleets are concerned, and the percentages that the automobile dealer has to assume on that; and it is too bad to have to pass it over.

*By Mr. Young:*

Q. Do these big houses handle cars?

Mr. SOMMERVILLE: They handle automobile accessories.

The WITNESS: Yes, that is right. Here is the hardware business. There are a lot of items here in connection with hardware, buckles, malleable cleavices, etc. Here we have the chain store selling malleable cleavices at 11 cents and our cost is 12 cents; a single tree at 14 cents where our single tree cost us  $19\frac{1}{3}$  cents. I heard so much about sweat pads that I have the whole story right here, and I am going to leave it with you.

Mr. SOMMERVILLE: This is the first time we have had sweat pads. We have had sweat shops.

The WITNESS: A sweat pad is something that every farmer uses, and here they are advertised at 39 cents and 38 cents when our costs are around from 46 to  $48\frac{1}{2}$  cents.

*By Mr. Kennedy (Peace River):*

Q. They can hardly be selling those sweat pads at a loss?—A. I think this explains the whole story. Did the T. Eaton Company, knowing of the rise in price, use pressure (by advertising) and morally force the issue with the manufacturer.

*By Mr. Young:*

Q. The price went up, you said?—A. The price went up, yes.

Q. And the T. Eaton Company were still selling at the low price?—A. Yes.

Q. Would it be possible that they had foreseen that and bought in advance?—A. I think what happened here is, they had this advertising, that they purposely printed this advertising here and then said we have got our catalogue out and cannot change that; it runs for 6 months; the sale ends on February 28th, 1934 and they have got to run them through.

*By Mr. Sommerville:*

Q. The suggestion is that they used their power to force the manufacturer to give them the pads at the old price?—A. At the old price.

Q. Although the price to everybody else was a higher price?—A. A higher price.

*By Mr. Young:*

Q. Can you tell me if the sale of these sweat pads has fallen off considerably? What I mean is this, the farmers to-day are in such a shape that they can't buy sweat pads or anything else?—A. They can't buy collars, but they can buy sweat pads. They put a sweat pad on the horse and the old collar might get by.

Mr. EDWARDS: The horse gets thinner.

The WITNESS: I believe that is right, Mr. Young. I would like to make a note of this matter. Mr. Young raised the point about the wholesaler, the manufacturer not selling to the Merchant's Consolidated.

*By Mr. Sommerville:*

Q. I thought you had covered that?—A. Yes, I have. Then in this file, in connection with hardware, there are advertisements and actual invoices, and I would like to particularly mention a letter from Glover Bros., Clarke & Co., and Kapells Limited; and they quoted here eleven items in connection with hardware. They quoted 100 assorted machine and carriage bolts, mail order house \$1.20, our price from jobbers \$1.23. Might I just run over two or three of these: Stuffed sweat pads—we have dealt with that. I will just file that here, so you will easily get at it.

Mr. SOMMERVILLE: That file is complete. Apparently you have gathered a good deal of material.

The CHAIRMAN: We will pass that over to the auditor for checking.

The WITNESS: That is just fine. Electric supplies; we have not got very much on that, but there is something.

*By Mr. Sommerville:*

Q. You have a schedule showing all that?—A. The cost of the large chains; they have shown what is the wholesale price to the retailer, that is shown right through. In connection with builders' supplies and fuel, here is a letter from T. M. Ball Lumber Company of Saskatoon, which is a firm that has done very well. They are having a pretty hard time right now, and there is certain competition that Cushing Bros. feel they suffer from the large stores. I am just going to leave that part. I think, Mr. Chairman, I would like to say here that I have a letter just received since noon from W. D. Dunlop and Co., from Yorktown, in regard to implements, and I think it is very important that something should be done about this. He points out in the letter that every farmer is needing new implements now, and that we should look carefully into the contracts of implement dealers. It is almost unfair for me to leave that, because the implement business, as you all know, is a very important one in our province. He gives the price of binders in 1914 and the price in 1921. He has sent you a copy of this so you will have it here.

*By Mr. Kennedy (Peace River):*

Q. In this case it is retailers?—A. Well, I have not really had time to read that letter.

*By Mr. Factor:*

Q. Does he complain that prices are too high?—A. Well—

The CHAIRMAN: Perhaps that is a subject that might very well be taken up in conjunction with what Mr. Young was speaking of, the question of separate and general study, and that type of thing, and we will note it for that purpose. We are going to have an investigator.

The WITNESS: He just thinks the manufacturers' are the huge prices. You have a copy of this; that is a covering letter to me. Mr. Chairman and gentlemen, I thank you for listening to me in the patient way that you have. I would like to have had a little longer time, in order to have gone into the different items; but we have a tremendous amount of information that will be available to you at any time; and our whole organization, speaking for a great number—I can't speak for them, but I think the feeling among many of our people is that a great number of these retail stores scattered throughout our province have been of immense value to our settlers, and it will be too bad if they are not given a chance. I thank you.

Mr. ILSLEY: I was just going to say, Mr. Chairman, that I think you should thank this witness on behalf of the committee for the definiteness of his evidence. It has been very satisfactory.

The CHAIRMAN: I was just going to do that. I thank you, and congratulate you on the way you gave your evidence, and the very excellent preparation of it in the short time that you have had; and we shall be glad to receive from you from time to time any further information that you wish to submit. Thank you very much.

*By Mr. Young:*

Q. Before you go, I have a question or two I would like to ask you. We have heard quite a bit now about certain practices going on which, if they are at all general, tend to draw business away from the regular channels into the chain stores and department store channels. Can you give us any figures as to

the percentage of decline in general business throughout the province—your province—because of conditions, in the regular retail trade; and the corresponding percentage of increase, if any, in the mail order and department store business?—A. I don't think I could. I ride through your province and see these villages being broken down, and vacant stores, but I have not got the percentages, and I am not very good at those percentages. I have got the general information, but I am a little afraid to quote percentages, because I might be too high or too low, and I don't know.

Q. Can you tell us where we could get that, that would give us an idea of the extent of this?—A. Oh, this story from Yorkton, the story from many of these towns—does it not tell the story? Our president, Mr. Cruickshank, attended a meeting, which I could not attend, at the city of Prince Albert the day before we came away, and the merchants were in from all over. They were taking a hearty and keen interest in this investigation and inquiry, and their story is what I have tried to portray here, that unless some action is taken, some measure of control is taken, that they are pretty well out of the picture.

Q. I see your position; but you see our position. The merchants are in a difficult position indeed, and we are looking for the cause. Everybody knows that part of the cause must be due to economic conditions generally, and part of it perhaps to these conditions that we have had outlined in the evidence these last few days; and we want to be able to judge as to how much of the trouble can be traceable to those causes. We will have to find that out before we can effectively deal with the situation, but I see your difficulty in getting at those figures. You don't know where they can be got?—A. No, I don't think I do. I would like to give that some consideration, and if I can give you some information I will be glad to send it on to the Chairman.

Mr. FACTOR: Would the Bureau of Statistics have any information on it?

The CHAIRMAN: Of course, we are making a study along that line down there at the present time; and after we get a lot more of this evidence, I think we will be able to form a better judgment on these things.

Thank you, Mr. McQuarrie, very much indeed.

The witness was discharged.

The CHAIRMAN: It is a little late this afternoon to call the representatives from Alberta, but there is a very brief statement here from Prince Edward Island, which was sent in by mail. Perhaps we could have that read and dispose of that.

Mr. SOMMERVILLE: It is a brief from Charlottetown, P.E.I., dated March 5, 1934:—

To the Chairman and Members of a  
Special Committee of the House of  
Commons appointed to enquire  
into mass buying and distributing  
methods in Canada.

GENTLEMEN,—As members of a Committee of the Charlottetown Board of Trade appointed for the purpose, we beg respectfully to reply to a request of the Hon. H. H. Stevens that the retail trade of the Province should survey for your information mass merchandising practice and its effect upon individual retailers and community life and consumers in Prince Edward Island.

Of the nine Provinces of Canada, probably none has suffered equally with Prince Edward Island from the encroachment by the mail order houses and chain stores upon established business.

A generation ago the country merchants of the Island consisted largely of men of substance, highly esteemed in their several localities. They were

not simply suppliers of the day to day requirements of the farmers and fishermen in their immediate districts, but they afforded to their customers a steady market for their products, largely upon a barter or contra account basis. They also acted to a considerable extent as bankers, assisting those with whom they dealt to tide over their slack seasons.

To-day—very largely as a result of the undermining of their businesses through the competition of extra-Provincial mail order houses—this whole class has almost entirely disappeared, and the small town trade is being done by storekeepers who are to-day actually struggling for an existence. As proof of this fact, we cite the following figures taken from a recent report of The Canadian Credit Men's Trust Association, Limited:—

There are in the province of Prince Edward Island 1,140 retail dealers, whose estimated capital is as follows:—

562 having no capital and without any credit standing.

213 having a capital of less than \$500.

38 having a capital of less than \$1,000.

81 having a capital of less than \$2,000.

86 having a capital of less than \$3,000.

70 having a capital of less than \$5,000.

46 having a capital of less than \$10,000.

\*44 having no capital in excess of \$10,000.

\* N.B.—The latter class are doing business almost entirely in the two cities, Charlottetown and Summerside.

It is the general opinion of the wholesale dealers of Charlottetown, by whom most of the credit is being extended to the country general storekeepers, that, unless protection of some nature is afforded to the latter without delay, a large proportion of them will be compelled to close their doors—many of them as insolvents.

Under conditions such as the above, it goes without saying that those engaged in wholesaling are not only experiencing a heavy shrinkage in the volume of their sales, but are each year finding the granting of credit without serious losses more and more difficult. Already three of Charlottetown's reliable and well established wholesale grocery houses have closed their doors, and the fear of a complete elimination of the wholesale grocery business is being openly expressed by leaders in the trade, while in dry goods two out of three combined wholesale and retail houses have already withdrawn from the wholesale business.

Until fairly recently, the outside competition to the retail stores came only from the mail order houses, but in the last few years five chain and branch stores have opened up in Charlottetown, while two more are coming to the Island in a few weeks. If this plan is extended to the smaller towns there can be but one result, viz: the collapse of both the wholesale and retail trade of the Island.

The reasons for the inability of the local retailers to meet the competition of the mail order houses and chain stores are of course well known to your Committee. Buying in very large quantities, these wealthy organizations obtain prices from the manufacturers materially below those quoted by the same manufacturers to the retail dealers, and frequently even lower than to the wholesale trade. In addition, they transport their goods in carload lots at much lower freight costs.

The prices quoted by the mail order houses and chain stores to the consumers—on this Island chiefly farmers and fishermen—are, on nationally known brands, lower than are offered in the general stores. At first sight, these lower prices may appear to be an advantage to the consuming classes, who, however, it must be remembered are also producers, and as such are keenly interested in the raising of commodity prices to a higher level.

It not infrequently happens that the chain stores sell food supplies, bought from other Provinces, or imported from abroad, at prices considerably lower than those offered for such goods (in the local markets) by the farmers and fishermen themselves. This results in an immediate reduction in price all over the Island—a very serious matter in the case of goods such as butter, ham, bacon, meat, cheese, vegetables, etc.

There are also other important handicaps in store for the farmers and fishermen of the Island if, as a result of the unequal competition from these outside institutions, the retail dealers are forced out of business, and with them the city wholesalers and many other institutions in Charlottetown and Summerside.

Not only would the country people lose the advantage of buying upon credit—an important factor, particularly during the winter months—but there is a wide range of goods kept for their convenience by the general stores that would not appeal to the chain storekeeper, because of the smaller demand. They would also be deprived of the exceedingly valuable co-operation of the city and town people in all such important matters as the maintenance of churches, schools, colleges, hospitals, hotels, newspapers, places of amusement, the employment of their young people, while many other advantages obtainable only on a collective basis would be weakened, including a central Government, the administration of justice, the policing of the Island, the maintenance of the highways, etc. The old idea of selling in the dearest market and buying in the cheapest will quite evidently act as a boomerang under modern mass producing and mass buying methods. Rather should the motto prevail of "Live and let live."

A feature from which the Province suffers is that it obtains none of the advantages that accrue to the central Provinces in the distribution of the pay rolls incidental to the manufacturing and distributing of the goods shipped to this Island by the mail order and chain store organizations, nor does it seem to be fair that the multi-millionaire institutions of Toronto and Montreal should be allowed to make use, at the lowest possible cost, of the Nationally-owned Post Office system, without which it scarcely would be possible for them to ply their injurious trade.

A point of no small importance is that, as each individual wholesale or retail firm is forced out of business, the Provincial and Municipal Governments of the Island are deprived of the taxes that would otherwise be paid to them, while the mail order houses contribute no taxes locally and the chain stores pay very small sums in proportion to the large volume of business that they obtain from the Island consumers.

In the matter of employment and salaries paid, there is no comparison at all between those of the country and city retail stores and the chain stores, where the customers serve themselves, carry away their goods, and are attended to by a few underpaid clerks.

This matter has been discussed at several meetings of the Charlottetown Board of Trade, and has been given intensive consideration by this committee, the members of which are a unit in regarding the situation as not only serious, but even alarming in its possibilities for the destruction of the established trade of the Island.

In this connection, we quote as follows from the special report of the Sub-Committee of Wholesale Grocers, which sub-committee represents the most important mercantile interests of the Province:—

We take it for granted that there is no question as to the importance of the service given by the wholesale grocers of this province. They have for many years formed the connecting link between the manufacturer and the retailer. Carrying large stocks of the many and varied

lines, and distributing same to the retail trade throughout the province, they have made it possible for the retailer to buy in lots to suit his needs, with prompt delivery and at a minimum cost for freight and handling.

Another service provided by the wholesale grocers has been the business carried on by them of produce shipping. For many years a large part of the farm produce of the province has passed through their hands. They take all kinds of goods from the retail merchants, forwarding them to the various markets and thereby giving a service that has been of great value to the community.

In substantiation of the contentions of the wholesale and retail grocers of the unfair competition of the chain stores, we tabulate below the prices advertised by the "Canadian Stores Limited" in the Charlottetown Guardian, with the corresponding costs to the independent retailer.

		Cost to independent retailer
April 28, 1933,	Lynn Valley pears, 9c. per tin.....	\$1.30 per doz.
May 5, "	Sun Flower Salmon, tall tins, 8c.....	1.20 "
May 5, "	Singapore Pineapple No. 2 tins, 3 for 25c....	1.07½ "
May 19, "	Quaker cornflakes, 2 pkg., 15c.....	.96½ "
June 2, "	H.P. sauce, 27c. bottle.....	3.25 "
July 7, "	Marven's waxtite sodas, 2 for 25c.....	1.50 "
July 14, "	Shredded wheat, 2 pkg. for 21c.....	1.26½ "
Aug. 11, "	Surprise soap, 10 for 37c.....	4.30 per cases, 100 cakes
Aug. 11, "	2-1 black shoe polish, 9c. tin.....	1.25 per doz.
Sept. 1, "	Lynn valley peaches, 2 for 25c.....	1.90 "
Oct. 6, "	Catelli Macaroni, 9c. pkg.....	1.06 "
Oct. 13, "	Carnation milk, talls, 2 tins, 17c.....	1.07½ "
Oct. 13, "	P. & G. soap, 10 for 31c.....	3.25 "
Oct. 13, "	Island pork and beans, 3 for 25c.....	.95 "
Oct. 27, "	Kellogg's cornflakes, 3 for 25c.....	.96½ "
Nov. 10, "	Citron peel, 27c. per lb.....	.27 per lb.
Nov. 10, "	Lemon peel, 18c. per lb.....	.18 "
Jan. 19, 1934,	Sliced bacon, 21c. per lb.....	.21 "
Jan. 25, "	Small prunes, 3 lbs. for 25c.....	.08½ "
Jan. 25, "	Singapore pineapple, 2 for 19c.....	1.17½ per doz.
Jan. 25, "	Pears, 2 tins for 19c.....	1.20 "

In addition to the above, on September 22, 1934, the Canadian stores advertised sani-flush 1 lb. 4 oz. tins, 27c. each. So far as we are aware, sani-flush in this size is not available to the independent dealer. Local wholesalers sell a 1 lb. 6 oz. tin at \$3.50 per dozen. The general public are apparently not aware of this discrepancy in weight, and practices such as this are unfair alike to the retail dealer and to the public.

Among many other prices advertised by the chain stores, we mention the following:—

	Chain store price	Cost to retailer
Marmalade.....	.29	.28
Strawberry and other jams.....	.29	.38
Canned pears.....	2 for .19	\$1.25 per doz
Canned pineapple.....	2 for .19	1.25 per doz.
Sunlight soap.....	5 for .25	.5½
Surprise soap.....	10 for .39	.60 per doz.
Lard per lb.....	2 for .25	.11½

The above could be added to extensively in all kinds of canned, bottled and boxed goods.

In the drug and patent medicine line, great complaint is made of unscrupulous price cutting. The line is too extensive to quote in detail, but as an example we cite the following:—

	Chain store price	Cost to retail trade
Lydia Pinkham Compound.....	.98 per bottle	\$12.75 per doz.

In drug sundries, and particularly in rubber goods, the mail order houses and chain stores quote many lines at prices considerably below the cost to the retailers. A similar complaint is made by boot and shoe dealers regarding rubber footwear, and the footwear sub-committee report as follows:—

The seven rubber factories in Canada manufacturing rubber footwear meet once a year and sometimes oftener and agree on a sale for all their lines to the regular retail trade. They also make a price for the mail order houses and chain stores, to whom last year they gave a special discount of 12 per cent. Although the mail order houses and chain stores sell only about 20 per cent of the rubber footwear in Canada, a preference of 12 per cent is obtained by them over the other merchants, large and small, who distribute 80 per cent of the rubber footwear. After receiving this special preference, they open branch stores and sell the same line of goods at a mark-up of 15 per cent, or less over the price that the regular trade are compelled to pay. In proof of this, we attach a list of prices quoted by the T. Eaton company in their catalogue 1934 on 16 staple lines of rubber footwear taken at random, which actually shows 13½ per cent of mark-up over the price the regular merchant is compelled to pay. The overhead expenses of the average shoe store in Canada, statistics show, is from 22 to 25 per cent. In other words, the regular retail merchants who handle 80 per cent or about \$12,000,000 worth annually, in order to compete, must take a loss of from 7 per cent to 10 per cent.

It is a well known fact that the mail order houses and chain stores are to-day dictating to the manufacturers the price at which they are to be charged for the goods they buy. In addition to the above, we have received reports from the dry goods and hardware trades, in which serious complaints are made, but we believe, in view of the facts already given, that further citations will not be regarded as necessary, particularly as the delegates from the other provinces will no doubt supply your committee with full information.

We, however, append the report of the wholesale grocers in full, and would specially request that same be studied with care, as it depicts a condition of vital interest to the future of this province.

In the matter of a remedy for the several troubles complained of, the following suggestions are offered for your consideration:—

1. That a Canadian trade commission be appointed with wide powers over all trade matters similar to those held by the railway commission. This commission would have the right to set prices on all nationally advertised goods. They would also have the right to compel manufacturers to class as nationally advertised such goods as they might deem to be of a similar character to those already priced by the commission. The commission would also have the right to order rebates to wholesalers and retailers upon goods purchased within a given period and unsold at the time at which the prices had been reduced.

N.B. In the event of the provinces contending that, under the B.N.A. Act, the Dominion parliament has not the right to grant the necessary powers to a trade directing commission, a compromise might be arranged by allowing the provinces to appoint a majority of the members of the commission.

2. That laws be enacted making it compulsory upon all manufacturers to supply their goods at the same prices to all buyers in the retail trade and at stated discounts to the wholesale trade, no preference being given for large quantity orders; chain stores and mail order houses, selling to the consumer, being classed as retailers.

3. That retailers or chain store owners, selling by mail order or otherwise, be subjected to a sales tax upon all goods shipped beyond the confines of their own province, 50 per cent of the said tax to be paid by the federal government to the governments of the several provinces into which the shipments are made.

4. That all goods made in quantity by a manufacturer shall be marked with a trade name or trade mark, registered in the patent office, Ottawa.

5. That on all goods nationally advertised, a price to the consumer shall be named, no retailer to be allowed to advertise or sell such goods to the public at lower figures, special provision being made for the disposal at reduced prices of faulty or imperfect goods and articles found to be unsaleable after a stated period of time.

6. That retailers who manufacture goods in quantity shall apply to the trade commission for selling prices of all lines so made.

7. That all presently established manufacturers, wholesalers, and retailers be licensed, and that in future, before licences shall be granted to individuals or limited companies proposing to embark upon new enterprises, a recommendation shall be obtained from a constitutionally appointed provincial board, representing the particular industry into which the applicant proposes to enter, and that before said recommendation shall be issued the board shall satisfy itself of the bona fides of the application, also as to the applicant's character, ability, experience, and his possession of the required capital.

8. That an Anti-Secret Commissions Act, also a P.A.T.A. Act, similar to those in force in Great Britain, be placed upon the Canadian statute books.

The above respectfully submitted.

*Committee of the Charlottetown Board of Trade appointed to consider and report upon chain stores and mail order houses.*

H. K. S. HEMMING,  
*Chairman.*

S. A. McDONALD,  
J. S. HOWATT,  
R. E. MUTCH,  
R. T. HOLMAN,  
B. W. LEPAGE,  
A. L. WRIGHT,  
E. S. COFFIN.

CHARLOTTETOWN, P.E.I., March 5, 1934.

Attached to it is the report of the grocery section, many features of which have been incorporated in the report I just read. The agricultural committee report is as follows: Chain stores adversely affect values of agricultural products.

The practice of mass buying and selling of farm products through chain stores has not been in the interests of the farmer. It is customary, when prices are low, to arrange for the purchase of large quantities which are used in the stores as leaders, and oftentimes potatoes have been put on the market at a price less or not more than the cost. This naturally has a disturbing effect on the whole market. The same principle is used along many lines, and the regular wholesaler or broker, as well as the retailer, has not the security that normal business conditions should warrant, and is, therefore, unable to pay the prices the farmer would otherwise receive.

The butter industry is adversely affected when large concerns undertake to import butter from New Zealand when, at the same time, there is a sufficient quantity of this product in the Dominion to supply its requirements. The imported butter is bought and sold at such a low price that the Canadian producer is obliged to accept less than his cost of production.

Chain stores make a daily or weekly endeavour to place on the market some leading staples at a price below that at which the commodity should sell considering its cost, and also to arrive at such a low price by a means that does

not help the particular industry their "leaders" may represent, particularly where there is more than one line of chain stores doing business in the same town or city. As an example, selling heavy hams at a material price reduction under the prevailing price of hams of desirable weight by advertising hams at 12 cents when the price of small sized hams was not less than 18 cents. When the customer calls, he is advised he will have to take half of a heavy ham, which, anyone knows, has neither the texture nor quality of the ham of desired weight. The tendency is naturally to pull down or depress pork prices. It is also a common practice for householders to take the advertisements of these different chain stores, pick out the leaders from each, and then secure their week's supply by purchasing their butter and potatoes at one store, their eggs and meat at another store, and so on until their requirements are satisfied. It is not difficult to see how this practice, carried on so generally by chain stores, provides a measure of instability in the market and reacts to the detriment of the primary producer.

---

The CHAIRMAN: Our witnesses next Wednesday will be representatives of Quebec, Alberta and British Columbia Retail Merchants Associations.

The committee adjourned at 6.05 to meet Wednesday, March 14, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

March 14, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Gentlemen, we have the minutes for the last meeting. They merely recite the filing of a number of exhibits and the names of witnesses who gave evidence. I will declare the minutes approved unless there is some question.

Now, here is a letter which I do not think it is necessary to read. It is quite a lengthy letter from Mr. Tom Moore in which he points out several inaccuracies in the report of his evidence. The letter has been checked over and I understand there are no material changes made, rather largely matters of nomenclature. It is suggested that the following resolution might be passed: "That the evidence given by Mr. Moore at the outset of the committee on March 1st be amended in accordance with the corrections indicated in Mr. Moore's letter addressed to the chairman of the committee on March 9th."

Mr. KENNEDY (*Peace River*): I will move it, and we will have the changes inserted.

The CHAIRMAN: Inserted in the minutes. They will be inserted in the minutes. There are a lot of small changes—really mistakes in the pronunciation of names. I have also a letter from the editor of debates in relation to this matter.

Carried.

Mr. FACTOR: Have you received a report in connection with coal?

The CHAIRMAN: I have taken that matter up again, Mr. Factor. I could tell you what I think is the matter, but I think we had better have an executive meeting.

Mr. SENN: Have you any information about when Dr. Coats and his committee will report?

The CHAIRMAN: I did expect possibly that we might have a little detailed information here this morning, but I find it is not here. Dr. Coats and those associated with him are making some very real progress in their study of the general subject, and we will discuss that to-morrow. To-morrow afternoon, if we can arrange it, we will have an executive meeting.

Mr. SENN: It seems to me that the tobacco matter should be looked into as soon as possible. There is a real demand throughout western Ontario for an investigation.

The CHAIRMAN: Of the tobacco business? That is certainly in contemplation.

Mr. FACTOR: I moved to have the report filed.

The CHAIRMAN: Yes. Now, gentlemen, the first witness to-day is Mr. Alexander MacKay of the Retail Merchants' Association of Alberta. He is secretary of the Alberta Provincial Board of that body for Canada. He will now come forward.

ALEXANDER C. MACKAY, called and sworn.

The CHAIRMAN: Before Mr. MacKay gives his evidence I would like to urge upon him and other witnesses, as far as they reasonably and possibly can to confine their statements to questions of personal knowledge or to statements supported by evidence, and to refrain from merely expressing opinions, and most particularly so when referring to any business concern; and, furthermore, that the names of business concerns ought not to be mentioned in connection with any statement unless the statement is made from personal knowledge or can be supported by evidence. If the witnesses will try to follow that general line it will help us materially in the committee, as we desire to be fair to everyone concerned.

*By Mr. Parry:*

Q. Whom do you represent, Mr. MacKay?—A. The Retail Merchants' Association of the province of Alberta.

Q. And your association is identified with all divisions of the retail trade in the province?—A. Yes.

Q. You desire to make representations to this committee?—A. I do.

Q. Just proceed, please?—A. Mr. Chairman, I appreciate very much the remarks which you have just made, and I will endeavour to the best of my ability to carry those suggestions out as I go along. It should be borne in mind, however, that there is a similarity in the conditions existing in each of the provinces of Canada, evidently, from the evidence which you have had the privilege of listening to, and we cannot very well bring before you gentlemen or to your attention our problem without just encroaching a little on maybe some problem that you have had already brought to your attention. There are one or two matters I would like briefly to touch on before I deal with this brief which I have. I do not know, Mr. Chairman, whether the gentlemen who are on this committee are acquainted with the fact, but when you consider the number of people who are obtaining their living from manufacturing, wholesaling and retailing—when these figures are compared with those that are in the agricultural bulletin I think that we have very reasonable ground for coming before you and bringing to your attention some of the problems which we have to contend with and which to-day are such that it is almost a hopeless fight insofar as the independent merchant is concerned.

Under the heading of agriculture—and this is taken from the Canada Year Book, 1933—1,127,767 people, male and female, are employed in agriculture; insofar as retailing, wholesaling and manufacturing are concerned we have 1,018,082. So the discrepancy is not so very great when you consider them in that character.

Mr. SENN: Does that represent actual workers?

The WITNESS: That represents actual workers.

Mr. FACTOR: Where is that taken from?

The WITNESS: From the Canada Year Book, 1933. There is a possibility that indirectly—I do not know whether the people living in the cities might be fortunate in having larger families than the people living in the country—if that should be so probably those that are indirectly deriving their livelihood from manufacturing and retailing and wholesaling, might be almost in a similar position to those who are occupied on the land.

Now, with that in mind, Mr. Chairman, it seems to me and to the association which I have the privilege of representing that the day has arrived when a little greater consideration should be given to those people who are not farmers but who in the past and up until the present time have done probably more for the farmer than any other group.

*By Mr. Young:*

Q. You mean the 1,018,000?—A. Yes.

Q. And they are all entitled to more consideration?—A. No, not more; I say as much. I say we have reached the time now when we should be given some consideration. My reason for saying so is this: in our province alone—I do not know what the figures are in other provinces—during the depressed conditions which have existed for the last two or three years, our merchants—and this is outside of the two larger cities of the province, Calgary and Edmonton—as the result of a questionnaire which we sent out from our office we find that the merchants—and I think the gentleman at the end of the table referred to the question of the rural retailer as compared to the city merchant—we have on the books of the retailers of our province over forty millions of dollars.

The CHAIRMAN: Outside of the two cities?

The WITNESS: Outside of the two larger cities.

Mr. FACTOR: Do you mean outstanding?

The WITNESS: Outstanding. Slightly over \$40,000,000. You gentlemen are quite well aware of the necessity which has developed insofar as our provincial governments are concerned in order to protect those people who have been victims of circumstances to the extent that the farmer to-day is not getting a sufficient amount from what he produces to show any profit whatsoever with the result that when the banks have been compelled to close down on the credit to the farmers and when no others were prepared to come to his support, the only individuals that had any compassion and sympathy was the retailer. And we have evidence in our province to prove very very conclusively that if it had not been for the merchants in that province Mr. Farmer would have been in a very much worse state than he is to-day—at least to the extent of forty odd million dollars.

*By Mr. Edwards:*

Q. That has to some extent backed up on the jobber and manufacturer; the manufacturer and jobber would be carrying the retailer?—A. Yes, in a proportionate amount, but not so much, or not to the same extent. The retailer has been the individual who has carried the burden. To-day our wholesalers and manufacturers have most of these retailers on what you have heard of as the C.O.D. list. He pays as he goes. But that does not help him to collect any of the money which has been outstanding for a year or two.

*By Mr. Senn:*

Q. I gathered from your remark a moment ago that you are of the opinion that practically all of that amount was owing by agriculture; is that correct?—A. Yes, almost entirely. We have left out the cities of Calgary and Edmonton, and what small proportion of that would be attributable to Medicine Hat and Lethbridge would be so small it would not make any difference. This has been taken—

*By Mr. Parry:*

Q. Is that made up from a fairly complete analysis?—A. I have a questionnaire I sent out to 6,000 retailers, and I have supplied that evidence to the provincial legislature, and as a result of that, Mr. Chairman, we were able to

get what is known as part 2 of the Debt Adjustment Act, which gives some consideration to the position of the retailer, and through the offices of our association for the last 18 months I think it is safe to say we have saved about 100 to 150 retailers from being forced into liquidation because of the attitude of some of our manufacturers in eastern Canada who were not familiar with the conditions which applied in the far west.

*By Mr. Edwards:*

Q. But who were made familiar by reason of the banks?—A. Yes, I would like to hope so.

*By Mr. Factor:*

Q. Is this amount still outstanding?—A. Yes, it is still outstanding and has been added to since we took that last survey, because of the fact that the merchants—I would like this committee to visualize for a moment—I do not know how many of you are merchants—if any of you are, and if you are living in the same community with a farmer, and he has paid his way when times were normal, and he comes into your store and he tells you he has got to be carried for a certain length of time, and he would like you to come to his assistance. If he was only one, it would be all right, but he is just one of a great many. Now, you may be a member of the same lodge, your children may go to the same school, or a farmer happens to be living close to the community. You are good fellows, you know each other fairly well. When Mr. Farmer comes into your store and asks you to carry him for a week or a month, as the case may be, you find it hard to say no.

*By Mr. Heaps:*

Q. How many accounts do those \$40,000,000 represent?—A. How many accounts? Well, it refers to and represents the accounts on the books of between 5,000 and 6,000 retailers.

Q. I am not speaking of the number of retailers. I want to know the number of individual accounts.—A. I did not go that far. I was not interested in the number of accounts. What I was interested in was the money outstanding, and the questionnaire which I sent to these merchants was along that line, and that is what we received. We received an estimate that is a complete record of their books. That is what we asked for.

Q. For how long a period do those \$40,000,000 go back?—A. That would go back probably—you know the statute of limitations takes care of certain accounts when it reaches a certain time. When it reaches a certain time it is written off. I think it is six years, so it could not go back beyond that because automatically all accounts become null and void after a six-year period.

Mr. PARRY: That is a general statement.

The WITNESS: That is a general statement.

*By Mr. Kennedy (Winnipeg):*

Q. As a matter of practice, do they write them off?—A. They have no alternative.

Q. Yes, they have?—A. If they cannot collect them?

Q. It is only barred if the debtor wants to insist on that right. There are old accounts running over six years that are paid all the time?—A. Well, it depends on the debtor.

*By Mr. Young:*

Q. Do not they take notes on the account before it becomes outlawed?—A. In some cases yes; in some cases no.

*By Mr. Kennedy (Winnipeg):*

Q. A payment on account would renew it for another six years?—A. Yes, or an acceptance of the amount outstanding renews it for another six years.

Q. Most of these farmers' accounts would have something paid on them in six years? It would be a rare one that would not have it?—A. That may be so here, but it is not so in western Canada. We have a number of accounts that the statute of limitations takes care of.

*By Mr. Parry:*

Q. A number of farmers could have carried their own burdens up until a short time ago?—A. Yes, no doubt. I do not mean to infer, Mr. Chairman, that the farmers are not trying to liquidate their obligations; but I do say the conditions that exist have made it impossible for them to do so. All that our farmers are able to do in the province of Alberta is just get by. In the last two months I think I have visited almost every town in our province—

*By the Chairman:*

Q. Your contention is the retailers have carried the burden?—A. Have carried the burden.

Q. Let us get along then, with your statement?—A. With those preliminary remarks, I should like to deal with this brief, and I just want to say that the Alberta provincial board of the Retail Merchants' Association of Canada appreciate this opportunity of presenting to your committee the following memorandum. The information which it furnishes has been obtained as a result of many personal interviews with independent merchants throughout our province, in addition to which approximately forty retail trade section meetings have been held during the past month.

This memorandum has therefore been prepared for submission concerning the unsound, unethical and ruinous practices relating to merchandising and retail distribution of commodities and which, in the opinion of the merchants of Alberta, call for immediate control and remedies, not only in the province of Alberta but throughout the whole Dominion of Canada.

The independent retail merchant to-day realizes that policies and forces are at work throughout Canada which, if allowed to continue, mean his ultimate elimination as a distributor of merchandise to the consumer. To be able to remain in business and operate on a successful basis, it is imperative that the independent merchant must be able to so purchase his merchandise that same can be sold to the public at a price which will not only cover his cost of operation but will assure him a fair return for services rendered and for his investment.

In the event that the corporation chains, the large departmental stores and the mail order institutions are permitted to continue to command special purchasing facilities from manufacturers, and if such facilities are not available to the independent retailer, then indeed his business days are numbered, as it is utterly impossible for him to compete with the firms which now enjoy special privileges in buying.

Evidence already submitted to your committee would indicate that not only are the policies of such companies and corporations unfair to the great many independent merchants throughout Canada, but are injurious to the wage earners, the farmer producers and to the state itself.

From the point of view of the state it becomes a question of the very greatest importance to determine in advance the underlying processes and whether they and their outcome are beneficial or pernicious. It is submitted that they are pernicious and destructive of the state.

Granting the whole system of retail distribution should remain on a highly competitive basis, it still is true that unfair, unethical and fraudulent competition may be and positively is destructive of the whole system, and if such practices as are charged are allowed to continue unchecked, it may well be, and it is so argued, that the state as a whole will become involved, the system of distribution will break down and the standard of living throughout the country will definitely fall from its present level.

It is very plain to be seen, and world expansion of the last few years has made the conclusion inescapable, that the modern system of production and distribution cannot long survive unless ample means of purchase constantly reach the hands of the consumer. The consumers are largely the workers in production and in distribution. If unjust, unethical or fraudulent practices are constantly cutting down wages and reducing the value of our farm products they automatically are forcing out of business employers of labour such as manufacturers and retail merchants. These practices are, in the opinion of this association, interfering definitely with purchasing power reaching the hands of the consumer.

Fair distribution of purchasing power in the hands of many people is the initial driving force in the modern industrial system. That and that alone creates the widespread demand which causes all industrial, commercial and other business activities to speed up. It follows that all forces which tend to cut down purchasing power in the hands of the many have a distinct tendency to slow up, as indeed they would ultimately stop, if carried to the limit, the whole system.

Large or mass production at reduced cost, and with a smaller number of workers, means inevitably smaller purchasing power in the hands of the many. Carried to its apparently approaching conclusion it means plenty of goods of all kinds on the one hand and on the other, people in great numbers needy and in want, without any means of bringing about the necessary distribution.

That, it is submitted, appears to be the lee shore on which the modern state is likely to wreck itself unless some real remedies are immediately applied. Chief among the necessary remedies are those which will check if not altogether eliminate, all forces which tend to improperly interfere with or stop the distribution of purchasing power among the people at large. The independent retail merchant is vitally concerned in finding out what those remedies should be, and in having them applied. He is the last link in the chain of distributing agencies which carry all merchandise to the ultimate consumer, and it naturally follows that the merchant is the first to experience the terrifying effect of shortage of purchasing power in the hands of the consuming public.

With the foregoing background in mind it is not difficult to understand how many of the present unfair practices of departmental and chain store organizations are endangering the whole structure of our retail distribution system, and are tending to lower the standard of living of our people throughout Canada. An examination of some of these practices will serve to show the evil of same, and in that connection perhaps the most sinister practice complained of is that of selling to the public goods at or below the recognized cost price, or at a price which does not include a reasonable amount of compensation for handling.

The practice of mass buying and underselling is now indulged in to such an extent that it has become positively destructive of the independent merchants' business, and is followed by the departmental and chain stores largely with that object in view. Its unfair and evil influence goes far beyond the sale of the particular goods.

I would like to say at this point it has been my unfortunate experience to stand behind a counter and a lady has come in to my store and she has asked for a certain commodity. I have endeavoured to service that customer, and

brought the goods to the counter. The next question is the price. When I mentioned the price, the lady looked at me and says, "Now, Mr. MacKay, I have been a customer of yours for some time. Why is it you have to charge me this, which is more than I can buy that same article for at a certain store," naming a certain store in the vicinity. I want to say, gentlemen, if I was to spend half a day trying to explain to the lady that I was not getting any more than a fair profit to cover the cost of operation and pay my help, and so on, if I was to spend half a day, I could never convince that lady that the store that she mentioned might be making a fair profit, and I was just asking that. Gentlemen, I think it is a tragedy that a man has to stand that from the public. It places the merchant in a position of being either a profiteer or a dishonest man, and surely our laws are such that we can look for protection from practices of that kind. I say gentlemen, that apart from the many other features of this business, of the position that the merchant is placed in, he is placed there by the public. It is not only detrimental to his best interest as a merchant or one trying to serve the public, but I think it goes beyond that; and he is being accused of a crime that he is not guilty of.

*By Mr. Young:*

Q. What explanation do you make to them?—A. What explanation?

Q. Yes.—A. Because of this situation?

Q. When that woman comes into your shop and asks you the reason for this difference in price?—A. Well, I would like to ask you what explanation you could make. You would do exactly as I have done on many occasions. I have tried to prove that I was trying to serve her; also I have shown her my invoices. I have said, "There is the cost of the goods." Let me give you one instance.

*By Mr. Factor:*

Q. What Mr. Young asks is, what reason did you assign to the fact that the departmental store was able to sell cheaper than you, to the customer?—A. Well because of the privileges which the system under which we operate allows him to indulge in, that they do not allow me to indulge in. The manufacturer of the product of the chain store or the departmental store is placed in the position where he sees a certain volume of business, and he knows his cheques are coming along. He does not have to take a chance, and because of the fact that the mass buyer says to the manufacturer, this is what I want, and the manufacturer has no choice. So he gets into the same position as I was in, and the chain store and departmental store are sitting pretty. They are able to undersell those who are trying to serve the public honestly.

*By Mr. Young:*

Q. They have the advantage of big orders, and pay cash, is that the idea?—A. Yes. I would like to say just at this point that before I left to come down here, I had an interview with certain gentlemen in the city of Calgary, and I have no brief for the packers, I am not here representing the packing industry or anything pertaining to them, but I think this committee have the opportunity right now to make an investigation which will prove a great many things that you don't know. You take the packer; it is one of his problems, and this can be verified—I will give you the name of the packer if you want me to, and if you want to get his statement you can have it, because I was privileged by him to come here and lay the matter before you—when a national organization such as a chain store or departmental store goes to some packer, and you know the packer's prices are based on the current values as they apply in the different centres of the dominion, according to the price of farm products such as wheat.

cattle, hogs et cetera, Mr. Packer, if he is negotiating—or rather the department store or chain store, if they are negotiating with the packer to get some idea whether or not they can continue to do business with that packer for the balance of the year, after they have made an arrangement with the company at that time, they say, “Mr. Packer, how much will you give a cheque for at the end of the year on a volume basis; what percentage is this firm prepared to give our company on a volume basis?”

*By Mr. Factor:*

Q. You mean a rebate?—A. I mean a rebate, yes; and in some cases Mr. Packer who refuses to recognize them gets no business from this national organization. These cheques are not usually in hundreds of dollars either. Now, Mr. Chairman, I will give you the name of the packer and you can prove that.

The CHAIRMAN: Yes, we will have that.

*By Mr. Parry:*

Q. These cheques, you say, pass through in the normal course of business of the packer?—A. Yes. It is so that a packer has to do that, that it comes to a question whether or not he is prepared to go so far, or go as far as the large institutions want him to go in order to get their business. In other words, he is compelled to pay the premium for the privilege of doing business. What happens is that the independent retail company doing business with that same packer naturally is an easy mark. The packer says, “If I have to give so and so on this man’s order, I can get a portion of it back by charging these fellows a little more than that man is charged.”

*By Mr. Edwards:*

Q. Is that a fair assumption? Is it not quite the custom in any business that volume plays a considerable part in price, volume over a given period, say a year, no matter what it is?—A. Yes. In our business we have a disease known as volumitis.

Q. We have had evidence here where we had co-operatives organized for that particular purpose, for volume buying?—A. I would like to say that we as an organization, and I represent the independent merchants, have no kick with what the chain store or departmental store gets in their volume buying. I have nothing whatsoever to offer in the way of criticism here; if a man wants to invest \$10,000 in a rising market in merchandise, rather than in stocks or bonds or anything else, he is, in my opinion, privileged to take advantage of it and I say he is entitled to what the market will give him.

*By Mr. Factor:*

Q. That is not the point that Mr. Edwards raises. Mr. Edwards says if a man doing business with a large firm and buys say 10,000 units, he will expect to get a much cheaper price than the man buying 100?—A. Yes, I take that for granted. I say he is entitled to that.

*By Mr. Edwards:*

Q. That is my point. Another point there: where you speak about the independent retailer, has not the casualty list from western Canada been pretty severe over the last five years; I mean, failures have been very large?—A. Yes.

Q. And as a result, have losses not been very great to the man who was merchandising, either the manufacturer or jobber; their losses have been very severe?—A. Very severe.

Q. Is not that taken into account when he turns to these large distributing people?—A. I don’t know whether I just get you. You mean the creditors of an institution that is forced into liquidation, that he has taken losses?

Q. I mean the losses have been so severe on manufacturers and upon jobbers, that that has had the effect of turning them to the larger channels of trade whereas you say it gets there naturally?—A. You would not think that was the experience they would have. You would think they would try to get away from continually losing money, and try to make a little money instead of handing it out.

Q. That is the very point I am asking?—A. That seems to me is the situation.

Q. I don't think we understand each other. I say this, assuming that a manufacturing concern, for instance, in eastern Canada, sends its traveller out to the west and he contacts a lot of accounts with small merchandisers, small stores, out of that lot of accounts he has a lot of losses during the year. The result is, it is pretty expensive selling; if he goes out with the idea of selling 20 to 25 per cent and due to these losses it runs up to 50 per cent, that is a different matter altogether. Then when a channel opens up where he can dispose of a lot of merchandise for cash, he can afford to take a smaller profit?—A. I appreciate that.

Q. I am just bringing that out; I am not refuting your argument?—A. In my opinion, he is defeating his own purpose if he is going to carry on a system that is continually putting these small merchants out of business; the loss of money is perpetuated.

Q. I am not at all in sympathy with these channels. I think the small merchandiser is certainly the man we want to protect?—A. Let me give you one more case—

*By Mr. Factor:*

Q. Before you leave the packer, did you investigate this particular angle in the packing business particularly, that the packing companies have been so over-capitalized that their incentive to do business with the large chain stores is increased. Take the illustration of the packing company which is meeting to-day and taking in a million dollars of preferred shareholders?—A. I appreciate that, all right, but you can't blame the individual merchant for that.

Q. I am not blaming them, but is that an incentive to the packing company, the fact that it is over-capitalized?—A. There is no doubt about that. It does not apply to the packers only. There are other businesses that have been over-capitalized, to our sorrow or grief.

The CHAIRMAN: I think Mr. MacKay is perhaps getting away from the point in the last statement of his.

Q. This bonus to which you referred—the case of which you are going to give us the name—is in addition to their trade discount?—A. Exactly, that is in addition to the trade discount.

Q. You were talking about trade discounts; but this is a special bonus in addition to trade discount?—A. That is it.

*By Mr. Ilsley:*

Q. Is it not in effect a quantity discount? Is this rebate that you told us about in addition to the ordinary quantity discount? I have heard this term quantity discount used time after time. Do you mean that that is what it is?—A. Well, not altogether. My experience in trying to find out just what we are discussing now,—you take in a case of smoked beef, smoked meat, provisions; a large store has, we will say, a half a cent a pound that he gets because of his volume; that is half a cent below what the independent merchant buys for from the same packer.

*By the Chairman:*

Q. That is a volume discount?—A. Yes. In addition to that, and in addition to whatever below he might be able to get it on the rail, below what it might be selling at the packing house, in addition to that Mr. Packer has to come through at the end of the year with a recognition of the business which he has received from that institution, apart and separate from anything else.

*By Mr. Edwards:*

Q. In other words, he never knows what he is getting for his goods?—A. Not under these conditions.

Q. No; if he does not reach the quota, he does not get the discount? I mean, the packer is in this position: he does not know what he has sold his goods for until the end of the year?—A. That is it.

*By Mr. Young:*

Q. In your dealing as a retailer, or as a representative of the retail merchants dealing with the packers, do you find that any of the packers discriminate between the different retail individually owned merchants?—A. Yes.

Q. There is discrimination there also?—A. Yes.

Q. The big firm is not the only one that gets an unfair advantage?—A. There are big firms who are not in the same classification as the department or chain stores. There is a firm that might be a chain so far as our own province is concerned.

Q. I have a letter here with complaints of packers charging six cents a pound for bologna in Winnipeg and ten cents in Regina, the same firm charging that to the retailer. Do you find that practice quite prevalent?—A. Yes. The packing industry is something of a mystery. You never know where you are. You have just got to take what you can get and be thankful that you didn't come off worse.

The CHAIRMAN: Let us get on.

The WITNESS: I am going to give you another instance of the packers before I leave that. I think you have the statement that the week before Christmas in our city a lady came into a retail butcher shop and she wanted to buy a turkey; she selected her turkey, and she said, "I would like to get a ham; we always have a ham along with the turkey." The merchant laid the ham on the counter, and she hesitated. He wanted 22 cents a pound for this ham, I think it was, and the lady said, "Now, I hesitate because I just wonder if I can pay you the difference between 18 cents a pound and 22 cents." She said, "I have just been over to a certain store, and there that same ham—at least I think it was the same ham—was being sold at 18 cents a pound." The price from the packer to the trade was 19 cents a pound. Let us get that clear, 19 cents is what you would have paid or I would have paid if we had been buying this ham for Christmas. The merchant said, "I have had your business for some little time, and I would rather make you a present of this ham than lose your good will." She said, "No. I don't want it as a present. Before I do anything more about the ham, I am going to go back to verify my own ideas, whether it is the same." She went back to the other store, and she came back and she said, "Yes, it is exactly the same ham, put up by the same packer." Mr. Butcher came to me and said, "We have got to investigate this and find out about it," and we did find out, not from the large stores but from a little private detective work. We found out that the company that was offering these hams for sale, in addition to buying them at a half a cent a pound less than the merchant, 18½ cents as against 19, have a demonstration allowance given to them which paid the salary of the girls selling and a portion of the advertise-

ments. That is a form of competition that we can't beat; I don't care how good a merchandiser you are, you can't beat it; and as I said before, we are again placed in the position by the public as being profiteers or dishonest people.

*By Mr. Young:*

Q. Now, why would that packing firm, that particular firm, allow that particular store an advertising allowance or demonstration allowance they would not give to you or anybody else?—A. That is what I would like to know.

Q. There must be a reason for it somewhere?—A. Well, the only reason I can give to you is the volume of business they can get from them, and the fact that their cheque is on the dot, when it is wanted. With you and I, they may have to wait a week until we collect enough money to pay the bill, but they have their cheque forthwith. I just mention that in passing, because that is a sort or form of competition that you can't beat, I don't care how you try. We have tried for years.

*By Mr. Ilsey:*

Q. Why can't you beat it by voluntary chains?—A. Voluntary chains?

Q. Yes?—A. Because voluntary chains are only recognized up to a certain point, but not beyond that point. There are some telegrams here that will give you some information on that. We have voluntary chains, and let me say, gentlemen, that these voluntary chains have only been created because of necessity, the merchants had no great desire to form a chain but to live, to survive they had to; they had no alternative. They had to come together to bring their buying power, as it were, to a certain point, and see what they could do with that.

Q. You say they can't do what the corporation chains can do?—A. No.

Q. Why can't they?—A. Because they are not on the jobber's list.

Q. Why aren't they?—A. That is what I want to know exactly.

*By Mr. Young:*

Q. I thought the voluntary chains were organized to get away from the jobber, to eliminate him entirely?—A. Not in all cases. There are some cases where they have so many of the independent retailers affiliated with that particular chain that they have been able to create their own warehouses; but even creating their own warehouses does not guarantee that they are going to be recognized jobbers.

*By Mr. Heaps:*

Q. Would you explain what is meant by the jobber's list?—A. The jobber's list—the wholesaler's list.

Q. Cannot the average small retailer purchase direct from the manufacturer, or is he compelled to purchase direct from the jobber?—A. He can purchase direct from the manufacturer, but he does not get the jobber's price unless he is recognized as a jobber.

Q. In other words he has to pay a higher price than those who buy direct from the manufacturer?—A. Yes.

Q. Does not the same practice apply to other things than those produced by the packers?—A. Well, the packer is a manufacturer and jobber combined. That is, the packer is in a class by himself. You take another commodity that comes from the manufacturer, it is sold by the manufacturer's agent or commission broker. There is one thing that maybe, while we are here, we might just as well mention, the fact that in my opinion—and I am speaking for the merchants of our province—that until something is done that will define who a jobber is, who a retailer is, business will be in the difficult situation which has been ours for years.

Q. Are there any cases where the small retail merchant is compelled to buy through the jobber and he can't buy through the manufacturer at the manufacturer's prices?—A. Exactly. Let me give you one case. We have a chain in our province known as the Merco Wholesale. They have done everything they could do to make them look like a wholesale, and make people think of them as a wholesale; they have their own warehouses and probably are doing as much business as some of the recognized wholesale houses, but we can't get recognized as a jobber in many of the lines.

Q. What goods are there that you can't get direct?—A. One of the main commodities, or one that is on the table of every home; sugar, for instance. Here are some telegrams. We have a firm of lawyers taking it up with the manufacturers, the B.C. Sugar Refineries, to see why it is Merco cannot be placed on the jobber's list.

Q. Can you tell us what the difference in price is, as between the manufacturer and the jobber and the jobber and the retailer?—A. I would not be able to give you that figure now.

Mr. EDWARDS: That is hardly a fair question.

The WITNESS: I would have to get that.

*By Mr. Heaps:*

Q. Can you tell us the spread in prices?

Mr. EDWARDS: That is hardly a fair question. That might apply to one commodity, but certainly it does not apply to a hundred others.

*By Mr. Parry:*

Q. What you mean in a word is, that the manufacturers arbitrarily furnish their jobbers with lists, not necessarily based on volume buying.—A. I would not blame the manufacturers entirely for that as much as recognized wholesalers coming together and dictating the policy to the retailer; we are the people doing business as recognized retailers and in the face of such a condition as that we cannot sell.

Q. The ultimate price fixing is between the manufacturer and the jobber.

*By Mr. Senn:*

Q. These jobbers' list is really a list of preferred customers.—A. Yes, practically so.

Mr. EDWARDS: If you will pardon me for saying so, I think your statement is very likely to be misunderstood. Now, there are very many reasons why a manufacturer cannot sell direct to a retail merchant. In Ontario and Eastern Canada that is pretty generally the case, but distance and carrying stocks and that sort of thing enter into it. A wholesale house has to have a jobbing house. It sends travellers out, and all that sort of thing enters in, expenses, and that is all dealt with when they are giving them the extra discount. I think that should be cleared up because the impression would go abroad, judging from Mr. Heaps' question there, that a manufacturer refused to sell to retailers.

Mr. FACTOR: The witness said so.

Mr. EDWARDS: And you must remember that freight rates are a very important part of this thing, and you have a peculiar situation in western Canada that does not obtain in the east.

The WITNESS: In our Province we have a number of manufacturers located right there, that is, we do a little manufacturing out there, and we find in some cases manufacturers would be quite willing to sell to the trade, but those who are in the jobbing business, those who are recognized as wholesalers say to the manufacturers "if you sell direct to so and so then we do not approve of that."

Q. Quite naturally. The question arises there, is this intermediary, the wholesale jobbing house, a necessity for western Canada conditions?—A. That is just what I was saying a while ago, that this committee should define what factors are necessary in distribution. The manufacturer, in some cases, does not sell direct himself, but in many cases he has what is known as manufacturers agents who will sell to the jobbers, for instance, take Donald Bain, Tees & Pearce, they are recognized as manufacturers agents, they take the goods from the manufacturers and sell them through wholesale channels.

*By Mr. Factor:*

Q. Why cannot they sell to you direct?—A. That is what we would like to know.

Q. You mean the manufacturers won't permit them to sell direct to the trade?—A. That is one reason.

MR. EDWARDS: Mr. Chairman, I think this is one of the difficulties: take a manufacturer in, say, a heavy line of goods, iron merchandise, he maintains his wholesale house in western Canada. The goods are shipped under an entirely different name, in all probability. This is what is done in practice: the goods are shipped from the foundry or the factory to the wholesaler in western Canada which is the same concern under a different name, and at a certain price which is the jobbers price. Then they take the part of a jobber and distribute the goods throughout the country. That is practice. I do not mean that is done in a lot of lines but I do know it is done in certain lines, in fact, I have had practical experience.

MR. YOUNG: We had a case here on Friday where a certain manufacturing concern got control of the entire stock of a certain line and then refused to sell at wholesale prices to the Merchants' Consolidated, Winnipeg. The Merchants' Consolidated then imported their supplies from Sweden. Promptly the tariff was raised, consequently those merchants are not able to get supplies at all.

MR. EDWARDS: I am speaking of a Canadian manufacturer maintaining his warehouse in Western Canada under another name. You see, he might take his own firm name and add "Western" to it, but he sells direct to his own house at a job price. That jobber, in turn, distributes to the retailer. The goods are sent out in car load lots at a time on account of freight rates.

MR. YOUNG: When a man is in that position and takes that attitude, do you think it right that he should be permitted to enjoy a monopoly of the selling.

MR. EDWARDS: Yours is a different point from mine, Mr. Young, entirely different.

MR. YOUNG: If they were competitors in that line of business willing to supply the goods at wholesale prices I would not object to that, but where a man has a complete monopoly I do not think he has any right to act that way.

THE WITNESS: We might just continue one step further than that. As I said a little while ago; we have no kick with what they get in their discounts, that is to say, what the large stores or large organizations get in their discounts. We say that they should not be permitted or the system should not be allowed, and that others should be privileged to get the same.

*By Mr. Heaps:*

Q. Mr. MacKay, do you say the departmental and chain stores can buy direct from the manufacturer?—A. Yes, because they are on that jobbers list.

Q. And the small retailer cannot?—A. That is the situation.

*By Mr. Edwards:*

Q. Just add to that, Mr. MacKay, that they bring their goods in in carload lots at a very considerable reduction in freight rates?—A. I think, Mr. Edwards, here is a very clear example of just what we are discussing: Some reference was made the other day to the rubber footwear situation. Here is a list that we are not supposed to have at all; I got this by a little scouting around; I tried to get some inside information; we are not supposed to look at these things at all; they are sent out by a group of people—

*By Mr. Factor:*

Q. You mean from the rubber manufacturers?—A. Yes, the rubber association. They have classifications—

Q. The manufacturers have?—A. Yes. They class certain institutions as A, B, C, and D. Now, I will give you a clear example of our difficulty right here. A year ago or so I made it my business, just on the basis of trying to get our buying power together, I went into the cities of Calgary, Medicine Hat and Lethbridge, to ascertain how many of the men handling rubber footwear would be willing to allow me to use my office as a clearing house so that they might be able to get in on some of these discounts that some of these institutions received. Just about that time we heard there were certain agents who were representing people in one of these classifications, and I told them I had a very large quantity of rubbers that I could buy and that I wanted them on a basis similar to this here, and I was told my money was no good.

Q. You mean although your volume was the same?—A. Although my volume may be bigger than in one of these.

Q. As contained in classification A?—A. Yes, as contained in classification A, or B; I might have bought three or four carloads of rubbers but they told me my money was no good, and they followed it up by saying "we cannot do what you are asking us to do, we are in a certain classification and what you are asking us to do is not in accordance with the rubber association business and we might find ourselves outside the classification."

MR. FACTOR: The rubber footwear situation, Mr. Chairman, does seem to warrant a special investigation. I would like you to make a note of that.

THE WITNESS: They said if they did what I was asking them to do they would find themselves with their heads chopped off.

*By Mr. Young:*

Q. Who would cut their heads off?—A. The rubber association.

*By the Chairman:*

Q. Let us get this clear. Your point, Mr. Mackay is that although you were able to secure a volume equal to, say, class A— —A. Well, it might not be class A; it might be class B.

Q. Well, class B, you were denied the similar discounts to which class B was entitled?—A. Yes. I was told my money was no good; they refused to take my money.

*By Mr. Baribeau:*

Q. Mr. Mackay, am I to understand that the sugar refineries refused to sell sugar to your group of merchants called the Merco?—A. Yes.

Q. That is, the sugar refineries refused to sell your group sugar at the wholesale price?—A. Yes.

Q. They did?—A. Yes, because of the pressure that was brought to bear on the sugar refinery by the already recognized jobber.

*By Mr. Kennedy (Peace River):*

Q. This rubber association is not in business for the good of its health, I suppose. Why did they turn down your order? Can you tell us why they turned down your order?—A. Well, Mr. Kennedy—

Q. They are in business to make money, I suppose?—A. Yes, but they make their money on a certain basis, and, as I say, I went out of my way to try to get those merchants the benefit of the discount—and I might say there is a difference there of 14 per cent in Class A.

Q. Why do they do it?—A. Why do they do it?

Q. Yes.—A. Because they control the rubber situation and they dictate the policy to everybody that wants to buy rubbers.

*By Mr. Factor:*

Q. They are a combine, in other words?—A. Absolutely.

*By Mr. Boulanger:*

Q. Why did the sugar refineries refuse to sell you sugar at the wholesale price?—A. Because pressure would probably have been brought to bear by the sugar refineries, by the wholesalers; but as retailers they said: No, you are not in the same class.

*By Mr. Young:*

Q. Do you know what the duty is on rubber footwear?—A. I would not like to say definitely because I don't know just at the moment.

Q. You never made any attempt to import from abroad?—A. No. This happened only a few months ago.

*By Mr. Factor:*

Q. I just want to clear up this rubber footwear situation. You say the manufacturers have an association called the Rubber Footwear Manufacturers' Association?—A. They classify their customers into certain classes—A, B, C and D.

Q. According to volume of business done, is that right?—A. Well, now, I don't know whether it is in accordance with volume, or some other thing.

Q. Or some artificial means.

*By Mr. Edwards:*

Q. You must know it is volume, Mr. MacKay.—A. Well, why would it be in volume, especially when I wanted to buy two or three carloads, in volume. At that time they said No, we cannot take your money.

Mr. EDWARDS: That is not the point Mr. Factor is asking.

*By Mr. Factor:*

Q. I was asking as to the basis of that. Is that the volume of business done, or are there any other considerations?—A. Well, I am inclined to think there are other considerations.

*By Mr. Senn:*

Q. What about ability to meet their accounts, their ability to pay?—A. Well, that might have some bearing, Mr. Senn.

*By Mr. Ilsley:*

Q. With whom did you deal? Who was it that denied you the certain privilege that you sought?—A. Well, I will give you that information.

Q. I do not mean the name of the firm, but was it an association of manufacturers or was it somebody else?—A. It was a jobber recognized by those manufacturers in a certain classification.

Q. Oh, yes.—A. But if they did business with me they would be doing business contrary to the rules of this rubber association, therefore, they would lose their classification.

Q. Well, to whom were these jobbers selling, the dealers you were dealing with, to whom were they selling? With whom were they free to deal?—A. Oh, I suppose any people that wanted to buy rubbers from them on the basis of what the rubber association said they should buy.

*By Mr. Parry:*

Q. To whoever they might dictate?—A. Yes, to whoever they might dictate.

*By Mr. Edwards:*

Q. Is not your problem to get on the jobbers list?—A. We cannot do that, Mr. Edwards. We have tried for years and years.

*By Mr. Factor:*

Q. Although you are willing to buy in the same volume?—A. Yes, we are willing to buy in practically the same volume, but they refused to take our money; they say our money is no good.

Mr. FACTOR: I understand the rubber situation has been investigated under the Combines Investigation Act. It would be well to have the report before the committee.

The CHAIRMAN: I do not think the investigation is yet completed. I understand it is under way now; but I am quite sure of this, in fact the intimation was conveyed to me this morning, that the secretary or officer representing the association will be very glad to come before this committee and give evidence, and we expect to have that within a few days.

*By Mr. Kennedy:* (Peace River):

Q. Have you got all the names and so on in connection with this case, Mr. Mackay.

*By Mr. Parry:*

Q. The name of the association. For the information of the committee, just indicate generally now the classes of merchants in class A who receive the manufacturers' bottom price to which reference has been made frequently.—A. Departmental stores, they are in class A; they have preference over a wholesaler who might be in class B or class C.

Q. They have a preference you say?—A. Yes.

*By Mr. Young:*

Q. Class A is confined to departmental stores?—A. Well, no.

Q. And there is a list of those who have the preference in class A who have a very big advantage in obtaining only the bottom price, which appears to be 14 per cent in class A, 11 per cent in class B, 8 per cent in class C, and 6 per cent in class B, and I suppose if you were fortunate enough to get in, D would be the classification you would have?—A. Yes. If we had had any encouragement in the illustration I just cited to you we might have got into a higher class, if it was on a strictly volume basis.

*By Mr. Factor:*

Q. Can you buy your rubber goods direct from the manufacturer or do you have to go to the jobbers?—A. I believe you can buy direct but you have to buy on a certain basis, a recognized basis of doing business.

*By Mr. Parry:*

Q. Mr. Mackay, before closing this matter out, will you name this particular association? I notice the letter is dated Winnipeg, April 17, 1933, footwear sales, circular No. 6, but there is nothing here to particularly designate the association from whom you obtained this.

The CHAIRMAN: Or who issued it.

The WITNESS: You mean those who received it from the rubber association.

*By the Chairman:*

Q. No, what is the name of the association issuing this bulletin?—A. As far as I know that is issued by the Dominion Rubber Association.

*By Mr. Factor:*

Q. Is that the name of it, the Dominion Rubber Association?—A. Yes.

Q. That is, the manufacturers?—A. Yes.

*By Mr. Boulanger:*

Q. Are all the wholesalers in the same classification?—A. No, there are different classifications which take in different jobbers, some wholesalers, some retailers. Departmental stores are in class A while there are some wholesalers in class B or class C.

Q. Why are not the wholesalers in the same class, what is the reason?—A. That is what I would like to find out. That is why I think there is room for investigation on the part of this committee just to give us the information we have been trying to get for years, and we cannot get it.

*By Mr. Kennedy (Peace River):*

Q. When you tried to buy the quantity of rubbers were you trying as a retailer or what?—A. We were—

Q. Or a group of retailers?—A. I was applying as representing a group of retailers in a certain section and with the money to pay for the goods, and we were told very plainly that our money was no good.

*By Mr. Boulanger:*

Q. How many merchants in your group?—A. We were probably between 50 and 75 merchants.

*By the Chairman:*

Q. In the group that you are now referring to?—A. Yes.

*By Mr. Boulanger:*

Q. The Merco?—A. No, not the Merco.

Q. How many are in the Merco group?—A. About 102.

Q. And what is the name of that other group?—A. They were just individual merchants with whom I had consulted as to making my office a clearing house in order to bring them to a point where they could buy all the rubbers they desired and at the same time secure some of the advantages accruing to those who were in the different classifications.

*By Mr. Factor:*

Q. Do you know how many manufacturers there are in that association?—A. I should think that is easy to find out, Mr. Factor. I think there is only one company that is not in the group or not in the association, if my information is correct. All the others are in.

*By Mr. Heaps:*

Q. You have given us three classes of goods now that a retailer cannot purchase direct from the manufacturers, sugar, rubber and products of packing plants; are there any other commodities that you know of personally?—A. No.

Mr. FACTOR: That is not right. He says footwear and packing house products can be bought direct from the manufacturers but at a special higher price.

*By Mr. Heaps:*

Q. Well, accepting that as the basis, are there any other goods that you know of that are bought by the retailer on a similar basis as this, or, I should say, as these other goods to which you have been referring this morning?—A. Well, I would say yes there are some other lines although I am not prepared to go into the detail now.

Q. I am not asking you for details, but do you know of any other class of commodities? If you do I would like to have them?—A. Yes, ladies' ready-to-wear is a line that I think would stand some investigation. The clothing business, you have heard about that; that has been very ably presented to you here.

Q. I am asking, Mr. Mackay, if the retailer has any difficulty in purchasing these goods direct from the manufacturer?—A. Well, there are very few lines—if I may put it that way—that we don't have difficulty in getting, very few lines.

*By Mr. Bell (Saint John-Albert):*

Q. In some cases do the retailers organize for the purpose of obtaining better prices from the manufacturers?—A. Yes.

Q. They have an organization amongst some of the retailers whereby they obtain better prices?—A. The movement on the part of the independent retailers to create these buying groups, these voluntary chains has been because of the necessity of meeting the competition which we are confronted with.

The CHAIRMAN: Mr. MacKay has just been telling us about the efforts that he himself has made.

Mr. BELL: There are some cases, where they have been obtaining better consideration, Mr. Chairman.

The WITNESS: Here is a commodity here, Mr. Chairman. You see the only difference is the top of the jar, made by the same people. This line sells at 25 cents to the public; this one sells at 50 cents. There is no difference in the contents, they are the same.

*By Mr. Factor:*

Q. What is it?—A. Cream.

Mr. PARRY: Just pass it round to the committee.

The WITNESS: I am going to read you a letter.

Mr. EDWARDS: I think, Mr. Chairman, that is very poor evidence.

The WITNESS: Very poor evidence?

*By Mr. Edwards:*

Q. Oh, yes, unless you are prepared definitely to tell us that the contents of those jars aren't absolutely the same.—A. I am going to give you the word of a gentleman who has been in the drug business for many many years.

Q. Does he give you the analysis of it?

Mr. YOUNG: Let us hear what the evidence is first.

The WITNESS: This is addressed to myself from Mr. McDermid of the McDermid Drug Company who have a number of stores throughout the Province of Alberta:—

At our meeting the other day Mr. Somers of Wetaskiwin said that you asked him to send any evidence we had regarding unfair trading practices so are sending you per concurrent mail two jars of Armands cold cream.

The one in the opal jar you will note from the label on the bottom is marked 50 cents, which is the price the drug stores have to sell the product. It costs us 33 cents bought in quantity through the jobber. The one in the glass jar, which is the same size contained and according to appearances the same product, is sold by the Kresge stores for 25 cents.

It was only within the last week that we learned of this condition and on inquiry from the local wholesale house, they never heard of this jar nor had they been offered it, so from this you can see the false position it places the druggist in as far as the general public is concerned. While one jar may be a little more expensive than the other, that does not add to the value of the cream.

We are not taking exception to these people for selling their cream for 25 cents but to the discrimination in selling the druggists the product on which the price of 50 cents must be maintained and putting up a similar product for another organization for half price on which they, no doubt, give a fair margin of profit.

We might state, up to the present, we found the Armand Company very fair in their dealings so are all the more surprised when this was brought to our attention.

*By Mr. Kennedy (Winnipeg):*

Q. He does not give any analysis, does he, Mr. MacKay.—A. Well, you have a very good analysing place right here.

The CHAIRMAN: Frankly, I do not think they are precisely the same myself.

Mr. FACTOR: What this man complains of, Mr. Chairman, is that they are made to look alike. They might not be alike but they are made to look alike and the ordinary customer could not tell the difference from looking at them.

The WITNESS: They are deceiving the public.

Mr. FACTOR: Yes, there is a certain deception in putting the article forward.

*By Mr. Young:*

Q. They are compelled to charge 50 cents, you say?—A. Yes.

Q. There must be something wrong with that arrangement, an arrangement through a wholesale house that will fix that price; that is the weakness in the system, isn't it?—A. Yes, I would say so.

Q. Supposing your association were in a position to go and buy a similar product somewhere else and ignore these people entirely would not that get them out of their difficulty in that way?—A. Yes. There is a certain value in nationally advertised merchandise which goes to the household, so far as the housewife is concerned, due to national advertising.

Q. If you could get some other nationally advertised article you would at least bring them to their senses?—A. Yes.

*By the Chairman:*

Q. Well now, Mr. MacKay, the name of the manufacturer has been mentioned in this, and I would like to ask one or two questions. There is no doubt

in your mind as to the facts, that one is sold for 25 cents and the other is sold for 50 cents; secondly, that the name, as appended, is exactly the same?

—A. Yes, sir.

Q. In each instance there is nothing to distinguish between the two?—A. No.

Q. The one is sold by a chain store at 25 cents and the other by the ordinary trade at 50 cents?—A. Yes.

Q. But you do not know, of your own knowledge, that the contents are the same?—A. I don't know, Mr. Chairman, no.

Q. But the appearance of the package is the same?—A. Yes, the appearance of the package is the same. What I say is they are deceiving the public.

Q. Yes, that is the complaint?—A. That is the complaint.

Q. Of your member, Mr. McDermid, he is a member of your association?—A. Exactly, yes.

Q. And this is filed as an illustration of what might be termed a misleading practice in the sale of these goods?—A. That is it.

*By Mr. Factor:*

Q. Can the ordinary trader buy the second jar, the 25 cent jar from the manufacturer?—A. Well, I would say judging from the letter that the druggists who have been handling that particular product have not had the opportunity. The product was put up in a special jar for the chain stores, and the druggists did not know of it until this was brought to light.

Mr. FACTOR: That is a similar illustration to the Hurlbut shoe, practically, a cheaper commodity.

Mr. EDWARDS: Yes, and just at that point you have got to be pretty careful because they are coming here with an entire rebuttal, so you want to be careful on this.

*By Mr. Parry:*

Q. Do you know, Mr. MacKay, whether that is done in any other form of goods that come under your purview, I mean special packages put up for distribution by chain stores?—A. Yes.

Q. Can you give the committee any examples?—A. Not off hand, but I would like to send you in a list of examples though.

The CHAIRMAN: I wish you would. We are not making very much progress this morning. Please proceed, Mr. MacKay. We are spending a little too much time, I think, in discussing details.

The WITNESS: When "loss leaders," as they are termed in the trade, are sold to the public at a price which is below their value or fair selling price, namely, the cost of production plus cost of handling with reasonable compensation for services rendered, other merchant vendors of the same class of merchandise must come down to that selling price or suffer misrepresentation to the buying public.

The individual transactions do not by any means measure the damage done to competitors, because the impression created in the minds of the public is that the fair and proper selling prices of the goods in question are the prices quoted by the departmental and chain stores, while the prices asked by the independent merchant are excessive, or, in other words, as competitors of the departmental and chain stores, the independent merchant in many instances is regarded as dishonest or is profiteering at the expense of the general public.

The evil, however, goes much beyond the injury suffered by the independent retailer, because it may and very often does set the price which producers will be able to get in the community for produce which they have to sell. This is of vital interest to farm producers, and the following instance demonstrates very conclusively the effect which these unethical practices have on the farmers of western Canada.

I am going to just make reference here to an address that was recently delivered by Mr. John Irwin, M.L.A., in the Provincial Legislature of the Province of Alberta. Mr. Irwin has taken a great deal of interest in this movement.

The CHAIRMAN: Mr. Mackay, I do not want to shut you off or curtail you unduly at all, but frankly we are anxious to receive from you as much as we can in the nature of evidence. However, just quoting opinions, you know—

The WITNESS: Well, I do not think Mr. Irwin would appear in the House at Edmonton, Mr. Chairman, and make a statement that was not absolutely right.

The CHAIRMAN: I do not think he would.

The WITNESS: Just let me read this.

Mr. FACTOR: Members of Parliament never do that.

*By Mr. Factor:*

Q. Is he a merchant, Mr. MacKay?—A. He was a merchant, but unfortunately, through circumstances which we are discussing now, Mr. Irwin has been forced out of business.

*By the Chairman:*

Q. Just before you go on, what is the nature of the statement you are about to make?—A. The nature of the statement,—well there are a number of statements here, Mr. Chairman, but I won't take time to read them all. However I want to draw your attention to one or two. Here is one, for instance:

Mr. Speaker, the chain stores are nothing but invaders . . .

The CHAIRMAN: Wait just there. Pardon me, Mr. MacKay, that does not prove anything. It is merely an expression of an individual who is perhaps feeling irritated and suffering perhaps under the competition; but, frankly we have got to be careful. That really is not evidence.

The WITNESS: All right, here is one thing that does say something.

Mr. FACTOR: It would be well if he arranged to furnish each one of us with a copy so we could use it to some account in the House ourselves.

The CHAIRMAN: Give Mr. Boulanger one, please.

Mr. FACTOR: This would serve as an example for a good speech.

Mr. EDWARDS: It opens well at any rate.

The WITNESS: I would call your attention to page 2, paragraph 2, and the last sentence I would like to read, because that statement I think sums up the whole situation, it says "one Canadian wholesaler who was present at a meeting attended by an official of one of the chain stores, had the courage to say: 'it seems you people came here to put us all out of business' and the answer was: 'that's what we came for, but you d. . . . Canadians don't know when to quit.'"

The CHAIRMAN: Of course, that is rough stuff, but it is not real evidence.

The WITNESS: I would like to say here and now that is about the sum of it. The chain organizations as we find it in our business have no sympathy; there is no sentiment—it is just a quibbling on business principles—and we merchants have come to that part of our existence when we see ahead that there is nothing but the inevitable day of doom.

*By the Chairman:*

Q. Let us get on with the evidence to support that?—A. Well now, I will just pass on: Dealing further with the position of our farmers and the effect which the policy of the chain and departmental stores has on his business, the following are a few advertisements picked at random, which refer to farm

products: December 27th and 28th, Christmas Hams, wholesale cost to the retail trade 19 cents per pound, advertised and sold by department store at 18 cents per pound.

*By Mr. Factor:*

Q. Have you a copy of these advertisements?—A. Yes.

*By Mr. Parry:*

Q. You will file these advertisements with the committee?—A. I will do that.

January 19th, shoulders of pork, cost 11 cents, advertised at 8 cents per pound. Spare ribs on a 4-pound basis, cost to the trade 24 cents per pound, advertised and sold at 17 cents.

February 7th, No. 1 Picnic hams, cost 14 cents, advertised at 13 cents.

While the foregoing should be conclusive evidence as to the detrimental effect which departmental and chain store "Loss Leaders" have on our farming industry, it is not generally known—in fact it might be considered as a trade secret—that national chain organizations and departmental stores recognize only the packing houses that are prepared to return at the end of the year a substantial cheque, the amount of which is computed on a percentage basis in accordance with the volume of business done during the year. In other words, only those firms that are willing to pay a premium to the mass buyers can hope to secure a share of this business, and then the business usually goes to the highest bidder.

Returning to the position of the independent retail merchant, I would like to draw the attention of the Committee to another aspect of this impossible situation. The following are the exact figures quoted in advertisements published by Calgary departmental and chain stores. You will note the articles referred to are of the type known generally as "staples" and used more or less in every Canadian home.

I will file this, Mr. Chairman, I have fourteen instances which you can have for the Committee:

Date 1934	Special price advertised	Wholesale cost	Retail cost
1. Jan. 5—Pearl Soap.. ..	10 for 29c.	\$3.21 per 100	\$3.40 per 100
2. Jan. 5—Sugar.. .. .	or \$2.90 per c/s 5 lbs. for 29c. or \$5.80 per 100	\$7.21	\$7.50
3. Jan. 12—Shredded Wheat.	2 for 19c. or \$3.42 per c/s	3.40	3.60
4. Milk 48/16.. ..	or \$3.42 per c/s .07c.	3.95	4.25
5. Oxydal 40 .. ..	or \$3.60 per c/s 16c. per pkg. or \$6.40 per c/s	6.64	7.10
6. Chipso 40 .. ..	16c. per pkg. or \$6.40 per c/s	6.64	7.10
7. Sliced Pineapple 48/2 .. .. .	3 for 25c. or \$4.00 per c/s	4.25	4.55
8. Jan. 19—Pork and Beans.	4 for 19c. or \$1.14 per c/s	1.40	1.55
9. Tomatoes .. ..	4 for 38c. or \$2.28 per c/s	2.40	2.60
10. Jan. 24—Maxwell House Coffee.. .. .	.35c.	.35½	.39
11. Feb. 16—Tomatoes .. ..	.09c.	2.40	2.60
12. Rolled Oats.. ..	or \$2.16 per c/s .12½c.	1.50	1.65
13. Feb. 27—Lux 72/.. .. .	or \$1.50 per c/s .06½c.	5.57	5.95
14. Shredded Wheat.	or \$4.68 per c/s .08½c. or \$3.00	3.40	3.60

Take another example, the bread situation. As this commodity is a daily necessity in every home, the chain store organizations with their own bakeries feature bread as a leader in their stores, and in many cases offer it as a premium to get other business.

Particularly drastic use of bread for this purpose has been made at country points, where it has been taken as a weapon to use against competing grocers who have to buy bread from regular bakers and ordinarily pay a fair price.

Country grocers have endeavoured to meet the situation by asking their local bakers for cheaper prices and the latter have been forced, in their endeavours to survive, to lower prices below production costs.

The results have been long hours, lowered wages, loss of employment, steady trade losses, businesses closing, and finally bankruptcies—all to the grave injury of a local industry employing local capital, local workmen and using practically altogether the products of our local farms.

Specific data follows:—

Now, here are some specific data in regard to the bread industry. This is in the Red Deer district, the city of Red Deer and the surrounding area.

#### EDMONTON DISTRICT

Red Deer	Week of Jan. 15-20, 1934
Competing Bread is Shipped by Chain Store from their Edmonton Bakery	
	Loaf
Local bakers' price this week.. . . .	7½c.
Chain store price this week.. . . .	7 for 25c.
Local bakers' usual price in 1933.. . . .	4 for 25c.
Chain store usual price in 1933.. . . .	5 and 6c.
Local bakers' lowest price in 1933.. . . .	4 for 25c.
X. Chain store lowest price in 1933.. . . .	"Free" and 2c.
XX. Shipping cost from Edmonton.. . . .	1c.

#### THIS IS THE LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

There were times during 1933 that chain store price in Red Deer was as low as 2 cents per loaf, or 2 loaves free with \$1 worth of groceries. I might say my volume is a little up from this time last year, but making a bare living.

#### GENERAL REMARKS

There are two local bakery establishments in Red Deer, both of which have had to curtail employment and wages and find business conditions most difficult owing to this competition.

*By the Chairman:*

Q. Just before you leave that; it is at any rate apparent that the chain store brings the bread in from Edmonton, or is it from another point?—A. They bring it from Edmonton.

Q. In competition with the local baker?—A. Yes.

*By Mr. Parry:*

Q. I believe you have similar information from other parts of the province which largely corresponds to that which you have just given. You might go over that and just list the number of instances that you are filing?—A. I will leave you a copy.

By the Chairman:

Q. Just put in your evidence, and tell us the similar instances to this which appears in the evidence which you have now filed?—A. The similar instances are, Lacombe, Ponoka, Wetaskiwin, Leduc, Camrose, Vermillion, Vegreville, and Stettler.

By Mr. Factor:

Q. At all these places you say chain stores are selling this bread at a low price?—A. Yes sir, shipped from their own bakeries in the city of Edmonton.

Q. They are competing with the local bakers?—A. Yes, sir.

By Mr. Kennedy (Peace River):

Q. They don't travel up into the Peace River?—A. That is just a little too far away for them.

The CHAIRMAN: All right, let us go on please.

The WITNESS: The other instances filed are as follows:—

Lacombe		Week Jan. 15-20, 1934	
Competing Bread is Shipped by Chain Store from their Edmonton Bakery			
			Loaf
Local bakers' price this week.. . . .			5c.
Chain store price this week.. . . .		3	for 10c.
Local bakers' usual price in 1933.. . . .			5c.
Chain store price (usual) in 1933.. . . .		3	for 10c.
Local bakers' lowest price in 1933.. . . .			5c.
X. Chain store lowest price in 1933.. . . .			"Free"
XX. Shipping costs from Edmonton.. . . .		1½c. rail, ¾c. truck	

LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

To compete with the chain store here, I have lost about \$800 in the year 1933, and it will be far worse this year as prices of raw material have gone up considerably in the past few months.

GENERAL REMARKS

Local baker formerly was able to employ two experienced men, now only has sufficient volume to engage two boys, part time. He is steadily going behind despite every effort to economize and meet the situation.

Ponoka		Week Jan. 15-20, 1934.	
Competing bread is shipped by Chain Store from their Edmonton Bakery.			
			Loaf
Local baker's price this week.. . . .			5c.
Chain store price this week.. . . .		3½c.	
Local baker's usual price in 1933.. . . .			5c.
Chain store usual price in 1933.. . . .		3½c.	
Local baker's lowest price in 1933.. . . .			5c.
Chain store lowest price in 1933.....			"Free" and 2½c. ¾
X. Shipping cost from Edmonton.. . . .		1½c. rail, ¾c. truck	

LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

"On different occasions chain stores here gave two loaves of bread free with each grocery order of one dollar or more."

GENERAL REMARKS

Local baker is a returned soldier and the only way he has been able to survive is by long hours on the part of himself and wife and every possible economy, together with support of local sentiment.

Wetaskiwin

Week Jan. 15-20, 1934

Competing Bread is shipped from Edmonton by Chain Stores from their Edmonton Bakery.

	Loaf
Local baker's price this week.. . . . .	5c.
Chain store price this week.. . . . .	2 for 10c. 3 days
	2 for 5c. 2 days
Local baker's usual price in 1933.. . . . .	5c.
Chain store usual price in 1933.. . . . .	2½c.
Local baker's lowest price in 1933.. . . . .	5c.
Chain store lowest price in 1933.. . . . .	"Free" & 2 for 5c.
Shipping cost from Edmonton.. . . . .	½c. rail, ⅓c. truck

## LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

While the inference from figures may be that my position has not been seriously affected since I have maintained my own price, this is quite erroneous. My wholesale prices, and the bulk of my business is wholesale, were forced down. At the time I lost considerable volume. Coupled with these was the strong advance in cost of many bakers' materials, e.g., flour, sugar, shortening, so that in order to continue in business at all, I was compelled to cheapen the quality of my product.

## GENERAL REMARKS

This town usually supports two local bakeries. One has been forced to the wall. The other is steadily losing out and will have to soon close unless some remedy for ruthless competition can be found.

Leduc

Week Jan. 15-20, 1934

Competing Bread is shipped by Chain Stores from their Edmonton Bakery.

	Loaf
Local baker's price this week.. . . . .	6c.
Chain store price this week.. . . . .	4c.
Local baker's usual price in 1933.. . . . .	5c.
Chain store usual price in 1933.. . . . .	3c. to 4½c.
Local baker's lowest price in 1933.. . . . .	3½c.
Chain store lowest price in 1933.. . . . .	"Free" and 2½c.
Shipping cost from Edmonton.. . . . .	½c.

## LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

I am quoting retail prices for myself. Sixty per cent of my bread business is wholesale, which I sold for one cent per loaf less than above stated, so the most of my bread in 1933 was sold for four cents per loaf. "On several occasions during the year chain stores have put on specials by giving two loaves of bread free with every purchase of \$1.00 groceries, and some other retail stores have followed suit. What we want is the price fixed by the Government and if it were possible to get legislation that would prohibit chain stores and grocers from handling bread, because a large percentage of them are using bread as a foot ball to get business."

## GENERAL REMARKS

Local baker's volume and price very seriously affected. He is operating at a loss.

Camrose

Week Jan. 15-20, 1934

Competing Bread is Shipped by Chain Stores from their Edmonton Bakery

	Loaf
Local bakers' price this week.. . . . .	6c.
Chain store price this week: . . . . .	5c.
Local bakers' usual price in 1933.. . . . .	6c.
Chain store usual price in 1933.. . . . .	4c.
Local bakers' lowest price in 1933.. . . . .	6c.
Chain store lowest price in 1933.. . . . .	"Free"
Shipping cost from Edmonton.. . . . .	1c. rail, $\frac{5}{8}$ c. truck

LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

We were only able to get chain stores to agree to a price of 5 cents in Camrose recently. All other stores were prepared to raise their price to a proper level, but would drop until chain store will promise to do so. I am fairly certain that chain store will lower price on the flimsiest excuse. They broke their agreement last time because one of the others made a special of sugar.

GENERAL REMARKS

There are two local bakers here. Long-time residents and good families in the community. Their life savings and position are being steadily eaten away in their endeavours to keep operating and meet the difficult situation arising through chain store establishment using bread constantly as a "Loss Leader."

Vermilion

Week Jan. 15-20, 1934

Competing Bread is Shipped by Chain Store from their Edmonton Bakery

	Loaf
Local baker's price this week.. . . . .	6c.
Chain store price this week.. . . . .	4 $\frac{1}{2}$ c.
Local baker's usual price in 1933.. . . . .	6c.
Chain store usual price in 1933.. . . . .	4 $\frac{1}{2}$ c.
Local baker's lowest price in 1933.. . . . .	4c.
Chain store lowest price in 1933.. . . . .	"Free" and 2c.
Shipping cost from Edmonton.. . . . .	$\frac{3}{8}$ c. truck, $\frac{3}{4}$ c. rail

LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

Bread competition has been so keen here we have been forced to close two or three days each week, and are at present baking around 1,000 to 1,200 loaves per week, due to unfair competition from chain stores. We have been forced to lay off two men and have a baker here now only on part time.

GENERAL REMARKS

This town formerly supported two local bakeries. One has been forced to close out and the business of the other is drastically curtailed.

Vegreville

Week Jan. 15-20, 1934

Competing Bread is Shipped by Chain Store from their Edmonton Bakery

Local baker's price this week.. . . . .	5c. for 16-oz. loaf
Chain store price this week.. . . . .	4 for 15c., 20-oz. loaf
Local baker's usual price in 1933.. . . . .	5c. for 16-oz. loaf
Chain store usual price in 1933.. . . . .	7 for 25c., 20-oz. loaf
Local baker's lowest price in 1933.. . . . .	5c. for 16-oz. loaf
Chain store lowest price in 1933.. . . . .	"Free" also 3c. for 20-oz. loaf
Shipping cost from Edmonton.. . . . .	$\frac{1}{2}$ c. loaf

## LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

Without prices fixed by Government it would not help us as all chain stores sell 20-oz. loaf cheaper than our 16-oz. loaf. Sometimes they give two 20-oz. loaves, wrapped, with every dollar order of groceries, so you see what country bakers are up against.

## GENERAL REMARKS

Local baker's position serious. He is now only able to operate on a small scale and it is only a question of time, unless some help is forthcoming, until he will be forced out.

Stettler

Week Jan. 15-20, 1934

Competing Bread is Shipped by Chain Store from their Edmonton Bakery

Local baker's price this week.. . . . .	4 for 25c.
Chain store price this week.. . . . .	4 for 15c.
Local baker's usual price in 1933.. . . . .	4 for 25c.
Chain store usual price in 1933.. . . . .	4 for 15c.
Local baker's lowest price in 1933.. . . . .	4 for 25c.
Chain store lowest price in 1933.. . . . .	"Free", also 2 for 5c.
Shipping cost from Edmonton.. . . . .	$\frac{3}{4}$ c. truck, $\frac{3}{4}$ c. rail

## LOCAL BAKER'S REMARKS AS TO HIS BUSINESS

We did not cut prices as other places did. Chain store prices reduced our volume on our shipping for fifty miles around as well as here.

## GENERAL REMARKS

This town has three local bakers, all of whom are finding it most difficult to remain in business.

In the ruthless and cold-blooded policies of the firms referred to the business of merchandising in this country has been debauched. Farm producers, wage earners generally and independent retailers are victims of the tricks which are practised, and in the final analysis all classes in the community suffer, even the buying public who, if they are buyers are individually and primarily sellers of either goods or services of some kind. Essentially no one is a buyer who is not a seller, and he automatically acquires his purchasing power through being a seller.

As buyers, the public want and are entitled to look for and find a competitive fair price on what they want to buy, but as sellers the same public, each one of them requires to receive a fair price for what he or she has to sell, whether goods or service. Unduly low prices must therefore be harmful for both buyer and seller, perhaps not in the individual transaction, but certainly when taking a long view of the situation. No person will find that he gets indefinitely a high price for what he has to sell—goods or services—if he and every one else is able to buy in the same community at a very low price.

This principle is inevitable in its application, but is not widely enough appreciated or acted upon. No person who wishes to continue to be himself well paid in a community can logically and successfully buy from all others to their loss or lack of reasonable and fair profit.

Prosperity and a high standard of living in any community presuppose that sellers get a fair and just price for the goods or services which they have to sell and that buyers be prepared to pay that fair and just price. No one

is injured but all benefit thereby, because the buyers and the sellers are one and the same public, and change from buyers to sellers and vice versa, according to each particular transaction.

These very true thoughts are set down here because they will indicate why the state must be prepared to regulate all merchandising of goods and services when individuals or aggregations of capital are pursuing practices which are running counter to the above principles and are tending to crush fair competition and fair prices within the community. Further, such practices debauch the minds of the public in their capacity as buyers, and conceal from them the fundamental truth, namely, that no person can systematically buy from others at or below cost without damaging his own future prosperity.

The true principle of general prosperity for any community is that any person willingly pay that price for what he or she requires which includes fair compensation to the seller. If that principle is carried out in practice every member of the community will make up in his capacity as a seller of goods or services what he seems to lose in his or her capacity as a buyer.

*By Mr. Young:*

Q. Have you ever tried this out, Mr. MacKay?—A. We are trying it now.

Q. In one individual community?—A. With the city of Calgary.

Q. Do you mean to say that has actually been done, that people have agreed to that?—A. No, we have not gone that far, we are just trying to start and educate.

It would be well if the general public were better informed on this matter, and it is imperative that regulations be set up and enforced which will permit the breaking through of the principle, with all its ruinous consequences to healthy business activity within the state.

Q. Don't you think it would be a capital idea to try this out in a certain community, where say the people would agree to pay a double price for everything they bought, and to pay double wages to their employees.

Mr. EDWARDS: Perhaps they might start in Weyburn.

Mr. YOUNG: I don't want to start it in Weyburn.

The WITNESS: We may make a start in Alberta before this year is over.

In conclusion, Mr. Chairman, the Alberta Provincial Board of the Retail Merchants' Association, speaking for and in behalf of the Independent Retailers of the province of Alberta, is of the opinion that the whole process of distribution is disturbed and seriously dislocated by mass buying, and its evil consequences.

The system of operating on the part of the departmental stores, the chain stores and the mail order institutions is being carried on without regard to fair play or any ethical code, which, if recognized, would sufficiently preserve the fundamental principle referred to.

It would seem that not only the independent merchants but the farmers and manufacturers are rapidly becoming disorganized by the methods and practices of the type of business firms referred to. In the final analysis all outside competitors will be crushed, eliminated, or reduced to a very low standard of living if immediate effective measures are not taken to set a limit to many unethical, unfair and even fraudulent practices which are now rampant in the distribution system throughout Alberta and the Dominion of Canada.

All of which is respectfully submitted by the Alberta Provincial Board of the Retail Merchants' Association.

*By Mr. Boulanger:*

Q. Right there, Mr. MacKay, have you any measures to suggest to remedy the situation?—A. Yes I have, in so far as our own province is concerned; I am not speaking for any other province.

I would like to read this letter, Mr. Chairman, and file it with you. This letter comes from a long way north of Edmonton—Grande Prairie—and it is dated December 11, 1933. It is addressed to Marshall Wells Co., Ltd., a wholesale house doing business at Edmonton, Alberta, and it reads: Some six weeks ago your Mr. Graham—now Mr. Graham I understand is one of the officials of Marshall Wells—at my solicitation checked over with me the catalogue prices on a large number of hardware articles, and in nearly 100 per cent of the items checked the catalogue price was in many cases as low as or lower than your wholesale price. Mr. Graham took this matter up at your Convention and your sales department manager asked him to obtain the catalogue with the prices marked, etc. You will readily understand that I am not trying to put anything over, but if the retailer is to remain in business and be able to do business, the prices as put out by the jobbers will have to be adjusted. Some years ago when Mr. Norman B. Douglas was secretary of the Retail Merchants' Association of Canada, with offices at Ottawa, he suggested to the government the formation of a bureau within the department of Trade and Commerce to exercise supervision of business in Canada on "fair trading." No action was taken—the writer happened to be in Ottawa as a Peace River delegate when this was brought up, and was received by some of the ministers, but the secretary pointed out to the writer that the retail trade would have to put more men into the Parliamentary field if they were to get any place. A few of us at the last Dominion election undertook to put in a certain retailer from this province, but did not make it. The business outlook for 1934 is none too bright. Dollars and cents will be hard to get hold of, and the purchaser is bound to look up the catalogue prices and compare them.

Now, this is the reference to which I wish to draw your attention: The item is, Vacuum Hand Washers; the catalogue price is 63 cents while the Marshall-Wells' price is 60 cents; and with that is this other item of baby-swing highback complete with spring, the wholesale price is \$1.49 as against the catalogue price of \$1. Now, gentlemen, how can we do business—it is going to be necessary, if we are to try to meet the catalogue and other prices—

*By Mr. Parry:*

Q. Mr. MacKay, following the question asked you by Mr. Boulanger, will you file with the Committee in the near future the recommendations from your Association?—A. The recommendations?

Q. The recommendations that your Association may determine to make as to remedial action?—A. As it applies to our province.

Q. Yes?—A. I have that right here.

Here is another case, Mr. Chairman, of an advertisement which appeared in a Calgary newspaper. It is only a small item. Nugget shoe polish. The advertisement reads "These savings in the shoe department." That is the heading of the ad. "Regular price 2 for 25 cents. Thursday per tin 10 cents." Here we have the cost from the wholesaler. Brasso polish advertised at ten cents, Silvo polish advertised at 10 cents. Here is the wholesaler's letter to the merchant who made inquiries as to why it should be advertised at that price:—

As requested we herewith quote you as follows:—

3B Brasso, \$1.43 dozen.

34 Silvo, \$1.45 dozen.

These prices are our regular wholesale f.o.b. Calgary, on which you would be entitled to a discount of 5 per cent.

Thanking you, we are,

Yours truly,

Mr. FACTOR: The same kind of polish?

The WITNESS: Yes, the same kind. Now, here is another list of items with advertisements.

*By the Chairman:*

Q. This is a list of six items with the advertisements and the wholesale price?—A. There is a file of advertisements which refer to the fourteen articles in the memorandum I have just read.

Q. Are these the bread items?—A. No, I have the bread items here separate.

Q. That is what you spoke about a few moments ago?—A. Yes. There are the bread prices with the statements from the bakers attached. Now, there are a few other lines of merchandise. Lux soap advertised at 5 cents per cake, \$3.60 a case, wholesaler's price \$4.41 a case; Lifebuoy soap, \$6.25 a case against \$6.84. That is \$6.84 to the trade by the wholesaler; Lux flakes, 3 for 25 cents, \$6 a case against \$5.87, wholesaler's price; Pearl White naphtha, \$3.33 a case advertised, cost \$3.38; Sunlight soap, \$3.48 a case against \$4.

Here is another instance. I think it is a little unfair. This is from the Deal Fish Company, wholesale and retail fish dealers of Calgary. He says:—

With regard to our suggested regulations submitted to you, we feel that perhaps some of them should be explained to your better satisfaction.

With regard to No. 5 of the regulations we will give you names and instances of this particular case which has been going on right here in Calgary.

Edmunds and Walker of New Westminster, a producing fish firm, ship to Campbell and Griffin, Cold Storage Plant, a car load of frozen fish for the (department store) company to be drawn from by them at their convenience. They shipped this car to them at the same price as ourselves and other wholesalers would have to pay for it. Consequently (the departmental store) sold the majority of this fish retail for less, in most cases, than we or other wholesalers could sell it to the retail butcher or restaurant in the city on a wholesale basis for them to resell. This kind of business of course discredits the small retailer in the eyes of the public.

*By Mr. Young:*

Q. They both bought at the same price, and the department store sold to the retail trade cheaper than the wholesaler can sell to the retail trade. I do not see why. I do not see the logic of that. If I heard you correctly the department store and the wholesaler were both buying the fish at the same price and the wholesaler complains that he cannot sell to the retail trade as cheaply as the department store can sell to the public. If they both buy at the same price why can he not?—A. Of course, you do not infer that the department store gets a profit on everything they sell, do you? This is one of the loss leaders that they bring into operation in order to try to get people of the opinion that everything in the store is sold on that basis, which is not so.

Q. You say that the department store is selling this at a loss?—A. Absolutely. Selling at a loss in the operating—

*By the Chairman:*

Q. That is the basis of your complaint all through in these cases?—A. Yes. In these loss leaders, in the operating of a department store if they can operate by advertising or some other method—if they can get people into the store every day and do business on the average, there the law of average is working. If they can get 5,000 people to come into the store every day they do so much business on a 5,000 customer basis.

*By Mr. Young:*

Q. Would you mind reading that letter again; maybe I did not catch it?—A. "Edmunds and Walker of New Westminster, a producing fish firm, ship to Campbell and Griffin, cold storage plant, a carload of frozen fish for a department store to be drawn from by them at their convenience. . . ." Now, of course, that is the convenience which they get and nobody else gets. If anybody had a carload of fish come in they would have to unload their fish and let the car go. The department store gets the privilege of drawing from that car at their convenience.

Q. Could the wholesaler not get the privilege?—A. No. ". . . they shipped this car to them at the same price as ourselves and other wholesalers would have to pay for it. Consequently the department store sold the majority of this fish retail for less, in most cases, than we or other wholesalers could sell it to the retail butcher or restaurant in the city on a wholesale basis for them to resell."

Q. There is nothing there about loss leaders?—A. You are asking if they were buying fish on the same basis why could they not sell it on the same basis.

Q. Yes.—A. The wholesaler has got to sell it to the independent merchant, and he has got to get something for the handling of it; and the department store—they get a carload shipped and they say: draw from that car as you want it. It is on the car.

Mr. HEAPS: The fish was not sold at a loss?

The WITNESS: It might have been. It did not have to be sold at a loss. It was sold at a price to the consumer which the wholesaler could not sell it to his own customers at.

Mr. FACTOR: It is only the usual complaint where the large store obtains merchandise at the same cost as the wholesaler paid for it.

The CHAIRMAN: This case does not prove a loss leader; it does not support the loss leader contention, does it?

The WITNESS: No.

Mr. YOUNG: It indicates that the wholesaler cannot actually handle those goods for the wholesale cost whereas they can be handled retail by the department store. It looks like incompetence on the part of the wholesaler to me.

The WITNESS: I would like to ask you, Mr. Chairman, what you would take from that ad just as it appears there? (referring to two trouser suits).

Mr. FACTOR: You had better give us your impression; ours will come later.

The WITNESS: Would you take it that that garment was sold at the price stated there?

*By Mr. Factor:*

Q. Two trouser suits at \$23.50?—A. Is that what would strike you?

Q. Yes, from the headlines?—A. If you look further you will see that the extra pants cost an extra \$5.

*By Mr. Parry:*

Q. You are producing a page from the Calgary Daily Herald dated Wednesday, February 28, 1934?—A. Yes.

Mr. FACTOR: A one trouser suit cost \$23.50 and the extra pair of trousers cost \$5, and the form of the advertisement leads the public to believe they get the whole of it for \$23.50.

Mr. YOUNG: What would the public reaction be? If you go into a store to buy a suit and two pair of trousers for \$23.50 and they tell you they want an extra \$5, what do you do?

Mr. ILSLEY: Your point is that it gets them to the store by misleading advertisement. I think that is absolutely correct.

The WITNESS: It gets them to the store.

*By the Chairman:*

Q. It takes skilled salesmen to get the deal over?—A. Now, there is one point in advertising I would like to mention—

Q. Of course, there is one thing you might note as to this ad—I am not now naming who it is, but it is an illustration—it says here: "Of fine old country materials, Harris tweeds, English and Scotch tweeds, Irish tweeds, Botany serges" and so on. Then it says here, "You may select any style of suit you desire, choose the material from over 100 patterns . . ." It would indicate that everybody could choose Harris tweeds. The question is, could they? However, the point you indicate here is that there is misleading advertisement and deception?—A. Deception.

Q. In that ad?—A. Yes. That is the point.

Q. We will examine it carefully.—A. There is another ad here. It is said that he went east and bought 3,500 new spring frocks, and he goes on to say that these frocks are worth regularly \$8.95 and he is going to sell them for \$3.90. Now, Mr. Chairman, he is not going to do anything of the kind.

*By Mr. Parry:*

Q. You are reading from a bulletin named "The Shopper" published in Calgary on the 14th day of February of this year?—A. Yes.

*By Mr. Factor:*

Q. Are you going to file with us some suggestions?—A. With regard to what should be done?

Q. Yes, some remedies proposed by your association?—A. I would be prepared to do that.

*By Mr. Young:*

Q. Now, Mr. MacKay, can you give us any idea of the extent of the danger to the retail trade of these chain stores, mail order houses and department stores—how much of your business have they taken away?—A. Oh, that is rather a difficult question to answer just in that way, Mr. Young; but I would say that there are indications that are now very obvious that in a very short time they are going to take it all away. We are faced with the danger of passing out of the picture.

Q. We all know that business has largely disappeared anyway of late. What business have they taken from you which would show in a corresponding increase in their own figures?—A. Well, I think it is quite easily recognized by virtue of the number of chains that have come into the picture. It must be a profitable business for them or they would not keep on opening up and expanding their business.

Q. This inquiry has developed into a struggle between two different methods of merchandising. You have on the one hand the wholesale and the individually owned retailer, and on the other hand, you have the chain store. In order to meet the competition of the chain store, the retail merchants organized themselves, in some cases, into voluntary chains of their own. That was your first answer?—A. Yes.

Q. There you ran across this difficulty, the manufacturers would not supply you with goods in some cases. What is your answer to that? What steps have you taken to overcome that difficulty?—A. Well, we have not been able to take any step, because unfortunately the retailer by virtue of his position, has no

say in anything. He is the victim of circumstances. If we were organized or had the recognition that we feel we are entitled to we might have some say as to just what the manufacturers' policy should be.

Q. If you had an alternative market, if you could just go and buy, would not that bring them to their senses?—A. Yes, but we have not that privilege.

Q. You have not got that?—A. No; we have no privilege to do other than what they say we must do.

Q. Then, there is another point. I have been reading something about those chain stores. I understand they have more than the advantage of mass buying over you, they also have the advantage in selling. That is to say, they have been able to reduce selling costs to a greater extent than the individual stores. Is that so?—A. No; I do not think that statement is correct.

Q. That is not correct?—A. No. I do not think either the departmental store or the chain store has got anything on the independent merchant insofar as his cost of operation is concerned.

Q. Can you give us any idea as to the difference in the cost of handling goods by these two different systems?—A. The difference in the cost of handling goods?

Q. Yes. That is to say if the chain store can take the goods from the producer to the consumer at, we will say, an advance of 25 per cent, what would it cost under your system of wholesaler and retailer?—A. Well, Mr. Young, we are not holding any brief for any other factor in this retailing of merchandise, other than ourselves. If you, in your good judgment and wisdom, feel that there should be certain recognized factors in the general distribution, with economy in view, that is what I think should be done. Just to define, why for instance should the departmental store as a retailer be privileged to be also a wholesaler, and a manufacturer without recognizing the cost of manufacturing the goods, and wholesale distributing of the goods, and the retail selling?

Q. Here is the point Mr. MacKay: the object of all commerce is to get goods into the hands of the people, the community at large. Now, there was a time when we carried them in ox-carts from one part of the country to another. That was displaced by something more up to date. The question is, is the old system of handling goods through wholesaler and then retailer becoming obsolete; is it being displaced by a more efficient system?—A. No.

Q. It is not?—A. Not in my opinion.

Q. In your opinion, then, the wholesaler—A. Because you have reached the point in this question, as I see it, where distribution is now becoming the question of the future of the state. You can do certain things. You can wreck other things by allowing those things to continue further. I would be prepared to go this far. If in the opinion of this committee, after their investigation, you find just what Mr. Young has referred to to be the case, I would say it would be a kindness to the retailer to put legislation on the statutes of the dominion that will put us out of business. Do not allow us to be slowly tortured to death. Put us out. If you come to the conclusion that the department store is what the people want; if you arrive at that point in your thinking, as to whether or not that is going to be in the best interests of the state, and you are going to put the independent stores and the families of the independent merchants out of business, where are you going to arrive at? You can visualize that yourself, Mr. Young.

Q. Yes, but we have to think of the people. The people are going to buy where they can buy to the best advantage. I want to know if the retailer could put himself in the position where he could compete insofar as—

The CHAIRMAN: Mr. MacKay, can you compete with these so-called modernized methods of distribution to which reference has been made; can the

independent retailer compete with the practice of the loss leader, seductive and deceptive advertising, which is alleged, the weight of mass buying as disclosed in the evidence last week or the week before?

The WITNESS: I do not think so, Mr. Chairman.

*By Mr. Ilsley:*

Q. Well, following that up, can you compete if the discounts were all put on a purely volume basis; that is, for cash, so that there were no additional rebates such as you have mentioned?—A. Yes, so long as those volume discounts were not permitted to do just what they are doing now. That takes me back to Mr. Young's question. If this is going to be the principle under which we must carry on this business of distribution, buy in the lowest market and sell to the people at the lowest price possible, that is Mr. Young's contention. I think a moment ago you asked me the question if we could compete. I say, "No, as long as these factors come into the business, factors that will allow any one institution to buy merchandise at a price made by myself, and then permit him to sell it to the public at less,—

Q. I do not want to argue with you. You admit that a man who buys in volume and who is willing to pay cash is entitled to discount on buying in volume?—A. Yes.

Q. If that were done fairly; that is to say, every person or group of persons who could buy in that volume got the same discount provided he was a cash purchaser, too, would not that put you in a position to compete? It results in this, that the smaller retailer, who could only buy a little, would have to pay more, but couldn't he, by combination with other smaller retailers, and by voluntary chains and other forms of co-operation, put the retailers of this country in a position to compete and at the same time give recognition to what is admitted to be a sound principle?—A. I think so.

Q. Yes. If you cut out the loss leader and false advertising, which is unethical, and put your purchasing on the basis that I have just mentioned, perhaps the independent retailer could continue to exist.

The CHAIRMAN: The more efficient ones.

The WITNESS: There is no doubt this false advertising is probably the greatest factor.

The CHAIRMAN: Deceptive.

The WITNESS: That is detrimental to the situation.

*By Mr. Kennedy (Peace River):*

Q. In regard to loss leaders, you mentioned a case, I think, of a price submitted by a traveller at Grand Prairie. This traveller mentioned a group of 100 articles that the departmental store sold. How much of that group did they employ as loss leaders?—A. It varies, Mr. Kennedy, very much.

Q. They did a large volume of business, a large percentage, at least?—A. Yes. The unfortunate part of the department store is, in so far as the public is concerned—I was going to say the unfortunate part of the matter which has been referred to by Mr. Kennedy is this: when the loss leader is used the individual of the buying public going into the store has the impression that because a certain nationally advertised line is sold at a loss, the same is true of all lines which is not the case.

Q. If they are losing on a certain percentage of their business, do they make it up on the rest?—A. Yes, to a very large extent.

Q. Do they, on the average, sell at a lower price than the average retail merchant?—A. No.

Q. On the lower lines?—A. No, I do not think so.

Q. Your contention is this, that if we abolished the unethical practice about which you are complaining, prices will not, in general, be raised?—A. I do not see any necessity of that, Mr. Kennedy, because you do not have to raise prices of the commodity unless by what you are doing raises the cost of operation, and I do not see why there is any necessity of raising the cost of operation.

Q. The stores that are using the loss leaders must be charging a greater profit on the balance of the stock—A. I would think so.

Q. —than the competing merchant who is using no loss leaders.—A. It naturally follows that a lady, when she is buying a tin of salmon or a sack of sugar or a bottle of ketchup, it is the same in every store. She knows she is not taking any chance when she saves a five cent piece here or there. But when she goes to some of the other departments, and she is buying something of a different type, as drugs or jewellery or chinaware or something, that is the time they get it back.

Q. Can you submit any actual illustration of the prices of other commodities where the department and chain stores are charging more in order to offset the loss on loss leaders?—A. I could; I have not got them here, but I could get it.

Q. I think that would be a good thing.

*By Mr. Heaps:*

Q. How is it that department stores advertise that they would give you your money and 7 per cent if you can buy goods at a lower price?—A. Why do they? I didn't get that.

*By the Chairman:*

Q. He is referring to the guarantee which some stores use, that if you can buy anywhere else at a less price they will refund your money, with 7 per cent?—A. That is just another card they are playing to try and get public sentiment behind their particular business.

*By Mr. Factor:*

Q. Do they actually do that?—A. Yes, it has been done in the city of Edmonton by the Army & Navy store; they have the same racket there.

*By Mr. Young:*

Q. You spoke about some \$40,000,000 outstanding; I would judge that one of the biggest handicaps under which your people work is the fact that they have given credit?—A. Yes; but not because they want to.

Q. What does that cost you? What percentage would that add to the price of the turnover?—A. Well, I would not say it would add anything to the rural business; it might add to the city.

Q. But you cannot sell goods for the same price if you are going to lose half of your accounts or 25 per cent of them?—A. I would like to show you some of the merchants' records for the country, where you would be surprised. You would be surprised.

Q. I think you will say this, that if a merchant knew he was going to get cash for all his goods he could sell much cheaper?—A. Decidedly.

Q. What percentage of the price of the goods does it cost him, from the fact that he knows he has to give credit?—A. Well, I still say in answer to that, that in the rural parts of the province I don't think it makes any difference; but in the cities where there are credits issued on a different basis—that is these departmental stores operate a credit business in the city, and most large firms do—

*By Mr. Factor:*

Q. They charge extra for that?—A. They charge extra for that; that is what I say, carrying charges; but when the farmer comes in to buy from the merchant on a credit basis in the country, I do not think the merchant gets anything for the privilege that he is extending.

*By the Chairman:*

Q. The question is what does it cost? Put it this way, if a country merchant sold substantially all his goods, we will say, on a credit basis, he would have to buy on a credit basis or else have a heavy capital to carry that quantity of goods that he has bought on credit, upon which he would have to pay interest? Is that not correct?—A. That is right.

Q. Therefore he could not sell his goods as cheaply on credit as he could if he had a strictly cash business?—A. Oh, I do not think that a credit basis—it might make a difference of 5 per cent.

Q. You don't think it makes much difference?—A. No, I don't think it makes much difference, not in the rural part.

The CHAIRMAN: It is one o'clock, gentlemen. Thank you, Mr. MacKay, you have been very kind.

The WITNESS: I want to thank you, Mr. Chairman, and the members of the committee for this opportunity.

The committee adjourned at one o'clock, to meet on Thursday, March 15, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,  
March 15, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday contain the usual record of the witness that appeared, the exhibits that have been filed, by number, and the corrections in the previous minutes at the request of Mr. Moore. Is there any question regarding the minutes? If not, we will declare them approved.

Mr. SOMMERVILLE: The first witness is Mr. Doyle, of Nova Scotia.

J. CUTHBERTSON DOYLE, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Doyle, you are secretary of the Retail Merchants' Association of Nova Scotia?—A. I am, sir.

Q. And as such, you have certain views that you desire to present to the committee on behalf of the retail merchants of Nova Scotia?—A. Yes.

Q. Will you just kindly present those views?

*By the Chairman:*

Q. Before you start, are the statements that you make in this presentation of your own knowledge?—A. Yes.

Q. All right. Will you proceed?—A. Yes.

To the Honourable H. H. Stevens,

Minister of Trade and Commerce, and Chairman of the Special Committee on Price Spreads and Mass Buying, and to the Members of the Committee, Ottawa.

SIRS,

On behalf of the retail merchants of Nova Scotia, I wish to thank you for the opportunity afforded of reporting their views on mass merchandising practices and the effect upon the individual retailer, community life and the consumer. It was my intention to deal with this matter in greater detail but, after hearing the comprehensive reports presented to your committee by those who have preceded me, I feel that considerable time of this committee can be saved and repetition avoided by being brief, as, in the main, conditions in Nova Scotia are essentially the same as those already outlined in detail by the witnesses from other provinces.

My personal experience in the retail field extends over a period of thirty-five years, the last twenty of which have been in association work. During this period I have been in constant and direct contact with all sections of the retail trade and have thus acquired first-hand knowledge of their grievances, as well as of our joint endeavours in seeking satisfactory solutions thereof, through the medium of equitable legislation or such other channels as would provide fair and just remedies and ensure sound trading policies.

Immediately upon receipt of your telegram kindly inviting me to appear before your committee, meetings were arranged in Halifax, New Glasgow and Sydney for the purpose of securing as much authentic information as time would permit, and simultaneously a letter and questionnaire were prepared and sent to a number of representative retail merchants in our province. This questionnaire contained the four following questions:—

1. What are your views on mass merchandising practices and what effect has this had on your business?
2. What effect has present mass merchandising practices had on the community life in your place of business, and your immediate neighbourhood?
3. What effect has present mass merchandising practices had on the consumer?
4. What suggestions have you to make to remedy or correct these unethical practices?

In the short time at their disposal, many of the merchants were unable to give this very important matter the careful consideration it rightfully deserves. The replies received to this letter and questionnaire are obviously of a confidential nature; nevertheless, they reveal the very serious conditions prevailing in Nova Scotia, and they are herewith submitted for the information of this committee as an integral part of this brief.

These answers also reveal the various systems employed by departmental and chain stores, particularly in their advertising methods, to be detrimental to all classes of retail merchants; and, if allowed to continue, will eventually eliminate independent, individual retail merchants, and thereby undermine and seriously impair community life, which is so essential to the general well-being of the people, and to a moderate and more evenly distributed prosperity, with consequent greater contentment. Elimination of the individual merchant obviously reflects adversely upon the community, through loss in taxation and depreciation in value of real estate, merchandising stocks and other community assets, as well as by the withdrawal of money from circulation in such communities, which money is the indispensable commercial life-blood essential to the permanent upkeep, life and welfare of every community.

The constant suction of money from these communities means, in the final analysis, their ultimate impoverishment. On the other hand, the accumulation and concentration of this money in the hands of a comparatively few, principally in larger centres often far removed from the community, has no real compensating advantages to offset the widespread damages resulting from the exploitation of the general consuming public which makes up our community life, and, therefore, cannot be in the general and best interests of Canada, since it does not and cannot give the greatest good to the greatest number.

The retail merchants of Nova Scotia have, in common with other provinces, suffered seriously from these unethical conditions and practices for many years, and have exhausted every reasonable means at their disposal to find a practical solution of the whole merchandising problem in all its various complex phases. The ultimate solution of this problem, in order to be enduring, must be at once just, fair and equitable, to labour, producer, manufacturer, wholesaler, retailer and consumer alike—in other words, the adoption and practice of a "live and let-live" principle.

Up to the present time, however, no such permanent satisfactory solution has been found, and while it has been the consensus of opinion of representative merchants in Nova Scotia that the merchandising problem should not be unduly restricted in its complex operation and exchange of commodities, it is recognized, however, that certain abuses have become so intensified, and are so deeply-

rooted, that apparently no power outside of the government itself can successfully correct and eliminate the unethical practices now undermining and demoralizing the whole commercial and community life, not only of Nova Scotia but of the country as whole.

In these circumstances, therefore, it is needless to say, Mr. Chairman, that the retail merchants of Nova Scotia welcome and appreciate very much indeed this opportunity of herewith presenting to yourself and members of this committee these humble views on this important subject now under investigation.

As tangible evidence of the great concern of the retail merchants generally in our province, it is only necessary to examine the numerous replies to our questionnaire. Time will not permit reading all these replies; I would, however, respectfully request your permission to read a few which are typical of the sentiments expressed, and of the deep sense of injustice felt throughout our whole province on this very vital issue.

Due to the far-reaching ramifications of this whole subject and of the remedies necessary to rectify the existing strongly entrenched evils, the retail merchants of our province would prefer giving this matter deeper thought before suggesting to this committee any concrete curative measures, and to this end I respectfully request permission to supplement this brief at a later date with such proposals and recommendations as, in our opinion, will be most beneficial in assisting this committee to reach its conclusions, from which we hope and believe a fair and equitable standard of national merchandising practices will become the law of the land.

All of which is respectfully submitted.

Very sincerely yours,

J. CUTHBERTSON DOYLE,  
*Secretary, Nova Scotia Provincial Board,  
The Retail Merchants' Association of Canada.*

*By Mr. Sommerville:*

Q. You were going to read a few of the answers to the questionnaire, as samples?—A. Yes, just to confirm what I have already stated. (Exhibit 59). I hold in my hand here a report from one of the largest general store merchants in Nova Scotia, residing, I suppose, something in the neighbourhood of fifty miles from Halifax. He, at one time during the war, I know, had done a business of over \$300,000 turn-over, so he is a pretty good-sized merchant.

The answer to the first question, What are your views on mass merchandising practices and what effect has this had on your business, was:—

Mass merchandising has in many cases forced the individual retailer to drop many of the specialties on which the larger profits are realized, and by their superior buying power compelled the independent retailer to sell staple merchandise at a margin of profit scarcely sufficient to take care of his overhead. The effect on our business has naturally been less than if located in a large centre, but the facilities for travel are so much improved over those of former years, that we cannot escape the effect of the mass merchandising competition.

The answer to the second question, What effect has present mass merchandising practices had on the community life in your place of business and your immediate neighbourhood, was:—

The life of any community is so bound up with its central elements, and is influenced so largely by the activity of its central organizations, such as stores, its banks and other institutions, that anything that tends to divert the natural business of the community from these institutions has a demoralizing effect on community life.

The answer to the third question, What effect has present mass merchandising practices had on the consumer, was:—

The consumer is naturally attracted by cut prices on the advertising circulars of the mass merchandising establishments, and he gets the impression that because a few items used as leaders and sold at cost or less, are offered at lower prices than the local store, therefore the local store is charging too much for all his requirements; and he is led to make a list of his needs and get them supplied from the larger houses, very often at an aggregate cost greater, when freight and other overhead is considered, than these goods would have been supplied by the store in his own locality.

Then, to the question, "What suggestions have you to make to remedy or correct these unethical practices," the answer was:—

Perhaps the cure will be found more along economic than legislative lines. Mass merchandising is in a position to dictate prices to the manufacturers which compels the independent retailer to carry the manufacturer's overhead, thus placing him at a great disadvantage. In dealing with this matter a few years ago, we encountered difficulty with the Combines Act. If a system could be inaugurated by which a uniformity of cost could be secured, it would go far to solve the difficulty. Mass merchandising contributes nothing at all to our community enterprises, and the system which has grown up in recent years has substantially increased the burden of those who must accept these responsibilities.

I am now going to give you the information received from one who has for years advertised a real country store, and who a few years ago was in a fairly prosperous condition. The answer to question No. 1, was:—

Mass buying by the larger retail department stores has placed me in a position where I cannot compete with mail order prices. Although I pay cash for my wants by borrowing at times from the bank, we independent merchants can sell the goods if we only can compete with mail order prices. I have been trying for years to buy to compete and no success. I am at the stage now unless a change happens very soon going to get out of the game or I'll be forced out whether I wish it or not.

The answer to question No. 2, was:—

Our customers in majority of cases feel we merchants are not the people to spend their cash with, and can you blame them, when we have to pay wholesale for our goods in some cases actual retail catalogue prices. Never can we make overhead expenses of about 16 per cent selling to compete with catalogue retail prices.

The answer to question No. 3, was:—

The consumer buys from the independent local merchant only when he requires goods on the spur of the moment, and when he arrives home and compares prices it sure gets him thinking that we are very poor buyers or else we are out to make an excessive profit.

The answer to question No. 4, was:—

Offhanded I would say if the manufacturer wishes the independent merchant to stay in business, make arrangements with merchants that they, the manufacturers, are willing to sell for cash prices sold to mail order houses and chain stores.

That is sufficient on that. We have here largely a repetition of this from every section in the different lines, boots and shoes, et cetera.

Q. Will you file this with us?—A. Yes.

*By Mr. Ilsley:*

Q. I think what we would be more interested in is just a little description of the retail business in Nova Scotia; how many department stores are doing business in Nova Scotia?—A. When I went to Nova Scotia first, of course there were none. That is about eighteen years ago. Later, probably about ten years ago, there was established by the T. Eaton Company in Moncton a large distributing centre for mail orders, and the retail stores as well.

*By Mr. Sommerville:*

Q. That was first?—A. That was first.

*By Mr. Ilsley:*

Q. That was the first one in the maritime provinces, was it?—A. Yes, as far as I know that was the first. The second was the Robert Simpson people who located outside of Halifax, in what is known as Armadale. Some say it was to save—

*By Mr. Sommerville:*

Q. Well, in any event they located just on the outskirts of Halifax?—A. On the outskirts of Halifax, and they carry on also a mail order house business, and as well a retail store. Later, the department store we had in Halifax operated by Mahons Limited for a great many years, was taken over by the T. Eaton Company; they tore down the building then occupied and built a magnificent building to the credit of the place, in which they carry on a retail business on the corner of Barrington street and Prince.

Q. That was how soon after the Simpson building had been erected?—A. Not very long. I just forget how long.

Q. That is, however, since 1924?—A. Yes. Combined to that fact, the T. Eaton Company put a branch in Sydney, took over the Merchants & Sons of Sydney, and also Glace Bay. They have also now gone into what is known as Canadian Stores.

Q. Canadian Department Stores?—A. No. They just call them Canadian Stores, operated by the T. Eaton Company.

*By Mr. Ilsley:*

Q. That is a chain?—A. Well, just like a chain, in which these stores are located practically in every town of any importance in Nova Scotia.

*By Mr. Factor:*

Q. What do they deal in, general merchandise?—A. They largely deal in groceries and provisions. They also have their mail order house catalogues there, to be able to solicit at any time and take orders for the mail order house.

*By the Chairman:*

Q. They do not keep a general stock at all?—A. Not of general merchandise; no, not that I know of. The principal thing is groceries and so on; so that by that means and their advertising method they get a large number of people coming in and they are facilitated in selling their orders by somebody there to look after them.

*By Mr. Sommerville:*

Q. In these Canadian Stores where they do not carry a general stock of merchandise, they have somebody who does look after selling by the catalogues?—A. Yes.

Mr. FACTOR: The Canadian Stores do carry a stock of groceries?

Mr. SOMMERVILLE: Yes, not general merchandise.

Q. Foodstuffs, largely?—A. Yes.

Q. In addition to the departmental stores of the Canadian Stores, have you order offices in still smaller communities in Nova Scotia?—A. Well, I imagine so, but I would not say so.

Q. Then you have these three systems, two large stores in Halifax?—A. Yes.

Q. The mail order house in Halifax, the Canadian Stores in larger towns where they sell both over the counter and by mail order as well?—A. Yes.

*By Mr. Ilsley:*

Q. There are two department stores in Cape Breton island?—A. Yes.

Q. One in Sydney and one in Glace Bay?—A. Yes, one in Sydney and one in Glace Bay. Of course, we also have the corporation chains as well. I might say that I brought to the attention of the merchants some years before that it was time they got a move on, because sooner or later there was not any question in my mind but that these large businesses would be located, and they would have some difficulty from the experience I have had in the past; but they did not think that that was possible; they thought they would not like to go to a small place like Nova Scotia.

There was a survey made by a large number of chain store systems in the Province of Nova Scotia with the idea of expanding their business there. At that time, when I heard about these things, I got the merchants together and told them something had to be done if they wanted to off-set this and protect their future, that they had better get busy. Meetings were called from time to time and we thought of various things, and I got in touch with some people in Toronto who knew about this thing, and they said that the only thing to do was to form some group by which it would be possible to offset their system of advertising, and to be able to hold their own.

*By Mr. Sommerville:*

Q. That was to be an advertising group?—A. Yes. We then formed up and I was largely instrumental in getting the establishment of the Superior Stores in Nova Scotia.

*By Mr. Ilsley:*

Q. That is the name of the chain, is it?—A. The Superior Chain Stores.

*By Mr. Sommerville:*

Q. They are individually owned stores?—A. Individually owned stores, made up of the various merchants.

*By Mr. Heaps:*

Q. How many were there, Mr. Doyle?—A. I would imagine about 40 altogether.

Q. Have you any idea of their capitalization?—A. They are just simply linked up with some wholesaler and pool their interests.

*By Mr. Sommerville:*

Q. For the purpose of buying?—A. For the purpose of buying, and for advertising as well.

*By Mr. Factor:*

Q. Do they buy direct from the manufacturer, or do they buy through the wholesaler?—A. No, they are using a certain local wholesaler to buy, and then they get I think some consideration from the York Trading Company in Toronto.

*By Mr. Sommerville:*

Q. And thus by linking their buying power together they are able to get a better price from the wholesaler?—A. A little better price from them, yes.

*By Mr. Young:*

Q. Do they ever try to get along without the wholesaler; buying direct?—A. Well now, there is a lot to be said in connection with that matter. Our recent systems of the promotion of the sales of goods in general depends largely on the class of goods they are. Clothing houses, and all that kind of thing—Gent's Furnishings, and so forth, have gone over the wholesale and go direct to the trade, so that it depends on circumstances. In groceries it is a little bit more difficult to handle. A few years ago we thought we had the solution of this problem; that was the indication of the Fair Trade policy which we thought was going to work all right, and we tried to get it established here. We had a meeting held in Toronto and reviewed the whole situation, and at that time Sir Wm. Glynn Jones was asked to come over here in order to establish that kind of a system; similar to what they have established in Great Britain.

*By Mr. Edwards:*

Q. Was that the P.A.T.A.?—A. That was the P.A.T.A., which the officials practically designated as a combination in restraint of trade—I could never see why though.

*By Mr. Sommerville:*

Q. But they dealt with drugs alone?—A. No, it was not intended to deal only with drugs.

Q. It was the intention to extend it to other commodities; but the P.A.T.A., as alone, only dealt with drugs?—A. That is correct. His idea was to extend it to all merchandise. No later than yesterday I met one of the prominent travelers in connection with one of our large industries, and he was saying that the system in England, that the retail trade in general—the independent retailer—was not developing there to the extent that it was here; and the answer I made was that I thought he would find on investigation that the system has been regulated, and prices are maintained.

*By Mr. Ilsley:*

Q. By this arrangement the sale price to the consumer was maintained; that was the idea, was it?—A. Yes. I think myself—if you will allow me to go ahead—

*By Mr. Factor:*

Q. You say that prices are maintained in England?—A. Well, there is an understanding made with the manufacturer, the wholesaler and the retailer; and the factory, and the consumer I understand are brought in, and they have all these divisions; and the manufacturer produces his costs, and is adding to that his overhead—at least his profit—and then the General Store and the wholesaler comes in on the talk and he charges his amount; it might be probably eight or ten per cent—five or eight or ten per cent.

*By Mr. Edwards:*

Q. But, Mr. Doyle, is it not a fact that the P.A.T.A. is recognized as a legal institution in England, and as an illegal institution in Canada?—A. That is correct, that is simply due to our legislative system.

Q. The principle of the manufacturer fixing the resale price on his product is a perfectly legitimate process in the Old Country?—A. Well, yes, and that particular thing is the only thing that you can get done—where the manufacturer puts a price on articles such as Gillett razors, or for instance Gillett's goods—Magic Baking Powder, and such things as that—where the manufacturer puts the retail price on under which nobody can sell these goods at less, otherwise the goods are removed from the shelves.

*By Mr. Ilsley:*

Q. I thought that only applied to standard products to consumers?—A. That would largely apply to standard lines; these are nationally advertised articles.

Q. Nationally advertised articles?—A. Yes.

*By Mr. Edwards:*

Q. Not necessarily nationally advertised?—A. Not necessarily, these are the goods that have been utilized by these large stores to get business.

Q. As loss leaders?—A. Yes, I think that is what you call them.

*By Mr. Ilsley:*

Q. I wonder what proportion of the total merchandise of the country is made up of that class of article; perhaps that is an indefinite question?—A. That would be pretty hard to answer.

*By Mr. Sommerville:*

Q. Have you got the questionnaires you were going to file with us?—A. These are the rest of them.

*By Mr. Young:*

Q. You did not finish your description of the deal. You were telling us how they fixed these prices in England. You said the manufacturer fixed his price, and the wholesaler agreed to add his profits; could you go on from there?—A. That is the system, that is how it operated; the retailer added his profits, and the retail price was then the regular price.

Q. Then the consumer comes in; what does he do?—A. He pays the retail price.

The CHAIRMAN: Mr. Young, might I interrupt. I have sent around to each member of the Committee the Sankey report. It is very illuminating on this whole subject, and it is put forth very clearly. May I just add this one point; in that report he says that they find that the consumers did not object to the prices because usually under that system they were fair. That was the point that the report made; but the report will give you the fullest information on that practice, and it also describes the local situation very thoroughly.

Mr. SOMMERVILLE: That is the report of a parliamentary committee.

*By Mr. Ilsley:*

Q. You were starting to tell about your efforts, and the efforts of the merchants of Nova Scotia, organizing these individual voluntary chains?—A. Yes.

Q. How did they get along?—A. I may say for your information that I was secretary of one of these groups. At the start we tried it with the packing

houses. We would meet on Monday night and the packing house agent supplied us with quotations for various things—butter, eggs, lard, meats, and so on. We found in the early stages that the packing houses seemed to be competing against one another for a time; and usually we did what was the natural thing for us to do, took the lowest price. Later on, however, we found that we were up against a stone wall inasmuch as it finally became the consensus of opinion of the committee that the packers must have just simply got together and just made up a uniform price; there was so little difference that it did not matter; so finally we gave each one a fair share of the trade. That is about what it amounted to.

*By Mr. Kennedy (Peace River):*

Q. Who were the packers?—A. Oh, Swift Canadian, Canada Packers—all of them.

*By Mr. Ilsley:*

Q. You were talking about the chain known as the Superior Stores; are these stores all in Nova Scotia?—A. Largely in Nova Scotia, some are in Cape Breton.

Q. There are some voluntary chains which extend all over the Maritime Provinces, are there not? I am asking for information?—A. I do not know of any one that does that.

Q. Do you know how many voluntary chains there are?—A. Well yes. There would be the British Empire Chain, and there is Acadia Chain of Halifax—privately owned, of course.

Q. Yes?—A. And then they have the M.M.A., which is operated from St. John.

Q. That is the Maritime Provinces chain, is it not?—A. So that these would be the principal chains.

Q. Do you know how many stores, individual units, are represented in these voluntary chains?—A. No, I have never made a summary of them.

Q. You do not know how that number compares with the total number of retail stores operating in the maritime Provinces?—A. Well, you see, if you were a merchant on a certain corner and the Superior Stores got you, you would not want another Superior Store next to you.

Q. No?—A. Do you see the point? You have to be fair in that respect, and try to get just here and there so as to give them each a fair chance to get fair trade.

Q. I notice these Superior Stores everywhere I look in Nova Scotia; I am glad to know that they are voluntary chains, I did not know whether they were or not?—A. Outside of Dominion Stores, and these Canadian Stores I think they are largely made up of individual retail merchants.

*By the Chairman:*

Q. You are speaking now of the Maritimes only?—A. Yes, only of the Maritimes. In Cape Breton they took over a wholesale that was operating there; one of the largest wholesale houses; and they practically own the control—they soon own the whole thing.

Q. Who will?—A. The Superior.

*By Mr. Sommerville:*

Q. That is a voluntary chain?—A. That is a voluntary chain.

*By Mr. Ilsley:*

Q. Could they buy as advantageously as the department stores, or the corporate chain stores?—A. It is quite obvious that they cannot.

Q. Why?—A. That is borne out by the fact of their advertising, which is done at below their cost; as to whether they are just made up of loss leaders or not I do not know.

Q. There are authorities on this subject who seem to think that the voluntary chain is the hope of the merchandising business?—A. There is no question about that in the world. You see from that system if you have a Superior Store operating in one particular place, you would need to have another one operating, you understand, under a different name—to give them different names; otherwise your advertising for the Superior Stores would not be as effective as it otherwise would be.

*By Mr. Factor:*

Q. These voluntary chain stores, you told the committee, buy from wholesale houses?—A. They are linked up with some special wholesale houses, and by pooling their orders, they are supposed to be able to get better prices.

Q. Why can they not buy direct from the manufacturers or the producers?—A. Well, groceries can hardly be handled in that way; they are bulky, and then, of course, demand is for immediate use, you see, and this has to be met regularly.

*By Mr. Young:*

Q. Do the corporate chains buy in that way, or do they use warehouses—how do they do?—A. The controlled chains, do you mean?

Q. The corporate chains?—A. I am not just in a position to state how they would buy.

Mr. SOMMERVILLE: I think we will be able to show that they all have their own warehouses.

*By Mr. Young:*

Q. They all have their own warehouses?—A. They all have their own warehouses, yes.

Mr. YOUNG: They don't buy direct from the manufacturers.

*By Mr. Sommerville:*

Q. They buy direct from the manufacturers and use warehouses for distributing centres?—A. That is correct.

*By Mr. Ilsley:*

Q. Do you find there is a tendency on the part of many consumers who have motor cars to go to Halifax just because it is a principal centre, and the stores there are attractive?—A. Yes, they find a lot of attraction there; there is no question about that. When I came here I wired to Sydney and some of the merchants there have given me a little more authentic information on these matters, and I am handing this over for the committee.

*By Mr. Sommerville:*

Q. These appeared in the newspapers and they show a series of advertisements featuring loss leaders?—A. Yes, together with duplicate invoices from the wholesale showing the price that was charged. Now, these make a very full case, so I will just simply hand them over, if you don't mind, because it would take too long to read them all. (Exhibit 60).

Q. These are all samples of the sale by chain and department stores of goods at less cost than it is possible for the independent individual to purchase them?—A. That is correct.

*By Mr. Heaps:*

Q. Have you any idea what the department store paid for that class of goods?—A. No, I have no way of finding out.

*By Mr. Sommerville:*

Q. In connection with these you are complaining about the loss leaders?—A. That is right.

Q. In your advertisements have you also had complaints as to false or misleading advertising?—A. Well, they have done so time and time again—complaints from the merchants themselves; yes.

Q. And these are filed as indicative of that?—A. That is correct.

Q. Thank you, Mr. Doyle?—A. I do not know that there can be very much more said. The others preceding me have taken up the thing and dealt with it in detail, and we have exactly the same problem, only I think it is intensified there because of the fact that our population is small and any additional business coming in there makes it all the more difficult for us.

Q. I suppose you find that taking away business from your province to a central group is injurious to the province?—A. That is correct. In travelling Nova Scotia in the early days when I went down there first there were a lot of prosperous merchants all around; in every store you would see the shelves filled with a well arranged assortment of merchandise.

*By Mr. Factor:*

Q. We were all prosperous five years ago?—A. There are other things which enter into it that make it much worse, it is not only the economic conditions we are up against; it is these other conditions, and the result is that every place you go you will see merchants—I have in mind one place where there were five merchants, dry goods and general merchants, and to-day there is only one left.

Q. In one town?—A. In that small town in Cape Breton. So in general we find the Chain Stores have eliminated them one after another.

*By Mr. Ilsley:*

Q. Then you are against this loss leader practice?—A. There is no question at all about it, that it is the big lever that is used to get business; there is no question at all. I do not suppose these department stores would have been able to build up the business they have if it had not been for that system.

*By Mr. Factor:*

Q. What suggestions have you as to the solution of this problem?—A. For one thing you will have to have standardization.

Q. What do you mean by that?—A. You may have a shoe made to look like a certain shoe, but that does not make the two of them the same, does it? They might put up a package of a certain size to look just like another package, but it might not contain quite as much as the other package. Now, if you standardize that package that would help to maintain prices on the sale of these articles.

*By Mr. Sommerville:*

Q. On the matter of solutions, in your brief you have intimated that your association is still considering that and hopes to submit something to the committee at a later date?—A. That is correct.

*By Mr. Heaps:*

Q. Mr. Doyle, there is just one matter on which perhaps you could give the committee a little information; could you give us any information as to the spread in price on a staple article such as a pair of shoes from the time

it leaves the factory until the time when a person actually purchases that pair of shoes?—A. Well now, I am not prepared to go into those details; there would be no difficulty in getting that information from those who manufacture shoes. They could supply you with that.

Mr. SOMMERVILLE: That is already being provided for, and we will submit that to the committee, with the scientific data accompanying it from the investigators' standpoint; that and other data will be dealt with when the time comes, Mr. Heaps.

*By Mr. Baribeau:*

Q. How many merchants are members of your association?—A. Well, the membership has been depleted considerably these last few years due to the conditions that exist. We are hoping that if this committee can establish something of a new order in merchandising, there isn't any question at all but it will be a great stimulus to the trade, and there is no doubt at all our membership will be largely augmented by that.

*By Mr. Ilsley:*

Q. Do you know of any instances of unethical practices by the departmental stores in Nova Scotia?—A. I would not like to go into all these details, but I have thought so myself at various times.

Q. Are there any instances of that included in the exhibits which you have filed, or not?—A. Well, they make the statement there, and in most instances they show the wholesale price, and other things.

*By Mr. Sommerville:*

Q. That is the object of the filing of these?—A. Yes, that is the object.

*By Mr. Young:*

Q. Do they show the wholesale prices?—A. Yes, they show the wholesale prices. There are duplicate invoices from the wholesaler to the retailer,

Mr. FACTOR: That is not answering Mr. Ilsley's question as to unethical practices.

*By Mr. Young:*

Q. Is there anything unethical or fraudulent?—A. You must remember, in a great many instances they have possibly the greatest system of building up, engaging the most expert advertising men I suppose the world can produce in all these things, and they can so arrange the advertising to look pretty attractive.

Q. Is there any misrepresentation in it?—A. I am not prepared to say that; I would not say that. I have heard that there has been by some people who have made inquiries.

*By Mr. Ilsley:*

Q. There has been a lot of evidence indicating that there is some unethical advertising going on by the department stores. You come here representing the Retail Merchants' Association of Nova Scotia. Are you able to give us any instances, or are you indicating that there aren't any to be given in that particular Province?—A. It would not imply that at all. It just means that you have to be careful of the statements you make, and you have to have something to go on, to base your opinion on.

Mr. FACTOR: Perhaps Nova Scotia is free of that.

The WITNESS: Well I imagine there is not so much of it done as in large centres like Toronto, and so on.

*By Mr. Sommerville:*

Q. I understand you came away without the advertising, and this has been forwarded to you since?—A. Yes, this came in yesterday. I asked that it be sent forward.

Q. So you did not gather up the advertising with a view to meeting that particular question of misleading advertising, did you?—A. No, I had not done that. My idea was in comparing prices, the wholesale price with the retail price of the goods and the advertising of loss leaders; it is an utter impossibility for the retail merchant in general to meet that competition.

*By Mr. Factor:*

Q. You mean loss leaders as compared with the price paid by the retailer to the wholesaler; you do not know the price the departmental stores paid for the same article.—A. No, we cannot find that out. I haven't any doubt at all that this committee by investigating thoroughly could probably get that information.

*By Mr. Sommerville:*

Q. With the advertisements which you have submitted, they will establish what you allege?—A. Yes.

Q. And you say that should be investigated?—A. Yes.

*By Mr. Senn:*

Q. Mr. Doyle, do you know of an organization within your Retail Merchants' Association known as the Retail Merchants' Underwriting Agency?—A. The Retail Merchants' Underwriting Agency?

Q. Yes?—A. Oh well, of course, we have an insurance department. Is that what you mean.

Q. Yes.—A. Oh, yes.

Q. Can you tell me something of the workings of that organization?—A. Well, it is purely a service that is covered by the Northwestern Mutual Fire. If a merchant's risk can measure up to their standard, why he participates, like in all other mutual companies, in the profits, so that they have paid back in dividends ranging from, I suppose, a million and a half throughout Canada and the United States.

Q. Can you tell me how the insurance is placed with this company; is it placed through the ordinary insurance agent in the local town?—A. Oh, no, it is placed largely through their own representatives. For instance, in my case, I am Provincial Manager of the Northwestern Mutual Fire as well as the acting secretary of the Retail Merchants Association because we linked up with them for service in an endeavour to help the retailer to get his insurance at cost and assist him in the difficult problem that he had.

Q. In other words, it is a system of mass buying insurance?—A. Well, no, that is not correct.

*By Mr. Heaps:*

Q. Are not your rates below the usual insurance rates?—A. It is similar to the system of life insurance; they are all doing the same thing. Life insurance did not become the factor it was or is until it was a mutual proposition in which the profits were distributed to the policy-holder.

*By Mr. Senn:*

Q. Mr. Doyle, you complain of the practice of mass buying, and say that it is detrimental to the individual retailer?—A. Yes.

Q. Is not the practice you are following with this fire insurance agency detrimental to the individual insurance agent?—A. No, I cannot say that.

Q. Perhaps you don't want to see it. It seems to me you are taking business away from the individual insurance agents in the town just in the same way as you are complaining of this mass buying taking business away from the retailer.

Mr. SOMMERVILLE: He simply says that in placing their insurance in that way it enables the retail merchants to still continue to do business.

*By Mr. Senn:*

Q. I would like to know just how it differs from the system which you are now complaining of.—A. There is a vast difference, it is a different thing altogether.

Mr. SENN: I certainly think, Mr. Chairman, that should be investigated.

The WITNESS: We will be pleased to give you all the information you desire.

*By Mr. Edwards:*

Q. Are you in a position to tell the committee what effect chain stores and department stores, where they are putting other stores out of business, have on property values and assessed values in the community?—A. Well, there isn't any question at all that every store that goes out the property stands idle and the values are gone; nobody wants to buy the property, because if a merchant perhaps had put every effort forward to do business and he failed, well, it isn't a very attractive proposition for anyone.

Q. How are the assessed values on these properties affected? For instance, a store is put out of business; it is assessed for a certain amount by the municipality?—A. Yes.

Q. Well, that store is put out of business, of course, there is no earning power; are the assessed values on properties such as that lowered?—A. The only thing to do—

Q. I mean from your own knowledge.—A. I was just about to say, the only thing to do is for them to go to the assessor and get a reduction in the assessment. In some cases they turn the property into apartments probably or private houses.

Q. If a loss of revenue to the city, town or village is caused, is the assessed value to the department and chain stores increased to compensate the municipality for the loss?—A. In one of these questionnaires, in answering that question, the statement is made that in one place in Nova Scotia due to the chain store system coming in ten established businesses have gone to the wall, and that the town is losing over a thousand dollars in revenue from taxes.

Q. In other words, the taxes are lost to the community and that loss has to be made up by the other merchants?—A. Most assuredly.

Q. What effect has this on rentals and returns to the owners of property?—A. It can't do anything else but lessen them. For instance, if you have stores that are in demand all the time you can get the rental for them just as soon as these became vacant due probably to the high rental that the former occupant could not meet, a rental which is probably not high compared to the money invested in the building. At the same time, however, the occupant is not able to meet it due to these conditions.

Q. Would you say then, Mr. Doyle, that due to the competition of these department and chain stores the values of properties in the community have lessened if the revenue to the community is lessened?—A. There is no question about that.

Q. And that the value of the property to the owner is very much depreciated?—A. Undoubtedly.

Q. That is due entirely to this competition. I mean, of course, we must take into consideration a man's inefficiency to run a business, but that is the general trend?—A. Yes, that is the general feeling all round, Mr. Edwards.

*By Mr. Ilsley:*

Q. Can you think of any particular town where that is the case in Nova Scotia?—A. Well, I have just mentioned one as to which the evidence is produced there by answering the questionnaire, in which ten stores have gone to the wall,—Springhill.

*By Mr. Factor:*

Q. They were closed down?—A. It may not be due entirely to that.

Q. There may have been other causes there?—A. Oh, well, I dare say, but that is what he says.

*By Mr. Young:*

Q. Mr. Doyle, you say that ten stores closed down and one took their place and that one pays a thousand dollars less in taxes than the ten?—A. I did not say that. I am reading from the information given in this questionnaire, and he states that since the advent of chain stores in that community—and, of course, there may have been other causes contributing as well—but there are ten stores less and one wholesale less. I suppose he got the information from the assessor, and he says there is a thousand dollars less in taxes going into that community due to that fact.

Q. Due to the fact that some stores have closed down?—A. That is correct.

Q. Then does it not follow that this new method of doing business has reduced the cost of merchandising goods by a thousand dollars?—A. Well, now, that is a pretty deep problem to go into.

Q. Suppose your own association now had been instrumental in closing down those ten stores; in opening up those other stores that have taken their place would not they have saved one thousand dollars in expenses?—A. I am not prepared to go into those details.

Q. It is simply the natural consequence. You said a moment ago that they are paying a thousand dollars less taxes than they were, that is, than were the merchants of this town. Is not that a reduction in the cost of doing business?—A. Is that a reduction?

Q. Yes.—A. I cannot see that.

*By Mr. Sommerville:*

Q. At any rate, you are stating the fact, Mr. Doyle?—A. Yes, I am stating the facts. I don't know all the details.

MR. FACTOR: Mr. Young wants an explanation, that is all.

MR. SOMMERVILLE: Mr. Young wants Mr. Doyle into an economic discussion.

THE WITNESS: I have not gone deep enough into that.

*By Mr. Edwards:*

Q. How does the number of distributing houses or wholesale houses in the Maritimes compare with ten years ago say?—A. Well, the wholesale houses are very much crippled indeed, the number that remain. Some, of course, have gone, but those that remain are considerably crippled, there is no question about that at all.

Q. Would you say that in that particular part of the country the merchandising of goods could be done more economically through the jobbing houses than by direct buying? I mean staples, I don't mean specialties. A lot of your goods are purchased in Quebec and Ontario?—A. Yes.

Q. It is not feasible to ship them down there in what is known as l.c.l lots?—A. Yes.

Q. Carload shipments with lower freight rates are very necessary?—A. Yes.

Q. Consequently, it is good practice to purchase staple articles through a wholesale house?—A. That is correct for convenience, there isn't any question about that. It has been established in Great Britain, according to any information I have ever got, that that is the sane way to distribute merchandise.

Q. I think Mr. Young asked the question about buying direct from the manufacturers, but the only other way you would say to overcome that would be to have the manufacturer ship a carload of mixed merchandise, or for the distributors in Nova Scotia to purchase—A. Well, that would probably be a saving but would it be sane merchandising?

Mr. EDWARDS: I am just suggesting that.

The CHAIRMAN: Just a moment. Opinions are being expressed on both sides, one asking the other a question.

*By Mr. Edwards:*

Q. Do you think that practical merchandising in the Maritime Provinces for staple articles is best done through the wholesaler?—A. Yes, I think there is no question about that.

*By Mr. Young:*

Q. Coming back to this question of taxation, Mr. Doyle, one of the evils you stated of this system of merchandising has meant a loss in taxation to the community?—A. Yes.

Q. Will you just explain that clearly.—A. Well, I have endeavoured to make the statement as plain as I can make it. This man states that in this place in Nova Scotia since the advent of chain stores, ten stores have gone out of business.

Q. Yes.—A. And, no doubt, other people have not taken their place, and the result is, as he has figured, a loss to that municipality of a thousand dollars.

Q. Ten stores then have closed up?

Mr. SOMMERVILLE: Somebody else must pay the thousand dollars in taxes that has been lost.

The WITNESS: I have not figured it up to give you those details.

*By Mr. Young:*

Q. But ten stores have closed up?—A. Yes.

Q. And ten stores have stopped paying taxes?—A. Yes.

Q. Well then, whoever is doing the merchandising in that town must be doing it at a less expense than it was being done formerly.

The CHAIRMAN: That is your opinion.

The WITNESS: That may be your opinion.

Mr. YOUNG: Mr. Doyle says they have lost a thousand dollars in taxes. The merchants then must be saving a thousand dollars.

The CHAIRMAN: That is your opinion.

Mr. YOUNG: No, that is the statement. It is the natural consequence of his statement.

The CHAIRMAN: That is your opinion as to the effect of his statement, but he does not say that. He has told you that half a dozen times, and I do not think it is fair to press him to say what your opinion is.

Mr. KENNEDY (Winnipeg): I think, Mr. Chairman, the witness indicated clearly that that reduction in taxation would have to be borne by the rest of the people.

Mr. YOUNG: I am saying this, that the merchants are not paying it.

Mr. KENNEDY (Winnipeg): All right, that may be your opinion, but you do not seem to be prepared to listen to any person.

Mr. YOUNG: I am anxious to listen if the witness will explain.

The CHAIRMAN: Mr. Young, you have expressed your deduction from what he said, you have stated your view.

*By the Chairman:*

Q. Mr. Doyle, you have stated your view with regard to this assessment?—A. Yes. That is all I can say. I just read it there from the questionnaire that was sent out. I will read it if you so desire, Mr. Chairman. He states, that since the advent of the chain store system in their locality ten stores have gone out of business together with one wholesale.

*By Mr. Young:*

Q. Well, are those chain stores doing the business that these other men were doing that closed up?—A. Well, no doubt they are.

Q. Are they paying any taxes?—A. Some of them are.

Q. And some of them not?—A. I imagine they must all pay taxes.

Q. Then are the taxes paid by these chain stores any less than the taxes that were paid by the ten that went out of business?

Mr. SOMMERVILLE: By a thousand dollars, he says.

The WITNESS: They are paying less than the ten stores that went out of business by a thousand dollars. There is a difference of a thousand dollars. That is the statement this gentleman makes. To be able to accurately go into the details of that I would have to check that up. I would not be prepared to state the exact amount.

*By Mr. Young:*

Q. Now, you spoke about another evil in this system, the withdrawing of money from the community. Would you explain that, please?—A. Well, if these large corporations are able to carry on their mail order system and their system of advertising then the community dollar is not in circulation, it is gone.

Q. What part of it is gone?—A. Well, the whole of it outside of the expenses borne by the upkeep of these places.

Q. The whole of it, you say, outside of the expense relative to the upkeep?—A. Yes.

Q. And will you tell me how much of the dollar that is paid in to the local merchant stays in the community and how much goes out?—A. You are getting into pretty deep stuff.

Q. Oh, no, I am asking for a statement of both sides?—A. It is an utter impossibility for me to answer that question.

Mr. FACTOR: I find it rather peculiar, Mr. Chairman, that when Mr. Young starts questioning the witnesses all seem to be getting into deep water and cannot answer the question.

The CHAIRMAN: I do not wish to argue further with Mr. Young. I want to give him the widest possible scope, but obviously witnesses such as Mr.

Doyle and others who come before the committee cannot be expected to have at their finger tips the various percentages that are known to students of economics and the breaking down of sales costs and price spreads and all that. We are going to get all of that to the abundant satisfaction of the committee from experts and scientists who are now working on it.

MR. YOUNG: Mr. Chairman, witness after witness has come before this committee and stated that certain people doing business in a certain way send most of their money out of the community. I asked him how much, and I ask if that is or is not any more than people doing it the other way?

THE CHAIRMAN: The witness, I think, has answered your question quite fairly. He indicates that with the closing down of the retail merchants and the loss of the prestige, and the spending power of the local merchants, the destruction of all that, what effect it has on the community. He is just giving you his opinion as to the loss to the community. You asked him what the loss is, and I submit to you he cannot tell that or answer that question; but we can get that. I think we can get real information on that, but I think it is unfair to press a witness of this kind to answer a question of that kind.

MR. YOUNG: Yes, Mr. Chairman, but we have had a lot of statements made here, and then when the question is asked the witness says invariably "I don't know." You say we will get this information from some other source. I would like to know where it is coming from and when we are going to get it.

THE CHAIRMAN: If you will just be a little patient until this afternoon when we have an executive meeting I will give you a very complete report. I have here from Mr. Coats quite a letter descriptive of what they are doing in this matter, and he goes on to say that a number of tables on price spreads have been prepared for specific sections of trade and industry; they have been forwarding these to the committee as they are finished, and at the present day's date (March 13) they have now sent tables on wheat; flour; bread; sugar; hogs and hog products, cattle and cattle products; sheep and mutton; milk, butter and cheese; a general memorandum on the relation of farm prices to prices of manufactured goods. And that they have still in preparation tables on fish; wool and woollen textiles; cotton and cotton textiles; petroleum and gasoline. These are all things that take time. I would ask you again, therefore, with all reason—in the light of this—and I will give you all the information that can possibly be secured—not to ask these technical questions from witnesses of this kind.

MR. FACTOR: May I interject here and ask you whether we intend to go into the matter of capitalization, and so forth—

THE CHAIRMAN: Supposing we leave that question until we meet in executive committee.

THE WITNESS: I might inform you that I got a wire to come before this committee the latter part of February, somewhere around the 27th I think, asking to get detailed information and so on, and to be here on the week of the 5th. Now, if you can tell me where it is humanly possible for the greatest experts you can imagine to ferret out all the details in connection with this system that we have referred to,—well, you just cannot get it, nor they never could get it in so short a period as that. It takes years sometimes to study all these details.

*By Mr. Young:*

Q. Then we will drop that point for a moment. Another evil you stated in this system of merchandising is the exploitation of the public. Will you explain that, please.—A. Well, if they advertise a loss leader and are able to bring into the store a number of people, because that is what is done, they will,

if they can, sell them something else. People go in there as I have known in a great many cases, in fact it has happened to myself, probably half an hour after the goods were supposed to be on sale to find they were all gone. Now, they surely had not disposed of all that stuff. Would not you call that exploiting?

*By Mr. Ilsley:*

Q. It is misleading advertising, is it not?—A. You can call it anything you like but I say that is exploiting the public. They go in there expecting to buy this article and, in a great many cases, the articles are all gone. They have simply sold a few, they might sell ten, fifteen or twenty, if you like, and that is a very cheap system of advertising because, in that way, they get the people into the store and they sell them a lot of stuff that they did not intend to buy at all.

*By Mr. Young:*

Q. Just a minute now, you say that they sold them stuff they did not intend to buy at all. I would take that to mean that they took more money out of them than they gave them value for?—A. Oh, no. There are a lot of different interpretations on that.

*By Mr. Sommerville:*

Q. If they sell something for less than cost they must make it up on something else. There is no question about that.

*By Mr. Kennedy (Peace River):*

Q. Is it your opinion that the departmental and chain stores are selling generally at lower prices than the ordinary retailers?—A. No, I don't think so outside of, well, of course, certain things.

Q. Generally. I am speaking of the whole range.—A. As a general thing they claim they can sell cheaper.

*By Mr. Young:*

Q. Then, speaking broadly, you can compete with them except in the case of loss leaders?—A. No—if we get advantage of the buying, the same buying, if we could buy at the same price there is no question about the competing.

Mr. ILSLEY: That is the crux of the whole situation.

The WITNESS: Absolutely, that is the crux of the whole thing.

*By Mr. Young:*

Q. That is all you ask, the chance to buy on the same basis?—A. Certainly; and standardize things so there will be no misrepresentation or anything. The great trouble again, gentlemen, is this: if for instance I come down and find something not right about the advertising, I come down and check it up and so on, now I am obliged to bring these people into court to prove that they were doing this kind of thing. What right has the retail merchant or the secretary of the Retail Merchants' Association to do that? The onus should be placed on them and by law they should be able to come in and state why they do this thing, and a pretty heavy, stiff fine put on so there will be no question of it being repeated.

Q. In procuring supplies for voluntary chains, do you find anybody refusing to sell?—A. So far as I know, yes, indirectly; that is the answer. They have been interfered with in some ways.

*By Mr. Sommerville:*

Q. That is to say, the wholesalers who supply you have given you that answer?—A. Yes, sir; that is correct.

*By Mr. Young:*

Q. On what grounds do they refuse to sell to you?—A. Well, the former witnesses gave you statements concerning that in which they said that they combined their buying and put it up to some manufacturers to see if they could get the same prices as other people believed they were supposed to be getting, and they should, under the circumstances. They combined volume as the means of securing a closer price, and they should have been able to get it. But they did not get it. In fact they have been interfered with in some way, and were refused.

Q. The manufacturer refused to give it to them?—A. Yes.

*By the Chairman:*

Q. In some cases?—A. Yes.

Q. You are not prepared to state specifically cases to your own knowledge?—A. No, I would not be prepared to do that. That is one of the reasons why I think the committee should be of so great assistance in trying to solve this problem.

*By Mr. Factor:*

Q. Do you know anything about rubber footwear conditions?—A. I have got it from—

The CHAIRMAN: In the questionnaire?

The WITNESS: In the questionnaire. The same thing has been said to me as has already been said by other witnesses who have preceded me.

The CHAIRMAN: On the rubber footwear conditions?

The WITNESS: Yes.

The CHAIRMAN: Gentlemen, we have another witness this morning, and as we are trying to get through to-day, I shall now call him.

Witness retired.

Mr. SOMMERVILLE: I have a very short brief of only three pages, which was submitted by the Summerside Board of Trade. I shall read the brief into the record, and I shall substitute for the name of the firm mentioned therein, the letter "A".

The Chairman,  
Parliamentary Committee on Mass Buying,  
House of Commons,  
Ottawa, Canada.

Dear Sir,—

We wish to bring to your attention in a general way the unfair competition of the mail order business with which our merchants in all the different lines of distribution have to meet and which is having a very detrimental effect on profitable operation.

"A" take from our community all the profit on their goods yet contribute nothing to maintain this community in taxes or in any other way.

In this province where there are no large manufacturing interests—mining or lumbering, the bulk of the taxes fall upon the merchants and the farmers. The merchants maintain large stocks in well equipped stores and as a consequence pay a large town or city and provincial taxes.

They employ sales staffs, they pay insurance, rent, they pay advertising on which the local newspapers depend for their existence. The people that are employed by these local merchants give business to the doctors, the lawyers, the dentists, the banks, the bakeries, the garages, the lumber mills and the farmers, and they contribute towards the upkeep of the schools, the churches and other local institutions.

"A" on the other hand, contribute to none of the above. They give business to none but endeavour to take business from every one, yet pay nothing for the privilege but instead cause the taxes and expense of keeping up these communities to be an increased burden on the local institutions.

We feel that this is unfair and that, if your committee is going to recommend legislation for fair and equitable trade, even the changing, if necessary, of the British North America Act should not stand in the way of making recommendations that could deal effectively with a situation, which is very unfair to the mass of people, on whom depends the real life of this Dominion of Canada, for without communities and all that they mean the people of Canada in the Maritimes and outlying sections would be but "hewers of wood and drawers of water" for a few privileged mail order concerns in central Canada.

We feel that an outstanding example of unfair competition may be found in the distribution of auto tires and we would strongly recommend that your committee thoroughly investigate the situation. Unless something is done in the way of correction, the time is rapidly approaching when "A" will have a complete monopoly of the sale of auto tires in Canada, that is if the people become aware of the advantage offered by "A" in a low price, with which the dealers cannot compete at the prices charged them by the Canadian manufacturers.

We wish to give you just three examples of tire prices taken from "A's" spring catalog of 1934 and the Canadian Manufacturers' list and discounts. We will take one popular size of tire and three grades, namely the 4-ply, No. 475/19 tire and the 1st, 2nd, and 3rd grades. We will compare "A's" catalog price with the retail price fixed by the Canadian manufacturers, plus tax, and also the dealers' cost applying from the Canadian manufacturers plus tax. The sales tax is included in all prices mentioned.

	1st grade	2nd grade	3rd grade
Dealer's fixed retail price.. . . .	\$10 88	\$ 9 33	\$ 7 93
A's prepaid price.. . . .	7 90	6 65	5 65
Difference.. . . .	\$ 2 98	\$ 2 68	\$ 2 28

You will see from this comparison that the Canadian manufacturer has fixed a price for the dealers to whom they sell, of \$2.98, etc., higher than A's price. It is therefore apparent that the dealers cannot expect to sell to the consumer at such a great difference in a higher price.

We wish to give now the comparison between A's price and the dealer's cost plus tax (A's price includes the tax).

	1st grade	2nd grade	3rd grade
Dealer's cost.. . . .	\$ 8 77	\$ 7 53	\$ 6 41
A's price prepaid.. . . .	7 90	6 65	5 65
Difference.. . . .	\$ 87	\$ 88	\$ 76

It is therefore clear that manufacturer sells to the dealer at a cost that is 87 cents higher than A's retail price. The unfairness of this is quite apparent, when in order to compete the dealer has to pay the local freight to his customer.

Now, we believe that the above will show that there is something wrong. We understand that these same manufacturers, who are selling to the dealers throughout Canada, are selling to "A" at a price so very much lower, that "A" are enabled to pay the freight to the customer and sell at a profit at a price lower than the actual cost to the dealer. It is common sense to anticipate that a continuance of such practices on the part of the manufacturer will divert all the trade on auto tires in Canada to "A" and therefore the manufacturers will be dependent on a single customer instead of on the many. Every year that they continue to give "A" such an advantage strengthens A's buying power increasingly, as the consumer becomes more aware of the vast difference in price.

There are at present in the town of Summerside, seven dealers in auto tires. Is it fair, is it just, is it right that these dealers should be put out of business by "A," that this community must lose the taxes collected from these concerns, that this community must lose the citizens that are supported by these concerns.

It is our desire to bring to your attention and suggest an investigation of the cotton and textile distribution situation. Briefly let us outline one phase of it. The Dominion Textile and Dominion Cottons refuse to sell to merchants direct and thus force them to buy through the jobbers. However, these manufacturers make an exception and sell "A" direct and they sell them, according to the jobbers' story, at a price lower than the price they charge the jobbers. The jobbers state that the manufacturers claim "A" buy more of their products than all the jobbers put together. Now the jobbers naturally have to get a margin to take care of their overhead expense and to give them some measure of profit. You can therefore see that it is impossible for our local merchants to compete with "A's" resale price to the consumer. It is apparent that the manufacturers, by giving "A" preferred treatment, do practically create a monopoly of the cottons and textiles manufactured in Canada by preventing the general merchant of Canada to compete in price. A continuation of this practice will divert more and more of the trade in these commodities to "A". The only way that this can be prevented is by your committee investigating, recommending and putting through enabling legislation to protect the many instead of having the favoured few enjoying a monopoly at the expense of the large number of merchants who will be forced out of business.

We respectfully submit the above outline of what we consider unfair competition and sincerely trust that it may be your pleasure to look into the situation outlined by investigation that will be thorough, far reaching and effective. We honestly feel that the great bulk of merchants in the different communities throughout Canada are entitled to fair treatment by the manufacturers and that they should not be forced out of business through the effect of mass buying and such practices that give the chain stores, the mail order concerns and the large organizations in the centres of Canada a monopoly and a stranglehold on Canadian trade.

Thank you for your kind consideration, believe us to be,

Sincerely yours,

THE SUMMERSIDE BOARD OF TRADE,

B. W. ROBINSON, *president*.

Accompanying the letter is the last advertisement of "A" which appears in the Charlottetown Guardian, advertising a new system of furniture price policy, mail order direct from the factory to the purchaser. (Exhibit 61.)

The next witness is Mr. Matthews of British Columbia.

GEORGE R. MATTHEWS, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Matthews what is your position in the Retail Merchants' Association of British Columbia?—A. The provincial secretary.

Q. You have been associated with the association for some considerable time?—A. Seven years.

Q. And you are familiar with the conditions with which the Retail Merchants' Association have to contend?—A. From the standpoint of the secretary, not as an economist or a statistician.

Q. And in that respect you desire on behalf of the retail merchants to make certain representations to this committee?—A. Yes. Mr. Chairman, at the outset I should like to say that perhaps it is very fitting that the one farthest removed from the capital would be the last to address this committee; and I am quite conversant with the fact that there will be more or less repetition of what I have prepared. With that thought in view, Mr. Chairman, I will make only references and file the statement. I would ask particular forbearance on the part of the committee in that regard. When we heard that our responsibility was to furnish what we felt were unfair practices, we went outside the city of Vancouver. You are familiar, sir, I think, with the fact that the city of Vancouver, or at least the greater Vancouver area would take in half the population of British Columbia. In order to get the view of merchants outside the city of Vancouver we took in the outside cities. It may be consoling to you to know, sir, that my introductory brief will take little more than one minute.

Mr. Chairman and gentlemen: The British Columbia Board of the Retail Merchants' Association of Canada very gratefully appreciate this opportunity of presenting to you some of the practices of so called big business operating as chains and department stores, which practices have been the major contributing factor in forcing so many of our independent merchants in the towns and cities of British Columbia out of business. Unfortunately the majority of the independent retailers in British Columbia, cannot continue indefinitely, unless government will introduce some measure of control over unfair practices, which we regret we have to admit, are now being adopted by some independents to enable them to continue on, just a little longer, in the hope that some relief is forthcoming soon.

Since the recent announcement that a special committee would look into trade practices a new hope has sprung into the hearts of our retailers. We have recently held meetings in six cities being the beginning of a provincial campaign. The attendance has been the largest known; in some cases sixty-five per cent of the local merchants being in attendance.

At the outset we are desirous of making our position clear. The British Columbia Board of the Retail Merchants' Association are not asking for the elimination of the chain and department stores, but are seeking from our provincial and federal governments such legislation as will eliminate unfair practices whether they refer to chains, department stores or independent retailers.

One of the outstanding practices, which is supported by exhibits herewith attached, (Exhibit No. 62) is the advertising of loss leaders, for the purpose of misleading the buying public. I say misleading because the purpose of such publicity is undoubtedly to create in the minds of the consumer the fact

that all the merchandise handled by these respective chains and department stores is sold at retail on a similar basis and, as the leaders are usually nationally advertised lines, well known to the public, the independent retailer is made to appear to be making an exorbitant profit—for example, take groceries.

*By Mr. Ilsley:*

Q. Excuse me just a moment. What you have said there, has been said by every witness who appeared before us. They all said it is due to loss leaders. Has there not been any progress made in the education of the consuming public of Canada? I would think that by degrees they would realize that these articles that are advertised at what appears to be a great reduction, or a great bargain would come to an end. There comes a saturation point in the consumer's mind; that is to say that while he would say to himself, "Well, I can get a bargain here on one thing, but probably not on other things; and I can get a bargain on something else in some other shop," and that in time the deceptive effect of the loss leader product would entirely disappear; is not that so?—A. I do not think in actual practice, sir, that is the buying experience.

Mr. SOMMERVILLE: That was not Barnum's experience.

Mr. ILSLEY: They keep on buying indefinitely?

Mr. SOMMERVILLE: There were two born every minute, was Mr. Barnum's conclusion, after 40 years' experience.

The WITNESS: Exhibit No. 1, is an advertisement by Woodward's Stores, Limited, a department store in Vancouver, which uses as its slogan "The best for less."

Mr. HEAPS: I thought you were not using any names, Mr. Chairman.

The WITNESS: We have the exhibit.

Mr. FACTOR: It is not a relation of your friend, Mr. Heaps.

The WITNESS: They advertised in the Daily Province in the issue of February 28, 1934.

British Columbia finest granulated sugar, 10 lbs. net 59 cents whereas the wholesale price to the retailer at this date was 66 cents.

Also the circular of the O. K. Stores offering:

Sugar at retail—10 lbs. for 57 cents being nine cents below the retailers' wholesale price.

*Exhibit No. 3.*—Is a list of comparative prices as between wholesale and advertised lines by chain and department stores which shows the impossibility of the independent retail grocer competing with the apparently accepted practices of the chain and department stores.

	Wholesale price to retailer	Retail Advertised Price
Item No. 1.		
Feb. 17/34—Aylmer soup-chicken	3 for 70c	3 for 59c
Item No. 2.		
Feb. 17/34—Combination soap special	58c	59c

The CHAIRMAN: Inasmuch as you mentioned Woodward's name, and inasmuch as you have filed the advertisement, there is no objection to naming these stores; because 10,000 people have already read them. Your first firm was Spencer's Limited, and the second was Spencer's?

The WITNESS: Number 1 is Spencer's, and No. 2 is Spencer's, Limited.

## Item No. 3

Safeway stores—

Feb. 22/34—Salada Tea.. . . . .42c. .43c.

*By Mr. Heaps:*

Q. That is the cost to the retailer?—A. Yes.

Q. Is it not a fact that the firms advertising these goods are losing money on all these sales?

Mr. FACTOR: They are loss leaders.

Mr. HEAPS: Not necessarily.

The WITNESS: Well, I can answer that, sir, in one of these items, as I developed it with the manufacturer himself. I have a wire from him, which I will read a little later, in which he states positively that one item here was sold at two cents less than what he paid for it.

Mr. HEAPS: You do not know anything about the other items?

The WITNESS: I have no evidence of that.

## Item No. 4

Spencer's Ltd.—

Feb. 20/34—Nabob coffee.. . . . .35c. .33c.

Feb. 20/34—Old Dutch cleanser.. . . .08c. .07½c.

## Item No. 5

Woodward's Limited—

Feb. 20/34—Aylmer Spinach 2½ tins.. . .18c. .15c.

Woodward's Limited—

Feb. 20/34—B.C. Crown Olive soap.. .40c. doz. .30c. doz.

## Item No. 6

Spencer's Ltd.—

Feb. 26/34—Chateau cheese 1-lb. box.. .23c. .22c.

	Wholesale price to retailer	Retail advertised price
--	-----------------------------------	-------------------------------

David Spencer—Feb. 26/34—Lux Soap Flakes.. .07 .06½

David Spencer—Feb. 26/34—All Bran Kellogg's (large) . . . . .	.17	.15½
--	-----	------

*Exhibit No. 4A.*—Another merchant from Nelson—that is a local manufacturer and a very fine institution—says they have sold Ledinghams bread here at 5 cents a loaf several times. We pay for this bread wholesale fourteen loaves for \$1 or 7½ cents.

*Exhibit No. 4B.*—Is a statement from one of the largest buyers in British Columbia, of groceries. In some lines his purchases would equal that of a department store. Being a large buyer he makes some rather astounding statements. I quote in part from his letter as follows:—

Large manufacturing organizations with distribution across the continent pay to chain and department stores actual advertising rates as charged by the newspapers except when large advertising schemes or drives to increase business are under way when generous inducements are handed to large retailers for this co-operation.

*By Mr. Sommerville:*

Q. What do you mean by that; develop that?—A. This gentleman states that a manufacturing concern giving a secret rebate to a chain or department

store will recognize the rate of advertising in that city or locality and rebate on that basis to the purchaser who is a chain or department store.

Mr. FACTOR: They will pay the advertising space?

The WITNESS: Yes.

Mr. YOUNG: That portion of the space which is devoted to his product?

The WITNESS: I am not so sure about that.

He states that—the independent dealer does not benefit through secret rebates but that such are common to large buyers. The only secret part is the amount which varies according to the size of the order and the chisseling powers of the buyer. He states that—the giving of 30, 60, 90 days to large retailers with good credit, is common practice particularly on large orders. The 1 per cent, 10 days which is the usual trade term, is seldom taken any notice of by the large buyer, who generally refuses to tie up his money in the manufacturer's goods. Hence he never has any difficulty in getting almost any term he chooses.

*Exhibit No. 4C.*—Is a tabulated record from the city of Victoria of the names of the firms, article, retail price, wholesale price and paper in which advertisement appeared, with the date of each from March 4, 1932, to August, 1933, which shows that in practically every instance butter has been advertised showing the retail price as being three cents below the wholesale.

Mr. SOMMERVILLE: When you speak of the retail price, do you mean the cost to the retailer?

The WITNESS: The retail price is the cost to the consumer. In substance it shows the retail price as being 3 cents below the wholesale in practically every instance.

Mr. FACTOR: On commodities sold by chain stores?

The WITNESS: Department stores. I think there may be a chain too.

*By Mr. Sommerville:*

Q. This refers to butter, eggs and bacon largely?—A. Exhibit No. 5 is another practice or form of publicity. This advertisement appeared in the *Vancouver Sun*, under date of February 20, 1934, in the name of David Spencer Limited, in which there are no less than 10 items that do not set out the proper description, for example—this is all in one ad, Mr. Chairman,—

No. 1 Mackerel in Tomato sauce....	15	cents	no size stated
2 Clams, Easter, per tin.....	10½	"	no size stated
3 Tomatoes, Spencers, per tin...	8½	"	no size stated
4 Spinach Royal City, per tin...	15	"	no size stated
5 Peas-Royal City, per tin.....	10½	"	no size or sieve stated

Q. A sieve—that is the size of the peas?—A. Yes.

No. 6 Flour 24 pound sack.....	69	cents	no brand stated
7 Apricots in Syrup, Aylmer...	15	"	no size stated
8 Cedar Polishing Oil, bottle..	12½	"	no size stated
9 Pears in syrup, per tin.....	15	"	no size stated
10 Pineapple Burke, per lb.....	13½	"	no size, or if pound is meant for weight or contents, it is wrong

You may assume different sizes as you wish.

*By Mr. Factor:*

Q. When you say "no size stated" have you investigated these cases and found that the size runs usually actually smaller than the standard brand?—A. That is not the point I am bringing out. The point is this, that the public have no way of judging the accurate value of this advertisement because of it not bearing the size.

*By Mr. Ilsley:*

Q. There is nothing fooling them; there is no deception?—A. I certainly say so. If my wife were thinking of purchasing tomatoes, and she has been buying a certain size from her local grocer, and she sees tomatoes advertised at  $8\frac{1}{2}$  cents, and if that has been the size she has always purchased, I would take it she would assume  $8\frac{1}{2}$  cents for that size.

Q. You are going pretty far in protecting people against their own conclusions.

Mr. SENN: It depends whether these goods are put up in standard sizes. If they are—

The WITNESS: The fact remains there is no size named.

The CHAIRMAN: That is all the point you are making now: that no size is given; and we can draw our own deductions.

The WITNESS: Yes.

Upon receiving assurance from me that I would not divulge his name, one of the largest manufacturers in British Columbia wired me here, as follows—I wanted reasonable confirmation of secret rebates and this is the wire:

Quantity price beyond reason—

He is referring to the quantity price that the department stores and chains are advertising—

—demands made for advertising allowance, windows, tables, posts and press advertising and in many cases chains dictate to manufacturers.

*By Mr. Sommerville:*

Q. What do you mean by windows and posts?—A. If there is a pillar in the centre of the store a chain or department store will ask from the manufacturer a weekly or monthly rental for that space.

Q. For showing his goods?—A. Exactly.

Q. When selling that persons's goods they charge so much for prominent space?—A. Yes.

Q. Do you find any problem or practice of charging the merchant for eye-level shelves?—A. I am not familiar with that, sir. British Columbia retailers most earnestly plead that a thorough investigation be made by your committee. In this connection we know we can render a service to such a commission in directing them to proper channels through which to secure evidence to confirm our statements.

*Exhibit No. 7* is a communication signed by three jewellers in the city of Nelson who state they have no desire to keep same confidential:

The jeweller buys a certain pattern in good faith, he receives it into stock and proceeds to interest his many prospective customers with the charms of this particular pattern, he succeeds and sells many persons, sets or part sets of this silverware, he repeats his orders and expects to continue doing business as before, *then one day he gets a real headache*, into his store comes a customer who has purchased some of the aforementioned silverware and they present to the jeweller a leaflet from either some big mail order house or large jewellery organization, which blares forth the news that they are selling the very self same pattern of silverware, that the local jeweller has been selling, but—at exactly half the price.

There is a four-page document signed by the three jewellers in Nelson which I give to the committee for further investigation.

*By Mr. Factor:*

Q. The complaint is that it is not the self-same pattern?—A. The complaint there, Mr. Factor, is that the manufacturer first secures his business from the smaller jeweller and he does not properly gauge his production. Then to even up he will go to the larger people and clear the balance; and the suggestion is here stated that if there was a fairer basis of estimating the production perhaps the smaller man would not be penalized to the extent he is and the larger man would not secure the discount.

Q. If he sells the surplus at a lower price to the larger organization?—A. Exactly.

*Exhibit No. 8*, is a statement from the Better Warm Air Heating Ventilating and Sheet Metal Work association from which I quote:

Garbage cans: This is one of the many items upon which the operators of Sheet Metal Shops counted as staple work and to-day are sold by the departmental stores for less money than they can be actually produced, paying for labour and material. Stove pipe is in identically the same category.

Furnaces: The department stores are selling by retail below our actual cost which in many cases has forced the wholesaler to sell direct, the manufacturer to sell direct. In many cases the wholesaler is also jobber and installer. The manufacturer is also an installer. In many cases the wholesaler practically owns shops through indebtedness and are operating them at a definite loss to the helpless position of their competitor, their own customer. Individuals are allowed to be in the heating business unqualified in any manner, both mechanical and from a business concern, with the result that both the public and our trade in general suffer through unethical practices.

*By Mr. Edwards:*

Q. Have you anything to say as to whether those furnaces are manufactured in Canada or in the United States?—A. I have not, sir; just the statement in this letter.

Q. You will find a lot of the furnaces sold that are made in the United States. That is a statement, not a question?—A. Manufacturers sales tax licence.—Due to the scarcity of construction work many shops are able to get away from making returns required by the taking out of a licence from the government by declaring they are not doing contract work or selling for resale with the result they are not paying taxes on their manufactured products the same as the rest are compelled to do. They are merely buying the iron, tax paid. Those operating under sales tax licence pay on the sale price to the consumer on all goods manufactured, this means considerable handicap.

This association, Mr. Chairman, is quite prepared to assist in securing evidence.

*Exhibit No. 9: Shoes and Rubber Footwear.*—This is an advertisement of a chain shoe store known as Copp the Shoe Man, in which he advertises—this will answer some of the inquiries this morning. It is rather unfortunate that all cannot see that advertisement—this is an advertisement of a chain shoe store known as Copp the Shoe Man in which he advertises, "Buy one pair of shoes at the regular price and get another pair of the same value for just one cent. Hundreds of pairs of new style shoes have been included to make this the greatest one cent sale we have ever had; complete range of sizes and widths. One pair \$3.95 extra pair 1 cent."

Mr. YOUNG: Is this a chain store or department store?

The WITNESS: They operate a chain, and they are one of the few people who are receiving the advantages of the rubber discounts.

*By Mr. Factor:*

Q. That is footwear?—A. Yes. These shoes cannot be purchased to sell profitably at these prices. If one pair is worth anywhere approaching \$3.95 then the second pair is literally “a give away.” If the first pair is not worth \$3.95 retail, then the advertisement is untruthful and misleading.

In any event, the advertising of shoes at one price with another pair, practically given way gives the impression that shoes are actually very cheap and are a long profit line, which is not the experience of the trade.

Q. What about the price of \$3.95 for this pair of shoes; is that an exorbitant price? Do they make up in this price the price of two pairs of shoes?—A. I do not know how they do it, sir.

Q. Suppose the shoe is worth only \$1.98 a pair and they tell you that they give you two pair for \$3.95, that is deceptive advertising?

The CHAIRMAN: There is a case downtown where they are advertising the same thing.

Mr. FACTOR: You cannot say anything about the actual price for one pair?

The WITNESS: No, sir.

Mr. YOUNG: It is quoted as the regular price.

The WITNESS: That is right.

Mr. ILSLEY: Is it quoted as the regular price?

The WITNESS: I think the word “regular” is used. We understand there is to be an investigation into the practices of the manufacturers of rubber footwear. Ninety-five per cent of the shoe retailers of British Columbia cannot purchase rubber footwear at a wholesale price that will permit of paying the mere cost of advertising, say nothing of the overhead charges, and retail the rubber footwear at the prices advertised by the department stores. They simply cannot secure the discounts.

*Exhibit 10:* Drugs—Is an advertisement of the Vancouver Drug company limited who use as their slogan “We save you money.” This advertisement appeared on February 15 and advertises specials for Friday and Saturday, February 16 and 17, among others being:

Scott's Emulsion, 65 cents. The wholesale price of this commodity in large quantities is a fraction over 62 cents.

We would call your special attention to another part of this advertisement which advertises Lyptodent, a tooth paste manufactured by the chain, which is advertised herein—in other words it is their own manufactured product:

Regular, 35 cents; Special for 23 cents.

Another druggist purchased a quantity of this product from the chain and resold it at retail for the same special price of 23 cents, as advertised by the Vancouver Drug company. This revealed a very satisfactory profit. Undoubtedly the advertising of Scott's Emulsion at a cut price which only reveals a margin of about 5 per cent is intended to create in the mind of the customer that Lyptodent is on a similar basis, though it returns a very handsome profit to the chain.

Exhibit No. 11 is made up of advertisements of some 18 drug items advertised within the last few days by chain and department store which reveals that they are being sold retail at practically the wholesale price to the retailer and in many, many cases much less, for example:

Exhibit	Regular price	Retail advt. price	Advertised product	Jobbers price to retailer per doz.	Wholesale each	Jobbers cost per doz. each	
	\$ cts.	\$ cts.		\$ cts.	\$ cts.	\$ cts.	cts.
A.....	1 25	0 98	Pinkham's Veg. Compound.	12 72	1 06	10 60	88½
A & C.....	1 40	1 07	Wincarnis (also 98 cts. C.)	12 75	1 06½	10 36	86½
A.....	1 25	0 98	Absorb. Jr. Linament.....	11 25	0 93¾	9 38	78 1/6
A.....	0 50	0 43	Wood Cold Cr. Jr. (also 9 cent special).	4 72	0 39¼	3 94	32 5/6

*By Mr. Factor:*

Q. You mean that the independent retail druggist pays that to the wholesaler?—A. Yes.

Q. Do these chain stores buy direct from the manufacturer?—A. Yes.

Q. They get a cheaper price for the articles?—A. In the form of discounts. It is quite a common practice with the manufacturers in bringing out a line to encourage the patronage of the retailer by stating this commodity will be price maintained, say, at 23 cents. Well naturally the druggist feels if it is maintained, "Now, I will get behind that product"; but upon examination it is revealed that in order to sell for 23 cents they need to be able to buy the quantity of the chain or department store which is ten times more than the average druggist can buy, and the maintained price of 23 cents does not mean anything, but it does to the chain who can get the extra 20 per cent discount.

Fruit and Vegetables.—The wholesale fruit houses on Water street, Vancouver, formerly employed between 50 and 75 salesmen to call upon the retail merchants of the lower Mainland. To-day there are not more than 12 owing to the ruthless competition of the chains.

*Exhibit No. 11B.*—Is a copy of a letter addressed to the chairman of this committee, which would appear to confirm statements of the independent jobbers. I quote in part:—

We have a company in Vancouver doing business under several names. . . .

I will not mention the names.

In Victoria they carry on business under the names of. . . so and so.

This is a subsidiary company to the General Fruit Corporation in the United States.

I call once a week on a certain customer who does business with one of these companies. On the day that I call they make it their business to have another of their houses call and he gives my customer ridiculous prices in order if possible to drive me out of business. So far they have not succeeded, but I am only able to obtain the business by a personal friendship, and by drawing the

buyers' attention to the fact that these prices are purely bait, but I have to shave my prices so as to make them unprofitable rather than put my buyer in the position of having to explain to his house that he is giving me the business on an uncompetitive basis.

This is a very wide statement. I understand it is signed; but it says:—

Independent wholesale dealers in Vancouver selling to the Safeway are paid for their goods. . . .  
by a certain firm and this firm is named as one of the five firms who are subsidiary to the American association.

Q. The person who sells for them belongs to the association?—A. It is a subsidiary to the General Fruit Corporation in the United States.

Q. Safeway must have a pretty good contract with that outfit?—A. *Exhibit No. 12.* Mr. R. R. Hinton, manager of Mannings store of Cranbrook states in a letter of February 24th, 1934, which is herewith attached:—

In October, 1933, the farmers were offered \$30 per ton for potatoes by the local merchants, as the press stated there was a shortage of potatoes. At the time they were harvested, the Safeway company brought in potatoes from Alberta and sold them for \$25 with the result that the local merchants were only able to pay the farmer \$22 per ton, a loss to the farmer of \$8 per ton, and ultimately a loss to the stores of their customers—these same farmers.

*By Mr. Young:*

Q. Before you leave those potatoes. The local merchants fixed the price at 90 cents a bushel. They figured that on newspaper reports of a shortage, did they?—A. Evidently. There is just one point about that which I will deal with later, but it comes in here. The question might be raised, Mr. Chairman; 'Well, why don't these merchants get together and decide to pay \$30 and decide to sell for a certain price?' Apart from it being absolutely impractical, another point comes in there, that if they did get together, even though they were trying to protect the producer, it is questionable if they would not be subject to the Combines Act.

Meats.—In the sale of meat is where some chain stores thrive. There is no law requiring that the grade of meat be mentioned in any advertisement and this is what is working so detrimentally against the reliable, independent retail meat dealer.

For the purpose of newspaper advertising, meat is just meat, liver is liver, and notwithstanding the fact that the average housewife requests calves' liver when ordering, combinations of half a pound of bacon and half a pound of liver are very frequently advertised at the actual cost of even less than half a pound of liver, but investigation reveals that the liver in the combination deal is not calves' liver.

*Exhibit No. 14.*—If all meat were required to be sold by grade and simple classifications, the meat dealer who is handling steer beef of top grade would not be placed at the disadvantage of having his customers compare the prices advertised for cow beef with that of higher grades.

*Exhibit No. 15.*—Is another communication from one of our members stating that on February 15th he purchased from Burns & Company smoked picnic hams at 15c. per pound and the daily paper of that date carried a chain advertising, offering these smoked picnic hams at 12½c. a pound.

*Exhibit No. 16.*—Shows the relationship between the farmers in the province of Alberta and the merchants who retail their products in the city of Vancouver. I quote as follows:

My store adjoins one of the Safeway Stores. For several years I have bought poultry direct from the prairie on a commission basis and have been interested in trying to secure for the producer as high a price as possible in addition to my own commission. At the beginning of the season I advertised poultry at the prevailing prices, only to have this price cut immediately by my next door neighbour. More particularly in December last, I advertised a 17 cent price for turkeys. As soon as the paper was on the street my neighbours put a big sign in their window advertising turkeys at 15 cents. The same day their advertisements in the dailies quoted a price of 17 cents.

*By Mr. Sommerville:*

Q. That is, the sign on the particular window was two cents less than the advertised price in the daily paper?—A. Yes. As soon as they discovered that the competitor was going to be on an equal basis, they went two cents lower.

Mr. YOUNG: For the same grade of turkey?

Mr. SOMMERVILLE: Well, it was in the same store apparently; and the sign was put on the window.

Mr. YOUNG: There might be two grades of turkeys in one store, Mr. Sommerville.

Mr. SOMMERVILLE: I presume so.

Q. Will you continue?—A. Yes. The quotation continues:

Under these circumstances it is impossible for me to return a fair and adequate price to the producer, and much trouble and dissatisfaction has ensued.

*Exhibit No. 16A.*—Is a signed statement from an employee of one of our meat chains, who advertises most extensively, quoting prices the average meat dealer cannot possibly meet. The explanation may be that such prices are made possible through exploiting the help.

*By Mr. Factor:*

Q. That is going in?—A. Yes.

*By the Chairman:*

Q. This lad gets \$6.75 a week?—A. Yes.

Q. Is there not a minimum wage law in British Columbia covering male labour?—A. Unfortunately, Mr. Chairman, there is no minimum wage for male labour.

Q. I thought there was at one time?—A. Yes, but it is inoperative as far as clerks are concerned; and girls employed in a similar capacity are required to be paid \$12.75. Unfortunately our experience has been that some girls have been let out, and men have been employed to take their place.

Mr. SOMMERVILLE: This young man says he is working in a certain prominent meat market and gets \$6.75 per week.

The CHAIRMAN: Yes, less six cents income tax, and less six cents for compensation board; that is 12 cents a week off \$6.75.

The WITNESS: Florists: The oriental who specializes so largely in fruit and vegetables in British Columbia is very rapidly gaining supremacy in the sale of cut flowers. He has been very quick to properly appreciate the practices of the department and chain stores in featuring loss leaders, and in order to sell his fruit and vegetables at a profit, he features cut flowers at a retail price as low and lower than the florist can produce them. This is made possible because of the low standard of living of the oriental.

This is a problem which is well known to the Chairman of this committee and which largely is confined to our province. It is not fair that merchants of Canadian standard be called upon to compete with oriental standards uncontrolled.

Chain stores featuring 15 cent articles are positively a menace to the florist wherever they operate, as they also have found a very attractive loss leader in cut flowers.

Mr. FACTOR: May I interrupt in reference to florists. I have here some pay envelopes of men working for florists in Ontario, getting as low as \$5 a week for a 51½ hour week, \$7.20, \$7.80, \$5.10, and so forth. Therefore the standard of the men working for florists in Ontario seems to be almost as low as in your province. I want to submit that to the committee later on, \$5.10 a week for 51½ hours, \$5.15 for 51½ hours, Mr. Chairman.

Mr. SOMMERVILLE: Are these clerks or greenhouse men?

Mr. FACTOR: Men employed by florists.

Mr. SOMMERVILLE: In greenhouses?

Mr. FACTOR: Greenhouses in Ontario towns.

*By the Chairman:*

Q. Will you be good enough to continue?—A. Milk: Information has already been furnished to this committee as to the advantages of the distribution of milk being subject to a commission as is now operating in the province of Alberta. Vancouver merchants recognize that the farmers in the Fraser Valley—that is territory within 75 miles of the city—are very potential purchasers of their merchandise. They received an appeal from the producers to stop slaughtering dairy products. In March and April, 1933, we were able to get independent retailers into line and had it not been for the insistence of one of our largest chains that they would continue to sell at a cut price regardless of the request of the farmers, milk distribution would have been able to realize one cent a quart more for their milk. We submit that it surely is "unfair practice" when one chain outfit can prevent independent merchants co-operating to assist one of our basic industries so much in need.

Q. Is that the end of that point?—A. Yes.

The CHAIRMAN: It is obvious, gentlemen, that we cannot finish with this witness before one o'clock, so we will have to meet this afternoon. We might stop at this point and re-assemble at 3.30.

The committee adjourned at 12.55 p.m. until 3.30 p.m.

---

### AFTERNOON SESSION

The committee resumed at 3.30 p.m.

The CHAIRMAN: Order please, gentlemen. We will now proceed with Mr. Matthews. This is the statement you presented this morning?

The WITNESS: Yes, sir.

*By Mr. Sommerville:*

Q. You have finished with the first part of it?—A. Yes, sir.

The CHAIRMAN: All right, go ahead, please.

The WITNESS: Hardware.

*Exhibit No. 18.*—Is an advertisement of a Department store which appeared in the Vancouver Sun, February 28, 1934, offering:

2,000 pieces of Kitchen Aluminum at . . . . .	.65
This was regular wholesale price.	
100 Rakes at . . . . .	.39
Being also the wholesale price.	
Daisy Tea Kettles at . . . . .	.15
Which cost wholesale 5 cents more than retail price, or in other words . . . . .	
	.20

*Exhibit No. 19.*—Is a letter from one of our members which partly reads as follows:

On January 24th, I purchased from Marshall Wells Ltd., Vancouver, some Barn Door Track No. 50 at 15 cents per foot F.O.B. their warehouse. I believe this is the correct wholesale price. After paying 15 cents per foot and cartage in Vancouver, and freight, I sold this at 20 cents per foot on credit, this nets me about 15 per cent. My customer wrote Woodward's for a quotation on the same line. They quoted 15 cents per foot. I had to come down in my price, or lose a good customer:

This is how it works out:

100 feet No. 50 Barn Door Track . . . . .	\$15 00
Freight . . . . .	65
Cartage . . . . .	25

My actual wholesale cost . . . . . \$15.90

Woodwards price for the same, \$15 retail F.O.B. Mayne Island.

I have in my possession Woodward's letter February 1.

What chance does a small man have in competing against such prices?

*Exhibit No. 19A.*—This exhibit just came in the mail this noon, Mr. Chairman. It is from Kydd Bros., a retail hardware firm in Vancouver, who I thought were competing very well with the Department stores. This letter says: "For your information, we copied from Woodward's windows, the following prices on pipe fittings, showing also the wholesale price, to show you how impossible it is for any man handling plumbing supplies of this nature to compete." Among other things it sets out bushings— $\frac{3}{4}$  x  $\frac{1}{2}$  retail price \$11 per hundred, wholesale \$11.25 per hundred; reduced couplings 1", retail price \$25 per C., wholesale price \$30 per C.

*By Mr. Senn:*

Q. That is the price per hundred?—A. Yes.

Unions,  $\frac{1}{2}$ " retail price \$26 per C. wholesale price \$26.40 per C; elbows  $\frac{1}{2}$ " retail price \$12 per C., wholesale price \$13 per C; elbows  $\frac{3}{4}$ " retail price \$15 per C., wholesale price \$15.50 per C.; 1" retail price \$25 per C., wholesale price \$26.50 per C.  $1\frac{1}{4}$ " retail price \$40 per C., wholesale price \$44.50 per C.;  $1\frac{1}{2}$ " retail price \$50 per C., wholesale price \$55 per C.; street elbows  $\frac{1}{2}$ " retail price \$13 per C., wholesale price \$16 per C.

*By the Chairman:*

Q. Now, Mr. Matthews, that firm is an old, well established and substantial firm of, what do you call them?—A. Retail hardware dealers, one of the oldest firms, and one of our largest.

*By Mr. Factor:*

Q. Do the department stores handle plumbing supplies in your city?—A. This was Woodward's Limited.

*By Mr. Senn:*

Q. Mr. Matthews, I understand that these articles are usually traded in by the unit rather than by weight?—A. I think, sir, that that has been computed.

*By Mr. Kennedy: (Peace River):*

Q. Is the point of this that they are used as loss leaders?—A. No, the point raised is rather that it is just impossible to compete on the general situation.

*By Mr. Young:*

Q. Is that your experience in British Columbia, that in general lines they cannot compete?—A. Well, in other lines our real problem is the loss leaders, Mr. Young.

Q. If the loss leaders were eliminated, you could compete?—A. It would contribute materially to our assistance.

Q. You would not say you could compete?—A. I would not say so, no. The CHAIRMAN: All right, Mr. Matthews.

The WITNESS:

*Exhibit No. 20: Paint.*—Is a communication from another member which reads in part:

My staple line is paint, and I work hard in the selling of it. I quote two instances within the past six months. One prospective customer required some 15 gallons to paint his house. I gave him all the information, sold him on my colour scheme, outlined his process for him, and he went to the factory and purchased the lot at factory prices. The factory said he was entitled to it as an employee of B. C. Telephone.

*Exhibit No. 21: Wholesale owned retail store.*—This is another angle and is another letter from one of our members in Victoria who sets out quite clearly in his experience in endeavouring to compete with a wholesale owned retail store.

One of the greatest evils existing in the Hardware Business of B. C. is the unfair competition created by wholesalers selling at retail to customers. There is no City in B.C. where a wholesale hardware firm is established, that provincial and federal governments such legislation as will eliminate unfair is an exception. The position in which the retail hardware merchant finds himself is that of being absolutely unable to compete with the wholesaler who receives special discounts which, while they may be legitimate if operating a strictly exclusive wholesale, cannot be considered so if he is going to use this privilege to compete with the customers of the retailer.

Hardware dealers consider it very unfair that Power Companies, enjoying a franchise, should be permitted to be in the retail field and use the profits of the Power Company to make up the loss on their retail outlet. As this matter is being dealt with at length under the heading of our Electrical Section, it will serve to only make mention of it here.

*By Mr. Young:*

Q. That refers to cases like we had here last year where our hydro electric were giving away some kind of a heater if you would use their power?—A. This refers to the whole principle of the power company being in the retail field; and I have gone into that in detail just a little later on.

*By Mr. Factor:*

Q. Also to include the wholesaler not keeping exclusively in the wholesale line, and selling at retail?—A. That is the real problem, Mr. Factor.

*By Mr. Sommerville:*

Q. Do you mean selling as retail, that these wholesalers are selling at retail prices?—A. Absolutely. It is destroying the independent retailer.

*By Mr. Young:*

Q. You mean, selling as a retailer at the wholesale price from a retail outlet?—A. Absolutely, direct.

*By Mr. Sommerville:*

Q. Through his own stores?—A. Yes.

*By Mr. Young:*

Q. You have one case, owned by a wholesaler?—A. Yes, it is a retail outlet for the wholesale store.

Q. In that sense he sells from a retail store?—A. Yes.

MR. SOMMERVILLE: His own retail store?

MR. YOUNG: Yes.

THE WITNESS:

Mail Order Houses.—In referring to Mail Order Houses, we have in mind those who operate in a national way. We understand Provincial Governments have jurisdiction over local Mail Order Houses distributing within the Province. Retailers are called upon to pay their license and taxes to their respective municipalities; they recognize this is necessary. They recommend however that the Federal Government should require the Mail Order Houses to pay a tax for the privilege of doing business in competition with the resident of the municipalities.

They certainly feel that no parliament can be conscientious in discharging its responsibilities that justify inaction in not taxing Mail Order Houses simply because changes may be required to be made to the British North America Act.

I am quite sure upon that, Mr. Chairman; for 15 years the Independent Retail Associations have been bringing this matter before the respective governments and when we go to the provincial government, they say that they can do nothing because of the provisions of the British North America Act; and our retailers feel that if the problem exists, the powers that be should be able to cope with it.

*By Mr. Young:*

Q. Your grounds for that are that the retailer pays local taxes to the local government—the city, or town, or province—in which they are operating, and the mail order house escapes that?—A. Yes.

Cleaners and Dyers.—The Cleaners and Dyers Association represent 95 per cent of the business of this classification. Owing to the cut-throat competition of one or two concerns, who employ their families and apparently make little charge for the labour and the numerous Orientals who operate at a very small outlay and working hours far beyond the legal regulations and employing help at wages that it is very difficult to determine owing to their very unsatisfactory methods of bookkeeping. The Dry Cleaners are forced to meet the prices that cannot continue if the present standard of minimum wages continues. A thorough investigation is sought by the Cleaners and Dyers Association who are prepared to furnish the necessary evidence.

MR. FACTOR: Q. We have the same deplorable conditions in the cleaning and dyeing industry in Toronto too.

MR. SOMMERVILLE: Yes, it is very bad.

MR. FACTOR: Yes, they have communicated with me about this, too.

## The WITNESS:

*Exhibit No. 21A: Electrical Radio and Music.*—A review of the state of the Radio Service Profession in Vancouver, B.C., with special reference to the prevailing abuses in the retailing of radio tubes. Submitted by the Associated Radio Technicians of British Columbia. Dealers handling electrical supplies are experiencing exactly the same vicious and unfair competition as are other classifications of the retail trade. I quote from a wholesale distributor, the original letter having been addressed to the Chairman of this Committee, copy of which was sent to me: I quote in part—

An electrical item in common use, namely, Pullchain Sockets, is shown at 27 cents at retail, whereas the cost of this item to an electrical or hardware store is 32 cents. It is purely safe to assume that this concern is not losing money by selling at 27 cents and one can only further assume that by mass buying, they are purchasing at a much lower price than the ordinary store. Is there any wonder that our ordinary citizens engaged in business simply cannot exist?

This firm further states in their communication to me being

*Exhibit No. 22* from which I quote in part:

We are finding every day that, owing to the competition from Chain and Department Stores, our electrical and hardware dealers with whom we do business, are finding it more and more difficult to exist, and unless some legislation is forthcoming, the situation must become more serious.

*Electrical Appliance Dealers.*—Retailers of electrical appliances are unable to give the terms of purchase quoted by Power Companies because of not being in a position to render monthly bills for power use.

The Power Companies enjoy an unequal advantage in the collection of installment payments on appliances. When a person buys from them on credit, the balance is charged "on the light bill." This *implies* that unless payment is made when due, the customer may find himself deprived of light and power. Consequently, customers are prompt in paying their appliance instalments at the Power Company's Merchandise Department, even if other dealers with whom they have business are forced to wait. In this way the Power Companies use the Power monopoly given by the people to collect payment for retail purchases in a way which was undoubtedly never intended. Thus it competes unequally with retail stores.

Representatives of Power Companies reading meters have access to the homes and tabulate the requirements of each, using same as leaders, whereas independent retailers receive no such preferential by the householder.

The following resolution has been unanimously approved by all the trade sections of the City of Vancouver and also endorsed without a single exception by retail dealers of electrical appliances throughout the Province to whom it has been submitted.

It is a very long resolution, Mr. Chairman, and it really bears out the principle of what we are dealing with, so I will just file it with the committee.

The CHAIRMAN: Will you do that, please; it will be extended in the record:—

Resolution Business Practices Power Companies enjoying Franchise—

Whereas unfair practices are exercised by utility Companies to take unfair advantage of their unique position as a Power and Light Monopoly to embark on intensive campaigns to supply every house with all its electrical requirements, and

Whereas the retail merchants gathered together here claim that the harmful consequences of Power and Light Companies' intrusion into the

retail appliances field presents such unequal competition to the private individual engaged in the merchandising of electrical appliances, that the utility monopoly is forcing the independent and legitimate retailers to the wall, with consequent loss of capital and employment.  
Be it therefore resolved—

That this meeting of retail merchants go on record as requesting that the Government extend its investigation of unfair trade practices to the Light and Power Companies in regard to light and power rates charged in many communities, which in some cases are based on huge over-capitalization, represented in watered stock, and

Whereas if the Light and Power Utility wishes to increase its power revenue through the retail field, then it should be compelled to organize a subsidiary retail company, operating under a different name, and entirely separate from and financially independent of the Power Company. This subsidiary Company should stand on its own feet—pay its own management, rent, accounting, solicitation and advertising costs. It should be debarred from using the power of monopoly enjoyed by the parent company to bolster its own merchandising. Or, as an alternative, that the merchandising of appliances should be organized on a co-operative basis between the utility corporation and the retail merchants in such a manner that would capitalize all potential allies so that through group action the light and power utilities might increase their load and the independent retailers be enabled to remain in business. Such co-operative selling has been developed recently in various communities in the United States with very satisfactory results, and with fullest protection to the welfare of the community.  
Be it therefore resolved—

That protective legislation be enacted preventing light and power companies from entering the retail field and making use of their light and power monopoly to throttle the independent retail merchant.

Mr. FACTOR: In this connection, Mr. Chairman, will you permit me to interject the observation that I would like your permission to obtain a copy of the report of an alleged combine in the radio monopoly that was obtained by the Department of Labour.

The CHAIRMAN: Will the clerk please write to the Labour Department for that report.

All right, Mr. Matthews.

*By Mr. Factor:*

Q. Are the Power Companies in your province privately owned or publicly owned?—A. We have what is known as the B.C. Electric Company.

Mr. SOMMERVILLE: It is a privately owned monopoly which operates under a franchise.

*By Mr. Factor:*

Q. If I got you right, they charge for appliances on the bill for power?—A. Yes. One purchase which I know was made was a Ruud Heater which cost \$28 and is charged on the bill at \$1 a month, and you pay that with your electric light bill, spread over a period of 28 months; and the footnote on that bill says that if this bill is not paid on a certain date, power and light may be disconnected. True, it does not say that allowance will not be made if you do not pay on the appliance; but the inference is if you do not pay the whole bill, your power and light will be discontinued.

*By Mr. Young:*

Q. Do they sell it cheaper than the trade would sell it?—A. No.

Q. But they furnish advantages in the shape of terms?—A. Exactly. Now, Mr. Chairman, would you like me to read the resolutions to which I referred.

*By the Chairman:*

Q. I suppose it covers the points you have outlined?—A. It does exactly that, and outlines the general conditions.

Q. We will have it extended in the record but if there is any special point to which you would like to direct attention you might mention it?—A. There are just two points: we consider it unfair that the power company be allowed to retail, to use appropriations from the power company and its offices to make up losses in the retail store; and we consider that if they do insist on retailing there should be a subsidiary company formed with its own capitalization, so that it would have its own financial structure in which these losses could be shown.

Furriers.—Reference has been made to the difficulty of securing conviction, for fraudulent advertising notwithstanding the recent amendment to the Criminal Code. The furriers of Vancouver have had a very sad experience in this connection.

*Exhibit No. 24* is an advertisement of a furrier who advertises very extensively and we feel very questionably. We submitted this advertisement to our legal department and the City Prosecutor, and it was considered to be a very glaring case of misrepresentation. The item to which we took exception reads as follows:—

33 Super Hudson Seal Coats—Trimmed with Ermine, Silver Fox, Kolinsky, Fitch and Dark Mink, including beautiful long roll collars and wide overwraps. A coat that will appeal to the woman who wants the best at any price. Regular \$400. Last chance at from—\$149 to \$195.

Mr. YOUNG: What date would that be?

Mr. SOMMERVILLE: That would be July 19, 1933.

Mr. YOUNG: July—that would be mid-season; between seasons.

*By the Chairman:*

Q. Just before you read that, what is your point in reference to this date?—A. I will give that here.

We purchased one of these coats for \$149. Upon examination it was found that the coat had been lengthened and that the quality of the Hudson Seal could not be considered as being "Super," in comparison to Hudson Seal coats which were being sold by the largest retail dealers at \$185 and \$200.

This case was tried by the Police Magistrate. We laid two charges:—

1. That the coat purchased was not a Super Hudson Seal.
2. That the coat was advertised as being regularly a \$400 coat, whereas it was not a \$400 value.

The magistrate decided that he could not ignore the evidence of one witness, who had stated he believed the coat to be of excellent quality and good value for \$149. We lost the case.

In addition to advancing legal expenses to assist the City Prosecutor, the furriers who were members of our organization, rather than be subjected to publicity, also are putting up \$50 each to defray the expenses of the furrier accused, as he threatened to take action for damages.

*By Mr. Young:*

Q. How was that charge laid, Mr. Matthews?—A. Under the criminal code.

*By Mr. Sommerville:*

Q. How was your charge worded?—A. That the coat purchased was not a super-Hudson seal; and, that the coat was advertised as being regularly a \$400 coat, whereas it was not a \$400 value.

Mr. FACTOR: The law considers that more or less puffing; it is an exaggerated statement.

*By Mr. Ilsley:*

Q. Does this word "Super" have any technical meaning?—A. Except in its implication.

*By Mr. Sommerville:*

Q. The code's language is very broad and refers to misleading advertising that contains false statements, and the false statement here, "regularly \$400," one would think would justify a conviction under those circumstances. What was the reason you did not appeal?—A. Well, the matter was taken up with our own solicitor and he strongly advised appealing. He said, "Absolutely, don't you put up any blood money." However, we called our furriers together, and there was a little different angle to it then. These are our most reliable merchants in the city, and they pointed out, "Now, hold on, if we get into the press, and the public see that we are being accused of raising prices, that won't do." I was also accused along with the furriers, and we have subscribed to putting up our \$50 along with them rather than bring our members into the limelight.

Mr. FACTOR: I personally went to one fur store in Toronto, and for a caracul coat they wanted \$375; for practically the same coat the price in the department store was \$700. There is a large spread there.

The WITNESS: The reliable furriers of Vancouver as well as merchants in practically every other class of business, feel that they have little protection from fraudulent advertising, and they believe that in the interest of the purchasing public a thorough investigation should be made; and if it be found that the criminal code does not afford ample protection to the consumer and reliable merchant, then such changes should be effected as will bring about this protection.

*By Mr. Ilsley:*

Q. You having made a case against the criminal code, proven by the instance you have given?—A. The point is, in bringing these matters before the city prosecutor—he is a very busy man and it is unfair to expect him to give the time to the prosecution of cases coming under the criminal code.

*By Mr. Factor:*

Q. He would be a still busier man if we made more laws restricting these things, would he not? If the lawyer had given it more time you might have succeeded in obtaining a conviction; is that what you are referring to?—A. exactly. Then, hairdressing—

Mr. SOMMERVILLE: Hairdressing does not come within the purview of the committee. We will just pass that over.

The WITNESS: That is a matter of labour.

*Exhibit No. 25A: Plumbers.*—An advertisement of Woodward's Limited, as follows: "Water closet combination, \$19.95." The wholesale price to plumbers is \$22.25. Ball valve with rod and float, \$1.85 and the wholesale price is \$1.89.

*Exhibit No. 25B: Furniture.*—An advertisement of chesterfield for \$49.50 on terms. It is made in Vancouver by local manufacturer and sold to the retailer at wholesale price of \$46.11. One lamp and shade advertised for \$1.69. This standard lamp is manufactured by the Monarch Manufacturing Company of Vancouver and sold for \$1.90 wholesale.

*Exhibit No. 25C: Men's Clothing.*—An advertisement of a department store of two pant suits at a new high for quality for \$13.95 including the famous Harris tweed in order to give the advertisement the real kick necessary to attract the purchaser. I want to read this letter as it is not marked confidential. It says:

Attached to this letter is a copy of an advertisement issued by the Hudson's Bay Company on a special sheet published by the Sun Newspaper Company on February 28, 1934, for sale on the first of March. This advertisement refers to the "Great Clothing Classic," to the "Spectacular Event," to "A New High for Quality" at a record sale price of \$13.95. An examination of these garments, both as to material and workmanship, satisfies those of us who are experienced in the men's clothing business that if these garments are made of "a new high quality" as advertised, they could not be purchased from the manufacturer at the price they are advertised to sell at. Therefore it is our opinion the above would have to be made in shops under adverse conditions to the people who make them, and further, if this is a fact, they could be bought from the manufacturer by mass buyers for eight or nine dollars each.

*By Mr. Factor:*

Q. Harris tweeds?—A. So he says. Continuing:

In view of this fact we consider this advertisement to be unethical and implying values that do not exist.

Yours very truly,

THOMAS FOSTER & CO. LTD.

(Sgd.) T. H. FOSTER.

The CHAIRMAN: Before you leave that, if the hon. gentlemen would like to know, I have noticed this same sort of thing: a suit of clothes with the extra pair of pants in the body of the advertisement indicated as \$2.25 extra, whereas up above it says two pant suit and top coats at \$13.95.

Q. I presume that is one of the features that attention is being drawn to?—A. Yes.

*Exhibit No. 25D: Gasoline, Auto Accessories and Tires.*—An advertisement of a department store advertising high-grade tires 30 by 3½, \$4.39, which is slightly less than a third-grade tire. This tire was examined and found to be third-grade and not high-grade, if high means one of the better grades.

*By Mr. Young:*

Q. What does high-grade and third-grade mean? Are there any standardized grades in tires?—A. It is largely implication.

Mr. ILSLEY: There must be first, second and third. You say there is the third grade.

*By Mr. Kennedy (Peace River):*

Q. How many grades are there below third?

*By Mr. Sommerville:*

Q. In tires, there are apparently three grades, first, second and third?—A. Yes.

*By Mr. Young:*

Q. Who grades them? They are not government grades; they are grades of the individual manufacturer. I would take it that each manufacturer would have his own first, second and third grade, and a third-grade Dunlop might be entirely different from a third-grade Firestone?—A. I don't think the manufacturers would admit that, Mr. Young.

The CHAIRMAN: The advertisement reads: "High-grade tires that give exceptionally fine service for prices that save you real money; all tires and batteries installed free of charge at the Bay parking lot." Then it follows: "Guaranteed Parkside tires complete with tubes, one of the finest values in 4-ply tires, 30 by 3½, at \$4.39."

*By Mr. Factor:*

Q. Were they 4-ply tires?—A. Well, this statement says they are third-grade tires. It does not refer to the ply.

*By Mr. Sommerville:*

Q. They may be 4-ply, but third grade?—A. Yes.

Mr. SENN: A defect in the manufacture, in some way.

Mr. BARIBEAU: Seconds.

*By the Chairman:*

Q. The point in the thing is that they are advertised as high-grade tires?—A. The implication is that they are high grade. They can be only one of the better grades.

The CHAIRMAN: That is the point in the complaint.

*By Mr. Factor:*

Q. Trying to make the public think they are first-grade tires?—A. Exactly, if high means one of the better grades.

Mr. SOMMERVILLE: Everybody would assume that.

The WITNESS: Batteries: Batteries are also included in this advertisement which says "Ideal for 90 per cent of the cars running." Examination revealed same was of inferior construction and in no way ideal.

Gasoline: Woodward's Limited and Vancouver Motors Limited cut the price of gasoline one cent per gallon regardless of what the retail price may be. They positively refuse to co-operate with the other 340 dealers in Vancouver. Woodward's Limited claim they advertise they sell for "less" and must do so. It is believed that this is made possible because of secret rebates. The practice of oil companies in forcing the dealer to handle exclusively one line of gas under penalty of having to be charged one cent a gallon more is a matter that should receive a most rigid investigation. The unfairness to the dealer in this case is that even though as an independent dealer, handling two or more brands of gas, he may sell five times what the exclusive dealer does, he must pay the penalty of one cent a gallon for his independence.

*By Mr. Sommerville:*

Q. Is that the usual practice, that anybody handling more than one grade, one variety or one brand of gasoline, has to pay a cent a gallon more?—A. There are no exceptions with the smaller dealers.

Is this not suggestive of a strong combine and does it not at least justify that the policy governing the sale of petroleum products should be governed by a "commission"?

*By Mr. Young:*

Q. Is there any truth in the report that Woodward's were selling gasoline two cents below anybody else, and one day they issued a circular to their customers saying they could not do this any longer because the refinery had threatened to cut off their supplies of other petroleum products if they did not stop it?—A. I am not familiar with that.

Q. I heard that such a circular was issued by Woodward's.

*By Mr. Ilsley:*

Q. They sell just one make, do they?—A. I don't know that. Their price is always under the regular price; and of course, when I say regular price, the price of gasoline is set because of the company's station setting it.

*By Mr. Factor:*

Q. The independent dealers are unable to compete?—A. Exactly.

Q. They are doing pretty well in Toronto; I mean, in the sense of being able to compete with the other gasoline refiners?—A. Reference has been made to the Minimum Wage Act being provincial in scope, and in our opinion this is the one weakness of the act.

We have information from a large candy concern in British Columbia that owing to lack of enforcement of the minimum wage in eastern Canada, manufacturers can ship their commodities to western Canada at less than the local manufactured price. We therefore submit that the Minimum Wage Act of our respective provinces could be made more equitable if the application of same were considered from a federal standpoint.

Q. Is the minimum wage the same in British Columbia as it is in Ontario and the maritime provinces?—A. I think not.

Q. Is it higher?—A. Ours is higher.

Q. What is your minimum wage there?

Mr. SOMMERVILLE: I think he said this morning it was \$12.75.

The WITNESS: That is for girls. I am not familiar with the factories.

The CHAIRMAN: We have the law here, we have it on file here.

*By Mr. Factor:*

Q. That applies to males?—A. No, not to males.

*By Mr. Young:*

Q. The point I want to make is this, if the minimum wage is higher in British Columbia than in Ontario, then the Ontario manufacturer would have the advantage over your local manufacturer?—A. That is a positive statement of fact.

Q. It is?—A. Yes.

Mr. SOMMERVILLE: The difference is not very great, though.

*By the Chairman:*

Q. You use that for the basis of a suggestion that some effort should be made to make it uniform throughout the dominion?—A. Yes.

Q. That is your suggestion?—A. Yes.

*By Mr. Sommerville:*

Q. Well, is not the statement largely made because of want of enforcement of the minimum wage in the east; it is not the difference of a dollar or fifty cents that affects you so much as the lack of enforcement in the east?—  
A. I think it is both.

It is the opinion of the retailers of our province that the following have contributed very largely to present very unsatisfactory conditions:

1. Fraudulent and misleading advertising and "going out of business" sales.
2. Advertising of "loss leaders."
3. Premiums, secret rebates and advertising allowances.
4. Mail order houses not being required to pay a tax.
5. Wholesalers selling to consumers.
6. Wholesale owned retail stores.
7. Power companies using profits from power to make up loss on their retail establishment.
8. The Anti-Combines Act in its present form being capable of unfair interpretation.

If in addition to being interested in the causes of depressed business, this committee is interested in learning of our effort during the past month to at least make a small contribution toward recovery, I will be glad to outline some of the trade practices that have been agreed upon by our grocers and meat dealers, and which have been subscribed to by merchants in Trail, Nelson, Cranbrook, Chilliwack, Mission, Cloverdale, Langley, Prairie, Ladner and Vancouver.

We are indeed very happy to be able to report to you that these "trade practices" though originating with the retailers, have been so fair and broad in their scope as to receive the endorsement of public bodies such as the organizations referred to following. I was very thankful to receive a wire that the practices had been chosen by the ministers of Christ Church cathedral and the First Baptist church, Vancouver, as suitable subjects to be included in their evening sermons and fully subscribed to.

Exhibit No. 26 is a letter from the president of the Vancouver Council of Women, an organization of over nine thousand consumers, addressed to us.

I might say, Mr. Chairman, that we forwarded these consumers, as an organization, a copy of these practices because we wanted their opinion, and at the same time we asked them to subscribe to anything they could in making up our brief, and this is the letter of the president of this organization.

*By Mr. Factor:*

Q. When did you first inaugurate putting into effect the fair trade price?—  
A. We experimented with our radio dealers last September, and then when the information came of this committee sitting other merchants seemed to be interested and we then tried to get them together. Prior to that we could not get them together. This is the letter:

It is a pleasure to co-operate with you in the preparation of your brief for the Dominion committee inquiring into business conditions and practices in Canada.

You will realize of course that the time allowed was very short and we realize the inadequacy of our report. Although only a few members of the executive could be called in to help, I feel sure that the following statements would receive the approval of the general body of the Vancouver Council of Women.

Advertising.—The statements made in the advertisement of goods we believe should be truthful in every particular and that the merchants

should be held responsible. With many types of merchandise, the consumer is fully dependent upon the honesty of the merchant for a true estimate of its value. The purchaser may be deceived easily.

At sales, goods are often advertised as being reduced from a high selling value when actually the sale price is the normal value. Thousands of inexperienced and heedless buyers are induced to buy, to their own loss rather than to the loss of the merchant.

Untrue and indefinite statements made about the grade of meats, butter and other commodities rob the purchaser of the full return for money spent.

*By Mr. Young:*

Q. Untrue statements made about the grade of meats. Meats are graded by the government, are they not?—A. But it is not. Apparently, Mr. Young, the merchants sell them as graded. That is the weakness.

Q. If he says this is grade 1 and it is not, he is breaking the law, is he not.

Mr. FACTOR: He advertises. He does not put the grade in the newspaper.

Mr. ILSLEY: He issues an untrue statement about grades, which is a little different.

Mr. SOMMERVILLE: He might refer to high grade meats.

Mr. YOUNG: There is no such thing as government high grade meats. The government grade is A, B, or 1, and there is an untrue statement made in that case.

The WITNESS: You see, in so many of the advertisements, Mr. Young, the word "choice" is used.

*By Mr. Young:*

Q. Is that a government grade?—A. It is not, but "choice" implies that it is high grade.

*By Mr. Ilsley:*

Q. Does anyone pay any attention to these things?—A. Yes, they do. That is one very sore point with the retailers.

Mr. SOMMERVILLE: They should not be used.

Mr. FACTOR: The people are very gullible.

Mr. ILSLEY: I cannot help thinking that there must be some limit to the gullibility of the public.

*By Mr. Senn:*

Q. Is it not true that there is such a thing as labels for beef granted by the department or departmental officials, and that a concern will not put up in their window "we are selling blue label beef," for instance, and then they may have two or three carcasses of that kind in their store?—A. The weakness there, Mr. Senn, is that it is not compulsory to sell only graded meat.

Q. That is it, that is where they get away with it.—A. Exactly.

Profits.—After a fair margin of profit is allowed to the producer, distributor and retailer, the advantages which have been gained by virtue of efficient management or change of conditions should be passed on to the consumer. A business, unduly increasing profits and in the position where it can maintain its own market price, should be compelled to recognize its duty to the consumer.

*By Mr. Young:*

Q. That is, to pass on the benefits of any increased efficiency to the consumer in lower prices.—A. Yes:

Wages.—The consumer should be assured that every business must give their employees fair wages. With the awakened conscience of to-day there is a large group who wish to know that values offered are not made possible by the exploitation of the employees. A legal standard of wage should be set up and strictly enforced.

*By Mr. Young:*

Q. Have you any idea, Mr. Matthews, how the wages paid to employees in departmental stores compare to the wages paid by others?—A. I have no record, Mr. Young.

Premiums.—Inducements, such as premiums, coupons, grouped articles, which are offered to the consumer if certain brands of merchandise are purchased work to the ultimate disadvantage of the consumer.

*By Mr. Ilsley:*

Q. What about these one cent sales, take Rexall for instance, and that kind of thing; you frown on those practices, do you?—A. I rather take it we can infer from that letter that perhaps there is a change coming in the minds of our women purchasers as there is in the minds of our retailers, and that they recognize there is a place in the picture for the labourer and that price is not the only thing to be considered.

The CHAIRMAN: Some hope yet to agitate the public.

Mr. FACTOR: It would be interesting to have a housewife give evidence to see if she agrees with that statement.

*By Mr. Sommerville:*

Q. This is from how many representative housewives?—A. Nine thousand, sir. This is the work of weeks, Mr. Chairman, in connection with trying to put the retailers house in order, and if the committee is interested I will be very glad to read it.

The CHAIRMAN: Go ahead.

*By Mr. Factor:*

Q. Recommendations?—A. Just what we are trying to do.

*By Mr. Sommerville:*

Q. Fair trade practices amongst retailers?—A. Exactly. When we first held our mass meeting after the Honourable Minister had made his speech it was quite evident that the retailer had gained fresh hope, and that the retailers, as a body, were prepared to get together. It had been our experience before, that it was very difficult to get the retailers to meet. However, after we had our first mass meeting it was clear we had to meet in sections. The grocers could not discuss meat, and shoes and clothing, so we agreed to have our sections together, namely, grocers and meat dealers in an endeavour to see if some of the trade practices could be eliminated immediately, and particularly so if there was to be legislation which would bring the odd chap into line who just would not play.

*By Mr. Young:*

Q. What do you mean by "trade practices?" That is unnecessary expenses or doubtful practices.—A. Doubtful practices. Our grocers met, and at a mass meeting they have selected these as a basis for the elimination of these trade practices. (Exhibit No. 63).

1. That we consider it to be unfair trade practice to advertise or display a combination of goods involving the giving away of one or more articles.

2. That no food or grocery retailer shall practice in his section or locality price discrimination which is designed or in any way effective in injuring competitors.

That perhaps should be explained. We had a Safeway Store open up a branch immediately opposite the Hudson's Bay store. That particular part of our city was well served with stores. The advertisements of the Safeway Store read:

These prices applicable only at our downtown store.

In other words, the Safeway Stores for the city of Vancouver did not recognize the prices advertised except you went down opposite the Hudson Bay and did business at that one particular store. We feel that is unfair.

*By Mr. Young:*

Q. Are not these people cutting each others throats that way?—A. Yes, they are. I can swear that too, Mr. Young. Up to the time that the Safeway Store opened their branch we had no complaint regarding the Hudson's Bay cutting prices in groceries and meats. After that it was a war.

*By Mr. Sommerville:*

Q. In other words, the Hudson's Bay, an old respectable house, had to meet its competitor with its competitor's own weapons?—A. Absolutely.

Q. And that to the detriment of the whole trade?—A. All the dealers and grocers in the city, sir.

Mr. FACTOR: I am glad to hear one departmental store as being quite respectable.

The WITNESS: This continues:

3. That all butter be graded into recognized grades, and that names or numbers be used for each grade, so that the consumer may easily recognize the quality being offered for sale.

*By Mr. Ilsley:*

Q. That is for one commodity, is it?—A. Butter, yes.

5. That the manufacturers discontinue the practice of supplying and paying for window and interior display and space for their products, and of supplying free demonstration privileges and of making allowances in any form for newspaper advertising.

6. That it shall be unfair competition for anyone to sell, offer for sale, or advertise to the public as retail, any merchandise at less than the net invoice cost plus ten per cent to insure that labour cost shall be partially covered.

Nothing in this paragraph, however, shall be interpreted to prevent seasonal clearance of merchandise, so advertised or plainly marked, or of perishable or damaged goods, so advertised or plainly marked, nor shall any retailer, for the purpose of discontinuing the handling of such goods when so advertised or plainly marked be stopped from selling merchandise at less than net invoice cost plus ten per cent to insure that labour cost shall be partially covered.

Regarding our meat dealers their code is as follows:—

1. That all advertising shall clearly indicate the exact grade or classification of each item offered to the public, so that the consumer may have a standard by which to judge values offered.

2. That the meat dealers negotiate with the packing houses to have all meats stamped according to grade, and that such grade be accepted as the one to be advertised.

I might say we are going to try in the meantime, Mr. Chairman, to see what we can do with our packers. We may not be able to do much but we are going to try to put that in operation if we can.

*By Mr. Factor:*

Q. You seem to be getting along very well without the committee?—

A. That is our hope, sir. I can tell you better two months from now. We have not met them yet.

3. That beef be graded and advertised as follows: Steer beef grade 1, 2 or 3; heifer beef grade 1, 2 or 3; cow beef grade 1, 2 or 3.

4. That lamb and mutton be graded and advertised as: Spring lamb grade 1, 2 or 3; yearling grade 1, 2 or 3; mutton grade 1, 2 or 3.

5. That veal be graded and advertised as veal, grade 1, 2 or 3.

6. That bacon be sold as graded, and the name and the brand be stated in the advertisement.

The following is an illustration of this point:—

Swifts Premium or Swifts Empire.

Burns Shamrock or Burns Dominion.

Our meat dealers reported one case of where they could not quite understand the advertised prices of bacon, so they went down to the establishment and they found a carton of one of these respective brands behind the pile of bacon, but the bacon in front of the carton was another brand entirely.

7. That fowl be graded and advertised as: Young roasting chickens grade 1 or 2, fowls, stags.

8. That liver be advertised with a definite description as follows: Beef liver, pork liver, lamb's liver, calve's liver.

9. That all frozen meats, poultry, and fish always be advertised as such and indicated with each item, as illustration—"spare ribs frozen."

The CHAIRMAN: Well now, Mr. Matthews, I am sure we have listened with a great deal of interest and attention to what you have had to say. Are there any questions that the members of the committee want to ask Mr. Matthews before he leaves.

Mr. YOUNG: Yes, I would like to ask him one or two.

Q. You spoke about the methods of handling bankrupt stock and you also spoke about fraudulent advertising, and I was not sure whether it meant fraudulent advertising of bankrupt stocks, or the fraudulent advertising and the handling of bankrupt stocks. What have you to say about that?—A. In that connection, Mr. Young, we have firms that will buy a bankrupt stock say of \$3,000. Vancouver is a good place to dispose of it; it is shipped to Vancouver; it continues on for a year under the head of bankrupt stock but with new purchases always feeding it.

*By Mr. Factor:*

Q. They keep feeding it with regular stock?—A. Exactly, and our dealers feel that is not fair. It is all right to dispose of that stock but it should not be fed with new material.

*By Mr. Young:*

Q. This new material is not sold at the cheap price?—A. Absolutely no.

Q. And it is the public that are being deceived?—A. Exactly.

Q. And that is a fraudulent advertisement?—A. It is very hard to prove, but we think it is.

Mr. SOMMERVILLE: You see there your difficulty is, there may be some portion of the bankrupt stock still remaining on the premises, and as long as it remains on the premises they can meet your prosecution by saying "some of our goods are bankrupt goods and, therefore, we are justified in advertising it as bankrupt stock."

The WITNESS: That is right, sir.

Mr. SOMMERVILLE: That sort of thing has been tried but has failed a number of times, just on that account.

*By Mr. Young:*

Q. There is just one more question, Mr. Matthews. What would you say of the advertising of the average moving picture?—A. That is one classification, Mr. Chairman, that we have not in our organization.

The CHAIRMAN: We want to thank you very much, Mr. Matthews.

The WITNESS: Thank you very much, Mr. Chairman.

Witness retired.

The CHAIRMAN: We will hold our next meeting on Tuesday, unless there is notice to the contrary.

The committee adjourned at 4.25 P.M. to meet again Tuesday, March 20, 1934, at 11 o'clock A.M.

HOUSE OF COMMONS, ROOM 368,

March 20, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the meeting of March 15, and the executive minutes of March 1 and March 15, are before us. If there are no objections, we will declare them adopted. Have you any exhibits to file?

The CLERK: I beg leave to file a copy of the Toronto Telegram and Daily Star of November 30, 1933, in connection with Mr. Hougham's evidence. These are advertisements regarding turkeys.

Mr. YOUNG: Did you say turkeys?

The CHAIRMAN: Yes. You will remember that Mr. Hougham gave certain evidence, and he said that he would file the records. These are the records.

The CLERK: The exhibit will be No. 40A.

The CHAIRMAN: Now, gentlemen, this morning we are to have the privilege of hearing Mr. McCallum of the Department of Agriculture, the live stock marketing branch, and we will ask Mr. McCallum if he will please come forward.

JOHN M. MCCALLUM, called and sworn.

*By Mr. Sommerville:*

Q. Mr. McCallum, what is your official position in the Department of Agriculture?—A. Chief of the marketing service of the live stock branch.

Q. What comes under your jurisdiction in that office?—A. Previous to the first of last September my work was concerned wholly with the administration of the Live Stock and Live Stock Products Act as applied to stockyards and live stock exchanges.

Q. In Canada?—A. In Canada.

Q. And since September?—A. And since September 1, my duties have been increased by being given supervision over the horse work in the Dominion of Canada, as well as responsibility for hog grading services throughout Canada under my assistant, Mr. L. W. Pearsall.

Q. Mr. Pearsall assists you in that department?—A. Yes.

Q. That is the hog grading department throughout Canada is under the direct supervision of your own department; and in that department Mr. Pearsall is the gentleman directly in charge and responsible to you?—A. Yes.

Q. Will you be good enough, Mr. McCallum, to give to the committee a statement of the live stock situation and marketing practices at the present time in Canada?

The CHAIRMAN: May I just indicate, Mr. McCallum, that I think the committee would like very much if you could just outline the whole situation from your experience and knowledge of the case; and then later, or as we proceed, there will be questions that members of the committee will wish to ask.

The WITNESS: I was just going to suggest to the hon. minister that possibly a picture of the whole situation of our administration of the Live Stock and Live Stock Products Act with respect to stock yards and live stock exchanges might not be out of place.

Mr. SOMMERVILLE: I think that would be very desirable.

The WITNESS: The development of stockyards as live stock marketing centres in Canada seems to have followed the line of settlement from east to west. A stockyard was established in the early days, about 1885, in Montreal; as the flow of population went westward, shortly after that, a stockyard was established in Toronto; and then as western Canada became settled and centres of population grew up, stockyards were established there. It is not at all strange that the packing industry is located at stockyard centres, the surplus live stock of the various provinces finding its way to these consuming centres where stockyards have been established; also reaching the packing plants which have been established at these consuming centres.

Previous to the year 1917, no supervision was exercised by the government with respect to stockyards or stockyard marketing. At the request of the various live stock interests throughout Canada, preparations were made in 1916 and in 1917 to bring stockyard marketing under Dominion government jurisdiction, with the result that in 1917 the Live Stock and Live Stock Products Act was enacted, under which both stockyards and live stock exchanges were brought under Dominion jurisdiction.

*By the Chairman:*

Q. That is 1917?—A. 1917. There is a copy of the act, Mr. Chairman.

*By Mr. Factor:*

Q. What are live stock exchanges?—A. Live Stock exchanges are associations composed of the men who are actually engaged in the practices of buying and selling live stock at stockyards, voluntary associations of these men interested in that process of purchase and sale.

*By Mr. Sommerville:*

Q. For the purposes of the record, when you refer to the Live Stock and Live Stock Products Act, you are referring to chapter 120 of the Revised Statutes of Canada?—A. Yes. The first act has been amended several times.

Q. It has been amended, and it is now chapter 120, an Act respecting Live Stock?—A. Yes. At the time of the passage of this act, there were some seven public stockyards in Canada; two in Quebec, both located in Montreal, one at the east end of the city owned and operated by the Canadian Pacific Railway, and one known as the West End Yards, owned and operated by the Canadian National Railway; one stockyard in Toronto; the Union Stockyards of Toronto; Limited; one in Winnipeg—

Q. Just as you go along, and this might be an opportune time to do it, if you could indicate who own various stockyards, whether they are owned by railways or by governments or by private enterprise, I think it would be well to do so.

*By Mr. Ilsley:*

Q. You have given the first two?—A. I gave the first two. The Toronto Union Stockyards is owned by a limited company.

*By Mr. Factor:*

Q. A private company?—A. A private company, yes, in which the railways have no interest. The Union Stockyards at St. Boniface, Manitoba, known as the Public Markets, Limited, are under the operation of the Public Markets, Limited, and is jointly owned by the Canadian National and the Canadian Pacific railways. Alberta Stockyards Limited at Calgary is a subsidiary of the Canadian Pacific Railway. Edmonton Stockyards Limited is owned and operated by a private company. Those are the seven yards that were already in operation when the Live Stock and Live Stock Products Act was put on the statutes. This act did not become fully operative until about 1919, in which year two other stockyards were established.

*By Mr. Ilsley:*

Q. Did you give us seven stockyards there? I think you gave us only six; two in Quebec, one in Toronto, one in St. Boniface—that is four; one in Calgary; that is five; and one in Edmonton, which is six?—A. I beg your pardon; one at Moose Jaw, Saskatchewan.

*By Mr. Sommerville:*

Q. Privately owned?—A. Also privately owned, or as it is known, the Southern Saskatchewan Co-operative Stockyards, more or less a co-operative company. It had not been fully in operation at that time. In 1919 the Moose Jaw stockyards and the Prince Albert stockyards, also a co-operative concern owned by private interests, were established and came under the act.

Q. You say "co-operative," that Prince Albert is co-operative; is Moose Jaw co-operative too?—A. It is owned by a joint stock company.

Q. I was wondering why you used the term "co-operative?"—A. Simply because they hitch that name onto their official name, the Southern Saskatchewan Co-operative Stockyards Limited, and the Northern Saskatchewan Co-operative Stockyards Limited.

Q. Misleading advertising?—A. Not your co-operative associations or pools, as they are regularly known.

*By Mr. Factor:*

Q. They are share capital companies?—A. Yes, they are share capital companies. Since that time three smaller stockyards have been brought under the operation of the act: a small stockyard owned and operated by the Saskatchewan Co-operative Live Stock Producers Limited at Regina; another small stockyard which is operated in connection with the same organization's abattoir at Saskatoon and the most recently established stockyard, that established at North Battleford, Saskatchewan, by the North Battleford Stockyard Company.

*By the Chairman:*

Q. They are under the act?—A. They are under the act. I might say that the yard at Regina operated a few years before it was brought under the act, because in the first place, the pool used it as a marketing centre for the output of their contract signers. They operated not for the general public, but more as a marketing centre for their own contract signers, which we thought was quite legitimate without bringing them under the act. However, after they started handling livestock for others than their own contract signers, and making specific charges, we thought it advisable to bring them under the terms of the act; so that, at the present time we have twelve stockyards in Canada, operating under the Live Stock and Live Stock Products Act.

*By Mr. Ilsley:*

Q. Is that stockyard at Regina a truly co-operative or is it a privately owned enterprise for profit making purposes for its investors?—A. No, I don't think it is a profit making enterprise. It was established primarily for the benefit of the Saskatchewan Live Stock pool and operated by them.

Q. And does the same apply to the one in Saskatoon, did you say?—A. Saskatoon, yes, there is one at Saskatoon. Unfortunately, the pool yard, if I may be allowed to call it that, at Saskatoon, is situated right directly across the road from the Union Stockyards at Saskatoon, a stockyard which had been established in 1927.

*By Mr. Young:*

Q. There are two yards at Saskatoon?—A. Yes, with splendid facilities and giving good service; but owing to the fact that in this smaller yard live stock was bought and sold, and settlements made to persons who were not members of the pool, we thought in the interests of consignors of that yard, that we ought to give them the same protection as consignors to other established yards were receiving under the Live Stock and Live Stock Products Act.

*By Mr. Ilsley:*

Q. What is the significance of being brought under the act, as you term it? You say you brought them under the act, and that they came under the act at a certain date. What do you mean by that? What change was made in their status to bring them under the act?—A. There was really no change made in the status of the stockyards themselves, other than that they were required to file with the minister a schedule of their fees and charges to be collected from those persons using them.

Q. If they are not under the act, they can charge anything they like; is that the idea?—A. Practically. In the second place, and possibly more important than the other, anyone thereafter operating as a commission merchant at those yards had to register with the minister a schedule showing the status of his operations, had to put up a bond of \$10,000 to guarantee the performance of his obligations as a commission merchant, and he had to operate his business through a shippers' trust account.

*By Mr. Sommerville:*

Q. All money goes in to that, for every commission merchant in Canada, into the shippers' trust account?—A. Yes.

Q. The act provides that the moneys due to consignors shall be paid out of that shippers' trust account, and that the commission merchant shall not use any of the moneys until after he has provided for the moneys due to the consignors?—A. Exactly.

Q. That is what you call it, the shippers' trust account as provided in the act?—A. Yes.

Q. So that by requiring that of these yards—and I believe all yards are subject to the same regulations—you have these conditions, that every commission man operating at these yards first of all gets a licence from your department?—A. Let me correct that. No, not from our department, from the Livestock Exchange.

Q. He gets a licence from the Livestock Exchange, and the Livestock Exchange is subject to regulations to be submitted to your department and approved by your department?—A. Yes.

Q. And the agent must file a satisfactory bond to the extent of \$10,000 to be responsible for moneys due by him to the farmers, and he must maintain the shippers' trust account into which all the proceeds of the sale of cattle go, for the farmers or consignors; and it is only after he has paid them that he can withdraw his own fees for his own commission and expenses?

*By Mr. Ilsley:*

Q. This legislation is for the protection of the shippers, is it?—A. Yes.

The CHAIRMAN: Just give your answers audibly, Mr. McCallum.

The WITNESS: Yes, sir.

*By the Chairman:*

Q. Did you answer Mr. Sommerville's question?

*By Mr. Sommerville:*

Q. You nodded your head, and the stenographer cannot get that down. You mean "Yes," do you, to what I said?—A. Yes.

The CHAIRMAN: I am forced to remind you that the reporters do not draw nods.

*By Mr. Young:*

Q. All the yards in Canada are under the act now?—A. Yes.

*By Mr. Factor:*

Q. Is it optional for any yard to come under the act or is it compulsory? How do you go about it?—A. It is required under the act itself, in the definition of a stockyard, that when a stockyard opens and provides facilities for the handling and the purchase and sale of livestock, and furnishes scales and loading chutes and yard facilities, that they are automatically a stockyard and are subject to the regulations described in the act.

*By Mr. Ilsley:*

Q. You said that one of them went on for a while without being under the act; how could it do that?—A. Well, this particular yard handled the stock of its own members under contract; it didn't have any obligations to others who were not its members.

Q. I understand.

*By Mr. Factor:*

Q. And then when it extended its facilities it automatically came under the act?—A. Yes, every stockyard company is subject to the order in council regulations passed in 1919, and which are included in this copy of the Live Stock and Live Stock Products Act. These regulations deal with the construction, equipment, operation and maintenance of stockyards.

*By Mr. Ilsley:*

Q. Construction, equipment?—A. —operation and maintenance of stockyards. These order in council regulations are attached to our office copy of the Live Stock and Live Stock Products Act.

*By Mr. Sommerville:*

Q. That is, your act goes further than merely bringing a yard under the act; it requires that yard to have certain facilities that your department deems necessary for the proper handling of the trade?—A. Yes.

Q. Both physical facilities and otherwise?—A. Yes. In addition to these regulations, every stockyard company has submitted for the approval of the minister another set of regulations embodying the rates and charges which they may collect, and outlining more or less definitely the services that they are prepared to give. Every stockyard company in Canada has also done that, and has received approval for their rules, regulations and schedule of charges.

Q. And these are subject to revision from time to time by the department as conditions may change?—A. Yes.

Mr. YOUNG: They cannot make any charge except as authorized by you.

*By Mr. Sommerville:*

Q. In other words, Mr. McCallum, the stockyard is not permitted to quote any rate except that which has been approved under departmental regulations?—A. They cannot do it legally. They may do it, but not legally—if it is brought to our attention.

Q. And then, Mr. McCallum, does your department from time to time, as you find conditions changing, require a reduction in the stockyard charges?—A. Yes, sir.

Q. In other words, you keep a supervision over the amount of the charges, so as to watch the interests of the producer?—A. Yes, sir.

Q. In connection with the stockyard charges, this might be an appropriate time to ask, do you require from each of the stock yards that they file with you a certified copy of their financial statement each year?—A. No, sir, the act does not require that the stockyard company file with the minister a certified statement of its business.

Q. Do you not in actual practice get from them a financial statement of their position from year to year?—A. At times we do, on request.

Q. Yes?—A. It may be a rather sketchy statement, but they do not as a rule refuse to give us statements.

Q. That is to say that although you may not compel it, when you request them to furnish a financial statement they comply with the request?—A. They usually do.

Q. And then when you examine that financial statement you can ascertain whether or not the amount they are receiving from the stockyard is sufficient, or more than sufficient to maintain their company and show a profit; from the financial statement you can ascertain what their profits are; do you ascertain them from their statement?—A. The statement that is usually furnished is not a very complete statement, it is simply a statement of their gross revenues and gross expenditures, and shows the amount of the balance between the two.

*By Mr. Ilsley:*

Q. How do you arrive at the basis on which they ought to charge? The ordinary public utility company usually have to make elaborate returns to show that they are not making excessive profits; on what do you base the fee, and the profits that the company is permitted to earn?—A. Well, the stockyard companies were brought under the jurisdiction of the act in 1917. The department in collaboration with the various stockyard managers set a schedule of yardage charges. I might just go a little further and state that the sources of revenue of stockyard company are three: first there is the unloading charge of \$1 per car on all live stock received at a stockyard. This unloading charge is the same as you pay the railway companies at their feeding in transit stations. For instance, between Winnipeg and Montreal there must be a stop for feed because the run cannot be made under the statutory 36 hours, longer than which animals cannot be kept without feed and water. That is the regular charge for unloading, and there is a charge of one dollar for reloading that applies to the different stockyards.

*By Mr. Young:*

Q. What does that include in actual service?—A. The railways deliver the loaded cars of livestock to the unloading docks of the stockyard. The railway company at the stockyards does not open the cars nor unload the stock.

Q. Do they charge switching charges there?—A. They absorb the switching charges.

Q. That is to say their rate is the same whether there is a switch in there or not?—A. Oh, I think so.

*By Mr. Edwards:*

Q. This change from one railway to the other is absorbed by the one which has the longest haul?—A. Yes.

*By Mr. Young:*

Q. Then switching in and out again, I want to know if they make a charge for that?—A. No, they don't, because take in western Ontario, where the rate per hundred miles is  $17\frac{1}{2}$  cents per hundredweight, they can go by the one railway or the other where they are competing lines, and there is no extra charge for switching them to the stockyards.

*By Mr. Sommerville:*

Q. Would you mind describing what these handling charges cover, Mr. McCallum?—A. The charge covers the service of breaking the seals on the cars, breaking down the partitions where such are in the cars—mixed cars have partitions in them to separate the larger from the smaller stock, and to protect the smaller stock—and the taking of these animals from the car into what are called holding pens right at the unloading docks. These operations are an important thing in the handling of live stock at stockyards, it is necessary to have this handling done in the shortest possible time because it is the consensus of opinion that more shrinkage takes place after the cars stop, and the animals get milling around in the car, than when the car is in progress, and it is most important to save shrinkage that this handling be done as quickly as possible, and that is a service done by the stockyard company which costs one dollar per car.

Q. And in a car of cattle there would be how many, approximately?—A. There might be from 20 to 32 or 33 head in a car of steers; from 70 to 90 in a car of calves, depending on their size—with the big rugged 400-pound calves, western calves which grow very large through running with their mothers in the summer—from 50 calves in the west, to 115 or 120 small veal calves in the east; and sheep, from 90 to 110 or 115 as the case may be.

Q. That is, unloading and putting in to the unloading pens?—A. That includes unloading and putting in to the unloading pens.

*By Mr. Kennedy (Peace River):*

Q. Does it cover the disposal of carcasses in case there are dead animals in the cars?—A. Yes, dead animals in the car have got to be removed; and downers—what they call downers and cripples—have to be removed and taken to a slaughter house and slaughtered under supervision, because they cannot be sold at stockyards as commercial stock.

Q. That is covered by this dollar?—A. Yes.

*By Mr. Sommerville:*

Q. Now, you have given us an idea of the service—

Mr. FACTOR: He says there are three sources of revenue.

Mr. SOMMERVILLE: That is one of the sources at any rate.

The WITNESS: The second source of revenue to the stockyard company is known as yardage, the basic charge for stockyard revenues. I may say that in Canada we have on the whole a very moderate scale of yardage charges, particularly when they are compared with the corresponding charges at American yards. The service which is known as yardage includes taking the animals from the holding pens on the unloading dock to the commission merchants' pen; putting them into these pens and locking the gate; it includes the service of weighing; it includes the service of providing running water; it includes the service of feeding; it includes the service of maintaining weigh masters approved by the minister—no weigh master at a stockyard can operate a stockyard scale

unless his employment has been approved by the minister—stockyard scales are regularly tested by the department of weights and measures, and also tested by the stockyard's own mechanics daily, and if not daily, at least weekly; includes the service of furnishing a scale ticket on which is included the weight of every animal, the price, the owner, the classification, and the buyer.

Q. That is all included?—A. This is included in the service of yardage.

Q. And this information is put on the ticket as the cattle go over the scale?—A. Yes, sir.

Q. What kind of a scale do you call it?—A. A type registering beam scale.

Q. One which weighs automatically and stamps on the ticket?—A. Yes.

Q. It does not come under the supervision of the weigh master at all to put the weight on the ticket—the scale does that automatically, types it?—A. Yes, and the scale ticket is put into that registering device, the beam shows the correct weight and a lever is pressed which then stamps that weight.

Q. Then the name of the buyer, the price and the name of the vendor are entered?—A. And the name of the commission merchant who negotiates the deal.

Q. They are all registered upon this ticket?—A. Yes.

Q. That is included with the yardage charge?—A. Yes, that is included in the yardage service; taking custody of the animals when they come off the scale, putting them in pens for the purchaser until whenever he requires to take delivery of them.

*By the Chairman:*

Q. Just a minute, what was the charge there?

*By Mr. Sommerville:*

Q. Now, will you give the yardage charge for this service which you have just described?—A. I have made the statement that yardage charges at Canadian yards is most reasonable. I think it was kept at a low figure to induce the largest possible volume of live stock to come to the stockyard to have the advantage of a public market, and the advantage of competitive salesmanship and competition in buying.

The yardage charges for cattle at the various stockyards is; I just want to make it plain that yardage is not a daily charge, yardage is collected only once on live stock passing through the stockyards—they may be there a few hours, or they may be there a few days—yardage is collected only once:—

**YARDAGE CHARGES AT ALL STOCKYARDS IN CANADA AND PRINCIPAL UNITED STATES YARDS**

Stockyards	Cattle per head	Calves per head			Hogs per head	Sheep and lambs per head
		Up to 300 lbs.	300-400 lbs.	Up to 400 lbs.		
	cents	cents	cents	cents	cents	cents

So that in general our yardage charges in Canada are very reasonable in comparison with those which obtain across the line.

*By Mr. Factor:*

Q. Is there any reason for the American charges being higher; can you assign any reason, or is that a fact?—A. I can assign no reason.

*By Mr. Kennedy (Peace River):*

Q. What is the reason for the difference between the truck and rail charges?—A. I was going to explain that a little later on.

*By Mr. Sommerville:*

Q. You are going to do that in connection with truck prices; perhaps we had better wait until you give us the comparative figures.

*By the Chairman:*

Q. Now, what is the third source of revenue?—A. Would you mind if I run down the column of charges for hogs first.

The CHAIRMAN: Oh yes.

(Witness read figures relating to charges for hogs.)

The WITNESS: It might possibly be better if I would answer Mr. Kennedy's question now, as to why higher rates are allowed in Alberta than elsewhere.

The CHAIRMAN: Yes.

The WITNESS: In the year 1922 the stockyard companies in Alberta made representations to the government and to the live stock associations of western Canada to the effect that these were initiating yards and did not have the benefit of through billing which Winnipeg and other yards had, that they could not operate and show any surplus of receipts over expenditures. The matter was thoroughly studied by the Western Canada Live Stock Union and the department representatives, and it was agreed that they be given an additional ten cents per head on cattle, 5 cents per head on calves, and 2 cents per head on sheep and hogs, owing to the representations made which were found to be correct at that time; that is why yardage at these points is higher than it is elsewhere in Canada.

*By Mr. Sommerville:*

Q. They are originating yards?—A. They are originating yards.

Q. And there is no through billing coming to these points?—A. Very little.

Q. And in other points, take Toronto for instance, cattle from Saskatoon, Edmonton, Winnipeg, Moose Jaw, or Calgary go through Toronto?—A. A great many of them do.

Q. They are unloaded there, fed; there are charges then in that connection which are received by that yard—the Union Stockyards—which are handled on that yard from these western points?—A. Yes, but might I just draw to your attention that no yardage is assessed on through-billed stock.

Q. That is, yardage having been paid at Calgary, Edmonton or Winnipeg once, although it may go through two other yards subsequently, no additional yardage charge is made?—A. No, where it is on the through bill; until it is offered for sale.

*By Mr. Factor:*

Q. I thought Mr. Kennedy's question was, why the difference between the rates charged on stock received by rail and by truck?—A. That is another part of the same question. Live stock received by rail is subject to this unloading charge of one dollar per car; in the second place all live stock received by rail, is fed, because it usually arrives at the stockyard a considerable period of time before it is offered for sale, and must be fed to put it into sale condition. Truck stock loads nearer the place, possibly two or three hours before it is offered for sale, and practically speaking there is no consumption of feed by truck stock, and it is felt by some of the stockyard managers—and I do not find very much criticism with their claim—that the truck stock should pay a larger amount of yardage, when they make no contribution to stockyard revenues through feed, or through unloading; and that is why at these two particular points there is an extra charge for truck stock.

*By Mr. Kennedy (Peace River):*

Q. But it does not apply generally, does it; just at some particular points?—A. There is a reason why it does not apply to some of the other yards.

*By Mr. Sommerville:*

Q. They don't have truck stock at other yards?—A. Toronto has about 6,000 cars received by truck this year—standard live stock cars.

Q. Why is not the spread maintained the same in all yards, as between rail stock and truck stock?—A. I think that is fairly easy to explain. At Toronto they have two large packing houses located right across the street from the stockyards. There has never been any differentiation between the yardage of truck stock and rail stock because if the truckers were told, well now in order to have you pay your proper share for the use of the stockyard we are going to assess you 10 cents per head extra on cattle, 5 cents per head on calves, and 2 cents per head on hogs and sheep, it would simply mean that many truck drivers would not unload the 6,000 cars of stock that come to that stockyard at the stockyard at all, they would go direct to the packing house and avoid the extra charge.

*By the Chairman:*

Q. It would increase the already large movement which now goes direct to the packing houses?—A. Yes, it would increase the movement.

*By Mr. Young:*

Q. Now, Mr. McCallum, your point is that the stuff going to a stockyard and stopping there paid no yardage charge. What benefit does the Toronto stockyard get from handling such stuff? Do they do it free?—A. When that stuff reaches Toronto it goes on the Toronto market for sale, and as soon as it is offered for sale in the yard this yardage charge applies.

Q. It is not a charge if it is going to Montreal?—A. No. It does not go through Toronto in going to Montreal.

Q. We will take three points A, B and C, A being the originating point, B the intermediary point and C the final destination. Do they pay a yardage charge?—A. Yes. If offered for sale.

Q. At the originating point?—A. Yes.

Q. Whether it is offered for sale or not?

*By Mr. Factor:*

Q. You say the yardage only applies if offered for sale at point A?—A. Yes. Take Edmonton as your originating point. The live stock is there for sale on the Edmonton yard. If it were bought at Edmonton by a packer's representative or a commission firm buying on order for Toronto district the live stock would go through Winnipeg as through billed stop, and all that the Winnipeg stockyards would receive would be the unloading charge of \$1, a reloading charge and the value and profit for the food consumed. They would charge no yardage. If that came to Toronto consigned to a commission firm there and offered for sale the Toronto stockyard would collect the yardage.

*By Mr. Young:*

Q. There is a difference between the two yards at Saskatoon. How do you explain that?—A. Simply because when the pool yards started operating they submitted for the Minister's approval a schedule of charges which said 25 cents per head for cattle, 15 cents for calves, 6 cents for hogs, 5 cents for sheep, and we approved of it.

Q. They offered to do it for less?—A. Yes. They offered to do it for less.

*By Mr. Sommerville:*

Q. I understand they have a small yard. Is it associated with or attached to a packing plant?—A. It is.

Q. They had established it there?—A. Yes.

Q. First of all it was a yard that was used for the collection of their own stock for killing purposes?—A. Yes, sir.

Q. And then its facilities, although they were small and limited, were extended so as to allow others to use it?—A. That is the fact.

Q. But their investment—their facilities do not compare with those of the stockyards across the road?—A. They are small, and they can be operated very inexpensively.

Q. The capacity is limited?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Mr. McCallum, before agreeing to the increased scale of prices in the yards I suppose you examined the financial statements of some of the yards in order to ascertain just how they were getting along, or how necessary that charge was?—A. I do not want to evade any personal responsibility, but when these increases were given in 1922 I had nothing to do with the stockyard work; but from the files I have seen evidence that the whole matter was thoroughly gone into—the receipts and expenditures of stockyard companies.

*By Mr. Ilsley:*

Q. You say that the western live stock union agreed to this increase for yardage?—A. Oh, yes.

Q. That is an association of producers, is it?—A. Associations of producers. The different breed associations throughout the west.

Mr. FACTOR: What is the third source of revenue?

The WITNESS: Profit on feed.

*By Mr. Ilsley:*

Q. With regard to these yardage charges being higher, as I gathered the yardage is charged when the live stock is sold?—A. Yes.

Q. Is it because a smaller proportion of the live stock is sold at the Alberta yards than at another yard that they have to have a higher per unit charge for yardage?—A. Yes. Alberta yards at that time did not get the benefit which a big yard like Winnipeg did on through bill stock from which they derived a revenue. The volume of live stock originating and coming to those yards was not large, and they had fairly large yards under good management, but it was found that they were not under the first charges authorized receiving enough revenue to equal the expense of operation.

Q. That was the reason all right; but the charges that a yard gets on through billed stock is confined to unloading and reloading charges?—A. And the profit on feed.

Q. But the basic charge, you said, was yardage?—A. Yes. That is the basic charge, because there are so many more animals offered for sale on yards than go through on through billing that the revenue on yardage alone is a big source of revenue.

Q. There would be on the stock handled by the Alberta yards—on all of it there would be a yardage charge whereas on the Winnipeg yards, on a lot of it, there would be an unloading and reloading charge?—A. Yes; but nearly every stockyard in Canada could handle at least 50 per cent more volume than it is handling now with a very slight increase in overhead.

Q. There is a small volume in the Alberta yards?—A. A small volume.

*By Mr. Sommerville:*

Q. And increased volume would involve decreased charges?—A. Exactly.

*By Mr. Young:*

Q. When you handle stock going through you feed it in those unloading pens?—A. No, sir, it is first put into the unloading pen and then moved to the regular feed pens.

Q. That is all covered by the unloading charge?—A. Yes. At Winnipeg there is a yard set apart for the through billed stock. The department takes the attitude that one yardage is enough to collect.

MR. FACTOR: Is the reloading charge the same as the unloading?

THE WITNESS: Yes, \$1 per car.

THE CHAIRMAN: You were going to tell us about the feeding charges. Would you give us an outline of that?

THE WITNESS: It is the charge on which the department and the stockyards throughout Canada get the severest criticism. "Under order in council regulation charges for feed and supplies for each calendar month shall be determined by adding to the wholesale market price for the preceding month a percentage plus a fixed charge for handling. The proprietor shall file with the Minister, not later than the tenth day of each month, statements of the average wholesale market price of feed and supplies during the preceding calendar month, and a statement of the charges in force during the current month. This statement shall be supported by such documentary or other evidence as the Minister may require."

Based on that order in council regulation, back in 1919 an arrangement was made with stockyard companies whereby they should add to the wholesale price of feed for the previous month a handling charge of \$4.50 per ton. That handling charge includes the service of unloading the feed from the cars, storing it in barns—because the stockyard companies have to provide for a few months in advance to be sure of their supplies—for keeping the hay insured,

for taking it from the barns and delivering it either to the mangers, as is done in most of the yards, or delivering it to the commission firms, to the fences above the cattle, as it is done at Winnipeg. That \$4.50 per ton is allowed for that service at all yards. The stockyard delivers at the order of commission firms so many bales or hundredweights. It is delivered, the bales are broken and the hay is delivered up in the mangers of the various commission firms at their order.

*By Mr. Factor:*

Q. The \$4.50 charge—is that irrespective of the wholesale price of the feed?—A. Yes, sir. That is a flat charge; a fixed charge for handling. In addition the stockyard companies have been allowed from \$10 to \$12 a ton profit on hay and feed. And that is the point that causes more criticism from those people who use stockyards than any other point that is raised.

*By Mr. Ilsley:*

Q. What is this feed—hay and other feed?—A. Well, straw hay and barley chop, as a matter of fact—barley chop is supplied for hog feeding.

Q. What about cattle? Do cattle get feed other than hay?—A. Cattle get nothing other than hay at stockyards.

*By Mr. Young:*

Q. Is this \$4.50 advanced plus \$10 to \$12 a ton?—A. Yes.

Q. How do you explain that?—A. On two or three different grounds. From statements which have been furnished from our three principal stockyards in Canada—the largest ones, Montreal, Toronto and Winnipeg—it has been shown that the whole revenue for yardage at these prices which I have given is taken up in operating the yard, and that the sole revenue that the stockyard receives for maintenance, repairs and interest on investment is from that spread on feed.

*By Mr. Ilsley:*

Q. Perhaps the American feed charges are smaller?—A. No. They are about the same. I think I have some of them here as well.

Mr. FACTOR: The yard is a sort of loss leader.

The CHAIRMAN: Yes. In regard to the practice of supplying hay, for instance, is that hay officially weighed, tagged and delivered to the purchaser or commission man?

The WITNESS: In eastern Canada when hay is baled every bale is tagged with its weight, and when a commission merchant orders two or three bales as the case may be, he pays for the exact weight shown by the tag on that bale. In western Canada that is not required—at least, if it is required, it is only recently. It is not required that the bales show the weight of the bale, and the average weight is taken by dividing the number of bales in the car into the net weight of the hay.

Mr. YOUNG: One man buys a bale of hay and another man buys another bale, and they both pay the same price regardless of weights; is that it?

The WITNESS: They pay a flat price in each western Canada yard regardless, because that system applies at all the yards in western Canada.

*By Mr. Sommerville:*

Q. The average weight is arrived at as the arbitrary basis for purchase?—A. Yes.

Q. A man may get a 95 pound bale to-day and a 105 pound bale to-morrow?—A. That is the fact.

Q. And the average is the basis arrived at—the average of the number of bales in the car divided into the net weight in the car?—A. Exactly.

Q. That is because of the fact that there is no tag on the bales in western Canada?—A. It is obvious that on occasions a man will not get as much hay as he pays for when he is buying the average weight of the bales, because there will be on occasion, I suppose, a difference of ten to fifteen pounds between the lightest and heaviest—possibly more than that—in the car; but it has not been found possible to weigh every bale. That would slow up the operation and greatly increase the cost. I might say that very very few criticisms have been received from men who patronize stockyards that they have not got as much hay as was charged for.

*By Mr. Factor:*

Q. How did the department arrive at these figures, \$4.50 a ton handling charge and \$10 to \$12 a ton profit? What factors entered into the arriving at this amount?—A. The \$4.50 charge is considered to be reasonable for the services performed—loading, storing, keeping insured, taking from the barn and delivering it, breaking open the bales or delivery to the fences, as the case may be; but the actual service performed is just about paid for by that \$4.50 per ton.

Q. It covers all the expenditures on the matters you have mentioned, and the labour?—A. Yes, sir.

*By the Chairman:*

Q. Does the stockyard employee do the actual feeding?—A. With the exception of Winnipeg, yes.

*By Mr. Kennedy (Winnipeg):*

Q. What practice obtains there?—A. They deliver the hay in truck loads, and it is put on what is called the fences—just above the feed racks of the various commission firms.

The CHAIRMAN: There is a walk around.

The WITNESS: Yes; and the commission firms keep those racks filled and feed the animals until they have them full before offering them for sale—just a regular practice—and they keep track of the number of bales fed to each man's consignment and charge him accordingly.

*By Mr. Factor:*

Q. What enters into the factor of fixing the profit of \$10 to \$12 a ton?—A. That figure was agreed upon possibly at that time in 1917 more or less by chance, but through the years it has developed that the revenue from yardage for operating leaves no surplus. While we think the hay charge is high, we would like to see it reduced, yet it has not been reduced, and the stockyard companies were allowed to receive enough revenue to maintain its plant and give the brand of service that we demand. If you reduce the hay very much you would have to give an increase somewhere else.

*By Mr. Ilsley:*

Q. They make monthly returns, you say, of the prices for the month before, and their rates for this month?—A. Yes.

Q. That does not give you anything upon which to base rates. Your rates would have to be based upon the financial statement of the company, would they not? Upon the profits of the company. For instance, you allow them from \$10 to \$12 a ton on hay, which seems a great deal. You say you have to do it, otherwise they would not make any money. The amount of money they are

entitled to make depends upon their investment, expenses of operation and many other things, I should think. The thing that occurred to me at the outset was that you should have elaborate and careful returns from those companies just as a public utilities commission requires from public utilities operating in their jurisdiction, in order to know whether you should allow them \$8 or \$10 a ton for profit upon that feed?—A. If we had the authority under the Act to investigate their books and records and possible factors and valuation on their actual investment, that could be done.

The CHAIRMAN: You have no authority now?

The WITNESS: We have no authority now.

Mr. ILSLEY: You should have it.

*By Mr. Kennedy (Winnipeg):*

Q. Those returns you speak of getting are rather sketchy, are they not?—A. Sometimes.

Q. Do you consider them of any real value as returns?—A. Some of them are.

Q. Yes, but in the main. If there are returns you cannot investigate and do not investigate—some of them are pretty sketchy—for practical value they are not of much good, are they?—A. Suppose that the returns were in a very full form, we have not even the authority to go and investigate the figures they have given.

Q. You are not answering my question. Inasmuch as such returns as you do get are in many cases sketchy, do you, as an official, consider them of much real value as returns?—A. The returns that we get from some yards, yes.

Q. Yes, from some, but generally, as a general proposition. I do not care how you answer, one way or another. As a general proposition in regard to the returns you get in that manner, do you consider them of any real value?—A. They are not of as much value as they ought to be as a price fixing basis.

*By Mr. Ilsley:*

Q. I thought you said a while ago that most of the returns you got were just rough statements of gross receipts and gross expenditures?—A. Some of them are; most of them are, yes. Not many go into any details.

*By Mr. Kennedy (Winnipeg):*

Q. You say most are of a rough nature, and are not of much value?—A. I say they are not of the value we would like them to be as a price-fixing basis.

Q. That is not a satisfactory answer.

*By the Chairman:*

Q. Probably we can get it if we put the question this way: Would you suggest that the department would be better served if they had a more complete statement, and had authority to examine the books upon which the statements were based?—A. Without any doubt.

Q. And you would welcome that, as a department official?—A. Yes.

*By Mr. Ilsley:*

Q. How much do you allow them as dividends, as a return on the investment; have you any basis for that?—A. There was more or less of a gentleman's agreement in 1917 that they should make not more than six per cent.

*By Mr. Factor:*

Q. You don't know whether that gentleman's agreement has been carried out, do you?—A. Not definitely.

*By Mr. Ilsley:*

Q. Do you make a physical valuation of their investment at all?—A. We have to be satisfied with the figures that they give us as regards their investment. We don't know.

Q. You don't know?—A. We don't know.

Q. You don't know whether they are over-capitalized or not, whether they have a lot of water in their capital; you don't investigate?—A. We have no authority to investigate, and we don't know.

Q. If they say they have to have eight or six per cent on a huge capital, you don't make investigations to see whether that capital is the actual investment or actual value or not?—A. No.

*By Mr. Young:*

Q. When you get the average price of hay—we will say the wholesale price of hay for the past month, and then you are going to allow them so much on that, how do you know that they buy the quality of hay they quoted?—A. Well, the quality of hay is under the supervision of our responsible representative at the stockyards; and if the hay is not up to the quality which it is represented to be, there is an adjustment made right away and a better quality of hay supplied.

*By Mr. Sommerville:*

Q. As I understand you, this monthly report is a report of the actual purchases of the previous month?—A. Yes.

Q. And it must come in by the tenth of the succeeding month?—A. Yes.

Q. And it must indicate the prices they have paid and the quality they have received?—A. Not the quality.

Q. Well, the prices they have paid?—A. Yes, the prices.

Q. And on that they indicate the prices at which they are selling during the succeeding month?—A. I may say, for the information of the committee, that quite frequently the cost price as shown on these statements is less than the wholesale cost price as shown in the press of the city in which the purchases were made.

Q. That being because they have bought some time previously and had it stored, is that it?—A. Yes.

Q. And bought in quantity?—A. Yes.

Mr. ILSLEY: Depending on whether the market is going up or down.

*By Mr. Young:*

Q. Sometimes it will be the other way around, will it?—A. It might be, yes; but over years I think it breaks even.

*By Mr. Ilsley:*

Q. Suppose you could fix this charge scientifically so as to allow these companies a definite return on the value of their investment, on the value of their plant or something of that sort, and that resulted in there being different charges for every point so that the charges at Winnipeg would be different from the ones at Calgary, and so on; would that create any practical difficulty in the trade?—A. It would not create any difficulty that could not be provided for. It is an advantage, of course, to people who are shipping long distances to have approximately the same scale of charges in effect.

Q. At the different points?—A. At the different points, yes; but this difficulty would not be insurmountable.

Mr. SOMMERVILLE: I think Mr. Ilsley's point is if you had hay charges for instance, at Saskatoon, that were \$10 a ton and had hay charges at Winnipeg that were \$6 a ton, would that create a preference in the matter of shipment to Winnipeg over Saskatoon?

Mr. ILSLEY: Yes, that is what I had in mind.

*By Mr. Sommerville:*

Q. Would that be a practical difficulty?—A. I think not.

Q. You think not?—A. I think not; the benefit of the big market would overcome that. The benefit of a big market, which is Winnipeg, might overcome any advantage that would accrue from the small amount of hay that would be used at the other yard.

Q. I think perhaps you did not get the figures correctly; I was suggesting \$10 at Saskatoon and \$6 at Winnipeg. Would the lower charge for hay at Winnipeg create a preference for the cattle going direct to Winnipeg rather than to Saskatoon or some of the other yards?—A. Quite likely it would.

Q. It does not take very much to divert cattle from one market to another, does it?—A. No.

Q. Have the direct receipts at stockyards been decreasing during the past number of years?—A. Yes, they have.

Q. And have those decreased receipts had any effect upon the maintenance of these charges for hay and services; has that been taken into consideration by you in allowing these charges to remain at these figures?—A. Yes, they have. They have to maintain the yard for twelve months in the year to accommodate a peak load for about eleven or twelve weeks. What I mean is this, that the bulk of the marketings at any stockyard occur during September, October, and November, when practically all the facilities of most of our stockyards are used to capacity. At other times in the year our yards are half empty, but the whole facility has got to be kept in a state of repair for twelve months in the year, to accommodate that peak load for eleven or twelve weeks; and that goes back to what I said before, that the stockyards could handle at least 50 per cent more stock than they are handling, with very little increase in overhead; and along with the reduction in receipts we have also taken into consideration that the whole plant has got to be kept in repair.

Q. In addition to the fact that you take into consideration the peak load capacity of a yard, do you also take into consideration the general trend away from the yards of direct shipment in the last few years by truck, or truck shipment to the packing plant?—A. Yes, particularly with respect to truck traffic, because live stock brought in by truck consumes no feed, and that means that the other stock has got to pay a heavier share of the burden than they really ought to bear.

Q. Have you, as a matter of fact, Mr. McCallum, in your department made an effort or made an experiment in having the charges reduced in the yard, to ascertain whether it would bring more traffic to the yard?—A. Yes.

Q. And what experiments did you make in that direction?—A. We requested the stock yard companies last year to make reductions in the price at which they sold their hay, their feed. Some made a reduction of two or three dollars per ton; some made a reduction of from twenty to twenty-five per cent.

Q. Two or three dollars per ton would mean a 10 per cent reduction, would it not?—A. Yes, about that.

Q. And some made a reduction of 25 per cent?—A. Yes.

Q. For a period of six months?—A. Approximately six months.

Q. And when the charges for hay were reduced from 10 per cent to 25 per cent, what did you find was the effect, if any, in increasing shipment to the yards?—A. There was no appreciable increase in the shipments to those yards.

*By Mr. Factor:*

Q. If I might interrupt, just for my information, what is the wholesale price of a ton of hay?—A. In Montreal at the present moment it is about \$15; in Toronto it is about \$10. It is going up every day in eastern Canada, and I shudder to think what the price of hay will be six weeks hence on account of the shortage of supply at the present time in eastern Canada. In some places it is \$9.50, some places \$9, some places \$11; I have not got these schedules with me showing what it is at different places, but there is quite a disparity in the wholesale prices at the various centres.

Q. And you add to that \$10 to \$12 a ton profit?—A. Yes.

Q. \$9 a ton, and then add \$10 or \$12 profit?

Mr. SOMMERVILLE: Yes.

*By Mr. Sommerville:*

Q. From the experiments that you made in reducing the charges with a view to increasing the run to the yard, what was your conclusion as a result of that experiment, Mr. McCallum, as to whether or not the reduced charges on these feeds increased the shipments to the yards as against truck shipments?—A. I came to the conclusion that there must be some other factor associated with the feed charge that would keep a bigger volume of stock from flowing to the yards when the feed was reduced. There must be some other factor along with the feed.

*By the Chairman:*

Q. That is, some other factor attracting the cattle away from the stockyards?—A. Yes.

Q. Other than the dear feed?—A. Yes.

Q. What, to your mind, was that factor?—A. There seems to be a desire on the part of a great many producers and shippers of live stock to get away from stockyard charges of all kinds, unloading charges, feed, yardage. I believe that has had a good deal to do with the increased truck shipments to packing houses where there is no unloading charges, where there is no feed charge, where there is no yardage charge. I don't think that the average shipper or producer takes a longtime view of the situation. He may think that for this week or next week when he has a load of stock to sell, "Well, I am freeing myself from these marketing charges by delivering direct to the packing house."

*By Mr. Sommerville:*

Q. And what in your judgment is the result of such a policy, having in mind the purpose for which the yards were established and maintained?—A. The stockyards were established and they are maintained as a public marketing centre where the patrons or consignors can have the benefit of competitive buying and competitive selling. Every head of stock or every load of stock that is diverted from that public market reduces that competition; that is, stock that is not sold at the stockyards cannot be said to be sold in competition. The benefits of competition are lost.

*By the Chairman:*

Q. And furthermore, would this be true: If a buyer or a purchasing company such as an abattoir secured say 60 or 65 per cent of its stock or supplies direct, then the necessity of competitive bidding on the stock exchange for the balance would be that much less?—A. Yes, that is true.

Mr. SOMMERVILLE: And be that much reduced.

*By the Chairman:*

Q. And the balance of the 100 per cent, that would be 35 per cent, still has to be purchased?—A. Naturally that would be true.

*By Mr. Sommerville:*

Q. And when the large buyer has a large quantity of cattle running direct, he therefore does not have to go upon the stock market to get this supply?—A. That would be true, if it applied to cattle; the volume of cattle going to packing houses is not particularly large.

Q. It is not as great as for others?—A. The biggest flow of live stock direct to the packers is with hogs.

Q. Take that situation; the same principle would apply to hogs, that the more you remove from the stockyards, the less competition there is on the stockyards?—A. That is true.

Q. And the less necessity for the packer to go on the stockyards to get his supply?—A. That is true.

Q. And therefore less competition?—A. That is true.

Q. Mr. McCallum, would not competition on the open stockyards in the long run overcome the whole amount that is involved in stockyard charges?

Mr. FACTOR: You mean in prices, a higher level of prices?

*By Mr. Sommerville:*

Q. By getting a higher level of prices through competition?—A. Well, we have this to depend on, the statements from the live stock exchanges and the various stockyard operators, that if all the live stock marketed at points at which they are established came through the stockyards, they could afford to reduce marketing costs.

*By Mr. Kennedy (Peace River):*

Q. Are packers inclined to pay more for stock coming in direct, or do they accept the price of the day made on the stockyards?—A. Well, that is a question that I cannot answer because I don't know. We know at a stockyard the price at which every animal or group of animals is sold, because we have authority to require that; but we have not authority to require the publication of prices or weights or classification of stock which go direct to the packing houses.

*By Mr. Sommerville:*

Q. In the competitive system in Canada, you regard it as being necessary to know the quality of live stock that is offered, don't you?—A. Yes.

Q. And you require to know the prices at which it is sold on each market?—A. Yes.

Q. And you require to know the source from which it comes?—A. Yes.

Q. You get all that information on the public stockyard, is not that a fact?—A. Yes.

Q. But you don't get any of this information in respect of stock that goes direct to the packing plants?—A. Except with respect to hogs. We know where they originate, because our graders at the packing houses have got that information.

Q. With respect to hogs, because you are grading at the packing plant, you know where they originate?—A. Yes.

Q. But otherwise you don't know the prices they pay for them, nor do you know the weights that are sold to the packing plants?—A. No.

Mr. ILSLEY: For what purpose is it required? With all deference, the question is not clear to me. You say in the competitive system you require to know this; for what purpose?

Mr. YOUNG: What do you mean by "you"?

Mr. ILSLEY: Yes.

The WITNESS: The department.

Mr. SOMMERVILLE: I mean the Department of Agriculture.

Mr. ILSLEY: For what purpose?

Mr. SOMMERVILLE: I will follow that up.

*By Mr. Sommerville:*

Q. Let me understand your present system in the Department of Agriculture; you have a representative at each of the stockyards?—A. Yes.

Q. Is that not a fact?—A. Yes.

Q. And when your stockyard opens, on Monday morning we will say, your representative learns the quantity of stock that is on that market?—A. Yes.

Q. And he learns what bids, if any, have been received on that market, and the prices at which cattle are sold or live stock is sold?—A. In other words, the state of the market.

Q. Yes, the state of the market; your representative gets all that information as soon as possible after the opening of the market when the state of the market can be ascertained?—A. Yes.

Q. And they have that information; your representative sends a wire to the representatives in the other markets advising of the state of that particular market; is that not a fact?—A. I might just elaborate on that.

Q. Yes, if you will; what is the system?—A. We regard Winnipeg as a very strategic marketing point and source of marketing information in Canada. Every morning our representative at Montreal, as well as our representative at Toronto, wires Winnipeg the volume of the receipts and the feeling of the market.

*By the Chairman:*

Q. In Montreal and Toronto?—A. Wires to our representative at Winnipeg. Up till very recently we have also been getting a daily wire from St. Paul and Chicago with respect to the state of the market there, but since we are not able to send any live stock there, we have discontinued that expense.

*By Mr. Sommerville:*

Q. It would not have an effect upon your market?—A. At Winnipeg, the Montreal and Toronto information is combined with the Winnipeg information at about 10.30 in the morning and wired to our other western yards, so that our men throughout Canada at all the yards know the state of the market throughout Canada on a particular morning.

*By the Chairman:*

Q. The Winnipeg market opens one hour behind Montreal and Toronto?—A. On account of the difference in time.

Q. The time differential?—A. Yes; in summer two hours.

*By Mr. Sommerville:*

Q. Then when your live stock men in Edmonton, Saskatoon or Calgary markets are opening their markets or shortly after, they have the information through your department, from Montreal, Toronto and Winnipeg; is that not a fact?—A. Yes.

Q. That information that is sent forward indicates whether or not the Toronto or Montreal market is draggy?—A. Or strong.

Q. Or strong?—A. Yes.

Q. It indicates whether it is heavy or whether it is active, does it not?—A. Yes.

Q. And that message goes out, we will say, from the Toronto yard at around ten o'clock, does it?—A. Say ten o'clock Toronto time.

Q. Suppose the packing plants in Toronto have received 30, 40, 50, or 60 per cent of their hogs or are receiving them by direct shipment; you have no idea what quantity they are receiving direct?—A. No, it is impossible to have that information.

Q. So that you do not know what is the full extent of the market at Toronto when sending out that information; you know only the extent of the stockyards market?—A. That is true.

Q. Then the packing buyers, having a supply of hogs or cattle running, may use that supply and remain off the market for a time at Toronto?—A. That is possible, yes.

Q. And you have known that to happen?

Mr. FACTOR: You mean fulfil their requirements off the yard?

*By Mr. Sommerville:*

Q. They don't have to buy right away? You know that happens? Everybody out there knows it—is not that a fact?—A. Well, it is a fact that buyers are not always as active at nine o'clock on some days as they are on others, and you can only draw one conclusion from that.

Q. You can only draw one conclusion from that, and that is there being no reasonable activity until ten o'clock, your wire goes out from Toronto indicating an inactive market; would that be a fair indication?—A. Yes.

Q. That is received by all the western yards, market inactive being perhaps below the previous market; would that be a fair indication of what your message might be if the packers' buyers remained inactive?—A. Well, it would be an indication that prices are off on the Toronto market.

Q. If it be an indication that they are off the Toronto market?

Mr. EDWARDS: Will you ascertain there if the figures of the buyers compare to those of wires sent out by the department?

*By Mr. Sommerville:*

Q. Yes. Now then, after these wires are sent out, and are received at Saskatoon on the opening of the market there—do these packers also have buyers out of Saskatoon?—A. Yes, the packers have buyers at Saskatoon.

Q. Yes, and what would be the effect, from your judgment as a live stock man, of the receipt of that wire at Saskatoon upon the market there—that the Toronto market is very inactive—and upon prices at Saskatoon?—A. Our experience has been that the packers' buyers usually have word long before our wires reach there in the morning, and that they have knowledge of the situation on the Toronto or other markets long before our men get it.

Q. A private service that is quicker than the government service?—A. Exactly.

Mr. FACTOR: How do they get that?

*By Mr. Sommerville:*

Q. They have their own men at the Saskatoon stockyards?—A. Yes, they have buyers representing the packing houses at the stockyards.

Q. Is it fair to assume that as a result of this combination of wires the market in Saskatoon drops a half cent, as frequently happens?—A. There is one thing I believe that would prevent a very serious drop, and that is that the packers at Montreal depend very largely for their supplies on western Canada.

Q. Yes?—A. And they have orders coming over the wire daily to the various markets and their orders would, I think, do as much in preventing a serious drop as the information from Toronto that there was a draggy market there.

Q. Well, let us leave out the word "wire," do you think it would have the effect of depressing the price at Saskatoon?—A. Naturally it would have a depressing effect.

Q. Yes, and then when sales took place on that depressed market, does your government representative then communicate the information to the Winnipeg market, or to the Toronto market?—A. No, our representatives at the various yards, with the exception of Winnipeg who advise other points in the morning, our representatives at all points send information direct to this department.

Q. Direct to Ottawa?—A. Yes.

Q. How does the information get back to the Union Stockyards at Toronto that the Saskatoon yard is depressed, and has dropped ten, fifteen, or twenty cents per hundred; how does that get back, by what system? Does that come from government sources, or does it come from private sources?—A. We make no general report for the press until Thursday afternoon. Our weekly reports are put out in this form (weekly live stock market report shown). It goes out on Friday; and through our radio service at various points the market at the various stockyards gets on the air.

Q. Yes, but is it not a fact that when the market is depressed at Edmonton, or Saskatoon, or Calgary, or Winnipeg, the information goes back to Toronto on that same market morning, whether by private or public sources?—A. I take it for granted that the information gets there.

Q. Yes, and then is it not a fact that this information going back is used by the packers' buyer at Toronto to bring the Toronto market in line with the depressed markets of the west?—A. I could not say definitely that that happens, but it is natural to suppose so.

Q. Well, all the markets keep in line fairly generally, do they not, subject to the differential in freight?—A. Subject to the differential in freight they are fairly well in line with the exception of Montreal.

Q. So that you have practically Calgary, Saskatoon, and Winnipeg conditions reflected in Toronto, subject to the differential in freight?—A. There would be this difference, sir, with respect to Edmonton and Calgary, where they have an outlet for Alberta hogs at the Pacific coast, and prices at Toronto would not affect them.

Q. They might possibly affect the question of hogs?—A. To quite an extent.

Q. Then have we fairly described the system by which market information passes from Montreal and Toronto to the West, and goes back again to the markets of the East?—A. Yes, we are responsible for getting that information to all our men, and to the public every morning.

Mr. ILSLEY: Why do you start in the east?

Mr. SOMMERVILLE: They open there earlier and their buyers are in the east.

*By Mr. Sommerville:*

Q. Then, Mr. McCallum, have I fairly outlined the system by which prices go out to the west and come back again to the markets of the east?—A. I am familiar with how it gets to the west, but the matter of the information coming back to the markets of the east does not come under our department.

Q. That does not come from your sources?—A. No.

*By Mr. Factor:*

Q. It is not official?—A. No.

*By Mr. Sommerville:*

Q. That comes from private sources?—A. Yes.

Q. But nevertheless when a break occurs on any of these western markets, or when there are reductions in price, that is immediately communicated to the eastern markets?—A. I would suppose so.

Mr. FACTOR: How do you mean? What information comes? How is it sent?

Mr. SOMMERVILLE: It is sent out within half an hour, as fast as the wires can carry it.

Mr. ILSLEY: I want to point out that Mr. McCallum says that he does not know anything about it, but just surmises that it gets out.

*By Mr. Sommerville:*

Q. Mr. McCallum, you were for years located at the Toronto yards?—A. No, sir, I was never at the Toronto yards.

Q. But you have a representative there?—A. Yes, sir.

Q. And you are in touch with the representative regularly, and have been for years?—A. Yes, sir.

Q. And have you observed the operation of the market system that I have outlined, the workings of that system in the course of your years of observation on the markets?—A. Yes, sir.

Q. Well then, Mr. McCallum, if a steadily increasing volume of live stock is removed from that market—from the stockyards market—will that have a beneficial effect or otherwise upon prices at that market?—A. It will not have a beneficial effect.

Q. It will not have a beneficial effect?—A. No.

Mr. FACTOR: You mean, removed by direct purchasing?

Mr. SOMMERVILLE: Removed by direct purchasing.

*By Mr. Sommerville:*

Q. Then does the direct purchasing put in the hands of the large buyer the opportunity, whether he takes advantage of it or not, of affecting the market on the public stockyard?—A. Would you mind repeating that?

Mr. SOMMERVILLE: Will you please read back that question?

The REPORTER: The question reads:

Q. Then does the direct purchasing put in the hands of the large buyer the opportunity, whether he takes advantage of it or not, of affecting the market on the public stockyard?

The WITNESS: It does affect the markets on the stockyards.

Mr. ILSLEY: Wherever you take off the supply, you take off the demand, too; if you take away the sellers, you take away the buyers; but where does it make any difference in the net result.

The CHAIRMAN: If you followed it through to a finish, there would be nothing left at all.

*By Mr. Sommerville:*

Q. May I put it this way, Mr. McCallum; is there any other public information on prices of live stock given to the people of Canada except the prices quoted on the stockyards themselves?—A. Not that I am aware of.

*By Mr. Young:*

Q. In other words, the stockyard prices form the basis of prices on cattle quotations throughout Canada?—A. So far as we know, yes.

Q. Well then, Mr. McCallum, perhaps you will give the committee the benefit of your views upon this situation: supposing in Alberta and Northern Alberta that you have all the hogs slaughtered at Edmonton 90 per cent bought direct and only ten per cent bought on the public stockyards; what do you say as to whether or not that is a healthy situation from the standpoint of the producer?—A. I had some figures prepared.

Q. Perhaps the figures may do even better on that?—A. That if 90 per cent—

Q. Suppose 90 per cent of the hogs slaughtered at Edmonton are bought direct; well let us put it at 95 per cent of the hogs slaughtered at Edmonton are bought direct, and only five per cent are bought on the public stockyards, and if the price on the public stockyards is the only quotation, is that a healthy situation from the standpoint of the producer?—A. In the long run I think not.

*By Mr. Factor:*

Q. Supposing we eliminate the stockyards altogether, and have the producers all go direct to the packers, what would the effect on the price then be?—A. There would be no price fixing, by stockyard competition.

Q. Then it would be entirely under the control of the packers?—A. There would be competition between the packers, instead of competition between packers, butchers, and eastern orders, so far as western men are concerned.

Mr. ILSLEY: We had a packer here who stated that it was the English market that fixed the price.

Mr. SOMMERVILLE: Supposing, following Mr. Factor's suggestion, we follow that question through. Supposing you had the stockyard eliminated entirely, then would this not be the situation; that you have the organized buyer dealing with the unorganized farmer or seller—would not that be the situation?—A. Yes.

Q. Has such a situation ever been to the advantage of the unorganized seller, that you ever heard of?—A. No.

Q. As a matter of fact is not it a fact that the stockyards have been encouraged and developed under government auspices for the very purpose of organizing the farmer for his competitive market?—A. I could not say whether that was in the mind of the department or not in taking the stockyards under government control. I look upon it in this way, the government has said to the producer of live stock in Canada, we have taken under our control the public stockyards and live stock exchanges.

*By Mr. Young:*

Q. Mr. Sommerville's question was about the government itself organizing stockyards and starting them to help the farmer?—A. That has not happened, and we have said the government—

Mr. SOMMERVILLE: I said, organized or encouraged; in some countries they have organized them distinctly, Mr. Young.

Mr. HEAPS: I wonder if you could find out if there is any differential between the prices received on the stockyards and places outside of the stockyard.

Mr. SOMMERVILLE: We will have no advantage in getting that at the present time, Mr. Heaps, but we will see that very clearly I think before the inquiry closes.

*By Mr. Factor:*

Q. In your opinion, Mr. McCallum, if some legislation is enacted limiting direct sale from the producer to the packer would that increase competition in the stockyards, and enhance prices?—A. Well, it certainly would increase competition.

Q. Would it enhance the price?—A. I think it would enhance the net return to the producer, because we could decrease the cost of marketing if all the live stock unloaded in Canada for slaughter purposes went through the public stockyard.

*By Mr. Sommerville:*

Q. Apart altogether from any question as to whether it would increase the price to the producer, it would decrease the cost of marketing?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Has not the whole agitation for public stockyards been because of the idea of farmers at least that when they did not have them they were being exploited, and that they would get better prices on the open yards?—A. I think that was the idea of having stockyards established in the days when they were; a better place of marketing, where buyers and sellers could meet in competition, and have the benefit of competition in establishing fair market prices.

*By Mr. Young:*

Q. Who are the buyers on the stock markets; whom do they represent, at the Winnipeg stockyard for instance?—A. The big packers' buyers.

Q. The big packers' buyers located in Winnipeg?—A. Yes, the agents of eastern packing houses.

Q. The agents of eastern packing houses?—A. Yes, and small butchers of whom there are quite a few.

Q. Do they buy from the stockyard, and kill it?—A. Yes.

*By Mr. Sommerville:*

Q. For local purposes?—A. Yes.

Q. I thought they had to get their stuff from the packing houses?—A. No. In Montreal the big competition in buying is given by the small wholesale butchers who buy their stock at the stockyards and they have to have it slaughtered at inspected abattoirs. Then again there is the speculator who forms quite a competition in buying. Speculators of the Winnipeg yards, for instance, are in receipt of orders from Eastern buyers and they are competing with local butchers and the local packers for supplies.

Q. Yes, but the large buyers, however, do take the dominant place in the market?—A. Oh yes.

Q. Then, Mr. McCallum, will you be good enough to give us a statement of what has been the history of shipments direct to the packers, and to the stockyards; if you have it, showing the percentages—whether or not there has been an increase in the quantity going to the stockyards, and prices. Perhaps you have a statement covering that?—A. I could get that statement for you, I haven't it at hand. I would like to explain that the market service is composed of two main parts; the part that has the supervision and administration of the Live Stock and Live Stock Products Act with respect to market practices, the securing of bonds, dealing with complaints, registrations, prices of hay and the fixing of charges; the other part is purely statistical.

Q. And the markets' intelligence branch?—A. That is handled by the markets' intelligence branch. I will have to apply to them to get these figures, and I would be only too pleased to get for you any figures that you may ask for from the markets' intelligence service.

*By Mr. Factor:*

Q. Generally speaking, do you know whether the percentage of direct selling to the packers has increased?—A. Yes, it was largely confined to hogs up to a few years ago; but we find that a very considerable volume of lambs and calves in car lots and in truck lots are now going direct to the plant.

*By Mr. Ilsley:*

Q. That is the trend?—A. Yes, and particularly since the truck traffic has developed so spectacularly in Ontario. We believe that there is about as big a trend of truck traffic to the packing houses in Toronto as to the stockyards.

*By Mr. Factor:*

Q. Where the producer sends it direct to the packing plant if he can get a better price than in the competitive market on the stockyard?—A. He believes that he is evading the stockyard charges, the yardage, and all the rest of the charges.

The CHAIRMAN: He is doing that, as a matter of fact.

*By Mr. Ilsley:*

Q. And he is doing that to evade these charges?—A. He is either directly or indirectly evading them.

*By Mr. Sommerville:*

Q. Is he not encouraged by the packer to send to the plant because he can avoid these charges?—A. That may be, I could not give you a direct answer to that.

*By the Chairman:*

Q. May I ask, before we get away from this point, is it the practice of the big packing plants and the abattoirs to clean up all their stock towards the end of the week, Friday and Saturday; to get rid of the live stock they have on hand, and get it all cleaned up over the week-end?—A. I suppose, when they have it on hand; I think so.

Mr. YOUNG: Do you mean supplies of live stock, or dead stock—dressed meat?

*By the Chairman:*

Q. Live stock, and meats. Now, here is something I notice very regularly in the press, when I read live stock prices. I am going to read you one now and I am going to ask you if you would give an explanation of this state of affairs. Here is last night's paper; Toronto, March 19th, (this would be Monday evening's paper), with a heavy opening run cattle trade was at a standstill at the Toronto Live Stock Market this morning, and not enough sales were made to establish prices. Receipts as reported by the Dominion representative at Toronto were: cattle 2,520, calves 220, hogs 930, sheep and lambs 630. And then it said, quotations—cattle, hogs, sheep and lambs no quotations. Now, such statements frequently appear. Can you give us any explanation?—A. Yes, the explanation to that is that the buyers were not on the market making any actual purchases at the time that that statement was sent to press. It was a draggy market which would necessitate a heavy carry-over of stock until to-day's market, and possibly to-morrow's market.

*By Mr. Factor:*

Q. And that draggy market was, perhaps, artificially created by the large packers who, having already directly purchased from the producers, kept away from the market?—A. It could have been created that way.

*By Mr. Young:*

Q. If the packers wanted to create a draggy market could they not do it more effectively by refusing to buy anything in their packing houses, and forcing it on to the stockyards?—A. If it were all forced on to the stockyard.

*By Mr. Sommerville:*

Q. The other fellow would have a chance on it?—A. They could not afford to keep their plant in operation without enough supplies to keep it going to its capacity.

*By Mr. Young:*

Q. It works both ways. If the packer has got 65 per cent of his supplies at his door and has to go on the market for 35 per cent, he has got to get that to keep his plant going—if he refuses to buy anything at the plant door and has to go onto the market for all his supplies, it would have the same effect.

The CHAIRMAN: He could not sit for a day and do nothing; he would have to go any buy the first thing on Monday morning.

*By Mr. Young:*

Q. Suppose the stock comes into the plant in larger supply than in their yard?—A. With rail stock, Toronto and Montreal might be called a one-day market for rail stock. Most of the railway divisions have put on a special livestock train starting at one end on Saturday morning and picking up loads all along that division until towards Toronto they have a full livestock train. That has happened all the way over Ontario. That stock arrives at the Toronto market, say, Sunday morning, all the way from 4 o'clock to 8 or 9 o'clock. It is well fed on Sunday and Monday morning and offered for sale. Monday is the big market in Toronto for rail stock, but with truck stock we have it spread over the week—Monday, Tuesday, Wednesday and Thursday.

Q. Deliveries would tend to even out the market?—A. Yes, even out the market, lengthen it over the week. But there is this to be said. Very often no purchases are made in the morning until 11 o'clock, until it is seen how much truck stock comes in. The most of the truck stock in Toronto arrives between half-past ten and eleven, and the volume of truck stock has a good deal to do with establishing the prices to be paid that day.

Q. It is not the stuff that has been bought before the market opened by the packer, but the stuff that might come in during the forenoon which is holding the market back?—A. That is what causes, to a large extent, the lack of purchasing up until half-past ten or eleven o'clock, particularly in Toronto; they wait to see what the volume of truck stuff on that particular day is to be to know the available supplies.

Q. They know what is coming in by rail; they have to wait and see what is coming in by truck?

*By Mr. Sommerville:*

Q. They know what is coming into their own plants over the week end; they know what they have available on Monday morning?—A. Yes, by rail.

Q. And then, following up Mr. Young's question, if they had 65 per cent in their own plant they would have only to go on the market to buy 35 per cent?

Mr. Young: Do they have 65 per cent?

*By Mr. Sommerville:*

Q. If they had 65 per cent in their own plant they would only have to go on the market to buy 35 per cent; but the possession of the 65 per cent might enable them to wait until Tuesday or Wednesday before buying the 35 per cent?—A. Sixty-five per cent of the purchased supplies would be for 65 per cent of the week.

Q. Speaking of the market, the big market on Monday would have what effect upon that market at the end of the day?—A. A very draggy market and a carryover.

Q. And did you ever know a carryover to improve in price on the second day; or is it the general rule that it depreciates in price?—A. The carried over stuff is not as attractive to the buyers as the stuff that is offered fresh for sale on a Monday morning. The carryover for one day does not affect it very much, but when it has to be carried over three or four days it is more or less warmed up.

The CHAIRMAN: I interrupted you when you were dealing with stockyard charges, and you were going to give us a picture when we got into this question.

Mr. ILSLEY: May I ask a question?

*By Mr. Ilsley:*

Q. Take this packer who, by hypothesis, has bought 65 per cent of his requirements direct. Now, you say that if that 65 per cent were drawn into that stockyard it would make a greatly increased supply to the stockyard; but the packer was compelled to go and bid, and the price would be better than if there was a very much smaller supply in the stockyard and no packer there?—A. I did not say the price would be better. I said that we could afford to reduce marketing costs, and in that way increase returns to the producer.

Q. I understand that perfectly. Mr. Sommerville's point and the chairman's position appear to be entirely different. That is to say, irrespective of the cost of operating the market, if you arrange your market by taking off buyers and taking off sellers, by taking off both supply and demand, and on a theoretical basis considering them apart from operation costs, you leave your market in exactly the same position. You have reduced the supply tremendously and you have reduced the demand tremendously, and that the net result would be the same.

The CHAIRMAN: If you have fewer buyers and fewer sellers to the same extent, why is not the net result of your market exactly the same, except for operation costs?

The WITNESS: Well, there are not too many buyers at the best. The number of sellers remains constant.

Mr. YOUNG: No. Not if 65 per cent is sold out.

The WITNESS: Yes, because there are the same number of commission firms there handling stock to sell every week.

Mr. ILSLEY: They would have a lot less to sell.

The WITNESS: Yes, they would have a lot less to sell; but there would be the same number of sellers. To all intents and purposes it is the commission firm mostly who is the seller on behalf of the man who, possibly, has not come in with his stock. He may have less stock to handle, but there are the same number of sellers, and if he has only half the number of buyers he has not very much competition.

Mr. YOUNG: The pressure is removed. He has only 35 head to sell instead of 100.

The WITNESS: When the competition is not keen they are just as hard to sell as 100.

*By Mr. Young:*

Q. If he has 35 to sell and there is a demand for 35 or if he has 100 and there is a demand for 100 his position is identically the same?—A. If it is 100 he would have double the number of competitors and he could select one who would give the best price. He has only half the number of competitors now.

Q. Each packer has secured 65 per cent of his requirements. He has to go into the market now to buy the other 35.

*By Mr. Sommerville:*

Q. Would the 35 per cent bring a better price if offered to 100 buyers rather than 50?—A. No, it would not.

Q. With the greater competition?—A. The keener competition the higher the price level you are likely to establish.

Q. I do not think Mr. Ilsley and I are at cross-purposes at all, but I understood you to say that if all the conditions were exactly the same and you brought all the cattle to the market you could, at least, reduce the charges?—A. Yes.

Q. And you could, at least, give that benefit to the farmer?—A. Yes.

Q. And that in addition to that he could also have the benefit of increased competition, whatever that might produce?—A. Yes.

Q. Now, that is the situation.

MR. ILSLEY: It works at both ends. That is my question. I do not see that it makes any difference, but maybe it does.

MR. SOMMERVILLE: Perhaps we will have some marketing men before us who will discuss the situation.

*By Mr. Young:*

Q. Has not this situation arisen—I have known it to arise at Moose Jaw—where the farmer getting his stock in there would get the impression that the buyers were holding off. They were not going to bid and would hold up his stuff. He shipped his stuff to Regina where there was no stockyard and sold it to a packing house?—A. Yes. That might happen. I do not suppose it happens very often, but it could happen.

MR. SOMMERVILLE: He would have increased costs in doing so, would he not?

MR. YOUNG: It is quite common for him to load it up and ship it to Winnipeg. He would ship it to Moose Jaw if the buyers sat back and did not bid, or he would load it up and ship it to Winnipeg.

THE WITNESS: I take it every commission firm is under obligation to his consignor, to his customer. If he cannot get a satisfactory bid where the stock is and he can get a better price by shipping it on, that is what he ought to do.

MR. YOUNG: It is sometimes necessary to do it.

THE WITNESS: Yes, because the only thing that talks is dollars and cents.

*By Mr. Sommerville:*

Q. Is that not subject to this handicap that he ships it to a market where the same buyers are to be found—the representatives of the same packing plant buyers?—A. Yes, but there may be some condition applying at a smaller place that would be obviated by going to a larger centre.

Q. Where he would have a larger competition?—A. Yes.

*By Mr. Ilsley:*

Q. Now, is there organized buying publicly—the organization is private, of course—but do they go there combined to go to a certain level or something of that sort?—A. The charge has been made that that is a fact. I do not say it is true, because I do not know.

Q. Would there be any more difficulty about organized buying at stock yards than organized and private buying assuming there were no stockyards. I am taking your own phrase, Mr. Sommerville. I understood we were taking a hypothetical case raised by Mr. Factor, if there were no stockyards, and your question to the witness was: Then you would have organized buyers against unorganized sellers; these sellers would be going to the various packing houses

with what they had to sell and they would be met with this price which would be arranged in advance.

Mr. SOMMERVILLE: No, no, Mr. Ilsley. I am glad you mentioned that. The packer is a buyer with information on that market as to market conditions. He has more information about market conditions than has the farmer in the back concession. When the packer with his information goes into the farmer's yard, he is an organized buyer in the sense that he has organized his system of buying and knows what he wants to do. The farmer is an individual, unorganized, and there is no competition.

Mr. ILSLEY: Take the case when he does not go into the yard. You were taking the case when he did not go into the yard—when the farmer brought the goods to the yard.

Mr. SOMMERVILLE: It is practically the same thing, because somebody goes into the farmer's yard, whether it be the trucker or drover or the agent. Somebody goes into the farmer's yard and makes a deal which results in the cattle going direct to the point.

*By Mr. Sommerville:*

Q. Have you found that there has been a large increase in trucking?—A. Spectacular.

Q. And the trucker's interest is in getting the return on his trucking?—A. As a carrier.

Q. And getting as many truckloads as he can possibly deliver within a certain length of time; that is his interest?—A. He is selling a carrying service.

Q. And if he goes to the stockyards with his truckload he has to wait until the stock is sold in order to take back the money to the farmer?—A. Yes.

Q. Whereas if he goes to the packing plant with his truckload he delivers it at once and goes back to the farmer, or some other farmer to get another truckload; is not that the system?—A. That is the system as I understand it.

Q. And that works in favour of the packer because of the interest of the trucker in getting back and getting as many loads as possible, does it not?—A. Yes. I believe that is the reason so many go direct with truck loads, to get immediate settlement and evade stockyard charges.

Q. And then they get an increased number of loads. Now, are you aware of whether or not the packing plants pay any bonus to the truckers to bring a certain volume per week to them?—A. I have heard the statement made. I have also heard a representative of a packing firm say that they pay a certain price for hogs and pay the transportation charges, just the same, of course, as the man who will buy hogs on an f.o.b. basis shipped by rail. He will take the scale tickets at the point of loading and he will pay on the weight and pay transportation charges, and it is just as natural, I suppose, to do the same thing with regard to the trucking business.

*By Mr. Kennedy (Peace River):*

Q. Who checks the scale at the packing plant?—A. I could not answer that question because I do not know. We have no jurisdiction over scales at packing houses.

*By Mr. Sommerville:*

Q. When stock is brought to a packing plant, it is not weighed over the government scale?—A. Well, it is not a scale that is operated by a man approved by the Minister of Agriculture of Canada.

Q. It is operated by a man employed by the packing plant?—A. I think so.

Mr. FACTOR: It is government inspected.

*By Mr. Sommerville:*

Q. I presume it is government inspected like all scales; but I am told it is not a type registering beam scale such as you require in stockyards?—A. I have never seen hogs weighed at a packing plant. I have definite knowledge of one type registering beam installed in a packing house at Winnipeg. As for the others, I cannot say, because I have not seen them, have had no occasion to visit them.

*By Mr. Young:*

Q. In a type registering beam scale, it does not register until someone pulls a lever?—A. They have to squeeze a lever.

Q. To make it register.

Mr. FACTOR: Once it is squeezed, it is pretty accurate.

Mr. YOUNG: Yes, it is pretty accurate, but not necessarily squeezed at the right point.

Mr. SOMMERVILLE: Well, it is squeezed by the government representative in the one case, and in the other case by one who is not a government representative.

Mr. HEAPS: Does that make any difference in the weight?

Mr. SOMMERVILLE: Well, it may make a difference in the weight.

The ACTING CHAIRMAN: It is now one o'clock. The committee will adjourn until 3.30.

The committee adjourned at 1 o'clock until 3.30 p.m.

## AFTERNOON SITTING

The committee resumed at 3.30 p.m.

The CHAIRMAN: Order, gentlemen, and we will proceed. Mr. McCallum, I think, was not yet through, and I would ask him to come forward, please.

*By Mr. Sommerville:*

Q. Mr. McCallum, you were giving us a picture of the operation of live stock marketing when you were interrupted and we got into a discussion of the question of marketing practices. Will you be good enough just to continue? You have dealt, I think, with stockyards and stockyard charges; there are just the three branches of revenue; one is the loading and unloading charge; the second is yardage, and the third is profit on the sale of hay and feed?—A. Yes.

Q. Will you now proceed with the further presentation of the matter as you like to present it to the committee?—A. There is one other indispensable factor in stockyard marketing. As I explained this morning, we have the stockyard company which furnishes the building, plant and all facilities for looking after the live stock from the time it is received at the stockyard until it is sold and delivered to the purchaser.

*By Mr. Young:*

Q. That applies to the stock that comes to the packing houses as well as anywhere else, I suppose?—A. Certainly; the live stock that the packer buys is taken in charge by the stockyard company until delivery is taken by the packer purchaser, the same as any other purchaser. The stockyard really furnishes a warehouse service. They have no interest, financial or otherwise, in the stock which passes through their facilities.

There is the other very important factor, the live stock exchange, or where there are not enough operators to form a live stock exchange, the commission merchants. The act requires that there shall be a live stock exchange in connection with each stockyard operated under this act of which exchange every co-operative association, commission merchant and dealer doing business at such stockyard shall be a member unless it or he holds a special licence from the minister. At a number of stockyards in Canada there are not a sufficient number of operators to form a live stock exchange. Consequently under the authority of the act, section 10, special licences are issued by the minister to the persons operating in the capacity of commission merchants, co-operative association or speculator, as the case may be. When I use the word speculator, it is synonymous with the term dealer, meaning a person who buys and sells for his own account, not for commission, but buys and sells for his own account for speculative purposes.

*By Mr. Sommerville:*

Q. Another word might be operator, might it?—A. Well, we call all persons who are on the stockyards "operators" whether they are commission merchants, co-operative associations or dealers; but dealer and speculator and trader are synonymous terms. They are speculating on their own account, not on commission.

There are at present six live stock exchanges in Canada: Montreal, Toronto, Winnipeg, Moose Jaw, Calgary, and Edmonton. All of the operators at those yards are members of the live stock exchange. The live stock exchange, as I explained to an inquirer this morning, is a voluntary association of the men engaged in the buying and selling of live stock at that stockyard. As I said, the act requires that there shall be a live stock exchange. Section 8 of the act requires that a live stock exchange shall not be operated until the by-laws to regulate the management and business of such exchange have been duly approved by the minister, and a written notification of such approval has been sent by the minister to the secretary of such live stock exchange. The following paragraph of that section is a very important one: Such by-laws shall provide for the admission of co-operative associations, commission merchants and dealers as members of such live stock exchange on such terms and conditions as may be fixed by the by-laws which shall require every co-operative association, commission merchant and dealer to furnish satisfactory security to His Majesty for the proper discharge of all the obligations of such member.

*By Mr. Senn:*

Q. Does that security vary with different firms, with the operations of different firms?—A. No, sir. So far as the commission merchants, and co-operative associations at stockyards in Canada are concerned, the amount of the security is set at \$10,000. While the business turnover of some of the larger firms is four or five times greater than that of some of the smaller firms, the amount of security required is a standard amount, it being thought by the department that with the proper operation of a shippers' trust account, that amount of security is quite sufficient.

*By the Chairman:*

Q. Can a person do business at a live stock marketing yard if he is not a member of the live stock exchange?—A. No, sir, except as a buyer. He can buy. He does not have to be a member of the exchange. He does not have to put up any security to be a buyer, but to be a commission merchant, to buy and sell on commission, or be a speculator, he must be a member of that exchange.

*By Mr. Kennedy:*

Q. Mr. McCallum, has that security in the main proved adequate?—A. In the main, yes, sir. We have had very few occasions to call upon the bonding company to make good any defalcation of commission merchants. A most outstanding case happened at one of our stockyards three years ago, when a bonded commission merchant issued cheques in the sum of \$6,699 and some odd cents. We asked the bonding company—

*By the Chairman:*

Q. Which he failed to meet, I suppose?—A. Which he failed to meet, yes, sir. We made a demand upon the bond company but they contested the department's demand and after a good deal of litigation a verdict was given on behalf of the department for the full amount of the claim plus interest at five per cent from the time we made the claim on the bond company. That means that every producer or shipper of live stock who had been issued an N.S.F. cheque received the full amount of his claim plus interest at five per cent; that is the most outstanding case we have had. I am very glad to say that we have had very few occasions to call upon the bond company.

*By Mr. Kennedy (Winnipeg):*

Q. The full amount of that verdict was recovered from the bond company?—A. Yes.

*By Mr. Factor:*

Q. Mr. McCallum, I think you told us that there are twelve stockyards in Canada?—A. Yes.

Q. Where could we get information as to the financial make-up or structure of these companies? Would your department have that, that is the amount of shares issued, where is it a share capital company, and the shareholders and all that?—A. You mean of the stockyard companies themselves?

Q. Yes?—A. That would have to be secured from the owners of the stockyard company concerned.

Q. Your department has no information?—A. We have no authority whatsoever to require it from stockyard companies.

MR. KENNEDY (*Winnipeg*): I think that if these are provincial companies, that information would be on file at the provincial secretary's office at the parliament buildings.

*By Mr. Factor:*

Q. Are they all provincial companies?—A. I believe that they are organized under provincial laws.

Q. Provincial charters?—A. Yes.

*By Mr. Senn:*

Q. There is a stockyard act, a federal act, is there not?—A. Yes, we were discussing that act.

*By Mr. Sommerville:*

Q. This morning?—A. Yes.

*By the Chairman:*

Q. Just at that point, may I ask if you keep any record whatever of who are the owners of the stockyards?—A. Oh, yes.

Q. I mean who are the shareholders in the stockyard companies?—A. No, sir, we have no record. We know who the officers are; we know who the owners are, and in some cases we know who the board of directors are; but the shareholders, no, sir, nor the amount of capital held by those shareholders.

*By Mr. Factor:*

Q. In the returns which are furnished your department, there is no provision for furnishing you with a list of shareholders and the capital structure of the company?—A. No, sir.

The CHAIRMAN: Would you like to get that, Mr. Factor?

Mr. FACTOR: Yes, I would.

The CHAIRMAN: We had better make a note of that while we are thinking of it.

*By Mr. Young:*

Q. Did you say that there were six live stock exchanges?—A. Yes.

Q. And twelve different yards?—A. Yes.

Q. And you say that they are forbidden to deal unless they belong to an exchange; how do they do when there is no exchange?—A. In reading section 7 and subsection 1 of the act, I brought to your attention the fact that every co-operative association, commission merchant and dealer must be a member of the live stock exchange unless he holds a special licence from the minister.

Q. There are some stockyards in which everybody that is dealing deals by special licence?—A. Yes, because there are not enough operators at those particular yards to form a live stock exchange. At some of them there is only one operator. At Regina there is one operator; at North Battleford there is one operator; at the pool yard at Saskatoon there is one operator.

Q. Do you mean to say there is no competitive bidding at those yards at all?—A. Competitive bidding but not competitive selling.

*By Mr. Ilsley:*

Q. Only one man selling?—A. Only one man selling; at the Union Stockyards, Saskatoon, two commission firms; at Prince Albert stockyards, two commission firms. You will understand that with that small number of operators at each of the yards I have mentioned there are not sufficient to form an effective live stock exchange. Consequently in order to bring them under the terms of the act, by requiring registration, by requiring bonds and shippers' trust accounts, we do so by special licence for which authority is given.

*By Mr. Young:*

Q. In a yard like that where there is only one seller and a number of buyers, does that seller hold the buyers in his hand? Can he, by reason of the fact that there is no competitive selling, force the prices higher there than they are at other points?—A. I don't think so.

Q. Why not?

Mr. SOMMERVILLE: The buyer may go elsewhere.

Mr. YOUNG: Just let the witness answer, if you please.

Mr. SOMMERVILLE: Yes.

The WITNESS: At those points—at Regina, for instance, there is the packing house within a quarter of a mile from that little stockyard. A man may take his stock to the stockyard and if the price offered the operator of the commission business there is not high enough to suit him, he has the privilege of taking that stock right across to the packing house and seeing what he can do with it

there. At the same time, at each of these small yards there are representatives of the various packers who can bid for the stock.

*By Mr. Young:*

Q. They are the buyers?—A. They are the buyers.

Q. There is only one seller?—A. There is only one seller.

Q. And if there are a half a dozen buyers bidding for his stock, is he not in a better position to sell his stock than if there were two or three sellers there and the same number of buyers?—A. That has never occurred to me.

Q. We have had arguments here this morning that where the numbers of buyers were reduced, it had an adverse effect on the market. The point that I am trying to get at is where the number of sellers is reduced, should it not have an effect on the market? If it works one way, why does it not work the other?—A. We find this at the larger stockyards where there are a number of sellers, one competing against the other in order to hold his shipper customers, that his incentive is that on every head of livestock that is sold, to get the last cent he can from the highest bidder; and judging from that statement, it might be possible that if there were more than one operator at a stockyard, that there would be better prices.

Q. Would it work the other way, where you increased the number of buyers competing for the stock, each buyer trying to place his principals behind him, while trying to get more stock than his competitor and raise the market; it is a poor rule that does not work both ways?—A. We have not had an opportunity of trying that out at these small yards, because at each of them there has never been more than one selling agency; and with two of them the selling agency also owns the yard.

Q. But the evidence here this morning was to the effect that where the packers got a portion of their supply from other sources than in the yard, then they could withdraw their buyers from the market for a few hours or a day and in that way force down the price; that was the evidence this morning. Now we have another set of yards where there is a shortage of sellers; you say a shortage of sellers might increase the price. Well then, would not a shortage of buyers in the other kind of market have an effect of trying to persuade these buyers?—A. I thought I said that where there was competition in selling, where there was more than one salesman, that there would be competition between those salesmen to get the very best price for the stock rather than where there was only one.

Q. More sellers will raise the price?—A. In that particular case.

Q. They would be running each other to make the sales?—A. They would be competing with each other to make the sales; but where there is only one salesman handling all the stock he might not be so disposed to use as great salesmanship as where he had a competitor. I don't know where the line could be drawn; I cannot say.

Q. Suppose there were only one buyer in the market and he had no competition, what would he do?

The CHAIRMAN: Compete with himself.

The WITNESS: He would have to compete against outside orders, because most of the men who are acting as salesmen at those small yards have orders from outside firms, Montreal firms or Toronto firms or Winnipeg firms as the case may be, and he would know what that order is worth to him, and if the price competing locally did not at least equal that price that was competing from the outside, he would ship that stock that is in his control to that outside order.

*By Mr. Young:*

Q. He would just handle those outside orders he had?—A. Yes, he can handle those.

Q. He is a lone buyer in the market, and he is buying cattle for different firms, one in Toronto, one in Montreal, and some local firms, is that the idea?—A. I think we are getting mixed up. He is the seller on the market; we are talking about a commission merchant that is acting as salesman.

Q. We are at cross purposes.

The CHAIRMAN: Mr. Young, Mr. McCallum says where there is a small exchange with one commission firm, that commission firm may get orders from outside, ask for quotations, and on those quotations he would compete against offers by the buyer or buyers that appeared on his small market.

Mr. YOUNG: You say they are asking for quotations to be given him?

The CHAIRMAN: Ask him for quotations on the stock.

Mr. SOMMERVILLE: Orders.

The CHAIRMAN: Offering him orders, if you like to put it that way.

The WITNESS: Placing orders with him, direct quotations.

*By the Chairman:*

Q. Would not this be the point, though—I will ask Mr. McCallum this question: In the case of a commission man, where there is say one or two, he is selling his services to the producer of the stock; that is really what he does; that is his competition for service?—A. That is what he is drawing commission for.

Q. He is selling his services?—A. Yes.

Q. So that if there were two commission men on the market, or three or four or a dozen, there would be keener competition among them to get customers, that is producers to send their stock to them?—A. Up to a certain number, yes; I don't know where that limit would be reached.

Q. You only know they have to offer better service than their neighbours if they are going to attract the business to them?—A. Yes.

*By Mr. Sommerville:*

Q. That service would consist in getting better prices if they could for their producers?—A. That is how it would be measured in terms of dollars and cents, for the producers.

Q. You spoke of the operators having outside orders, and these outside orders they will have, we will say, in their pockets when the buyer comes along?—A. Yes.

Q. That is what you had in mind when you spoke of them?—A. Yes.

Q. And they will use those outside orders to force the buyer up in price?—

A. They will gauge a local buyer's bid by the order that they have in their pockets, if they have orders.

*By Mr. Sommerville:*

Q. Yes, that is true; and is that one of the reasons why the packer goes to buy at the country point where the agent will not meet him with outside orders in competition; away from the yard, I mean? Is that one of the reasons, Mr. McCallum, why the packer goes to the farmer, wherever the farmer is, to avoid meeting the competition of this outside order that the commission agent has in his pocket on the yard?—A. That is a very difficult question to answer. I do not know why the packer goes out to the country to buy stuff. We know that that practice is followed. We know in addition that the representatives of different packing houses buy live stock in the same territory or in an adjoining territory where there is a certain amount of competition between them to get the stock in that locality. I know this much, the drovers working here and there throughout the country have the keenest

competition amongst themselves, whether they are shipping their purchases to the stockyard to be sold on commission, or buying it to go direct to the packing house; that competition at country points is very keen at many places.

Q. Probably you could tell us, do you know as a fact that when certain shipments of hogs come from certain stations they go directly to certain packers?

Mr. YOUNG: Did you say, from certain stations?

Mr. SOMMERVILLE: Yes, from certain railroad stations; when they come into the yard, they are automatically put on one side for certain packers.

Mr. ILSLEY: At what point is this?

Mr. SOMMERVILLE: In a number of yards.

Mr. YOUNG: Regardless of billing.

*By Mr. Sommerville:*

Q. Regardless of building—they are put on one side for certain packers; do you know of that practice?—A. That was supposed to be the practice years ago, but my information is that it does not apply to anything like the extent at the present time that it used to.

Q. Was that a result of arrangements with certain packers that they would not compete with certain other packers at these stations,—one packer getting hogs from one centre, and another packer from another—or do you know?—A. I do not know, I could not answer that question.

Q. I thought perhaps when you knew of the vigorous competition among drovers at local stations that you might know something of this practice?—A. I have been a farmer, and have had the drovers compete for my hogs for a number of years—speaking as a farmer at the moment.

Mr. YOUNG: Does that mean cars consigned to the stockyard would be diverted to the packing house without going through the yard?

Mr. SOMMERVILLE: No, I think you will find Mr. Young that certain carloads of hogs come from certain stations, and then it is recognized that these hogs will belong to one packer. It is recognized that the hogs from a certain point belong to one packer and hogs from another station belong to another packer, and it is suggested that that may be the result of an arrangement that there is to be no competition at these stations.

Mr. YOUNG: It would seem that there must be collusion between the commission men in the yards and the packers.

Mr. SOMMERVILLE: Not necessarily.

Mr. SENN: It would be arranged between the drover and the packers.

Mr. SOMMERVILLE: Or it may be an arrangement between the packers themselves that they will not compete at various stations.

The CHAIRMAN: I think we had better get that information later because Mr. McCallum says he does not know.

The WITNESS: I do not know, I could not answer that question.

*By Mr. Senn:*

Q. I would like to ask a question, if I am not repeating something that was taken up this morning. A former witness here made the statement that certain alleys in certain stockyards were allotted to the buyers of different packers, by the commission men. Do you know anything of that practice, Mr. McCallum?—A. That certain commission merchants—do I understand you right—that certain commission men keep their alleys specifically for certain packing houses.

Q. Yes?—A. I do not know that that is correct.

*By the Chairman:*

Q. Have you ever heard of it?—A. I have heard the allegation, sir.

Q. Did you ever look into it?—A. As far as I was able to, yes; and when I find a certain commission firm passing stuff over the scales to a number of different buyers, I could not come to the conclusion that he was restricting his sales to one firm.

The CHAIRMAN: That is not quite the point.

*By Mr. Senn:*

Q. Did you not hear as well that on certain days in certain stockyards, the buyers of one firm will go down one alley and he is the only buyer that goes down that alley that day; and that another buyer from another firm will go down another alley. That means no competition?—A. I do know this that at certain stockyards a certain packers' buyer will have first chance at a certain alley this week, another buyer will have first chance at that alley the following week and if there are two or three resident buyers there, it will be arranged for them to go to the various alleys; but that the selling is restricted in any alley to any one particular buyer, I do not think that that is correct.

Mr. ILSLEY: What do you mean by a certain packer's buyer going there first?

Mr. SENN: I think it goes further than that, Mr. McCallum. If that man does buy, there is no competition in that alley that day.

*By Mr. Ilsley:*

Q. What advantage would it be to him otherwise to go in first, unless, as Mr. Senn says—what advantage is it?—A. All buyers have not the same requirements on the same day. A particular buyer may have a demand for a certain type, he may want heavier steers on that day for that day's business; he may want medium butcher steers, or he may want baby beef or fat cows; and by having first chance at an alley he can pick out the choice stuff that suits his particular trade on that particular day.

The CHAIRMAN: Yes, and that destroys your competition.

Mr. SENN: Why should he have that, without competition?

Some Hon. MEMBERS: Hear! Hear!

*By the Chairman:*

Q. Does it not destroy competition?—A. He makes the first bid on it.

Mr. YOUNG: And if that bid is not accepted?

*By Mr. Senn:*

Q. I understand that no more bids are made; that is the story that is in circulation, whether it is correct or not?—A. I do not think, as a general practice, sir, that it could be said to be correct. I could not say that that is correct, as general practice, it may have happened on occasions; perhaps it did.

Q. Who makes this arrangement; does the packer make it, or is it the commission man who gives this man first chance at this particular alley?—A. On the particular yard to which I have reference, I believe it is solely an arrangement that has been made between particular buyers and commission firms.

*By the Chairman:*

Q. What yard is that?—A. I mean the Edmonton Stockyard.

Mr. ILSLEY: Does that have the effect of keeping the price down?

*By Mr. Senn:*

Q. Have you ever heard of the practice at Toronto?—A. I have heard that such an arrangement—

Q. But you are not in a position to say whether it does now, or not?—A. No.

Q. Did you ever investigate it?—A. As I said before I have gone to this extent, that I have seen tickets from such alleys, animals going across the scales, and the scale tickets which show various buyers on the same day—cattle shipped on consignment—which led me to believe that the salesman was selling to the highest bidder for the particular class of stock which he had to offer for sale.

Q. Would you say, in your opinion, that it is in the interests of the shipper or the producer to have that kind of operation being carried on?—A. There is another system in vogue at one particular yard, where the first buyer who appears on the scene gets the first chance to bid, as is natural; when two buyers arrive at the same time they flip a coin and whoever is fortunate enough to win gets first bid, and he goes in and buys what he can, or makes such bid as he cares to make, and then the next one has a chance at that same alley.

Mr. YOUNG: Could they not both go in at the same time, would that not be practical?

*By Mr. Ilsley:*

Q. That is the point, the advantage in having the privilege in making the first bid; he can select what he wants to bid on; is that the reason?—A. That is one of the reasons.

Q. Is it not an advantage to have the right to make a first bid?—A. It is probably an advantage when he gets a chance to pick from that particular alley the particular kind of stock for his particular killing purposes for the day.

*By the Chairman:*

Q. Does it imply that by this arrangement between the buyers and commission men, that a certain buyer can go down the alley and have his opportunity to bid—does that imply that other buyers, by mutual consent, will not compete with him in his bidding for the stock in that alley until he is through with his inspection.—A. When it is remembered that there are more buyers than the big packers' buyers on the yard—

Q. Never mind that, does it imply what I am saying?—A. I do not think so.

Q. Then, why do they do it?—A. I do not know.

Q. Well, they are not doing it for fun, Mr. McCallum; these are hard-headed business men?—A. I do not think that that practice obtains to a large extent.

*By Mr. Sommerville:*

Q. Mr. McCallum, do you know this; that after the buyer has gone up the alley in this preferred position, do you know whether or not on returning from the alley he tells the other buyers what he has bid on that alley?—A. I could not say.

Q. Do you know of that practice?—A. I do not know whether he tells his competing buyer or not.

Q. Have you ever heard that; that these men go up their respective alleys and then meet and compare bids?—A. I have heard the statement, yes.

*By Mr. Edwards:*

Q. Would it be a fair inference, Mr. McCallum, this: that under this arrangement for one of them to get his chance—whether there is any benefit or not—these buyers must consider that there is a benefit in having it in that position?—A. Conceivably, yes.

Q. Well now, conceivably, yes; why would they make arrangements and carry it out unless they consider that there was an advantage to them in it—what other reason could you suggest for their doing it? Can you suggest any other reason for their doing it?—A. No, other than this; that, as I tried to explain before, certain buyers have certain definite requirements for a particular day, the buyer going in to one commission firm's alley to select what he might wish there, leaves the other alleys open for his competitor to go through to buy what he wishes there; and at the same time there are the smaller butchers and speculators who have orders to sell, who have the privilege when there are no other buyers there of going in and buying any of the other stuff for which they have orders.

Q. Well, they must consider it to their advantage to have that arrangement?—A. I would suppose so.

Q. And they must consider that such an arrangement was to their advantage?—A. I would say, yes.

*By Mr. Sommerville:*

Q. And these other buyers are admitted into the alley after the packers' buyers are there; is that the understanding?—A. Not necessarily.

Mr. FACTOR: It would be well to have evidence produced of the practice first.

Mr. SOMMERVILLE: I thought perhaps Mr. McCallum might have heard?

Mr. FACTOR: If he knows, certainly.

*By Mr. Sommerville:*

Q. Can you assist the committee in any respect, Mr. McCallum, in telling us how the various packer-buyers arrive at the prices which they pay from day to day?—A. Not being directly connected with packer operations I can only give an opinion, and my opinion is this; that the price they pay on any particular day is based on the amount of meats that they have in store, and the amount of live supplies they have on the way to their plant, or right in their plant ready for killing; and the trade prospects, whether they are getting better or declining.

Q. I see, yes. You cannot furnish further information which you could give to this committee which would in any way assist them in coming to a conclusion as to why prices are always so close to one another?—A. I am afraid I cannot give you that information, sir.

Q. All right. Now, you are proceeding with a statement as to the live stock exchange?—A. I have already outlined the set-up of the various live stock exchanges. Each live stock exchange submits for ministerial approval a set of rules and regulations outlining the set-up of the exchange, the methods by which they shall deal with violations of their regulations—as a matter of fact the live stock exchange is self-governing with respect to the activities of its members.

Q. These are submitted for the approval of the minister?—A. They are submitted for the approval of the minister.

Q. And do these contain also the fees to be allowed, and the charges to be made for their services?—A. Yes.

Q. And they are submitted to the minister?—A. Yes.

Q. And then do the live stock exchanges also submit financial statements of their operation; or have you access to their books to enquire into their position?—A. We have supervision over the shipper's cost account. We are anxious to see that only such funds go into that account, or are paid out of that account, as legitimately belong to it. We have received in confidence from time to time from the various commission firms financial statements of their year's operations.

*By the Chairman:*

Q. Is that one of the by-laws?—A. That is one for Toronto.

Mr. SOMMERVILLE: That will be exhibit No. 64.

*By Mr. Factor:*

Q. Can anybody buy an interest in a live stock exchange?—A. Any person 21 years of age with sufficient character and credit, who has or proposes to have an interest in dealing in live stock may apply to a live stock exchange for membership.

*By Mr. Edwards:*

Q. These rules and regulations that require departmental approval; is that departmental approval a condition precedent to the exchange operating?—A. Yes, sir.

*By Mr. Young:*

Q. And when you belong to one of these associations, that gives you a licence to go in there and operate; could you send in half a dozen men to represent you on the strength of that licence?—A. The organization of the commission firm will largely determine that. Some commission firms are composed of an individual who may employ such assistants or salesmen as he may desire. It may consist of a partnership, or a limited company, or otherwise—a co-operative association—and when they register with the minister they give the names of the principals of the firm, the name under which the firm operates, and the principal employees, particularly the salesmen.

*By Mr. Edwards:*

Q. Will you let me pursue the point just a little further. If a member of the exchange is guilty of an infraction of their rules and regulations that have been approved by your department, can disciplinary action be taken by your department; or must it be by the exchange itself, or both?—A. Either.

Q. Either of the two?—A. Yes.

*By the Chairman:*

Q. The minister may initiate?—A. Yes, sir, on complaint.

*By Mr. Edwards:*

Q. And suspend them from the right to operate on that exchange?—A. Yes.

*By Mr. Young:*

Q. Going back to that other point, Mr. McCallum; one firm could have two or three buyers in there?—A. Excuse me, they are sellers—not buyers; commission firms are sellers, not buyers.

*By Mr. Factor:*

Q. They don't require to license every buyer?—A. There is no licence for a buyer. The commission man is only a buyer when a man comes into his yard and says, will you buy me a load of cattle—hogs, or sheep as the case may be—of a certain quality; then that commission firm is a buyer, and he goes to the other firms' alleys and buys the load of stock, or the number of stock which will suit his customer. He can be a buyer under those circumstances, and only under those circumstances.

Q. Anybody could do that, he could do that without a licence?—A. The farmer himself can do that without a licence. He does not even have to register, because buying and selling rights are saved to every farmer who patronizes the stockyard, "Notwithstanding anything in this act, any person other than a co-operative society, dealer, drover or buyer may sell his own live stock, or buy live stock upon the stockyard on his own account.

*By Mr. Senn:*

Q. Does that happen in practice, Mr. McCallum?—A. It is a very unusual practice.

*By Mr. Sommerville:*

Q. They rely upon the experience and judgment of the commission men to make sales in the vast majority of cases, practically all cases?—A. In the vast majority of cases.

Q. Now, what are the charges that are allowed under the approved regulations to the live stock commission men?—A. Without going into too much detail the charges for selling at present at those yards which have not reduced their commission are for a carload of cattle \$17, a mixed carload of live stock containing cattle, \$17, calves at some yards, \$12 per car, other yards pay \$14 per car; hogs at most of the yards, \$10 per deck, at other yards \$10 per deck plus 10 cents per head for all over 80 head in the car or a maximum of \$12; sheep \$10 per deck, and, in some cases, running to \$12 per deck. Then, for truck or driven-in stock there is a schedule per head.

Q. A schedule per head that there is some reasonable relation to the car rate?—A. Yes sir.

Q. For instance, at Toronto the rate for trucked-in cattle is eighty?—A. One dollar per head.

*By Mr. Senn:*

Q. Whether they are 5 cent cattle or 2 cent cattle?—A. Yes. The charges are not based on the value of the stock handled.

*By Mr. Kennedy (Winnipeg):*

Q. Is not there an existing rate of \$15 per car?—A. We have requested a maximum rate of \$15 per car for cattle and \$15 per car for mixed cattle containing cattle, all across Canada at all live stock exchanges.

Q. It is not yet in force?—A. It is at some of the exchanges. Montreal has it.

Q. Winnipeg?—A. Calgary has it in force, Moose Jaw has it in force. Neither Edmonton, Winnipeg nor Toronto have it yet in force.

Q. In those other places you have mentioned the rate is \$15 per car?—A. Yes.

Mr. FACTOR: How long have these rates prevailed?

Mr. SOMMERVILLE: The \$17 rate, for instance, has prevailed since when?

The WITNESS: 1919.

*By Mr. Factor:*

Q. You mean the same rate has been paid since 1919, irrespective of the price received by the farmer or producer of cattle?—A. Yes. It has never been regulated in accordance with the selling price of the animals.

Q. Why is that? Why did not the department try to regulate that, having a view to the price paid for the cattle?—A. In the first place the nature of live stock shipments has changed in the past ten years. The majority of cattle shipments at that time were straight cars of cattle. Now, with the great increase in truck transportation, there is a great increase in the number of mixed cars containing cattle, sheep, and hogs, and more individual attention has got to be paid to the handling of that stock, selling it according to quality—as well as according to quantity and classification. That is, that the service required to-day is greater than was required some years ago. In the second place—

Q. Were they paying too much in 1919? Does that follow?

Mr. ILSLEY: Not on an ad valorem basis. I see the point Mr. Factor makes. When prices were high they could afford to pay more. That is Mr. Factor's point. When prices have gone down and they do the same work, it is fair to charge them more.

WITNESS: In 1919, when these prices were fixed at the level that I first quoted, prices of all live stock were high. They have reduced very materially this past two or three years.

Mr. FACTOR: They can afford to pay more for less service. Is that the argument?

Mr. SENN: I suppose the service is the same in any case, is it not? When prices were high they performed the same service as they do when prices are low?

WITNESS: More salesmanship is required when prices are low, because live stock, like other commodities, does not move as freely when prices are low and the demand is not too keen.

*By Mr. Ilsley:*

Q. You say greater service is rendered by reason of changing conditions of shipments. You said that, did you not?—A. Yes.

Q. There is more accounting?—A. More mixed shipments, more mixed cars, and more cars containing a number of owners. It used to be that one man would own all the stock in a car.

*By Mr. Kennedy (Winnipeg):*

Q. Is that what you call pool cars?—A. Pool or multiple cars.

*By Mr. Ilsley:*

Q. If they were on an ad valorem basis, would it not be more advantageous than on a per car basis?—A. Well, if you remunerate a man for services rendered, he is rendering just as good service in selling cattle for that low price as for high prices. His service is not gauged by the amount of money he gets for the stock.

Q. The producer is in the same situation, is he not? The price goes down. Should not everybody's remuneration connected with it go down too?—A. That is what we are trying to secure now.

*By Mr. Factor:*

Q. The producer works just as hard and gets less for his product, and the commission man seems to be getting the same price as he did in 1919. That is what I cannot understand?—A. We are at present seeking to have these rates reduced.

*By Mr. Kennedy (Winnipeg):*

Q. Mr. McCallum, it has been represented to me by live stock commission agents that this practice has developed considerably what I will call pool cars, that is a car containing stock belonging to multiple owners. It has been represented to me that that has developed to a great extent, and by reason of that the amount of their work in selling that carload, keeping track of the stock belonging to the different owners, and all that work has multiplied their work on a car considerably, and they write that \$15 is not adequate in view of the great increase in the amount of their work. Would you care to express a view as to that? For instance, they produce to me, say, an inventory of the stock in a given car, and the list of owners, showing a multitude of owners. The clerical work was increased as each lot had to be treated as a different lot, and they claimed that, as a matter of fact, the present price of \$17 is not enough? Have you any views in that regard?—A. It is a fact that there is more work, more service expended on a multiple ownership than on a car with one ownership. That is a fact. There is also this to be considered, that in July, 1914, the commission for selling a car of cattle was \$12. The spread from \$12 to \$17 is very considerable.

Q. Did the principle of multiple ownership prevail then to the same extent as it does now?—A. No.

*By Mr. Sommerville:*

Q. Was it not a fact that up to that time the drovers existed in large numbers and gathered up their carloads of cattle at a local station and shipped them into the market?—A. Or bought them himself and shipped them as his own.

Q. And that was the most economical way of transporting them to the market—by carload lots, was it not?—A. That is a fact.

Q. While today with the broken lots coming in by truck, that is probably the most expensive way of delivering them at the market, is it not?—A. As a matter of fact the truck rates for the same distance are almost double the rail rates, and frequently I am told that truck rates—the excessive truck rates will exceed all the market charges on certain shipments. Do you know of that condition?—A. I could easily figure that out, because I know all the charges which accrue in the marketing of a load of stock.

Q. Perhaps you can tell us, Mr. McCallum, what is the respective relation between a truck rate and a rail rate, say 100 miles from Toronto?—A. One hundred miles from Toronto the rail rate is 17½ cents per hundredweight, from towns and villages in western Ontario 100 miles away. Trucking from the same shipping point, I understand the rate is from 35 to 40 cents per hundredweight.

*By Mr. Young:*

Q. The truck rate?—A. Yes.

Q. Does the trucker go to the farm and pick up the stuff?—A. In practically all cases he goes right to the farm and picks up the stock.

Q. And when it is sent by rail the farmer has to take it down and load it on a car?—A. To the nearest station, yes.

*By Mr. Somerville:*

Q. Perhaps you could tell me whether or not this is the kind of thing that happens. I have here the record of a transaction on the 21st of October, 1933, of a shipment by a farmer of Peers, Alberta, indicating how a farmer of Peers, Alberta, received only \$4.15 each for three steers that averaged 1,050 pounds each. This is the sales statement as recorded: 3 steers, weighing 3,150 pounds at \$1 per hundred pounds, \$31.60. Deductions—condemnation insurance 16 cents; unloading, weighing, etc., \$1.79; brands inspection, 30 cents; commission,

\$2.40; trucking transportation to market, \$14.40; net payment to the farmer, \$12.55; total cost of marketing \$19.05, of which \$14.40 was the trucking charge, and the net result was that the farmer received \$4.15 for each of these steers that weighed 1,050 pounds. Is that a condition that is more or less common as the result of the dead markets of the last year or the low prices?—A. The price of 1 cent per pound is certainly a reflection of the tremendously low prices that have been received for cattle for the past year, and I can well imagine if these were big rough steers without much flesh on them that they might sell for no more than 1 cent a pound. Coming through Winnipeg last summer just after the drought had got so acute and the grasshoppers in western Canada had been very destructive I saw loads of splendid young cattle which would have made good potential feeders to keep on and feed and bring back to the market in a year's time as good butcher cattle, go to the market in thousands and they were going across the scale at from 1 cent to 1 cent and a quarter a pound. At the same time, owing to a shorter than usual crop in Ontario the Ontario demand for feeders had not developed. Farmers in Ontario had not made any commitments, and the prices ruling last summer and fall were the lowest on record for cattle. I can well imagine that depending on the quality of those big steers, they may have been big rough steers without flesh—selling for a cent a pound.

Mr. FACTOR: How is that trucking charge made up to \$14?

Mr. KENNEDY (*Peace River*): What was the date?

Mr. SOMMERVILLE: October 21, 1933.

Mr. KENNEDY (*Peace River*): That is about 100 miles west of Edmonton.

Mr. SOMMERVILLE: There is a trucking charge of \$14.40. It has to be absorbed here. The commission on that three head of cattle was 80 cents per head. That is \$2.40. And the market charges for handling, weighing and yardage was \$1.79. That is 60 cents a piece. In other words, the yardage charges were \$1.40 a piece and the truckage charge was \$14.40 for the three.

Mr. KENNEDY (*Peace River*): How much did the farmer get?

Mr. SOMMERVILLE: \$4.15 for each steer. He got less than the trucking charge for an afternoon's run.

Mr. HEAPS: What was the net figure the farmer got?

Mr. SOMMERVILLE: \$12.55 for three steers—for 3,055 pounds of beef.

Your statement from Winnipeg, Mr. Kennedy, is perhaps consistent from this one written from Deer Horn, Manitoba, written by a farmer there who has been in business for a long time: "I had a bunch of well fattened 3-year-old steers weighing 1,200 pounds. They were a fine bunch, and I was offered \$1.65 a hundred, and after paying all the costs you can see what was left. That figures at about \$20 a head. I had paid \$35 a piece for them to fatten. The expenses were \$5 a head. This was early in November." Now, he said, "I have been steadily at stock raising for the last 37 years and I am so disgusted that I have no name for it, and I have handled cattle for a long time and such ridiculous prices were not paid before." Is that consistent with what you find?

The WITNESS: Yes.

Mr. SOMMERVILLE: The conditions, apparently, have been extremely bad in that western situation.

The WITNESS: Yes.

Mr. FACTOR: That is because of the low prices received for the cattle.

Mr. SOMMERVILLE: Yes, \$1.65. Those are fattened steers.

Mr. FACTOR: And also the marketing charges are entirely disproportionate to the amount received.

Mr. SOMMERVILLE: The marketing charges have not changed according to Mr. McCallums statement with the change in prices on cattle.

*By Mr. Sommerville:*

Q. Do you find, Mr. McCallum, that the trucking charges from all over Ontario are very much larger than the rail charges?—A. I would say about double the rail charges.

*By Mr. Young:*

Q. In the figures you gave us a little while ago you quoted the rail charge at 17½ cents and the trucking charge at 35. That makes a difference of about \$1.75 on a 1,000-pound steer. Now, if a farmer has got three of those steers to market and he has to load them himself and haul them to the railroad, it is pretty nearly worth that?—A. Apparently that is the way the farmers look at it. They are putting against that extra trucking charge the trouble and expense of delivering to the the station.

*By Mr. Senn:*

Q. There is another factor that enters into that too, that in the case of the ordinary freight charges the amount is quoted in carload lots?—A. Carload lots.

Q. It would be impossible for a farmer who had three or four head of cattle to take advantage of that rate.

*By Mr. Sommerville:*

Q. Again, is it not a fact that by reason of the operation of the trucker he has broken up the field where the drover used to go in and gather up the cattle in carload lots?—A. That is quite true.

Q. Is this a correct statement that in large parts of Ontario at least the system has changed from the drover system who shipped his carload lots to the trucking system who trucks them in three cattle at a time and a few hogs at a time?—A. It has undergone that change.

Q. And the result is an increased cost in transportation for the sale of the live stock?—A. Yes.

Mr. HEAPS: Mr. Sommerville, could the witness give us his own personal opinion as to the reasons for the very low price that the farmers are receiving for their cattle?

The WITNESS: It was a fortunate thing—in answer to your question—that we had an outlet to Great Britain last year for 53,000 head of export cattle. While these cattle may not have returned their owners very much more than they would have returned at their home market, it had the effect of helping a very, very critical situation in Canada. Did those 53,000 odd head of good cattle—and they were good cattle—have to enter into our channels of consumption here, I am afraid that instead of getting them from 1 cent to 1¼ cents per pound for some of their best cattle, it would have been 50 cents per 100 lower than that. The condition which obtained last year was an unprecedented one, and as I have just explained, drought in the West, and grasshopper plague, caused an undue liquidation of cattle for which there was no demand; and they had to be bought by somebody at a price that could be no more than very, very disastrously less than the cost to the men who raised them.

*By Mr. Factor:*

Q. Suppose we had succeeded in making an arrangement, say with Russia, for selling 100,000 cattle; that would have improved the market. It is not a laughing matter; it is serious?—A. Well, the point of being able to remove 100,000 cattle from this country at any time is, of course, worthy of consideration.

*By Mr. Sommerville:*

Q. To any point?—A. To any point.

Mr. ILSLEY: The wider the markets, the better.

*By Mr. Senn:*

Q. Could you explain to us what you mean by condemnation charges; is that system of insurance recognized by your department?—A. It is recognized by the department. The institution of that charge goes back to about the year 1912 or 1913. A man offering an animal for food purposes is supposed to offer something that is fit for human food. It was found that animals which were slaughtered were condemned through being diseased, and an attempt was made to work that loss back from the buyer, back from the drover, back to the man who owned the animal. You can easily understand that the farmer who sold his animal, and got a price for it, would object very strenuously to giving back any of what he had received. Consequently the packers' and the producers' representatives, with the department sitting in as a witnessing third party, came to this agreement: that insurance would be collected on all cattle and hogs marketed either direct to packing houses or through public stockyards. In the West this amounts to one-half of one per cent of the sale price of cattle and hogs. It does not apply to calves or sheep. At Toronto it is collected on this basis, 50 cents per head on cows, 20 per cent on steers, heifers and bulls, and one-half of one per cent on hogs; at Montreal, 50 cents per head on all cattle, and one-half of one per cent on hogs. The reason that there is a higher charge in Montreal is this, that the bulk of the cattle marketed at Montreal come from the dairy sections of eastern Ontario and the province of Quebec, where condemnation had been more common than in western Ontario or western Canada. No fund is created.

Q. The reason I asked is because it is reported that there is a very large sum in reserve in that fund, and there are complaints made that the rates charged are too high; is that true?—A. As a matter of fact, Mr. Senn, there is no fund created through the operation of this condemnation insurance; there is no fund created. A commission merchant sells a bullock on the Toronto market, a 1,000-pound bullock, at 5 cents a pound, for \$50. The buyer pays \$49.80 for that bullock. The commission merchant settles with the owner on the basis of \$49.80. It is a recognized practice at stockyards in buying live stock for slaughter, that the price of cattle is the market price; less, 20 cents per head on steers and 50 cents a head for cows; and  $\frac{1}{2}$  of 1 per cent on hogs, at Toronto, while at Montreal it is the market price less 50 cents per head on cattle and  $\frac{1}{2}$  of 1 per cent on hogs.

*By Mr. Sommerville:*

Q. The buyer assumes the risk because he is getting this 20 cents per head?—A. He assumes the risk.

Q. And there is no fund created in the sense of an amount being put into some central fund to meet these losses?—A. That is true.

Q. That is the way in which the system works?

*By Mr. Young:*

Q. Is that a fair reflection of the amount condemned, the figure you gave us there, one-half of one per cent, one animal in 200?—A. I am sorry that I have not the last annual report of the Veterinary Director General, which shows the number of carcasses of beef animals inspected at inspected slaughter-houses for last year, and the number of carcasses that were condemned. I believe the number of carcasses condemned is about one-half of one per cent of the

total number slaughtered. In addition, there are many parts of the carcasses that are condemned, not the whole carcass, but certain parts thereof.

Q. And this covers it all?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. Just pursuing that point further, Mr. McCallum; you say there is no reserve, that there is no fund created. I suppose it is not created because the buyers who keep that off the farmers are just in that much; and by reason of them keeping that off, then they assume the risk of condemnation?—A. They assume the risk of condemnation, yes sir.

Q. Can you follow that out a little further; has your department ascertained whether or not that amount that they keep off is excessive in so far as the risk is concerned? In other words, are the amounts that they keep off the farmers greater than their losses through condemnation?—A. Ten years ago a statement was prepared showing what the condemnation insurance would amount to had it been kept in a fund; and on the other side of the account the poundage of beef and pork products which were condemned through disease; and at a very conservative estimate of the value of those carcasses and parts thereof that were condemned, the statement showed that the amount allowed through the condemnation insurance did not nearly meet the value of the carcasses and parts condemned.

Q. Has the department had any complaints from the buyers that these amounts retained are not sufficient to cover their losses?—A. No, we have not.

Q. Would you not expect to have such complaints if those losses were very excessive?—A. Our information is to the effect—it has not been verified by figures recently—that on hogs the amount of condemnation slightly overruns the value of the condemnation in hog products, but falls very, very far behind in that of beef products.

*By Mr. Sommerville:*

Q. These condemnation charges not having changed since 1912, are we to understand that there has been no improvement in the health of animals offered for sale in the last twenty years?—A. No, I would not say that at all, sir. A good many sections of the Dominion of Canada have been cleaned up from T.B. infestations; and there are now quite a number of T.B.-free areas, known as restricted areas; and while the cattle from those areas do not yet have any advantage by the remission of these charges, I believe that the packers were making a study from some of those areas last year, just to find out how much disease would be found in the carcasses of animals coming from these restricted areas, with a view of getting some basis upon which those areas might be dealt with.

Q. That is, animals from that area?—A. Restricted areas.

Q. That being so, Mr. McCallum, does not the continuance of this condemnation fund at these figures indicate that, by and large over the whole country, there is as much condemnation to-day as there was in 1912, in the gross?—A. There is a way by which a shipper or seller of live stock does not need to pay condemnation charges, and this will apply to any stockyard; he will instruct his seller that he does not wish his stock to be sold subject to the condemnation insurance, in which case he takes all the risk, that if any animal should go down on health inspection on the rail, he suffers the total loss. If he is sure that his animals are sound and healthy, he has the privilege of selling them not subject to the condemnation insurance, in which case he takes the risk.

Q. In actual practice is that taken advantage of?—A. No, I know of practically no cases where it has been done.

*By Mr. Kennedy (Winnipeg):*

Q. Inspection is made by one of your department officials?—A. Yes, the health of animals branch have officials in every inspected packing house and abattoir, making rigid inspection.

*By Mr. Factor:*

Q. May I be permitted to ask a question; I have here a letter from a live stock commission merchant of Toronto saying that "The Department of Agriculture has notified the Toronto Live Stock Exchange that they must reduce their commission \$2 a car on all cars containing cattle, 25 cents a head on truck cattle, and 5 cents a head on truck lambs. Under the prevailing conditions and the amount of work entailed in handling live stock through the yards, this is a very unreasonable demand as the facts and figures that will follow will show . . . The net profit for the nine firms, not taking into consideration anything for doubtful debts which might be setting on individual books, but showing nothing for interest on capital investment representing a net revenue of \$18,025.70. The number of head of live stock for the year was 817,985. Net profit per head of two and one-fifth cents for the same year."

The CHAIRMAN: Is that hogs and cattle?

MR. FACTOR: Yes.

*By Mr. Factor:*

Q. "If the ordered schedule of selling was in effect the net loss of the nine commission firms would be \$20,186.40, or a net loss per head of two and two-fifths cents." What opinion can you express on that complaint?—A. Just this, that several exchanges have acceded to the request of the department to reduce their commission to the level of the maximum set in that letter. It is a fact that at Toronto the three largest commission firms handle over 60 per cent of all the live stock marketed at those yards; and that the remaining six firms handle 40 per cent only; and that last year the three smallest firms combined did not handle as much stock as the fourth smallest firm. I think it is hardly fair to make a consolidated statement lumping the profits that have been made by the larger firms who must, on account of the volume handled, have made a considerable profit, to lump the profits of these smaller firms whose amount handled would not possibly be sufficient to more than pay their operating expenses with very little left over; and in presenting a statement of that kind you are getting at the average, which I do not think is a fair statement on which to base a discussion of this reduction in charges. Furthermore, since our request was made for reduction at Toronto, another firm has entered into the commission business; so that instead of trying to do something for the producer of live stock or the farmer in making it somewhat easier to get his live stock marketed, we have this situation in Toronto, that nine firms have grown into ten and dividing their receipts, which that statement shows is small; and instead of dividing it among nine firms now they are dividing it among ten. In addition to that, in our office at Toronto there is a bond for another firm which has not been sent on to me as yet. They are waiting for a little more information before the bond is sent on to me, before another commission firm starts in the business.

*By Mr. Kennedy (Winnipeg):*

Q. You have intimated that the department has requested a reduction in the carload rate from \$17 to \$15, and that certain exchanges have acceded to the departmental request, and others have not?—A. Yes.

Q. What is the departmental jurisdiction in that regard to enforce their request?—A. Will you permit me to read the act?

Q. Well, they have the right to do it?—A. Yes, they have the right to do it.

*By Mr. Sommerville:*

Q. I understand, Mr. McCallum, that the reason it has not been enforced is that under the act there is power to appeal from the direction of the minister to a committee, and that an appeal has been launched; is that a fact?—A. No, sir, that is not.

Q. Well, the situation at any rate is that the order has not as yet been enforced?—A. The order has not been enforced because the live stock exchange has sixty days after the receipt of the order.

Q. And within the last sixty days the order was made?

*By Mr. Factor:*

Q. Mr. McCallum, may I just ask another question; you say that grouping of the profits of the larger firms, and the losses of the smaller firms consolidated as in this statement is not fair?—A. It would not appear so.

Q. What effect would your reduction have on the smaller firms, if they lose money at the prevailing rate and now you are asking them to reduce it \$2 on all cars? Would they not be in a worse position, the smaller firms in Toronto?—A. The smaller firms might, but I do not think that the department under the present conditions of the live stock industry, is justified in having maintained at a fairly high level commission charges which are keeping quite a large number of firms in operation and allowing them to be increased by one or two at this particular time. More than that, when the representatives of Toronto, Montreal, Winnipeg and Moose Jaw exchanges met our minister in Winnipeg on January 13, they said, and the statement was not contradicted that the firms could handle 50 per cent more live stock than they were handling without an appreciable increase in overhead. So I think we have every justification at the present time in asking for a reduction in the cattle commissions.

*By the Chairman:*

Q. Before you leave that point, for instance in Toronto to which this letter refers, how many tons of hay would be marketed on the average in a year on the exchange, in the yard?—A. Speaking off-hand, I would say about 5,000 tons of hay would be fed in the Toronto stockyards.

Q. Then you get \$10 a ton profit on it?

MR. SOMMERVILLE: That is the stockyard.

THE CHAIRMAN: Yes, that is the stockyard.

MR. SOMMERVILLE: Not the commission merchant.

MR. FACTOR: The stockyard gets that.

*By the Chairman:*

Q. What I was getting at was this, is there any identity between the stockyard as a company and the commission merchants operating on the stockyard?—A. None whatever, except that the commission firms pay rental to the stockyard company for the offices they hold and occupy.

*By Mr. Sommerville:*

Q. Nothing further?—A. Nothing further.

Q. The stockyard is required under your regulations to provide the exchange building for the purpose of the duties of the commission men?—A. Yes.

*By Mr. Factor:*

Q. Do you take issue with the statement in this letter that if the price of the commission agent is reduced, that grouping them together they will sustain a loss of 2- $\frac{2}{3}$  cents per head?—A. My criticism of the statement is this, that

while the revenues of all firms would be decreased, yet the firms that are handling the big volume of the stock would still be making a considerable revenue.

*By Mr. Ilsley:*

Q. And handling all the business?—A. And handling all the business.

*By Mr. Sommerville:*

Q. That is, on the Toronto exchange for instance, one firm represents the farmers' co-operative?—A. Yes.

Q. The United Farmers of Ontario?—A. Yes.

Q. And that firm handled upwards of 40 per cent of the stock on the exchange, didn't they, on the yard, approximately?—A. I could tell you definitely just in a minute. I would say between 35 and 40 per cent.

Q. So that you have a situation of 60 to 65 per cent of the business being divided among the other eight firms, and this one co-operative firm representing a large portion of the business, is that not a fact?—A. That one firm handles the biggest volume of any of the firms.

MR. FACTOR: The other eight firms would have sustained losses, according to the contention of this firm?

MR. SOMMERVILLE: Well, most of them, according to the contention of your letter, Mr. Factor.

*By Mr. Ilsley:*

Q. It may not be economically sound for so many commission firms to be operating in Toronto; I suppose that is correct?—A. Your figure of 40 per cent is just about right, Mr. Sommerville.

Q. Excuse me, I was just trying to get your answer; that is your contention, that it may not be economically sound for so many commission firms to be operating in Toronto?—A. Yes, in view of the present condition under these high rates approved by the department.

MR. FACTOR: They will have to close if they are going to sustain losses.

*By Mr. Sommerville:*

Q. I understand the applications you have for new firms are from among the employees of old firms that have been allowed to go?—A. One new firm that has just opened has as one principal a man who has not been identified with the stockyards for a few years. He has taken into partnership men who were engaged in another capacity.

Q. In another firm?—A. Yes.

Q. In other words, men from another firm have had somebody join them in the forming of a new firm?—A. Yes.

Q. And they have left the old firm and formed this new one?—A. Exactly.

*By Mr. Ilsley:*

Q. When a new firm starts up do they have to have a licence from your department?—A. No, our department does no licensing where there is a live stock exchange. This is our procedure; the members of that firm must become members of the live stock exchange; they must have been registered with the department, must furnish the required bond and open a shipper's trust account; when that is done we advise the secretary of the exchange that all of these things have been observed and have been approved, and that they may issue a licence to the firm. That is looked after under the rules and regulations of the exchange.

Q. Do you make any study, or any investigation to see how many firms are needed to operate at a particular point; would that be possible?—A. It would be possible, but we have not done so.

*By Mr. Sommerville:*

Q. And that will depend upon the volume of traffic on a particular yard, I presume?—A. Very largely.

Q. Now, Mr. McCallum, are there any other observations you wish to make with respect to the men on the exchange? You have given us a statement of their fees, is there any other source of revenue which these men have other than what you have indicated?—A. Their revenues come solely from commissions, either selling commissions or buying commissions—when they get orders from outside it is on a commission basis.

Q. Now then, leaving the question of yards and the men who operate the commission firms, can you give us any facts or figures relative to the movement of live stock to yards during the past ten years, and any change that has taken place in that movement?—A. Yes. The department of agriculture each year puts out an annual market report which shows practically all the details that could be asked for with respect to live stock marketing through stock yards. The volume of receipts through every yard, the classifications, their dispositions, and a general survey of the live stock trade throughout the year at that particular stock yard. You have asked for cattle movements to yards.

Q. Yes?—A. In 1928 on the Toronto Stockyards there were 330,335 cattle marketed; in 1929, 318,021; in 1930, 276,184; in 1932, there were 269,421,—the increase this past year being 274,727. Now, I could quote you figures for every stockyard in Canada with respect to other classes of live stock if you so desire, because they are right here in front of me.

Q. That shows that over 5 years' period a decrease in the volume coming to the stockyards—what proportion would that decrease amount to, approximately?—A. About 11 per cent, between 11 per cent and 13 per cent in cattle.

Q. Now, can you give us appropriate figures as to the increase of direct shipment to the stockyards at Toronto?—A. You don't mean to the stockyards?

Q. I mean to the plants, I beg your pardon?—A. We have only started this past year getting regular data on direct receipts of packing houses. We have, of course, through our hog grading staff a check on the number of hogs received and graded from direct shipments; but we find that our statistics are not nearly complete with respect to the live stock trade in Canada unless we have a definite statement sent to us week by week or month by month by the various packers, so that at the end of the year we should have a complete statement of stockyard receipts and marketings and we should also have the same with respect to direct marketing. Our figures are very incomplete, although we have started this past year through communicating with all the packers to get monthly summaries, or weekly summaries, of the numbers of animals of various classes they receive on direct shipment.

Q. Can you give us any idea what they are now, say for the year 1933, at Toronto?—A. I can file with you what we have in the statistics division of the live stock branch with respect to the stock received.

Q. Do you know whether or not they show steadily increasing proportions?—A. I said this morning that the trend is upward.

*By the Chairman:*

Q. Have you got the 1933 figures with you, or do you know roughly what it was?—A. No, but I can look on the file.

*By Mr. Sommerville:*

Q. Do you think this would be correct, Mr. McCallum—perhaps you can recall this—taking two concerns, Canada Packers direct to the plant 33 per cent of cattle, 54 per cent calves, 74 per cent of hogs, and 40 per cent of sheep; and Swift Canadian, direct to the plant 18 per cent of cattle, 27 per cent of calves,

60 per cent of hogs, and 51 per cent of sheep?—A. I will try to get such figures as we have. I do not think that the direct shipments of cattle would be nearly so large as you have allocated to the Canada Packers.

Q. I see, you will get these for us?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Do the packers apply figures quite willingly?—A. We can get such figures as they furnish to us with respect to their direct purchases. As I said we did not have our organization completed for getting these figures previous to this last year, we started about last May.

Q. You have the authority to demand this, have you?—A. Well, we have no authority to demand it, but I do not think we would have any trouble whatever in getting it.

Q. Now then, Mr. McCallum, would it be helpful to your department, and to the marketing of live stock in Canada, and to the farmers, if you had the prices paid by the packers published in the same way as the prices paid on the stock yards and at the same time?—A. In the general interests I would like to see these figures available, just as we make them available from stockyard marketing.

Q. If these figures were made available at the stock yards as cattle and live stock are received, would this not put the commission merchant selling the farmers' products in a better position to know his market, and to demand his price?—A. I think it would give him a bargaining power that he does not now possess.

Q. At the present time is it not a fact that he bargains with the packer, not knowing what the packer has by way of private supply?—A. I would answer by saying that I think he is in the same position as the department is in, that he does not know.

Q. But the packer knows what he has and can bargain accordingly; but the vendor does not know what the packer has and therefore is not on the same footing?—A. That is true.

Q. Is not that the situation?—A. That is true.

Q. And these live stock commission men are pretty keen market men, are they not?—A. I have found them to be quite strenuous in their efforts to get the last cent for the producer.

Q. And the fact that they do not know what is the available supply in the packers' yard must necessarily affect their activities to some extent?—A. Well, it puts them in the position of not being able to anticipate the demand.

Q. After all, it is the demand that helps to make the price?—A. Yes.

*By Mr. Young:*

Q. If they knew how many head of stock the packer had in his yard, or in his packing house, but did not know what demand he had for the finished product, would they be any wiser; if they knew how many head were on the market and did not know the demand for meat, would they be in any better position to engage the market?—A. I would think they would. They only see one half of the picture as it is, and if they knew what the buyer has on hand, they would know whether or not that buyer could be raised up over the previous day's price or not.

Q. And if the buyer had still over a thousand carcasses and they knew nothing about it, they would not be in a position to press him very much?—A. No, it would work the other way.

*By Mr. Sommerville:*

Q. But it does work that way, anyway; if the buyer has a thousand carcasses it does affect the market, and the commission man cannot change it?—A. As I said this morning, I am of the opinion that every day when the packer

goes on to the stockyard or elsewhere to buy stock, he has a picture of what supplies he has in his cooler; of the volume of that supply that is going to move out immediately; what he has moving to his plant; and from the information that he has from these standpoints he knows his requirements to buy elsewhere.

Q. And if the information as to his current supply of live stock was available to the commission man, the commission man could gauge the demand along with the packer and match his wits with the packers' buyer—is not that the fact?—A. He would at least be in a better position as a salesman.

*By Mr. Factor:*

Q. Would it help entirely to eliminate the direct sale from the producer to the packer, and make him buy from the stockyard; what is your opinion on that angle of it?—A. We have had so many resolutions to that effect that it is hard to know what to answer.

*By Mr. Ilsley:*

Q. Both ways, do you mean?—A. No, to insist that all live stock be marketed through stockyards rather than to have a portion of it sent direct to packing houses.

*By Mr. Sommerville:*

Q. You say you have had a number of these resolutions?—A. Yes, take the province of Ontario—

*By Mr. Factor:*

Q. Are they from the farmer, the producer?—A. The farmers have asked through producer organizations—we have in Ontario a number of small packing houses, at Stratford, two at Kitchener, at Guelph, at Hamilton, at London and at Peterborough. I just asked myself if it would not increase the cost of sending live stock to these small packing houses if they had to go to Toronto to buy.

*By Mr. Sommerville:*

Q. But is it not a fact that they do buy quantities of their live stock now through commission firms on the Toronto exchange, and that these commission firms divert to them hogs and cattle that are running to Toronto?—A. That may be, but the bulk of these shipments that are running to Toronto never reach Toronto, they do not have to pay that extra transportation expense.

Q. But do they not now meet that condition by having these cattle and hogs diverted to these various plants at Stratford, and Kitchener, and London, that you referred to?—A. My information is that the number of the shipments of live stock reaching Stratford or Kitchener that have been handled by any commission merchant at Toronto is very small.

Q. You think so?—A. Yes.

Q. Well then, is there not just as much necessity for giving the farmer a competitive price at Kitchener, London, Stratford, or other points, as there is for giving him a competitive price at Toronto?—A. Well, the farmer who markets his stuff directly to Kitchener or Stratford is of the opinion that he is getting as big a net return as though he sent it to Toronto where there is a competitive market.

Q. Well then, since you find it necessary to license the yard at Saskatoon—I think you mentioned that this morning?—A. Yes.

Q. Where there was a small packing plant attached to that yard, you found it desirable to license that yard, and provide all the facilities for competition there; would not that same principle apply, and would it not be equally neces-

sary and far more desirable in the farmer's interest to license the small yards at Kitchener, London, or Stratford, for the same purposes?—A. All these small receiving yards at Stratford, Kitchener, Guelph and so on, if they were used for the purpose of buying or selling or trading in live stock, then they would have to come under the operation of the act. They are receiving yards where they buy live stock to process it, but they do not sell the animals—that is a different situation altogether.

Q. But, in any event, you say there ought to be some provision made for these small plants at Kitchener, Stratford, London, etc., where they would not be required to have the additional expense of bringing their cattle from Toronto?—A. Yes, sir.

Q. Well now, may I ask you, are the prices at Kitchener and Stratford fixed on the basis of Toronto; or do they fix them themselves by bargaining with the farmer?—A. The price at Toronto has an effect, because the packer makes himself acquainted with the price at which he could get this stock at Toronto, and he gauges what he can get it for at Stratford or Kitchener on its way there and divert it.

*By the Chairman:*

Q. That is the governing price?—A. It has some influence.

*By Mr. Sommerville:*

Q. But nevertheless there is not the same competitive price at the small plants at Kitchener, Stratford and London as there is at the larger plant at Toronto, is there; not the same competitive prices for the producer?—A. No, it could not be called a competitive price.

Q. And if competition is a desirable thing to improve the price to the producer, then that competition is equally desirable for the smaller plants as it is for the larger plants; is not that a fact?—A. In establishing that competition at these small places you would increase the cost of marketing if you established a small stockyard.

Q. Don't let us get into the cost of marketing?

MR. ILSLEY: He is making a very vital answer, if you ask me.

*By Mr. Sommerville:*

Q. I am going to get it. I want you first of all to tell me whether that principle is not equally applicable at these small points as it is at Toronto—the necessity for providing competitive prices for the producer?—A. The farmer in marketing his live stock at Kitchener or Stratford, etc., believes that his net return must at least be as great as though he were to send it to Toronto; hence he would not send it to Toronto and to that extent there is competition in the fixing of prices.

Q. But he must be of the same opinion, or he would not ship direct to the packing plants at Toronto, would he?—A. Exactly so.

Q. Well then, if that is so, how do you account for the large number of resolutions that you have had—I know a number of them have been forwarded to this committee. Here, for instance, is a resolution

Resolved that all Canadian bacon for the British market be graded and labelled and sold on the same grade, and that all shipments of bacon be under strict Government supervision.

Also resolved that in view of the fact that 65 per cent of hogs, 20 per cent of cattle, 40 per cent of lambs, and 60 per cent of calves, in Ontario, are being shipped direct to abattoirs or packing plants, thereby depriving the producer of bargaining power.

Therefore, we urge that all livestock be shipped and sold on competitive public market.

Resolutions similar to the above have been received from the following organizations:—

Sydenham Progressive Club, Owen Sound, Ont.  
 Burn's Farmers' Club, Sarnia, Ont.  
 Oak Club, No. 850, United Farmers of Ontario, Renfrew.  
 Lucknow U.F.O. Club, Lucknow, Ont.  
 Dayton Club, Dayton, Ont.  
 North Easthope Farmers' Club, Stratford, Ont.  
 Farmers Club at Arthur, Ont.  
 Annan U.F.O. Club, Annan, Ont.  
 Four Mile Lake U.F.O. Club, North Bay, Ont.  
 Bar River U.F.O. Club, No. 74, Bar River, Ont.  
 Stayner Farmers Co-operative Co., Stayner, Ont.  
 Seaforth Livestock Shipping Club, No. 117, Seaforth, Ont.  
 Tait's Corners U.F.O. Club, Glencoe, Ont.  
 Pakenham U.F.O. Club, No. 174, Pakenham, Ont.  
 West Lorne Farmers' Club, West Lorne, Ont.  
 North Horton Farmers' Club, Renfrew, Ont.  
 U.F.O. Eady Club, No. 676, Coldwater, Ont.  
 Dunwich Farmers' Assoc., Dutton, Ont.  
 Chatsworth Live Stock Shipping Assoc., Chatsworth, Ont.  
 United Farmers' Co-Operative Ltd., Duke and George Sts., Toronto.  
 High River Board of Trade, High River, Alta.  
 Massie United Farmers' Club, No. 820, Chatsworth, Ont.  
 Seaforth Livestock Shipping Club, Seaforth, Ont.  
 New St. Andrew Club, St. Andrews, Ont.  
 North Easthope Farmers' Club, County of Perth, Ont.  
 Castleton Farmers' Club, Castle, Ont.  
 United Farmers' Club, No. 6, Guelph, Ont.  
 South Mountain Farmers' Club, South Mountain, Ont.  
 Mar Farmers' Club, R.R. No. 4, Wiarton, Ont."

Some twenty-eight resolutions from these clubs. (Exhibit 65.)

Mr. FACTOR: Mr. Sommerville, are these percentages correct, 65 per cent of the hogs and 40 per cent of the cattle?

Mr. SOMMERVILLE: The resolution reads that 65 per cent of the hogs, 20 per cent of the cattle, 40 per cent of the lambs and 60 per cent of the calves in Ontario are being shipped to abattoirs and packing plants.

Mr. FACTOR: Is that checked up, or is that the resolution?

Mr. SOMMERVILLE: That is the resolution. I thought that Mr. McCallum through his department might be able to give us figures, and as the only market in Ontario is Toronto we will probably be able to get the figures.

Mr. YOUNG: Just following up those figures, Mr. Sommerville, if 65 per cent of the hogs had been lifted from the open market and the packers only had to go into the market for 35 per cent, and in the matter of cattle they got only 20 per cent at their packing plant and have to go into the market for 80 per cent, naturally you would expect that the cattle market would suffer more from that condition than the hog market; but, as a matter of fact, we find it is the other way around. Could you explain that, Mr. McCallum?

The WITNESS: There certainly has been a most satisfactory improvement in the hog market since a year ago due largely to the increased demand and

better prices on the old country market. That demand, of course, was not at all affected by the fact that a large percentage of hogs was going direct to the packing houses or stockyards. The demand was there for the Canadian packer and the Canadian producer to shoot at.

Q. Do you think the packer has taken advantage of the fact that he had 60 per cent of his hogs quite independent of the stockyards, and that he has taken advantage of that to squeeze the price a little bit?—A. I could not say that he had or had not, because I do not know.

Q. He certainly would not be in a position to do it with his 20 per cent of cattle, would he?—A. No.

Q. Not to the same extent. Is there any real effective competition between the stockyard and the packer?

Mr. SOMMERVILLE: Between the stockyard—

Mr. YOUNG: The buyers in the yard competing with the packers. Is there any effective competition. The witness told us a moment ago that they assigned alleys to certain buyers and one buyer has an alley to himself and another buyer has an alley to himself. It seems to me you have eliminated competition in the yards just as effectively as you have in the plants.

WITNESS: I do not think I said that that obtained in Toronto. I did not make that reference to Toronto.

Mr. YOUNG: Some place anyway.

The WITNESS: Besides the two larger packers whose names have been mentioned frequently to-day we have the operator of a small abattoir situated in the stockyard who is regarded as one of the best buyers in Toronto and who goes into those yards.

*By Mr. Sommerville:*

Q. This man as a general rule pays the top price, and they let him go and take his supply, and then he is off the market for the day?—A. Is it not a fact that he establishes a high for that day and that the others have got to reach it for stuff of the same quality?

Q. If they do. They may not.—A. If they do it is a fine thing that he went through the alleys first.

*By Mr. Young:*

Q. What becomes of your arrangement that No. 1 buyer was to have No. 1 alley to himself for the first hour and No. 2 was to have No. 2 alley if this man is going to butt in? Have you broken that arrangement?—A. I didn't make that statement that that practice obtained in Toronto.

Q. It does in some places?—A. It did not some time ago. Whether it obtains today I do not know.

Q. Have you ever checked prices here against prices in Britain and followed them up to see if prices here vary with the prices over there?—A. The price for hogs for this last while has been pretty closely in line with the values in England—a slight fluctuation from week to week.

Q. Have you checked it closely enough to know whether our packers are taking a larger or lesser share of the product?—A. No, I have not.

*By Mr. Senn:*

Q. I do not suppose that that comes within the purview of Mr. McCallum's activities as head of that branch?—A. It does not.

The CHAIRMAN: As a matter of fact there will be an analysis made of that.

*By Mr. Ilsley:*

Q. It would appear from his resolutions as if the farmers were asking to be restrained by legislation from doing what they are doing from day to day?—A. I started to say this morning that we have twelve stockyards, most of them well equipped, in this country, which are under Dominion government supervision, and while we do not say so in so many words to the producer we virtually make it plain that any man has the privilege of deciding whether he should market his stock to these stockyards under the supervision which we exercise, or whether he shall choose for himself some other avenue of marketing.

Mr. FACTOR: And the farmer has chosen, apparently, the other avenue of selling direct to the packers?

The WITNESS: In view of the fact that we have no jurisdiction over that other avenue of marketing, and putting myself in the place of a farmer with live stock to sell, I am just seriously wondering how I would regard legislation which would seek to tell me that I must not sell my stock to a drover who was going to take it to my nearest station, load it into a car, and ship it direct to a packing house.

*By Mr. Sommerville:*

Q. Nor would that be the suggestion of these resolutions, would it?—A. I think that is included in these resolutions that live stock must all be marketed through a public stockyard.

*By the Chairman:*

Q. Mr. McCallum, would you look at it this way: You raised the point of the difficulty of the small abattoirs in these smaller cities outside of Toronto: suppose the live stock that goes to the Toronto area, that is that goes into the big markets and the big abattoirs of Toronto, were all marketed on the live stock yards in Toronto, would that in your opinion give a more competitive market than at present?—A. Yes, I think it would give a more competitive market; and in addition to that, while you are not interested in my personal difficulties, it would solve a great majority of the difficulties which I have in seeking to strike a level of stockyard marketing prices.

Q. Now, the next point, apropos of that; a moment ago you said that the Toronto market, even in its present restricted form, was one of the big factors in the determining of prices throughout the country—throughout Ontario, at least; if a larger proportion, or if the whole of it went into the live stock market, and it created a higher competitive marketing condition, would there not be a tendency for the prices to accelerate somewhat, and thus reflect back upon the country buying of the other smaller abattoirs in other points?—A. Well, we could depend on this in that event, that the prices as established were established on a basis of honest-to-God competition.

Mr. FACTOR: Apparently from this picture we need more competition; on the evidence last week we needed less.

Mr. SOMMERVILLE: It was unfair competition last week.

Mr. FACTOR: And this would be honest-to-God?

Mr. SOMMERVILLE: Yes, honest-to-God competition.

The WITNESS: I think possibly I had better retract that.

Mr. SOMMERVILLE: Oh, it is something we thoroughly understand.

Mr. FACTOR: It is just an expression.

*By Mr. Sommerville:*

Q. No, Mr. McCallum, suppose with reference to the question of marketing at live stock yards, you had a provision which required all packing com-

panies engaged in inter-provincial or export trade to do their buying on the stockyard, would that not solve the problem that apparently is troubling these farmers; because there you would have the packing company doing an inter-provincial or export trade going into the stockyard and there in open competition setting the prices which would be reflected through the country districts?—A. The immediate reaction of that question is this: How will you differentiate in the buying of live stock as between that which was intended for local slaughter and local consumption and that which was meant for inter-provincial trade.

Q. Is there a necessity for differentiating? The provision that I just suggested to you was one which I just asked you to consider, if the packing plant engaged in the business, whatever may be the use to which they may put their stock, if they are engaged in a business which does include export business, if they were required to buy on the open competitive market at the stockyards, would that not set the price which would be reflected back on these smaller areas of the province?—A. Put it another way; that would be an indirect way of prohibiting the farmer from selling direct to the packer.

Q. To a packer engaged in export or inter-provincial trade, yes. To put it directly, it would remove from the large packing plant the secret supply of stock which they have running, which you have admitted affects their activities on the market and leaves the agent without the same bargaining power as the buyer has?—A. That would have to be accomplished by new legislation. I know of no legislation at present existing whereby that could be accomplished.

Q. I presume that is so; I am not thinking of whether or not there is legislation; is that a practice which might help to improve the competitive price to the producer and remove some of the complaints that are rising about the use of this direct buying of cattle.

Mr. SENN: Do you include hogs in that, Mr. Sommerville?

Mr. SOMMERVILLE: Yes, hogs, all live stock.

The WITNESS: The marketing of all live stock through the public market would remove those complaints, yes; that is what is asked for.

*By Mr. Sommerville:*

Q. Now, Mr. McCallum, with reference to the question of hogs, did you want to deal with the question of marketing, the method of marketing hogs?—A. I would much prefer, if the Chairman would allow it, to have that discussed by my assistant who has charge of the hog grading and hog marketing in Canada.

Q. Probably that would be better; that is Mr. Pearsall?—A. Mr. Pearsall.

The CHAIRMAN: I think we have had Mr. McCallum on for a long time; he has done exceptionally well.

Mr. YOUNG: I just want to ask a simple question.

The CHAIRMAN: Quite so, but I was just going to say that I think we have almost exhausted Mr. McCallum. However, if you have any further questions, go ahead.

*By Mr. Young:*

Q. Does the trucker who takes his stock to the packing house ever check the prices he is offered up against the prices he could get in the yard, or is he quite ignorant of the prices in the yard?—A. I hope I am not prejudiced against the trucker of live stock; I would not like to be thought to be prejudiced. The fact that the trucking business has grown to such huge proportions seriously affects our stockyard marketing over the whole of Canada. As a matter of fact, 76.2 per cent of the cattle delivered at stockyards were delivered by rail

and 23.8 by truck; calves, 63.4 per cent by rail and 36.6 per cent by truck; hogs, 70.8 per cent by rail and 29.2 per cent by truck; sheep, 67.9 per cent by rail and 30.3 per cent by truck, a very appreciable increase over last year.

*By Mr. Sommerville:*

Q. That is for what month?—A. That is for the year 1933, for all the stockyards.

Q. An appreciable increase?—A. An appreciable increase over last year.

Q. Those are deliveries at the stockyard?—A. At the stockyard, Toronto deliveries, all species of live stock delivered by rail, 61.3 per cent, and all species of live stock delivered by truck, 38.7 per cent.

*By Mr. Senn:*

Q. That does not include abattoirs?—A. No, it does not; we have no figures for the direct deliveries by truck at abattoirs.

*By Mr. Sommerville:*

Q. I understand those figures are to indicate the very large proportion that is now handled to the stockyards by trucks?—A. By trucks.

Q. And would indicate a somewhat relative proportion of cattle, of live stock, handled to the packing plants?—A. It is creating a very serious situation with respect to our stockyards. This 38.7 per cent of live stock practically takes no feed, makes no contribution to the stockyards revenue from feed consumed, nor is there an unloading charge made; and yet if as has been suggested that a higher yardage charge were put on, this would not be sufficient to compensate for the loss sustained through lost revenue from feed. We are of the opinion that of some 6,000 cars of live stock that were received at the Toronto stockyards last year by truck, possibly half of those would never come to the stockyards if yardage were increased and a bad condition made worse; so we are in a position of wondering what is the best thing to do under the circumstances. The trucks are here to stay. The situation has got to be faced and dealt with in regard to their deliveries to the stockyards.

*By Mr. Kennedy (Peace River):*

Q. Is it generally believed that there is less shrink in animals going to market by truck than by rail?—A. Well, it is generally believed that shrink is less because they are under transportation for a so much shorter time. You must remember this, that rail shipments of cattle, while they may lose from 70 to 80 pounds per head in coming 100 miles, when they are fed, they get about 60 or 65 pounds of that back, so that the shrink is very light in the final analysis.

Q. In other words, the packer as I understand it would rather buy his live stock off the trucks where it has neither been fed or watered, than buy it in the yard?—A. That is rather an anomalous thing too, because the price of truck hogs is lower than the price of off-car hogs at Toronto by 25 cents—I believe it is 25 cents per cwt. off-truck hogs lower than off-car hogs.

*By Mr. Senn:*

Q. There are two prices, Mr. McCallum; the fed-and-watered price and the off-car price?—A. The f.o.b. price because a great many of the hogs that are now sold on the Toronto stockyards are sold on f.o.b. weight—and f.o.b. price—and the number that are sold fed-and-watered is very small.

*By Mr. Kennedy (Peace River):*

Q. You said that the off-truck price was lower?—A. Yes, that is quite easy to understand, because there is more shrink on hogs that come by rail.

*By Mr. Sommerville:*

Q. Have you in your branch of the department any record showing the spread between the cost of the live hog and the finished bacon as it is sold in Great Britain; or does that come within your department?—A. That does not come within my work, sir.

Q. Then, do you know whether or not such information is available in your department?—A. I will make inquiries with regard to that.

Q. Then will you be good enough to let us have the list of resolutions that you have, along the lines indicated in your evidence today?—A. Yes, sir.

Mr. YOUNG: I have not had an answer to my question, yet, Mr. Chairman.

Mr. SOMMERVILLE: I am sorry, Mr. Young, if I interrupted your question.

*By Mr. Young:*

Q. My question was, does the trucker when he comes into the packing house with a load of cattle or hogs and is offered a price for them, does he check that price against the price offered at the yard?—A. I could not answer that question, sir, because I do not know.

Q. You see the impression has been created here that this stock that comes into the yard by truck is a great source of supply to the packer, and the market has to contend with the price that is paid to the man who is selling that stuff. He must either be getting a higher price for it, or else he is getting the same price, or else he is sacrificing the stock to the packer. I want to know whether there is any relation between these prices?—A. While we are able to give you information as to what price the trucker receives, or the practice he follows at the stockyard, I am not in a position to tell you anything whatsoever about the practice at the packing house, because we have no jurisdiction over direct marketing either by rail or truck to packing houses, and it is beyond my power of ascertaining.

Q. You do not know whether the price paid at the packing house is a competitive price, or not?—A. No.

*By Mr. Edwards:*

Q. I suppose if one farmer sells a load of hogs to the packing plant, and his neighbour sells a load to the exchange, they can talk over the line fence and find out all about that, can't they?—A. That is quite easy to understand.

The CHAIRMAN: Now, I think we have really imposed on Mr. McCallum quite long enough. May I thank you, Mr. McCallum.

Mr. FACTOR: We have learned a lot from Mr. McCallum, at least I have.

Mr. SOMMERVILLE: We all have.

The CHAIRMAN: Thank you for your attendance, and certainly for the long time we have had you on the stand.

The WITNESS: I am only sorry, Mr. Chairman, than on some of the points on which you have asked information, I was not able to give the information desired.

The CHAIRMAN: You did very well, and thank you very much. I think we will adjourn until to-morrow at eleven o'clock.

Mr. FACTOR: What is your program?

The CHAIRMAN: We will continue with some representatives from Ontario on live stock.

The committee adjourned at 5.35 P.M. to meet again Wednesday, March 21, 1934 at 11 o'clock A.M.

HOUSE OF COMMONS, ROOM 368,

March 21, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, Gentlemen. The minutes of yesterday's meeting indicate the witness called, and the exhibits filed. If there is no objection, I declare the minutes approved.

This morning we have the three gentlemen representing the agricultural committee of the legislature of the province of Ontario, of which I think Mr. Jamieson is the chairman. Mr. Fraleigh and Mr. Craig are members of the legislative committee. We will have Mr. Jamieson first.

Mr. SENN: Before the witness is called. I understand that a subcommittee of the committee on agriculture and colonization of the Ontario legislature has taken evidence and submitted a report on the tobacco situation in Ontario. I suggest, if possible, that the report and the evidence taken therewith be secured for the use of this committee.

The CHAIRMAN: We can ask them if they would supply us with that.

Mr. SENN: I understand they have reported to the general committee, and I do not think there will be any difficulty about getting their report.

Mr. SOMMERVILLE: I am sure, Mr. Chairman, that the chairman (Mr. Jamieson) would be able to tell us that; it would be very valuable to have the report.

Mr. FACTOR: In that connection, has the clerk of the committee been able to secure the report under the Combines Act with respect to tobacco.

The CHAIRMAN: There is no reply yet, we will check them up.

J. E. JAMIESON, M.L.A., called and sworn.

Mr. SOMMERVILLE: Mr. Jamieson is the member for South West Simcoe in the Ontario legislature.

*By Mr. Sommerville:*

Q. Mr. Jamieson, you are the chairman of the committee on agricultural colonization in the Ontario Legislative Assembly?—A. That is right.

Q. And in connection with the work of that committee, you have been investigating agricultural conditions in the province of Ontario?—A. That is right.

Q. And have they as yet made a report, Mr. Jamieson?—A. I was presented with the report from the subcommittee, I think yesterday; it is in my possession, or the possession of my secretary, and will be available for this committee. I will be very glad to forward it.

Q. And would you be good enough to support that with any evidence that you have available taken in connection with the report?—A. Yes.

Q. Then, in connection with the inquiries of your committee, you have been investigating the live stock situation?—A. Yes.

Q. What has been the condition of live stock during the past year in the province of Ontario, Mr. Jamieson?—A. Well, we have had a general feeling—the producer, the shipper has lodged many complaints as to marketing conditions; and the subcommittee undertook to get all the evidence they could from shippers and producers during the session, and even previous to the session, and they have been submitted—I have been instrumental in collecting some evidence from shippers and producers which you have in your possession.

Q. Now, Mr. Jamieson, before dealing with the questions of the individual complaints, or the nature of the complaints, what generally has been the condition of the live stock industry in the province of Ontario during the year 1933, as to prices?—A. Prices generally have been very low, of course.

Q. And they have been below the cost of production?—A. Much.

Q. Yes, and what has been the view of the committee with respect to the question of improving prices by competition?—A. Our committee at its first meeting organized subcommittees pertaining to each phase of agriculture, which they were to go into and present reports on the different phases of agriculture during the sessions of the legislature. The committees have been called from time to time, and live stock produced the main interest.

Q. Is that because of the relatively low prices of live stock on the market?—A. The low prices and the marketing conditions.

Q. Now, first of all as to marketing conditions, what observations have you to make to this committee as to competition in the local stockyards?—A. Well, the general report of the committee indicates that competition has fallen down.

Q. Yes, and how do you account for that, Mr. Jamieson?—A. We attribute that to the percentage of stock purchases going direct to the packer, and the packer controlling the conditions that prevailed.

Q. That is, through the proportion of stock that went to the packer direct; he was in a position to control the conditions on the market?—A. Yes.

Q. How could he control the conditions on the market, Mr. Jamieson?—A. Well, our observations and reports are that the buyer does not appear till late in the forenoon, possibly eleven o'clock in some cases, and we had evidence where they did not appear until even four o'clock in the afternoon; and not even bidding on the stock that was in the yards.

Q. Yes, and the result on the market was what?—A. Draggy.

Q. Draggy; and the effect upon the price?—A. Low.

Q. And that was the basic condition that you found?—A. Yes.

Q. Then, what observations have you to make, if any, as to your enquiries respecting the sale of hogs at fixed differentials?—A. We found that the hog prices of late have not been so bad, but we find that there are many complaints on grading conditions.

Q. That is, when you refer to grading conditions you refer to the sale of fixed differentials on various grades?—A. Yes.

Q. And what would be the observation as to the improvement that could be made in that respect?—A. A great many in the evidence felt—they were recommending grading on the rail, or any system preferable to what they had.

Q. Any system preferable to the system of selling at the present time?—A. Yes.

Q. Were there any representations made to your committee, or evidence given, that sale by grades, as grades, would be better?—A. Some discussion arose as to that, and they felt that it could not be any worse; that was the general impression, and they were ready to accept any grading that might be devised in preference to what they had already.

Q. What was the effect of the fixed differential in the sale of hogs, as far as the packers are concerned, in getting a load?—A. The committee were rather of the impression that they were not particular about the grade, they would have been turned down; if you picked out your selects they would not buy unless they bought the whole load.

*By Mr. Kennedy (Peace River):*

Q. When you complain about grading, do you think you are not getting enough selects?—A. That is the idea, that is the general impression; and the drover who was going to the country—the producer was demanding the grade and did not consider it any benefit, and was ready to sell his hogs as they were and the drover encouraged that.

*By Mr. Edwards:*

Q. I was just going to ask you, Mr. Jamieson, about this grading; assuming the farmer takes in a lot of 20 hogs and says he has 12 selects and so many seconds and so many thirds; now, the packers' buyer differs with him, and says he has ten selects, or eight—as the case may be?—A. You don't have the farmer saying—

Q. Who fixes the price, who arbitrates?—A. The abattoir or the grader.

Q. Well now, my information is that at these smaller packing plants a government official is there all the time who can be called in by the packer and the seller, who had to accept his judgment as to how many selects there are?—A. I think the seller has to accept what he gets. Our experience has been that the farmer has not been dictating as to whether they are selects or not. He thinks he has selects, but he knows he has to take what he gets. The buyer will come along and say, I will allow you three, or four selects; and he sells them on this basis and takes the drover's word.

Q. Is it not true, Mr. Jamieson, that there are government officials at both the packing plants, and that the farmer accepts his word; they both have to accept it?—A. Yes, absolutely.

*By Mr. Sommerville:*

Q. Wherever there is a government grader he is the man who fixes the grades?—A. We think so.

Q. He is the man whose decision rules?—A. Yes.

Q. And that decision is made for the purposes of settlement?—A. Yes.

Q. That is, when he fixes the grade, then the buyer settles on the grade that he fixes?—A. Yes.

Q. Well now then you say the packer insists on getting all the grades, or he won't buy selects?—A. We find some of that, yes.

*By Mr. Young:*

Q. You are referring to stockyard practices, not direct to abattoirs?—A. Oh no, we know nothing about the direct stock; we have no record of what is done there.

Q. But in connection with the stockyard shipments you find that the packer insists on getting all the grades, or he won't buy the load?—A. Yes.

*By Mr. Ilsley:*

Q. I thought you said he did not get the selects he was entitled to?—A. The farmer says he thinks he does not get all the selects he is entitled to, but does not question it. The spread is only a dollar. He is ready to sell his selects. They are taken to Toronto, and he realizes that he has no say and he accepts the price.

*By Mr. Edwards:*

Q. I think the big sale is to the packing plant?—A. I am referring to the drover when he buys a load of hogs from the farmer. He settles with the farmer and sends them down to the stockyard.

*By Mr. Factor:*

Q. Sometimes the farmer does not utilize the opportunity of getting the advice of the government grader?—A. Very often.

Mr. SENN: He has the opportunity of having them graded.

Mr. FACTOR: He has the opportunity to have them graded.

Mr. SENN: As I understand it, every hog that goes on to the stockyard is graded.

The CHAIRMAN: I think you are getting a little bit at cross purposes, Mr. Senn.

*By Mr. Sommerville:*

Q. Every hog that goes on the stockyard is graded?—A. Yes.

Q. And that grade is made by the government grader?—A. That is what we understand.

Q. And both the farmer and the packer must accept that grade?—A. Yes.

Q. Whether it is good or bad?—A. Yes.

Q. Whether it is for or against the farmer; now that is clear?—A. That is clear.

Q. Now, one complaint is that the farmers sometimes think they do not get enough selects in their grading?—A. That is it.

Q. That is one of the objections?—A. Yes.

Q. And another objection is that when they are graded the packer insists on getting all the grade?—A. Yes.

Q. Or he will not buy the selects?—A. That is very often the case.

Q. And the submission of your committee was that if they were sold by grades to respective purchasers, there would be a bigger price paid for these lower grades?—A. We feel that there would be better competition.

Q. On these lower grades?—A. Yes.

*By Mr. Young:*

Q. The spread between the grades is not fixed?—A. Yes.

Q. What difference does it make who buys it after the government grader grades them; the spread is fixed, what difference does it make who buys them?—A. Well, the shipper—

*By Mr. Sommerville:*

Q. Now, wait till we get this clear; this differential is fixed by the packer, is it not?—A. Yes.

Mr. SOMMERVILLE: If it is not fixed by the government the differential—

Mr. ILSLEY: That is not the evidence we have before us, it was fixed either ten or twenty years ago.

Mr. SOMMERVILLE: Not the differential below the bacon; the only thing that is fixed by the government is that of hogs over bacon, namely selects, on which a premium of \$1 is paid.

The WITNESS: A premium, that is right.

Mr. SOMMERVILLE: That is the premium, and that is the thing which the government insisted on.

Mr. ILSLEY: I certainly did not understand that. I understood that about 1919 or 1920 they fixed these differentials, some sort of a body representative of all interests fixed these differentials; and we had a big discussion as to whether these differentials should be specific or ad valorem.

Mr. EDWARDS: Mr. Ilsley is quite right about that.

Mr. SOMMERVILLE: It is not the government, however.

Mr. ILSLEY: All interests were represented, the government was represented.

Mr. SENN: The statement made was that the Joint Swine Committee fixed these differentials.

Mr. SOMMERVILLE: With the packer.

Mr. SENN: I do not think so, yet.

Mr. EDWARDS: If I might interrupt, Mr. Sommerville.

Mr. ILSLEY: It was made quite clear by the witness, whether his evidence was correct or not, it was a committee representative of all interests—a very fairly constituted committee.

Mr. SOMMERVILLE: We will find out later who fixes the differential.

Mr. ILSLEY: All right.

*By Mr. Sommerville:*

Q. But the complaint is that when the differential is fixed the packer insists on getting all the grades, or he will buy none?—A. That is right.

Q. And the observation of your committee is that if the seller could sell his respective grades separately, to separate people, there would be competition on each grade?—A. Yes.

Q. And, therefore, there would be a bigger price for these lower grades?—A. We think so.

Q. In other words, there are some buyers who would require butchers and lights?—A. Yes.

Q. And there are more buyers who would require butchers and lights than would require the premium bacon?—A. Yes, we think so.

Q. And with the present system he cannot get the butchers and lights without buying a whole load?—A. That is so.

Q. And therefore competition is restricted or eliminated?—A. Yes.

*By Mr. Factor:*

Q. In other words, we would have to eliminate these grade differentials, is that the recommendation?

Mr. SOMMERVILLE: There are two factors, Mr. Factor. The first is a grade. Now, the grade is fixed by the government grader and that grade divides the hogs into their respective classes.

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. That is one thing that is quite irrespective of price and independent of price. The next thing is that someone or other says that these various grades bear a certain relation to one another, and that is settled by price. Therefore, we take the bacon hog as the basic hog; is that right?—A. Yes.

Q. And you take 50 cents a hundredweight, or \$1 a hog off for butchers, and \$2 off for heavies and \$2.50 off for sows?—A. Yes, along those lines. That is the scale.

Q. That is roughly the scale. The suggestion of the committee is that if the vendor could sell his heavies or lights separately as they are graded by the government grader and there was a larger number of buyers those heavies and lights would get a better price?—A. They think it would be a better system.

Mr. YOUNG: There would be a premium paid over the price for each grade at times.

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. That is right. That is the observation. You think it would be an improvement?—A. We think it would.

Q. You think the purchase of the whole being insisted upon by the packer limits competition?—A. Yes.

Q. And therefore affects the price?—A. We rather think so.

Q. Then, Mr. Jamieson, what other observations have you to make respecting the question of marketing?

Mr. FACTOR: Has Mr. Jamieson got the percentages that go to the rest of the packers and to the stockyards?

The WITNESS: No, sir, we have not got that direct. I think you can get that fairly accurately, but we estimate it in the neighbourhood of 30 per cent of that product went direct to the packer.

*By Mr. Factor:*

Q. That is 30 per cent of the cattle?—A. Cattle and hogs.

Q. We will get the accurate amount?—A. We do know that the packer bids and induces the producer to ship direct to the packer.

Q. To go direct to the packer?—A. Yes.

Q. That is what you find?—A. Yes.

Q. To avoid the stockyards?—A. Yes. They tried to attract them to go direct, and we had reports where 50 per cent was possibly going.

Q. From some districts?—A. Yes.

*By Mr. Young:*

Q. Cattle or hogs?—A. Both.

*By Mr. Sommerville:*

Q. Did you find that to be a general practice, that they were encouraging direct shipments rather than by going through the stockyards?—A. Yes. It came to the ears of the committee. That was the report.

*By Mr. Ilsley:*

Q. What efforts do they put forward to attract them direct?—A. If they are acquainted with anybody that drives up—they know he is shipping to the plant—they get in touch with him and keep in touch with anybody who is shipping by truck. Principally truck stuff goes direct.

*By Mr. Kennedy (Winnipeg):*

Q. With regard to the farmers themselves, are they not in favour of having the privilege of selling direct to the plant?—A. The general feeling seems to be that the stockyards were there for the purpose of establishing competition for the market and they desired to get the competition. The feeling of the producer is that he wants a competitive market.

Q. He would like to have the right to sell direct taken away?—A. Yes. The shipper prefers to go direct.

*By Mr. Edwards:*

Q. Why does he sell direct?—A. This might happen. A trucker is paid by the farmer to take a load of livestock to the market. He is only making a day's pay. That is all the interest he has in the load. He may be able to make

another trip if he gets rid of it direct that day, make another few dollars. He is well used when he drives direct to the plant. He unloads his stuff. He possibly may deliver another load; and the trouble is he has not anything invested in the stock which he brings down; his interest is not in that stock but in making a day's pay for his service.

*By Mr. Young:*

Q. Would the fact that he might be able to make two trips affect the rates he charges?—A. Not necessarily.

Q. It would not have any tendency that way?—A. No.

*By Mr. Sommerville:*

Q. Then the trucker has a personal interest in endeavouring to get the live stock to the plant rather than to the stockyard?—A. Well, we think that prevails in some cases.

Q. Did your committee get any evidence of any special bonus being paid or of any special amount being paid by the packers to truckers for producing a certain volume in the week for them?—A. No. We have no evidence.

Q. You haven't any evidence? But your committee made observation with respect to the interest of the trucker?—A. Yes, to some extent.

Q. And you say the necessity for greater competition prompts the producer to desire the shipments to be hauled to the stockyards?—A. Yes.

Q. Now, then, dealing with the question of stockyards, what are the observations of your committee as the result of your evidence on stockyards and stockyard charges?—A. Well, the principal complaint that we found was in the hay product, and the questionnaires which we produced—which we have through Lampton county—on 65 questionnaires sent out by Mr. Fraleigh the returns are 100 per cent, not one confirmed the charges that existed pertaining to hay. Not so much complaint about the other charges, the other fees; but they felt they were being charged an exorbitant price for their hay.

The CHAIRMAN: That refers to the large profit that is charged on hay?

The WITNESS: Yes. We had evidence that hundreds of tons were sold to the yards last year at \$6 a ton and retailed at \$26.

*By Mr. Factor:*

Q. \$26 a ton?—A. Yes.

Q. I thought they were limited to adding from \$10 to \$12 a ton.

Mr. SOMMERVILLE: That is the regulation.

Mr. FACTOR: In other words, they break—

The WITNESS: We do not know anything about the regulation. The information in the communications here and the replies to the questions sent out, the lowest is \$26—some \$28 and \$30; and drovers give evidence to our committee through these questionnaires of selling hay at those prices and buying it the next day when they went for their stuff at \$26 a ton.

*By Mr. Young:*

Q. Are these average cases or isolated cases?—A. No, this is pretty uniform. There has not been a case quoted in my enquiry below \$26.

*By Mr. Factor:*

Q. That is in the Toronto stockyard?—A. Yes.

*By Mr. Young:*

Q. The spread between what they pay and what they charge would be \$20 on the average?—A. At the time they sell it at \$6 a ton it would be retailed at \$26.

Q. Was that laid down, freight paid?—A. Delivered. We have documents before the committee, 100 tons from one man delivered in the stockyard at \$6 a ton, retailed at \$26.

The CHAIRMAN: We will call the stockyards later and get the facts. The main point you have to emphasize is the uniform complaint about the very high price charged for hay?

The WITNESS: Yes, uniform complaint.

Mr. FACTOR: Apparently it is a clear violation of the regulation according to Mr. McCallum.

The CHAIRMAN: It would appear so, but I am afraid we could not demonstrate that just now.

*By Mr. Sommerville:*

Q. That is with respect to stockyards. Now, what was the observation of the committee on the evidence taken with respect to charges of the livestock exchange men, the commission men?—A. The unanimous report that the commissions were too high.

Q. What reasons were given for the complaint that the charges were too high?—A. Evidence was produced to the committee that in 1914 commission on a carload of cattle was \$12, I think, for handling that carload; in the present year it is \$17. No reduction had ever been made. The question arose in the committee: had any reductions been made, any percentage, during the period of hard times. There had been a lower percentage for every other concern in the province and the Dominion and they had taken their cuts, but the report of the evidence is that there was never any cut made by the commission men.

Q. All others having taken reductions in salaries and cuts, the evidence before your committee was that the livestock men had not taken their cuts?—A. Yes.

Q. And had not reduced the charges?—A. That is right.

*By Mr. Factor:*

Q. You mean commission merchants?—A. Yes.

Q. Yesterday I read a letter from one of the commission merchants complaining that they would sustain a loss if the present commission is reduced. Do you know anything of the net profits of the nine firms operating in Toronto?—A. No, we do not know. It has been reported to our committee that there is \$22,000 in telephone messages there which we think looks rather unreasonable. We do not know all the conditions. We have no way of finding the financial situation. We do not know whether they are losing money or not, but we do know that these are the same conditions, and we do know that a commission man set up a month ago, and there are preparations being made, as we learn, for another to set up.

Q. Did you have the commission merchants before you at your committee to give their side?—A. I might explain. I think it was last week we gave notice to the commission men if they had anything to say to the committee we would be very glad, and we allotted the hours from ten to eleven to hear them, and we waited until ten-thirty and they did not appear. Therefore we sent a messenger to the phone and we learned that they could not very well attend for some reason or other.

*By Mr. Sommerville:*

Q. You had no evidence from the commission men themselves upon their financial position or their charges?—A. No.

Q. Your conclusion, from the complaints that you had, was that the charges were too high?—A. Yes. We had to accept the report that we got from all parts of the province.

*By Mr. Factor:*

Q. What do you say about this statement contained in a letter from one of the commission merchants that the net profit is  $2\frac{1}{2}$  cents for the year 1933?—A. I would not be able to state because I am not in touch with their offices and their financial conditions. We do learn that three commission men handle in the neighbourhood of 60 per cent of the products. That report has come to our committee.

*By Mr. Sommerville:*

Q. In addition to the stockyards, were there any other complaints that were being made with respect to charges from commission firms?—A. No, no complaints, only their fees.

Q. Was any evidence produced before your committee to indicate that if there was a larger quantity of stock going to the stockyards there would be a reduction in charges?—A. The general impression of our committee was that if the stock went through the yards it should lend itself to reducing the exchange charges.

Q. And also reducing the stockyard charges?—A. Yes.

*By Mr. Senn:*

Q. Do you think it is possible to have all the stock go through the stockyards?—A. Well, if this government cannot proceed to do something, Ontario has no power. It is all within the power of this government to control or take into consideration the control, as we learn, of the situation there.

The CHAIRMAN: You mean the stock market in Toronto, I presume?

The WITNESS: Yes. Now, I might state that the Minister of Agriculture and our committee are unanimous in the opinion that if conditions do not change there immediately that the Dominion government take over the situation and control it in some way.

*By Mr. Sommerville:*

Q. Take over the stockyards?—A. Yes, take over the stockyards.

Q. And control the situation of marketing?—A. Yes.

*By Mr. Factor:*

Q. That would not solve the problem of the farmer selling direct to the packer?—A. Well, it would certainly be very acceptable to 90 per cent, and in fact I think I am safe in saying 99 per cent of the province of Ontario; it would be acceptable at the present moment.

Q. Because of the conditions that prevail in the country?—A. Yes.

*By Mr. Senn:*

Q. You mean that 99 per cent of the farmers in Ontario would be willing to accept government intervention that they must market their stock through the abattoirs?—A. I will not say they must sell their stuff through the stockyard; but I think I am safe in saying that 99 per cent of the producers of stock will favour the government taking charge of the stockyards and the exchange.

*By Mr. Young:*

Q. They would like to keep the packing houses in operation as opposition?—A. They feel also that the great trouble of all exists in the packing plants.

*By Mr. Sommerville:*

Q. And what is that trouble?—A. We are rather inclined to believe, only by what we can pick up—we have no way of investigating—but the general impression of the committee was that they were not losing any money and, in

fact, they must in the last year or two have made reasonably large profits, and you can quite realize at the present moment that there is not any expense connected with either stockyards, exchange or any part of the marketing that the producer does not maintain and pay every cent, even the stamps on the cheques that the exchange pay him for his stock. They charge him that.

Q. That all comes out of the producer?—A. That all comes out of the producer. The consumer and the retail man does not pay any percentage of the cost that exists up to the present time.

*By Mr. Factor:*

Q. How will the taking over by the government help that?—A. Well, we always feel, and we know that the people can bank their faith pretty well in the government men.

*By Mr. Sommerville:*

Q. Taking control of the situation?—A. It takes it out of private interests, and we think if there were some way of getting at them it would be a better condition.

*By Mr. Senn:*

Q. When you suggest that the government take over the stockyards, do you mean the companies or the commission firms or both?—A. Yes, both. Take charge of the stockyards and exchange, if you choose.

*By Mr. Edwards:*

Q. Take the packing plant in Kitchener. The farmers in that district truck their stuff to the Kitchener plant. Would you suggest that that be marketed through the yards in Toronto and back to Kitchener?—A. No. We understand that there is a certain percentage of stuff under the choice of the shipper. He takes his choice as to what market he shall go. The Toronto yards will control a certain percentage, and there is a certain class of producers that will always go to Toronto, but as we understand it they pretty well control the market in this Dominion at large.

*By Mr. Sommerville:*

Q. That is to say that if you build up the Toronto market, you build up all the other markets?—A. Yes.

Q. And if you provide more competition at Toronto you provide a better price throughout the country?—A. That is my view.

Q. And, therefore, by building up the Toronto market you get a better price for your farmer even if he were to send direct to the smaller plants throughout the country?—A. Yes, it is the prevailing price.

Q. Then, Mr. Jamieson, you were speaking of the packing interests. When the stockyards were first established and the packing plants were first established at the stockyards, did not all or practically all the stock go through the stockyards to the packing plants?—A. That is our information.

Q. And that was the time when you had a number of packing plants and you had large competition upon the market?—A. Yes.

Q. And then with the merging of the plants there has been a larger amount going direct and a smaller amount of competition?—A. Yes.

Q. And that competition has been steadily decreasing?—A. Yes.

Q. And that is the situation that was disclosed to your committee, was it not?—A. Yes. The Canada Packers used to be four packing plants, and we only have Swifts and Canada Packers.

Q. You have only Canada Packers and Swifts at Toronto, practically?—

A. Yes, the local butcher likes to come into the market. We also have the evidence coming to our committee—reported to our committee that no competition—one buyer went down one alley, and that plant did not grant permission to the second buyer to go into that alley.

Q. What do you mean by that? Let us develop that.—A. It is the prevailing practice.

Q. Then, Mr. Jamieson, you were speaking of the packing interests; when the stockyards were first established and the packing plants, were first established at the stockyards, didn't practically all the stock go through the stockyards to the packing plant?—A. That is our information.

Q. And that was a time when you had a number of packing plants, and you had much competition upon the market?—A. Yes.

Q. And then with the merging of the plants, there has been a larger amount going direct?—A. Yes.

Q. And a smaller amount of competition?—A. Yes.

Q. And that competition has been steadily decreasing?—A. Yes.

Q. That is the situation that was disclosed to your committee, was it?—A. Yes. There are what used to be four packing plants, and we only have Swifts and Canada Packers.

Q. You have only Swifts and Canada Packers at Toronto, practically?—A. Yes, and the local butcher that likes to come into the market. We also have the evidence given to our committee, reported to our committee, that no competition—one buyer has to run down one alley and that plants do not grant the second buyer going into that alley.

Q. What do you mean by that; just develop that?—A. As I understand the report that came to our committee, we had it reported that there was not more than one buyer for an alley, and the packing plant which sent their buyer out there saw that no other buyer from their plant disturbed that alley.

Mr. YOUNG: What about a buyer from another plant?

*By Mr. Sommerville:*

Q. Yes, what about a buyer from another plant?—A. Of course, we know what is in the minds of the people, but we have not evidence. It is in the minds of the people that the packers have a little conference occasionally, and they know what they are going to pay to-day, and they know who will go up certain alleys.

*By Mr. Young:*

Q. Are not commission men in there buying as well as packers?—A. Commission men are there selling my stuff or shippers' stuff that comes in there. The exchange is doing that.

Q. There is no buyer but the packer?—A. The packers are the only buyers, possibly, at times.

*By Mr. Sommerville:*

Q. At times you have the butchers, the small butchers?—A. Yes.

Q. And you have the packer, and then at times you have the buyer who wants feeders to take out to fatten?—A. Yes.

Q. And with the exception of these buyers, the packers are in control?—A. They control the whole situation.

*By Mr. Young:*

Q. There was something said yesterday about speculators who buy to ship to another; does he come in somewhere?—A. If he wants to buy cattle, I presume he could go to the stockyards, if he wants to buy a load of cattle which he can very often get at a very reasonable price.

Q. Speaking broadly, you say there is no competition in the yard except what is furnished by the packers?—A. A man who is buying to feed, buys cows at a certain season of the year, and it might be a month for the season that certain feeders are needed in the country.

Q. The fall of the year?—A. Yes. The other eleven months is left to the packer and the local butcher.

*By Mr. Kennedy: (Peace River):*

Q. Feeders are a different type?—A. Yes, feeders are a different type of cattle.

*By Mr. Sommerville:*

Q. The packer is not interested in the feeder?—A. No.

Q. He is interested in the cattle or live stock which he can kill and dress?—A. Yes.

Q. What other observation can you make to this committee with respect to the practices that have been complained of, Mr. Jamieson?—A. Well, I don't know how better I could put it with less trouble than to just read a few lines here.

Q. Very well?—A. "Dealing weekly with those men down there I have come to know many of them personally, both commission and abattoir men, and I must say that I have found most of them good fellows. However, I find a great lack of competition among the buyers. It is an exception rather than a rule to have a buyer raise the bid against another. A few weeks ago I had one lot of five cattle. My commission men when they saw them put their value at  $4\frac{1}{4}$  cents per pound. One of Swifts' men offered  $3\frac{1}{2}$  cents for them. Another buyer offered  $3\frac{3}{4}$  cents. Another of Swifts men came and bought the cattle at 4 cents."

*By Mr. Ilsley:*

Q. The first figure was  $3\frac{1}{2}$ ?—A. The first figure was  $3\frac{1}{2}$ .

Q. You said  $4\frac{1}{2}$ .

*By Mr. Sommerville:*

Q. The commission man first put it at  $4\frac{1}{2}$  cents value?—A. Yes.

Q. The first bid was  $3\frac{1}{2}$  cents?—A.  $3\frac{1}{2}$  cents. The second bid was  $3\frac{3}{4}$  cents. He then was bid 4 cents. "They were weighed to him and the tickets sent into the office. Now, there is an unwritten law there that after a buyer makes an offer no other buyer is to be taken in to bid on the cattle. After the yards had closed at four, the first bidder returned the tickets to the commission and refused to keep the cattle." The market was practically over and he was forced to take  $3\frac{3}{4}$  cents. You notice the cattle went over the scales, as he thought at 4 cents. They forced him to take  $3\frac{3}{4}$  cents.

*By Mr. Factor:*

Q. That is the second bid?—A. The third bid.

*By Mr. Young:*

Q. The second bid was  $3\frac{3}{4}$  cents?—A. Yes.

*By Mr. Sommerville:*

Q. The first bid was what?—A. The first bid was  $3\frac{1}{2}$  cents.

Q. Of Swifts?—A. Yes.

Q. The second bid was  $3\frac{3}{4}$  cents?—A. Yes.

Q. Swifts came back at 4 cents?—A. Yes.

Q. And then when it was weighed over the scale to Swifts, the tickets were returned to the commission firm?—A. Yes.

Q. They refused to take them at 4 cents?—A. Yes.

Q. And they had to go back to the buyer at  $3\frac{3}{4}$  cents?—A. Yes. The day was closed. The market had closed at four o'clock in the day. He was obliged to take  $3\frac{3}{4}$  cents. That is his own statement.

Q. You are submitting this in connection with the complaints you received?—A. Yes.

Q. That there was practically no competition among bidders?—A. That is practically a uniform complaint.

*By Mr. Factor:*

Q. But was there not a contract made between them when the bid was made of four cents?—A. He expected he made a contract, and he was taking the cattle. He went over the scales, as he thought, sold at 4 cents.

*By Mr. Young:*

Q. Is there any board that controls those things in the yard?—A. I don't know of any.

*By the Chairman:*

Q. Would you give the name of that individual to Mr. Sommerville?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. That was the same man that offered 4 cents as the man that offered  $3\frac{1}{2}$ ?—A. No, I don't understand it was. Another buyer, he said. It was the same firm that bid  $3\frac{1}{2}$  and 4 cents.

Q. Who got the cattle?—A. He sold them to the first bidder, the firm that bid  $3\frac{1}{2}$  cents. He thought he sold at 4 cents to another bidder.

*By Mr. Sommerville:*

Q. Of the same firm?—A. Yes.

*By Mr. Ilsley:*

Q. It was a case of the buyer backing out?—A. Apparently.

Q. Would that be an isolated instance?—A. The information we get, he says it is an unwritten law that one buyer from the same firm will not bid against another. Therefore they bought the cattle; they bid  $3\frac{1}{2}$  cents. As he expected, he sold the cattle at 4 cents, and they went over the scale and as he thought it was finished. But these tickets came in, they refused to pay  $3\frac{3}{4}$  cents; that was not their bid.  $3\frac{1}{2}$  cents was their bid and 4 cents was their bid.

*By Mr. Kennedy (Peace River):*

Q. Did the same packing company get the cattle?—A. Yes, the same packing company got the cattle.

Q. Three different bids?

*By Mr. Young:*

Q. No, the first man bid  $3\frac{1}{2}$  cents. That was a Swift man. Somebody else bid  $3\frac{3}{4}$  cents. Then a Swift man comes in and bids 4 cents and they sold to him?—A. That is right.

Q. Then he refuses to take them on the ground, as you say, that nobody can bid against the first bidder—that the second man bid against the first bidder?—A. No, that is what he reads from it. He was there, and he had to take it because the day was closed. To bring them back into the yard after going over the scale meant that he kept them another day, which meant money to him.

MR. FACTOR: In other words, Swifts chiselled him down to  $3\frac{3}{4}$  cents.

MR. YOUNG: No, Swifts didn't get the cattle.

*By Mr. Sommerville:*

Q. Is this not the situation: The first bidder was from Swifts at  $3\frac{1}{2}$  cents?—A. Yes.

Q. Then another buyer from another firm bid  $3\frac{3}{4}$  cents?—A. Frank Hunniset, as a matter of fact.

Q. Frank Hunniset bid  $3\frac{3}{4}$  cents, and he is an independent?—A. Yes.

Q. And another buyer of Swifts, not the first man, came along and bid 4 cents for Swifts?—A. Yes.

Q. And when they went over the scale and were awarded to Swifts, the tickets were returned?—A. Yes.

Q. And the cattle were refused by Swifts?—A. At 4 cents.

Q. Yes, at 4 cents; and the cattle went back to Hunniset at  $3\frac{3}{4}$  cents?—A. No, it stayed there. He didn't bring it back. He accepted.

Q. He accepted at  $3\frac{3}{4}$  cents?—A. Yes.

Q. This is given in evidence in support of the contention that it is the unwritten rule in the yard that when one buyer from the firm that makes the first bid, another buyer from the same firm shall not increase that bid?—A. He terms it an unwritten law.

Mr. YOUNG: Eliminates competition.

*By Mr. Sommerville:*

Q. Another buyer might come along and feel that these cattle are worth a quarter to a half a cent more?—A. Yes.

Q. But when they have learned that the first buyer for their firm has bid a quarter of a cent less, then they withdraw?—A. Yes.

Q. That is the suggestion, is it?—A. Yes.

*By Mr. Ilsley:*

Q. Is that the practice, or is it an isolated instance?—A. This man ships every week, and he goes out—I know him personally; I know he ships; I know he buys the stuff and pays with his own money. He takes them to the yard, and he takes his competition there, and when I write him for information this is what he gives me, and is very anxious that something will develop.

Q. I know, but he may be sore about that one instance?—A. No.

Q. Does that happen right along, or is it just something that happens once in five years?

*By Mr. Sommerville:*

Q. His letter says that it is a practice?—A. Yes.

*By Mr. Ilsley:*

Q. To back out on its bids in that way?—A. Well—

Mr. SOMMERVILLE: No.

Mr. FACTOR: He says it is an unwritten law.

Mr. KENNEDY (*Peace River*): The bid was raised, the first bid was raised.

Mr. SOMMERVILLE: The first bid was raised by another packer.

Mr. KENNEDY (*Peace River*): Yes.

Mr. SOMMERVILLE: By the independent packer or man who had the small packing plant.

*By Mr. Kennedy (Peace River):*

Q. And he got the cattle?—A. No. Swifts came up.

Mr. EDWARDS: Swifts chiselled him out of a quarter of a cent.

Mr. KENNEDY (*Peace River*): They took the cattle away from the other fellow.

Mr. SOMMERVILLE: Yes; because they had been weighed over the scale to Swifts, they were Swifts' cattle; but when the price tickets went in Swifts apparently found that they had made two bids on the same cattle, one at  $3\frac{1}{2}$  cents and the other at 4, and they refused to honour the 4 and insisted on getting them at the price which had been bid by Hunniset,  $3\frac{3}{4}$  cents. That is the situation.

Mr. ILSLEY: They regarded the second bid as null and void because it was made against their own man.

Mr. FACTOR: Some system.

The CHAIRMAN: Apropos of this, I have the rules of the Toronto Live Stock Exchange in my hand, and in article 21, subsection 3, we have this rule:

All purchases and sales of live stock at the market shall be made upon the basis of a bona fide bid, or bids, to buy, by the purchaser, and the acceptance of such bid, or bids, by the seller; or an offer, or offers, to sell, by the salesman, and the acceptance of such offer, or offers, by the buyer. The price, or prices, thus bid or offered and accepted by either buyer or seller, at the time the transaction is made shall be the price, or prices, governing such purchase or sale and the scale ticket shall be so marked.

So this is evidence that in this instance, I am pointing out that it was an utter violation of their rules.

Mr. FACTOR: Taking advantage of the farmer.

The WITNESS: That is a usual occurrence, taking advantage of the farmer.

*By Mr. Kennedy (Peace River):*

Q. What is the closing hour?—A. Four o'clock.

Q. They get out of this by saying that the closing bid was made after that hour?—A. No, they were over the scale at four, and it was then closing.

*By Mr. Sommerville:*

Q. But it was refused after four, and the man had no other market?—A. Naturally his commission man led him to believe that his cattle were worth  $4\frac{1}{2}$  cents. He stayed on the market as well as he could and tried to get as good a price as a commission man could get.

Q. And got no bid until late in the afternoon?—A. I don't know what time. He may have got some of those bids early in the day. I don't know.

The CHAIRMAN: I think it is just as well to put in another subsection; it is just as well to have it on the record. It is so clear. Section 4 in the same article 21:

Members of the exchange, or their employees, in consummating the purchase or sale of live stock at the market, shall agree upon all the terms of the trade, at the time the said trade is effected, and in no case shall any deduction, change or offset of any nature whatsoever be claimed or allowed other than such as is specified and agreed upon by and between the principals at the time the trade is made.

Mr. YOUNG: What body is there to enforce these rules? Anybody there at all?

The CHAIRMAN: Oh yes, there is a most elaborate provision for grievances.

Mr. SOMMERVILLE: Arbitration.

Mr. FACTOR: Like the constitutions of fraternal societies, never enforced.

The CHAIRMAN: It is pretty elaborate.

*By Mr. Factor:*

Q. Why could not the farmer—or would it have paid him to have allowed the cattle to remain there until the next day?—A. The drover?

Q. The drover, yes?—A. Well, you know what that means, with hay at \$26 a ton.

*By the Chairman:*

Q. And hotel bills?—A. And hotel bills, with a lot of six cattle.

*By Mr. Senn:*

Q. May I ask this further question: Suppose the drover had made a complaint—

Mr. SOMMERVILLE: That is what I am coming to.

*By Mr. Sommerville:*

Q. Suppose, Mr. Jamieson, that this drover had not acceded to the demand of Swifts to take 3½ cents, what would have been his chances with the same Swift Company on the next load of cattle he brought in the following week?—A. It looks like as if it would be serious.

Q. In other words, he is dealing with these two packers from week to week?—A. His hands are tied.

Q. Absolutely, I thought so; that is the situation that he is placed in, is it not?—A. That is what we find with every drover and shipper, that he refrains from giving evidence for fear his head is cut off.

Q. Now that you have raised the question, as a matter of fact questionnaires were sent out?—A. Yes.

Q. To a large number of shippers and drovers?—A. Yes.

Q. Perhaps you will tell this committee what some of them said as to why they did not answer the questionnaire?—A. Well, the complaint was that we just don't want our names divulged. We are doing business every day, every week, with these men, and we don't want to get in their bad graces.

Q. And so they would refuse to answer the questions that were sent out?—A. Yes.

Q. In their own interests?—A. In fact, I had one who had them scrutinize his letter before he mailed it to me.

Q. That is the last word in care.

The CHAIRMAN: That is co-operation.

*By Mr. Kennedy (Winnipeg):*

Q. Do you believe that he thought possibly he could get a little extra price the next time?—A. Well, there might be a drink in it for him, or something.

*By Mr. Ilsley:*

Q. Mr. McLean said in his evidence that there was no business in Canada where there was as much competition, or more competition, than there is between the packers of Canada in purchasing live stock. What do you say to that?—A. Well, I do not think he would get a producer in the province of Ontario to agree with that.

Mr. FACTOR: This is the thing that puzzles me: Suppose you eliminate direct sale by the producer to the packer, if that system prevails at the stockyards how is the producer going to benefit?

Mr. SOMMERVILLE: The packer cannot get his supply anywhere but on the stockyards then.

Mr. FACTOR: That practice now, as Mr. Jamieson suggests, is the practice prevailing on the stockyards.

*By Mr. Sommerville:*

Q. Then he is more independent now because he has an available supply from elsewhere which is constantly increased?—A. As I pointed out at the outset, the packer lays back until he sees what is going to come to his plant that day by truck. The truck has more or less ruined the situation because they go direct, in some cases. The evidence that we got, or the report we got, is that the buyers of the packing plants lay back to see what there is.

*By Mr. Young:*

Q. Does the truck ever unload at the yard?—A. Oh, many of them do.

*By Mr. Sommerville:*

Q. On permission of the farmer?—A. Yes. A truck may be coming in a hundred miles; he is not making another trip, and he stays at the stockyards for two or three hours. In watching them sell on the stockyard—and I thought the bids were ridiculous—in several cases they got no competition and by three or four o'clock, he says, "I have got to take it or leave these cattle here at the cost of the farmer," and his orders are to dispose of the cattle.

*By Mr. Factor:*

Q. The point is this: Suppose all live stock were sold on the stockyards; you have already told us that with exception of the small butcher there are only Swifts and Canada Packers who are buyers; what is to prevent them from containing practices of that kind on the stockyard after you eliminate direct sales to packers?—A. They will come out in the morning, at least.

*By Mr. Sommerville:*

Q. Because they have to have their supplies?—A. Yes, and we know they want their supplies. If they have got 1,000 cattle by 10 o'clock, that means a good deal in what they are going to handle that day. They do not have to go out and bid.

Q. In other words, they have to keep their plants working and if they buy supplies as soon as the market opened, that would affect all the markets in Canada, and the whole price level in Canada?—A. That is what we think.

*By Mr. Young:*

Q. But would they buy the whole day's supply as soon as the market opens?—A. We would not say that they would buy all at once, they quite possibly would spread their buying. They would be there to bid, anyway.

Q. To make their bid, and with more cattle being there, there might be more competition?—A. You can understand that a producer, when he has gone on a competitive market such as this where they are all bidding, is satisfied that he is meeting good competition.

Q. At the present time he feels that he is not getting competition?—A. He feels that at the present time there is no competition.

*By Mr. Kennedy (Peace River):*

Q. Before Mr. Jamieson goes on from there, just a moment; I want to get this clear as to your point of view as to all stock going through the stockyard. I gathered from your answer to Mr. Edwards that you referred to stockyards at country centres, at points like Kitchener, for instance?—A. Our committee only considered the stockyards which at the present time practically control the market.

Q. That is, Toronto?—A. Toronto.

*By Mr. Sommerville:*

Q. Yes, you were taking into consideration all the packing plants that are on the stockyard?—A. Yes.

Q. And you were taking into consideration those places where there were packing plants at the stockyard?—A. Yes.

Q. And these are the places where they hold back because they have cattle coming in direct?—A. Yes.

Q. But the packing plant in Kitchener would not have that influence?—A. No.

Q. It is where the stockyard and the packing plant are side by side that they hold back from the market and affect the market across the road?—

A. The situation is that the packing plant at Kitchener gets on the telephone and buys stuff from the farmer, and they want this stuff so they give him a quarter of a cent more than he would get at Toronto, or any other place.

Q. But the basic price is settled on the competitive market of Toronto?—A. At Toronto, yes.

Q. And the extent of that price is dependent upon the amount of competition on that central market.

Mr. EDWARDS: That is clear, thank you.

*By Mr. Young:*

Q. Can you tell us all the cost that would attach to a carload of cattle going through a yard—on any car going right to the plant?—A. No, but I can give you here a couple of shipment statements. I can give you what the car costs, shipping 95 miles.

*By Mr. Sommerville:*

Q. That is just to the stockyards?—A. Or direct.

*By Mr. Young:*

Q. Never mind the freight, I want the charges going through the yard?—A. Yes, we have it here, I think.

The CHAIRMAN: We got this all officially yesterday, Mr. Young.

Mr. YOUNG: I want to compare them, as to the costs going through the plant.

Mr. SOMMERVILLE: We haven't this, of course, at the present time; but we will have before this committee the costs from both sources, because I am hoping to submit evidence to the committee indicating what is the out turn and the profit made by the packing plant on the cattle bought in the yard, on the cattle bought direct by truck, and on the cattle that are bought direct by car; so that you will have the relative portions of each, the relative cost of each and the relative profit of each.

*By Mr. Kennedy (Peace River):*

Q. Mr. Jamieson, supposing a farmer loads his hogs on a truck and there is a smash-up on the way to the city, what protection has the farmer?—A. Well, if he is carrying insurance—in a lot of cases he has none; there are a lot of cases where there is none.

*By Mr. Ilsley:*

Q. There is one question I want to ask. Did the complaints about these differentials that we were speaking of a while ago, that they are too great, or that they are all established on the wrong principle; there was a suggestion made when Mr. McLean was here giving his evidence, that when the price of

hogs was very low that these large fixed differentials subtracted from the price of the bacon hog, made the price of the lower grade hog so pitifully small, that it was altogether out of line. Do I make my meaning clear? Did you have any complaints about that?—A. The general feeling of the producer is that the spread is not quite sufficient in most cases. The producer finds the encouragement of the British market—our best market—that the dollar premium which he gets does not encourage him to grow select hogs. For instance, he will take a hog that is a good hog, and when hung on the hook will likely grade select. If he were to finish it, probably a month longer, then he would have a select. You have to have a good breed and good type.

*By Mr. Sommerville:*

Q. Longer finishing?—A. A little longer finishing, a slower type of hog to finish. You take cross-bred hogs, certain breeds, he will be a finished hog by the time that he is 150 pounds. He will be a finished hog and he will go to the butcher shop, and he will get a low price; there is not enough spread to encourage him to dingle for another month and possibly get half of his load select—or not that many.

Q. In other words, it costs more than a dollar to produce a select?—A. Yes.

Q. And he does not get more than a dollar for his selects, no matter what he does?—A. No, no matter what he does.

Q. He allows his butchers and bacons to run along on the markets, and he will make more money out of the sale of them than he will out of his selects?—A. Yes.

Q. And he would make more money if he could get his right price on his butchers, instead of having to take a dollar off the butchers?—A. Yes. That is where encouragement comes in. When they established grading and had them all graded on the stockyard, and you come to this—where we have an outlet for a select bacon he can demand a better price.

Q. And when he does not get enough money to produce selects, that discourages him?—A. Yes.

Q. And that affects the quantity that is available for the export market?—A. There is no guarantee at the moment that he is going to get a select price, don't you see; therefore he is not taking the same interest as he would if his hogs went to market and were graded on the stockyards; if his hogs were grading select he would put in an extra month if the spread was enough to pay him.

*By Mr. Kennedy (Peace River):*

Q. What premium should we have on selects, Mr. Jamieson?—A. I would not like to dictate. We used to have \$2 a hog.

*By Mr. Sommerville:*

Q. Up to 1928 you had \$2 a hog on selects over what you called them the thick smooth?—A. Yes.

Q. And the thick smooth was then the basic hog?—A. Yes.

Q. And that thick smooth hog is now divided up into two classes, the bacon hog and the butcher hog; these two classes constitute the old thick smooth?—A. Yes.

Q. And when they were together as one class, the farmers got a \$2 premium for their selects?—A. For their selects.

Q. Now that they are divided up, you get a dollar over the bacon?—A. Yes.

Q. And a dollar less on the butcher?—A. Yes.

Q. In other words, there is no gain?—A. Nothing to it.

Q. The dollar off the butchers off-sets the dollar on the selects?—A. Yes.

Q. And that is the fact since 1928?—A. I do not know whether it was then or not, I thought it was longer than that since the change.

Q. I thought it was about 1927 or 1928?—A. My view would be that at the present time, with the outlet we have for bacon, the spread should be \$2.

Q. Should be \$2 for selects?

The CHAIRMAN: The premium on selects?

The WITNESS: Over bacon.

*By Mr. Sommerville:*

Q. And that there ought to be a spread on the lower grades?—A. The general impression is that the bacon is going in on the hoof, and is going out as select in the same box.

Q. That is to say the general impression of the producer is that the bacon hog is producing the same kind of bacon as the select hog and is going forward to the British market and is bringing the same price in the British market as the select bacon?—A. In many cases.

Q. In many cases, and that he ought to get a larger price?—A. For instance, the grader grades them out, and after they are hanging on the hook it is quite evident to any one who has slaughtered hogs—who knows there is a in their appearance when they are hanging on the hook—there is a very close margin on the grading, but when they are on the hook they will all go as selects.

Q. Perhaps your familiarity with the hog situation might help me in this respect; Mr. McLean, when he was here, told us that 90 per cent of the hog production was for domestic use. When you kill your "butcher" and hang it on the rail do you think that there is any lower price taken for the butcher sold for fresh pork than for the bacon sold for fresh pork?—A. That is not our information.

Q. In other words, it is your opinion that the packer does not pass on to the market the dollar he takes off the butcher below the bacon?—A. That is our conception of it.

Q. And is it not a fact, from your knowledge of the hog industry, that a great deal of the supply of pork for the domestic market comes from lights and heavies?—A. Yes.

Q. On which there is as much as \$2 taken off?—A. Yes.

Mr. ILSLEY: Wasn't it more, \$2.75;

*By Mr. Sommerville:*

Q. I think it was \$2.50 and \$2.75 on some. And do these hogs not produce for domestic purposes fresh pork that is sold in the same way as the pork for select bacon?—A. The local butcher prefers a 150-pound hog.

Q. That is a light hog?—A. Yes.

Q. In other words, you take a loin of pork, whether it is from a bacon, a light or a heavy, it sells at the same price in the butcher shop?—A. We think so.

Q. But the producer has to pay for the difference because he is producing these various types?—A. We think so.

Q. And the packer takes anywhere from \$1 to \$1.50 per hog off him, but you think he does not pass that on to the consumer?—A. I doubt if he does.

Q. You think, therefore, if there was competition for these lights, heavies and butchers, independently, then these grades would come into their own prices?—A. They should.

Q. And bring their own value?—A. They should.

*By Mr. Ilsley:*

Q. Do you think that these discounts below the price for bacon hogs, that is the discounts for heavies, lights and so on, are too great; that the differential is too great?—A. You mean between them?

Q. As I understand it, the bacon is the basis, and the lower grades suffer?—A. I do not think so. I feel like encouraging the better hog. I do not think we should encourage a lesser spread, because the greater the spread the better are the prospects for a better type of hog.

Q. There was a suggestion here that when the price of bacon is very low, and the price of hogs is very low, that with a rigid differential—say of \$2 or \$2.50—for the poorer grades, the farmer gets comparatively little for the lights and heavies?—A. Yes, the hogs are low.

Q. And that with a differential that was not rigid, that was say on an ad valorem basis rather than on a fixed basis would be more just?—A. Well, I think you could hardly arrange a sliding scale. I think the hogs—really that is the unfortunate part of it, having the thick hog—I do not know that we could change that very much.

*By Mr. Sommerville:*

Q. Perhaps on a percentage basis, Mr. Ilsley has in mind, instead of a fixed basis; in other words, the differential should bear a relationship to the price that is received for the hog rather than to a definite fixed price, irrespective of what the producer is getting for his bacon hog?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Referring again to this matter of hog selling either direct to the packers or to the stockyards; over the past period of years is there any trend in any particular direction?—A. That is, as to the yards and to the packers?

Q. Yes.—A. I rather think it is increasing to the packers.

Q. It is increasing to the packers. I have the information, I thought it would be of interest to the committee, but I want to get your view as to this. My information, take over the period of the last ten years—I was rather surprised to get this information—that the percentage of hogs in Canada shipped direct to the stockyards in 1923 was 42.4 per cent, and direct to the plants 57.6 per cent. Now, bringing it up to 1933, direct to the stockyard shows 41.2 per cent, and direct to the plants 58.8 per cent. The change in ten years is approximately 1.2 per cent. Would that be in accordance with your views?—A. Well, I have thought that there was more since the truck came into action.

MR. SOMMERVILLE: Mr. Edwards, are these figures for Toronto?

MR. EDWARDS: This is the evidence which was given before the Select Standing Committee on Agriculture.

MR. SENN: Mr. Pearsall gave that evidence.

*By Mr. Edwards:*

Q. This covers the percentage of hogs in Canada shipped direct, and it shows a difference of only about 1 per cent in the whole of the Dominion in ten years?—A. Yes. But it is just possible that Ontario, owing to improved roads, in the last ten years, has brought that up. It is also possible that a greater percentage is coming to the stockyards in western Canada. You might recall that ten years ago in many of the provinces practically all live stock was moving by rail. You will also know that a shipper might buy his load f.o.b. and sell it to a packing plant, and ship it direct, do you see; and there might have been just as much as that by carload lots in some of the provinces some years ago. But my impression is that in the province of Ontario the "direct" has increased very materially in the last five years; and the truck, as it takes it direct to the packing plant.

Mr. SOMMERVILLE: Thank you, Mr. Jamieson.

The WITNESS: Do you wish to keep this as an exhibit?

Mr. SOMMERVILLE: Yes, this is the complaints.

The WITNESS: Yes, and the report of the general committee.

The witness was discharged.

HOWARD FRALEIGH, M.L.A., called and sworn.

*By Mr. Sommerville:*

Q. Mr. Fraleigh, you are the member for East Lambton in the Ontario legislature?—A. Yes, sir.

Q. And you have taken an interest in the live stock situation in your riding the last few years, particularly because of the conditions which prevail?—A. Yes, sir.

Q. What do you say generally as to the condition of the farmer producing live stock?—A. Well, I was appointed chairman of the sub-committee for live stock, and asked to go into the details in regard to commission charges and stockyards; and before doing so I felt that it would be wise to get the views of the shippers from my districts, and I sent out a questionnaire. First I got the sales from the stockyards, and all those in my riding who had been in the habit of shipping at one time or another to the Toronto stockyard—and I got back, I think, about 75 or more questionnaires so that we could get them in shape; and I found that quite a lot hesitated in filling them out; they were afraid that they might get into trouble if their names were divulged.

Q. Get in trouble with whom?—A. With the commission men at the stockyards.

Q. Now I have this before me here, the questionnaire, and I have prepared a statement for Mr. Jamieson of the proceedings. If you would not mind reading that out, I think it would cover it pretty well.

Q. Would you not prefer to read it, Mr. Fraleigh?—A. No.

*By Mr. Kennedy: (Winnipeg):*

Q. Before you read it, Mr. Sommerville, may I ask Mr. Fraleigh about how many questionnaires you sent out and about how many, approximately, you got replies to?—A. I just fixed up 65. I think I got over 75. There is the questionnaire there.

Q. You said there was reluctance to fill them out; you sent out how many and got back how many?—A. I just don't remember, but I got an awful lot of letters back refusing to fill them out. They were pretty well all answered one way or the other.

*By Mr. Sommerville:*

Q. Then these other questionnaires—the answers were received by you in confidence?—A. Yes.

Q. That is as to the names of the persons?—A. Yes.

Q. You gave them the intimation you would hold the name in confidence?—A. Yes.

Q. Even where you gave that intimation, you found a number of people who were not willing to send it in?—A. To take my word for it, yes.

Q. For fear they might have trouble by making any complaint?—A. Yes.

Mr. SOMMERVILLE: I shall now read this statement:

Summarized Report of Proceedings of the Committee on Agriculture and Colonization of the Ontario Legislative Assembly.

### Meeting of March 7

The committee met at 10 a.m. with Mr. J. E. Jamieson, member for Southeast Simcoe, as Chairman.

Mr. Jamieson explained to the members that the purpose of the meeting was to hear complaints from members and receive criticism concerning all matters pertaining to the live stock industry so that, if thought advisable, suggestions and recommendations could be made to the Stevens' committee at Ottawa. Mr. Jamieson stated that he believed the Stevens' committee were prepared to deal with reasonable requests in this regard.

After some discussion, in order that this matter might be dealt with, Dr. H. J. Davis, member for East Elgin, moved and Mr. John A. Craig, member for North Lanark, seconded the following resolution: "That this committee on agriculture ask for a thorough investigation of the packers, stockyards, and commission firms and all conditions of live stock marketing in Ontario by the Stevens' committee of the federal government at its present session in Ottawa."

In the discussion of this resolution Mr. Jamieson, chairman, recalled that Mr. F. R. Oliver, member for South Grey, levelled certain definite criticisms in connection with live stock marketing in a speech made in the house and that these matters should be investigated before the committee. He further pointed out that there were certain general complaints common to shippers and farmers in his own riding, and as evidence read various letters to this effect.

Dr. H. J. Davis, member for East Elgin, suggested that there is a general impression that the practices in buying by packing houses made people suspicious that a combine existed. Generally speaking, shippers complained that the open stockyards did not provide active competitive buying such as was intended and is desired.

Mr. John A. Craig, member for North Lanark, gave the committee the benefit of his experience as a shipper for twenty-five years by stating that present charges in marketing stock were too high, particularly so when the value of stock at present day prices is considered and compared with values and expenses some years ago. In other words, values of stock had declined considerably but the charges in connection with the marketing had not declined at all; and if at all possible that charges in connection with marketing should be reduced in keeping with the reduced net return to the shippers and farmers. Mr. Craig further expressed the opinion that it is generally assumed that labour costs and other expenses to packing plants, stockyards and commission firms had probably decreased during the depression and that the benefit of these reduced expenditures had in no way been passed along to the producer or shipper.

The chairman, Mr. Jamieson, pointed out that he had in his possession evidence that the Toronto Stockyards Company had been able to pay 8 per cent on invested capital until the end of June, 1932, after which they had been paying 6 per cent, or  $1\frac{1}{2}$  per cent quarterly on this capital; and, as expressed to him by a stockholder, such investment was preferable to farm mortgages.

Mr. J. D. Taylor, member for North Grey, expressed the opinion that the situation in connection with live stock marketing was serious and needed investigating. He further stated that while it was generally

believed that certain abuses existed, it would be difficult to obtain definite information because shippers believed that, by coming before a committee such as this to give evidence, they might be penalized in trading on the stockyards if present conditions continued to exist. He further expressed the opinion that if this matter were to be thoroughly investigated and results forthcoming, the evidence could be produced. General complaint was centred around the lack of competitive buying and the importance of truck deliveries direct to packing plants in creating a condition which permitted of packer buyers using stockyards to set prices when they were in a position to wait, and sometimes force down the price through having large quantities of stock on hand through direct purchases.

The chairman, Mr. Jamieson, pointed out that if the motion before the committee were passed, the members of the committee should undertake to gather information and evidence which could be submitted to the Stevens' committee to justify the asking of the investigation.

The motion was therefore put and unanimously carried, and the committee adjourned to meet again on March 15 at 10 a.m.

### Meeting of March 15

The committee met at 10 a.m. with Mr. J. E. Jamieson, member for Southeast Simcoe, as chairman.

Mr. Jamieson, in opening the meeting, stated that the purpose was to hear evidence, as collected by the members of the committee, in regard to the whole scheme of live stock marketing in the province of Ontario.

Mr. Jamieson advised the members that, in fairness to the commission firms and the Toronto Stockyards Company, on behalf of the committee an invitation has been extended to each of these organizations to send a representative, if they so desired, to appear at this meeting of the committee to present any facts concerning their end of the business that they might wish. He reported that neither organization had seen fit to send representatives, and therefore the meeting was open to the members to present what evidence they had been able to collect since the last meeting on March 7.

Mr. Jamieson produced letters of complaint from the following shippers:—

*By Mr. Sommerville:*

Q. And then follows a list of nine or ten shippers whose letters of complaint were handed in?—A. Yes.

Mr. SOMMERVILLE (Reading):—

He also submitted statements of sample shipments, one on behalf—a man from Collingwood, whose name is here, and one from another man from Collingwood.

These statements indicate the charges deducted and the net proceeds of sale.

The original letters are attached hereto for the use of the Stevens' committee.

Mr. Howard Fraleigh, member for East Lambton, advised the committee that he had asked the co-operation of the shippers of East Lambton in the answering of a questionnaire, so that a summary of their views might be placed before this committee. He further explained that in order that shippers might feel free to reply to his questionnaire, he had

made the promise that any statement made by them would not be used without their permission. Notwithstanding this undertaking, some shippers had returned the questionnaire unanswered, stating that they felt they could not feel free to give this information as it might jeopardize their position in selling live stock on the Toronto yards.

However, a copy of the questionnaire is attached hereto and a summary of the answers to some sixty-five completed questionnaires received to date revealed the following conditions:—

Are the stockyard charges for the following too high:—

1. Yardage—Answers, Yes 38, No 8.
2. Hay and feed—Answers, Yes 59, No 0.
3. Services rendered in unloading, loading, etc.—Answers, Yes 24, No 17.

Are the commission charges for buying and selling stock on the stockyards too high?—Answers, Yes 60, No 0.

Is the service rendered by the commission firms generally satisfactory to the producers and shippers?—Answers, Yes 42, No. 11.

Do these charges tend more largely than stockyard charges to increase direct marketings to the packers rather than to the stockyards?—Answers, Yes 30, No 9.

Are the present transportation services of the railways in live stock satisfactory to shippers of live stock?—Answers, Yes 22, No 26.

Are trucks supplying a more satisfactory service than the railways?—Answers, Yes 20, No 16.

A general discussion followed the presentation of this evidence in which Mr. Clifford Case, member for North York, brought to the attention of the members that considerably over one-half of the total live stock business on the Toronto stockyards was handled by three commission firms, and the balance of the business was divided among the six remaining commission firms. The view was expressed that there are sufficient firms operating on the Toronto stockyards to handle a much larger volume of stock than at present is coming forward, and that probably an increase in volume of stock would not cause any very considerable increase in expenses to the commission firms already existing.

Mr. A. H. Acres, member for Carleton, in giving his experience as a shipper, advised that in his opinion truck deliveries of live stock direct to the packing plants were on the increase, and as a result these direct purchases were tending to depress prices on the Toronto stockyards through lack of an active competitive market; and that if all stock delivered by truck were sold through a commission firm on the open market, conditions on that market would be considerably improved. He further expressed the view that all stock to be sold on the open market, where arriving by truck or otherwise, should be delivered by 8 a.m. if such stock was to be sold on the day of delivery. If such a condition existed, Mr. Acres believed that when the market opened at 9 o'clock buyers would know the amount of stock to be sold that day, and buying would commence at 9 o'clock; but with present conditions existing, buyers hesitated to begin bidding on the opening of the market and waited the arrival of trucks to ten and eleven o'clock, to see what deliveries were being made before they would do much buying.

Mr. Acres further expressed the view that commission charges on the Toronto stockyards should be the same as those prevailing in Montreal, since these two markets drew stock from the same territory.

Mr. Acres, therefore, moved and it was seconded by Mr. J. A. Sangster, member for Glengarry, That this committee recommend that the commission charges on the Toronto stockyards be reduced and placed on the same basis as the commission charges on the Montreal stockyards.

Mr. Case, member for North York, expressed the view that in keeping with the evidence before the committee that this committee should recommend that the commission charges on the Toronto stockyards be reduced by 20 per cent, and that such recommendation be forwarded to the Stevens' committee. He further expressed the view that, notwithstanding the reductions already made in the commission charges at Montreal, these charges should be further reduced.

Mr. Case, therefore, moved an amendment to Mr. Acres' motion, which was seconded by Mr. H. J. Davis, member for East Elgin, as follows: That this committee recommend to the Stevens' committee that the commission charges on the Toronto stockyards should be reduced 20 per cent all round.

The Chairman, Mr. Jamieson, on putting the amendment declared the amendment carried by a vote of thirteen to three.

Q. This is a report of the recommendations of this committee?—A. Yes.

Q. I see the first matter dealt with is the lack of competitive buying on the Toronto market?—A. Yes.

Q. Perhaps you would just develop that for the committee; what do you mean by that? Are you a livestock man yourself?—A. No. I have not had experience of shipping. I am just a farmer, and I do no shipping of livestock; so therefore I am fairly ignorant along that line and wish not to express my opinion.

Q. On the question of competitive buying?—A. On conditions there at the stockyards.

Q. I suppose Mr. Craig, who is with you on this delegation from Ontario, will be able to do that?—A. He has had 25 years of it, and I think he can do that much better than I can.

Q. And he will deal with that phase of it?—A. Yes.

Mr. FACTOR: Have the questionnaires been filed?

The WITNESS: These are personal. However, I will leave them in your hands.

Mr. SENN: Is there a blank copy?

*By Mr. Sommerville:*

Q. Yes, you have a copy of the questionnaire, and we have the number of answers; if they are given to you in confidence, I think you had better keep them.—A. There are 75; that is 65. I have got over 75 now.

Q. That is the completed list of answers?—A. No; there will be some more.

Q. Will you complete that list for the committee and let me have it?—A. Yes.

Q. Thank you.

J. A. CRAIG, Called and Sworn.

*By Mr. Sommerville:*

Q. You are Mr. J. A. Craig?—A. Yes.

Q. And you are a member of the legislature of Ontario for the county of Lanark?—A. Yes.

Q. And you have been engaged in the cattle industry, or livestock industry, for a great many years?—A. Yes.

Q. And have been shipping, I understand, to the Toronto market regularly for twenty-five years?—A. Well, I have shipped to Montreal and Toronto.

Q. Montreal and Toronto?—A. Yes, for 25 years or more.

Q. And you are therefore familiar with the conditions now existing on the Toronto and Montreal markets?—A. I am sorry to say I am, very familiar with them, yes.

*By Mr. Senn:*

Q. Both hogs and cattle?—A. No, I wish to state that I do not ship any hogs.

Q. Just cattle?—A. Yes, just cattle, lambs, calves.

*By Mr. Sommerville:*

Q. And calves?—A. Yes.

Q. Cattle, lambs and calves?—A. Yes.

Q. Then you were a member of the special committee of the Ontario legislature dealing with the livestock situation?—A. Yes.

Q. And on that committee you gave certain information. Will you be good enough just to develop that part of the report that has been filed on the want of competitive buying on the Toronto market? What do you mean by that?—A. Well, there are several reasons. I think the biggest reason is the truck coming into being.

Q. The biggest reason is the truck coming into being?—A. Yes, coming into being; and shipping cattle—I think we have got the percentage of that here somewhere—direct to the packing plants.

Q. The trucks ship cattle direct to the packing plants?—A. Yes, that is one of the reasons.

Q. That is one of the reasons for the want of competitive buying on the Toronto market?—A. Yes; that is, in my judgment. When cattle were all shipped to the stockyards by rail, they were all in the stockyards we will say—I am talking of Monday's market, to make it clear—they were all in, or almost all in the stockyards on Sunday, fed, watered and ready to be sold when the market opened at 9 o'clock Monday morning. But at the present, there are cattle coming to the market all day, truck cattle coming in at 4 or almost 4 o'clock in the evening to be sold that day, with the result that the buyers are not sure how many cattle are going to come in from the sellers, are not sure how many cattle are going to come in that day.

Q. And does that have the effect of holding off buying, to some extent?—A. Well, we think it does. No doubt it does.

*By Mr. Kennedy (Winnipeg):*

Q. That might work in favour of the seller, might it not?—A. Why?

Q. Well, if they were all there the night before, the buyers would know at nine o'clock the quantity; whereas if they are coming in during the course of the day, there might not be nearly as many there in the morning?—A. Yes, there is always enough there, as a rule, to start the butchers, we will call them, killing their cattle. That is what we want. With the cattle all on the market, we know there are no cattle there ready to be killed. Therefore the buyers go on the market and buy to start killing.

Q. The second suggestion was that the thing that interferes with competitive buying is that of delivery by truck on the market during the day having a tendency to delay buying?—A. Well, I would not say on the market, because they are delivering on the market and direct to the packing plants; and they are both, I consider, the cause of not so much competition in buying cattle.

Q. The truck delivers to the packing plant or to the stockyards during the day?—A. Yes.

Q. They both contribute to the want of competitive buying on the market?  
—A. Well, that is my opinion.

Q. Now, you say you have been shipping for some 25 years?—A. Yes.

Q. Now, what is the effect of the shipment of cattle to the stockyards—that is to the packing plant, as against shipments to the stockyards; what is the effect upon the stockyards?—A. Well, it naturally reduces the volume of business in the stockyards.

Q. And has that volume been largely reduced in the last ten years?—A. I would say yes.

Q. And has therefore the amount of competition been reduced very substantially?—A. Yes, it certainly has; of course, there are more reasons than one for the lack of competition; supply and demand rule prices—and I think the packing houses have kept pretty well together, and competition is not so keen.

Q. The packing houses keep pretty well together; well, there has been a merger of packing houses?—A. Yes.

Q. A few years ago you had five packers at Toronto, and now you have one instead of five?—A. Yes.

Q. And then you have Swift's as the other large packer?—A. Yes.

Q. And you think there being a reduction in the number of packing plants, there is a reduction in competition?—A. Naturally.

Q. And then you say, they keep together; what do you mean by that?  
—A. Well I think that in the evidence given by Mr. Jamieson here you have a pretty clear demonstration of that.

Q. That it is easier for them to get together and discuss prices and conditions on the market when there are but two than it was when there were five packers?—A. Yes.

Q. What has been your knowledge, or your experience with respect to this "getting together"?—A. As has been pointed out here already, you very seldom get, especially this last year or two, any particular or very little opposition in bids on your load of cattle. If you get a bid on a load of cattle from one packer you pretty nearly know that the other packer's bid will be pretty close to this.

*By Mr. Factor:*

Q. There are only two packers to bid on the purchase?—A. Yes.

Q. You cannot get competition if there are only two packers?—A. Why not, will not one bid against the other?

*By Mr. Sommerville:*

Q. You say when you get a bid your experience is you know that this is the price you are going to get?—A. Usually, yes.

Q. And you cannot get competition in bidding without a formal bid?—A. No.

Q. Is there anything else that you can give to help this committee in the matter of evidence that there is some of the "getting together" which you referred to?—A. No, I have no evidence; just from doing business there it looks that way, but I have no proof of that; none whatever.

Q. How often do you go to the market?—A. Well, I go once a week from, say, July to Christmas, ship from 1, to 5 or 6 loads of cattle.

Q. From July to Christmas?—A. Yes, about that.

Q. And these observations are based on your experience in that connection?  
—A. Yes.

Q. Well, thank you, Mr. Craig.

*By Mr. Ilsley:*

Q. Just a minute, you did not say anything about conditions on the Montreal market of which you have had similar experience?—A. I have not been shipping cattle to Montreal for some years, I did ship there from 1905 till 1913 steady, but since that I have shipped very little stock to Montreal.

Mr. SOMMERVILLE: I understood he was not operating on the Montreal market.

*By Mr. Edwards:*

Q. Are hogs bought on grade on the Montreal market?—A. I told you I could not tell you that. I do not ship hogs, but I understand they are not; but I will not say that I am right.

The CHAIRMAN: Thank you, Mr. Craig.

The witness was discharged.

The Committee adjourned at 12.45 p.m., to meet again this day at 3.30 p.m.

---

#### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

The Committee received from the Department of Agriculture Exhibit No. 67, being a report showing the origin and quality of commercial live stock marketed in Canada in 1926; together with a copy of the "Thirteenth Annual Market Review."

The CHAIRMAN: Order, gentlemen. We have here this afternoon Mr. MacLeay, of Alberta, a rancher who has kindly consented to give the Committee the benefit of a few observations. If Mr. MacLeay would be good enough to come forward.

Mr. RODERICK MACLEAY, called and sworn.

*By Mr. Sommerville:*

Q. Mr. MacLeay, you are a rancher?—A. Yes.

Q. And where is your home?—A. I live on one of my ranches southwest of High River, Alberta.

Q. And you have been ranching for how long?—A. Thirty-five years.

Q. In Western Canada?—A. In Western Canada.

Q. In Alberta?—A. In Alberta.

Q. And you are still engaged in the ranching business?—A. I am.

Q. At the present time how many head of cattle have you, approximately, on your ranches?—A. About 7,000 head.

Q. And what is the area over which you have your various ranches, approximately?—A. I have four ranches, and they cover an area of approximately 200,000 acres.

Q. And what is the annual production of your ranch, say last year?—A. Cattle.

Q. How many did you sell?—A. I sold something over 1,400 head.

Q. Will you tell the Committee as to the conditions of the cattle industry in your neighbourhood; as to prices, competition and the general condition

that prevails. Out of your experience of thirty-five years you could perhaps tell the Committee the situation as you find it?—A. My experience the last year, Mr. Sommerville?

Q. The last two years, if you will?—A. I think if I were to confine myself to last year's cattle I could probably give you a picture.

Q. All right, Mr. MacLeay.—A. Last year, in the fall of 1932, I put in about 600 head of cattle in the feeding pens to feed—that would be along in the month of December.

Q. December of 1932?—A. December of 1932.

Q. You put 600 head of cattle into your feed pens to feed and fatten?—A. Yes.
